added to by the purchase of other tracts contiguous to the first tract, where these last are not themselves riparian. And it is further held that mere contiguity of quarter sections with another quarter section, through which a stream runs, does not make the former riparian, although all are owned by the same person, where they are granted by separate patents, though issued to the same individual, based upon separate entries.[7] Again, if the owner sells off a portion of the original tract, not adjoining the stream, by that act all riparian rights are cut off forever from such segregated tract;[8] and that is true, even if the tract so sold should be again repurchased by the owner of the tract actually riparian. As was said in a case decided in 1907: "Land thus conveyed and severed from the stream can never again regain the riparian right, although it may thereafter be reconveyed to the person who owns the part abutting on the stream, so that the two tracts are again held in one ownership."[9] Therefore, it may be considered the present rule in California that, however great or however small the tract of land may be which borders upon a stream, and which is in common ownership, it is all riparian; provided, that it was acquired through a single source of title, and is all within the watershed of the stream in which riparian rights are claimed.[10]

Upon our second proposition, stated above, that riparian land stops at the outermost edge of the land from the stream as de-

[7] Boehmer v. Big Rock Irr. Dist., 117 Cal. 19, 48 Pac. Rep. 908.

[8] That a sale of land back from the stream cuts off riparian rights, see Sec. 461.

[9] Anaheim Union Water Co. v. Fuller, 150 Cal. 327, 88 Pac. Rep. 978, 11 L. R. A., N. S. 1062, citing Boehmer v. Big Rock Irr. Dist., 117 Cal. 19, 48 Pac. Rep. 908; Alta Land & Water Co. v. Hancock, 85 Cal. 219, 24 Pac. Rep. 645, 20 Am. St. Rep. 217; Lux v. Haggin, 69 Cal. 255, 4 Pac. Rep. 919, 10 Pac. Rep. 674; Watkins Land Co. v. Clements, 98 Tex. Civ. App. 578, 86 S. W. Rep. 733, 70 L. R. A. 964, 107 Am. St. Rep. 653; 2 Farnham on Waters, 1572, Sec. 463a.

[10] In this connection it may be said that there is nothing in the decision of Hudson v. Dailey, 156 Cal. 617, 105 Pac. Rep. 748, which tends in any way to modify or overrule the former decisions of the Court cited above limiting the extent of riparian lands in that State. In that case the Court simply decided the rights of landowners to the use of waters underlying their lands, and said: "Such waters, together with the surface stream supplied by them, should be considered a common supply, in which all who by their natural situation have access to it have a common right, and of which they may make a reasonable use upon the land so situated, taking it either from the surface flow, or di-

scribed by a single original entry of land as acquired from the Government, the Nebraska Court seems to lead. In a leading case upon the subject [11] it was held that, in any event, the extent of riparian land can not exceed the area acquired by a single entry or purchase from the Government; and queried whether, in view of the policy of the Government in the distribution of its public land, such riparian land should exceed the smallest legal subdivision of a section (that is, 40 acres), or in lieu thereof, if an irregular tract, a designated numbered lot which borders upon the natural stream. It was further held that this right could not be augmented or extended by the acquisition of the title to lands contiguous to the riparian land. The State of Texas has adopted the same rule as that of Nebraska, that the boundaries of the Government subdivisions, so far as they lie within the watershed, will govern in determining what land is riparian so as to entitle it to the use of the water from the stream for irrigation purposes, in the absence of special circumstances. "Riparian rights arise out of the ownership of land through or by which a stream of water flows, which rights can not extend beyond the original survey as granted by the Government. . . . Another limitation upon the right of the riparian proprietor is that he can not ordinarily divert water to land lying beyond the watershed of the stream." [12]

The third proposition stated above we will discuss in the following section.[13]

rectly from the percolations beneath their lands." It will be noticed that the Court in no way attempts to limit or define what are riparian lands, but simply relies upon the well-settled rule of access, or lands bordering upon or overlying such waters.

11 Crawford County v. Hathaway (Hall.), 67 Neb. 325, 93 N. W. Rep. 781, 60 L. R. A. 889, 108 Am. St. Rep. 647.

12 Watkins Land Co. v. Clements, 98 Tex. Civ. App. 578, 86 S. W. Rep. 733, 70 L. R. A. 964, 107 Am. St. Rep. 653, citing Lux v. Haggin, 69 Cal. 255, 4 Pac. Rep. 919, 10 Pac. Rep. 674; Boehmer v. Big Rock Irr. Dist., 117 Cal. 19, 48 Pac. Rep. 908; 2 Farnham on Waters, Sec. 463a, p. 1572, where it is said: "The most satisfactory rule is that the parcels of land should be regarded as riparian, so far as their location with reference to the stream has indicated where their boundary should be fixed, so that all that parcel which is regarded as one tract should be regarded as riparian, leaving the question of the extent of use which may be made of the water to the rules regulating the relative rights of owners of the stream. Under this rule the boundary of riparian land is restricted to land the title to which is acquired by one transaction."

13 See Sec. 465.

§ 465. **Extent of riparian lands—Rule that all lands in common ownership at time of claim are riparian.**—The third rule, as stated in the previous section, limiting riparian lands to those based upon the source of title to such lands,[1] is that all lands held in common ownership at the time of the claim or the use is made of the water of the stream adjoining them should be regarded as riparian to such stream, and that, too, regardless as to how or when such lands were acquired, or from whatever sources of title. In other words, a tract of riparian land may be segregated so that any portion not touching upon the stream may be cut off, during the period of such segregation, from all riparian rights.[2] Again, upon the other hand, a tract of riparian land may be augmented by the purchase of contiguous tracts which have by themselves no actual contact with the stream, but which become riparian upon being added to the tract which actually touches upon the stream. This is the true rule of the common law. As stated by Mr. Weil, quoting from an English authority:[3] "The following is a statement of the general common law: 'If riparian property becomes divided between two owners, so that one portion no longer adjoins the stream, that portion no longer retains any riparian rights.'[4] Conversely, land which adjoins riparian land may become itself riparian by becoming united therewith in ownership."[5]

The rules as stated under our first and second divisions, as set forth in the previous section,[6] are rules adopted by the various States and modify the common law. But, as long as we are dealing with a common law subject, it becomes necessary to know just what the common law rule is. The common law knows nothing of governmental subdivisions, and hence could not have made such a subdivision the extent of riparian lands. It also does not regard the riparian land limited to the smallest subdivision in the chain of title of an entire tract. Otherwise, during the hundreds of years of conveyancing, it can be readily seen that riparian lands in England would have become smaller and smaller in area,

1 For the different rules, see Sec. 464.

2 For the effect of the segregation of riparian land, see Sec. 461.

5 Quoting from Salmond on Torts, p. 252.

6 See Sec. 464.

without the right of augmentation, until in many instances they would be nothing but a thread upon the stream, which would have attached to it all of the riparian rights, and probably far in excess of its needs, and to the entire exclusion of riparian rights of all the other lands within the same watershed, although they might be held in common ownership with the small tract actually riparian. Under the common law of England riparian lands are not restricted to any such narrow limitations; and, consequently, riparian rights are not so restricted, but depend more upon the settled rule of "reasonable use"[7] by one proprietor regardless of the extent of his riparian lands, after taking into consideration the rights of all the other owners upon the same stream. In other words, the extent of "riparian land" is not the sole limit of riparian rights; but the gist of the question is the reasonable use of those rights upon all of the lands which touch upon the stream, and are held at the time in common ownership, and are within the natural boundaries of the watershed.

Although, as we have said before, a State has the power to adopt any rule it sees fit in limiting or defining riparian lands or in maintaining or abolishing riparian rights,[8] we consider that the more consistent rule as to the extent of riparian lands back from the stream to be, to include all lands which are owned in common, regardless of the source or sources of title, and which are within the watershed of the stream, upon which a portion of such lands border, leaving the question of extent of the use which may be made of the waters of the stream to the settled rule of "reasonable use," and taking into consideration the relative or correlative rights of all the other riparian owners whose lands also touch upon the same stream.

The above is the rule adopted by the Supreme Courts of Oregon and Kansas. The case of Jones v. Conn[9] holds that the right of a riparian proprietor to use the water for irrigation purposes is not limited to the tract of land actually bordering on the stream, as first segregated, but extends to lands lying back of such tract contiguous to it, and afterward purchased by him from other persons. In support of this proposition the Court said: "It would

[7] For the rule of reasonable use, see Secs. 489, 496, 511-513.

[8] See Secs. 588-594.

[9] 39 Ore. 30, 64 Pac. Rep. 855, 65 Pac. Rep. 1068, 54 L. R. A. 630, 87 Am. St. Rep. 634.

seem, therefore, that any person owning land which abuts upon, or through which a natural stream of water flows, is a riparian proprietor, entitled to the rights of such without regard to the extent of his land, or from whom or when he acquired his title. The fact that he may have procured the particular tract washed by the stream at one time, and subsequently purchased land adjoining it, will not make him any less a riparian proprietor, nor should it alone be a valid objection to his using the water on the land last acquired. The only thing necessary to entitle him to the right of a riparian proprietor is to show that the body of land owned by him borders upon a stream. This being established, the law gives to him certain rights in the water, *the extent of which is limited and controlled less by the area of his land than by the volume of the water and the effect of its use upon the rights of the other riparian proprietors.* By virtue of the ownership of land in proximity to the stream he is entitled to a reasonable use of the water, which is defined as 'any use that does not work actual, material, and substantial damage to the common right which each proprietor has, as limited and qualified by the precisely equal right of every other proprietor.'[10] In the determination of what will be considered such a use in a particular case, the character and extent of the land, its location, and the time of acquiring the title, may all become, and are, no doubt, important factors to be considered; but they are not controlling, and each case must depend entirely upon its own facts and circumstances." The Kansas Court, upon the authority of Jones v. Conn,[11] adopted the same rule, and held that, in determining the quantity of land which might be considered riparian, the principle of equality of right of the riparian owner with the others should control, irrespective of the accidental matter of subdivisions of the land.[12]

**§ 466. The character of lands to which rights attach.**—The question of the character of the lands to which riparian rights attach does not seem to have been discussed to any extent by the

10 Citing Kinney on Irrigation, 1st Ed., Sec. 276.

11 *Supra.*

12 Clark v. Alleman, 71 Kan. 206, 80 Pac. Rep. 571, 70 L. R. A. 971. That the use of water for irrigation as a riparian right must be confined to riparian land, see, also, Secs. 514-516.

English authorities. The rule, therefore, is the same under the strict construction of that rule, the only requisite being that the lands touch or border upon the stream. But under the modified rule of the common law of riparian rights, as adopted in some of the Western States of this country where the principal use of the water is for irrigation, the character of such lands to which such rights attach or are claimed must be considered. It stands to reason that an owner whose lands are so hilly and rocky that they are absolutely unfit for cultivation, although they may adjoin a stream and be strictly riparian, can not claim the right by virtue of such ownership to the use of the water for irrigation; and, therefore, it can be said that riparian rights do not attach to such lands. He has no use for the water upon his own lands, and he has no right by virtue of riparian ownership alone to conduct the water to lands not riparian. This is the positive holding in a California case, where it was found that the riparian lands were valueless for agricultural purposes. And the Court said: "A riparian proprietor's claim to make such use of the waters of a stream is, of course, without legal foundation."[1] This, of course, is a modification of the common law riparian right to the undiminished flow of the stream, regardless of the use of the water, a subject which will be discussed in subsequent sections of this work.[2] It makes the legality of such a claim depend more upon the actual use of the water, or at least the possibility of its use upon the riparian land, than upon the fact that the land touches upon the water, and, therefore, is strictly riparian.[3]

# CHAPTER 23.

## TO WHAT WATERS RIPARIAN RIGHTS ATTACH.

§ 467. Scope of chapter.
§ 468. Rights attach to all natural water courses.
§ 469. Natural water courses—Rights attach to navigable rivers.
§ 470. Natural water courses—Rights attach to flood waters of streams.
§ 471. Natural water courses—Rights attach to certain subterranean waters.
§ 472. Natural water courses—Interstate rivers and streams.
§ 473. Riparian rights do not attach to artificial water courses unless by lapse of time they are deemed natural.
§ 474. Lakes and ponds—General rule.
§ 475. Riparian rights also attach to natural lakes and ponds—Western rule.

**§ 467. Scope of chapter.**—Having discussed in the preceding chapters of this part the nature of riparian rights,[1] and to what lands riparian rights attach, in the present chapter we will discuss the subject to what waters such rights attach.[2]

**§ 468. Rights attach to all natural water courses.**—In general it may be said that under the common law riparian rights attach to all natural water courses,[1] and that, too, whether the same be called a river,[2] stream,[3] creek, brook, or rivulet,[4] and to their branches and tributaries.[5] They also attach in certain instances to ravines when these have all the essential characteristics of a water course and, therefore, are water courses.[6] They also attach to sloughs, when these are considered a part of a water course, or a

1 See Chap. 21, Secs. 450-456.

2 See Secs. 468-475.

1 For definitions and description of natural water courses, see Secs. 301-307.

2 Sec. 308.

3 Sec. 309.

4 Sec. 310.

5 Sec. 311. And that, too, even if such tributaries are small and flow directly from springs. See Hollett v. Davis, 54 Wash. 326, 103 Pac. Rep. 423, where it is held that where the flow from a spring is sufficient to form a water course the flow is governed by the common law rule of riparian rights.

See, also, Chauvet v. Hill, 93 Cal. 407, 28 Pac. Rep. 1066; Barneich v. Mercy, 136 Cal. 205, 68 Pac. Rep. 589.

For the appropriation of water from tributaries, see Sec. 649.

6 For ravines as natural water courses, see Sec. 312.

branch thereof.[7] Riparian rights also attach to all classes of the flow of water courses or streams—the natural surface flow, the subterranean or underground flow,[8] and to the ordinary flood or storm waters.[9] They do not, however, attach to marshes or swamps with no natural outlet.[10] They attach to known and defined underground streams, under exactly the same principles as to surface streams.[11] It makes no difference as to the size of the streams. They may be of an actual navigable capacity,[12] or they may be the smallest rivulets, provided, always, that they have all of the essential characteristics of water courses.[13] One may have riparian rights in a stream even though its source be a spring upon the land of another, yet it must be a stream that was wont to flow from time immemorial.[14] There is one requisite, and that is the water course or stream must be a natural one, or a stream, which by lapse of time, is deemed natural. Riparian rights do not attach to artificial water courses or streams.[15]

We will now take up in detail some of the waters to which riparian rights attach, and refer by our cross-references to where the subject is discussed as to other waters in other portions of this work.

**§ 469. Natural water courses—Rights attach to navigable rivers.**—Riparian rights attach to all navigable water courses and

7 For sloughs as natural water courses, see Sec. 315.

See, also, Turner v. James Canal Co., 155 Cal. 82, 99 Pac. Rep. 520, 22 L. R. A., N. S. 401, 132 Am. St. Rep. 59, 17 Am. & Eng. Ann. Cas. 823, where the Court held that, as regards the taking of water for purposes of irrigation, the rights of persons owning lands adjoining a slough connected with a river are equal and coextensive with those of persons owning land bordering upon the river itself.

See, also, Strong v. Baldwin, 154 Cal. 150, 97 Pac. Rep. 178, 129 Am. St. Rep. 141.

8 See Secs. 1154-1160, 1193-1195, where the entire subject will be discussed relative to the rights in subterranean or underground waters.

9 For riparian rights in flood waters, see Sec. 470.

10 Hayward v. Mason, 54 Wash. 649, 104 Pac. Rep. 139.

11 For riparian rights in underground streams, see Sec. 471.

12 For riparian rights on navigable streams, see Sec. 469.

For the right of navigation, see Chap. 16, Secs. 341-357.

13 See Secs. 302-307.

14 Mason v. Yearwood, 58 Wash. 276, 108 Pac. Rep. 608; Hollett v. Davis, 54 Wash. 326, 103 Pac. Rep. 423; Miller v. Wheeler, 54 Wash. 429, 103 Pac. Rep. 641, 23 L. R. A., N. S. 1065.

15 See Sec. 473.

rivers as well as to those which are non-navigable.[1] In previous sections of this work, we have discussed some of these riparian rights. In certain States the riparian owner owns the beds of the large navigable rivers above the tide waters. In others the beds are owned by the State. As we have stated before the rule in this country as to whether the riparian owners or the State own the beds of the large navigable or public rivers is left entirely to the respective States wherein the riparian lands are situated.[2] In any event, whether he owns the bed of the river or not, the riparian owner has the sole right of access to and from his lands adjoining such streams.[3] Even upon portions of these rivers which are subject to the ebb and flow of the tide, although the general rule is that the riparian owners do not own the beds of such streams, there are certain riparian rights which attach, such, for example, as the right of access.[4]

When we come to the right of the riparian proprietor to the flow of the stream or his right to make a reasonable use of the waters of the stream, in general, we may say that the same rights attach to a navigable stream as attach to a nonnavigable stream,[5] subject, of course, to the public right of navigation in the stream. Therefore, it is held that riparian owners, in the case where the river has been improved in aid of navigation, have the right to insist that the water which is not required for navigation be returned to its accustomed channel in such a manner and place that it will flow past their lands as it was accustomed to flow.[6] In the

St. Rep. 937; *Id.*, 93 Wis. 383, 66 N. W. Rep. 601, 67 N. W. Rep. 432; Kaukauna Water Power Co. v. Green Bay & M. C. Co., 142 U. S. 254, 35 L. Ed. 1004, 12 Sup. Ct. Rep. 173; Smith v. Rochester, 92 N. Y. 463, 44 Am. Rep. 393.

But see St. Anthony Falls Water Power Co. v. Water Commissioners,

Western States, adhering to the doctrine of riparian rights,[7] it is generally conceded that a riparian owner has the same rights by virtue of his ownership in the use of the waters of the stream whether they are navigable or nonnavigable; provided, always, that the easement of navigation by the public is in no way interfered with. This is the rule in California.[8]

In conferring the authority to improve the navigation of rivers, it was held by the Washington Court that the legislature did not delegate the right to take or damage the rights of riparian owners without compensation, the Court saying: "The respondent, being a riparian owner upon the Kalama River, has, as such, valuable property rights which can not be taken or damaged for public use without compensation. One of these is its right to a continuance of the natural and ordinary flow of the water over, across, and past its lands. This riparian right, guaranteed by the common law, has been repeatedly recognized and protected by this Court."[9] This

168 U. S. 349, 42 L. Ed. 497, 18 Sup. Ct. Rep. 157, where it was held that the appropriation of the waters of a lake for a city water supply, thereby preventing their flowing past a water power plant in a river, without any compensation for the resulting injury to riparian owners, is a matter of local law on which the Federal Courts must follow the State decisions.

See, also, Scranton v. Wheeler, 179 U. S. 141, 45 L. Ed. 126, 21 Sup. Ct. Rep. 48; Morrill v. St. Anthony Falls Water Power Co., 26 Minn. 222, 2 N. W. Rep. 842, 37 Am. Rep. 399, where it was held that a riparian owner upon a navigable stream may use the water flowing past his land for any purpose, so long as he does not impede the navigation of the stream.

See, also, Williams v. Fulmer, 151 Pa. 405, 25 Atl. Rep. 103, 31 Am. St. Rep. 767.

7 For these States, see Sec. 507.

8 In the case of Heilbron v. Fowler Switch Canal Co., 75 Cal. 426, 17 Pac. Rep. 535, 7 Am. St. Rep. 183, it is said: "We see no occasion to discuss the question as to whether the river is navigable or not. In either event, the result would be the same. The riparian owner on a nontidal navigable stream has all the rights of a riparian owner not inconsistent with the public easement. . . . The right of the State to interfere with the flow there would certainly be limited to the interest of navigation," citing Brown v. Chadbourne, 31 Me. 9, 50 Am. Dec. 641; Moore v. Sanborne, 2 Mich. 519, 59 Am. Dec. 209; Wood, Nuis., Sec. 485; Smith v. City of Rochester, 92 N. Y. 463; Woodruff v. North Bloomfield etc. Co., 8 Saw. 628, 16 Fed. Rep. 25, 9 Saw. 41, 18 Fed. Rep. 753.

See, also, Lux v. Haggin, 69 Cal. 255, 4 Pac. Rep. 919, 10 Pac. Rep. 674.

9 Kalama Electric Light & Power Company v. Kalama Driving Co., 48 Wash. 612, 94 Pac. Rep. 469, 22 L. R. A., N. S. 641, 125 Am. St. Rep. 948; Monroe Mill Co. v. Menzel, 35 Wash. 487, 77 Pac. Rep. 813, 70 L. R. A. 272, 102 Am. St. Rep. 905; Spokane Valley Land & Water Co. v. Arthur

is also held to be the rule in the State of Texas, and that the riparian owner's right can not be taken or damaged without compensation even in the improvement of navigation in a river.[10]

The State of Nebraska, however, adopts a different rule, and holds that navigable rivers are not subject to riparian rights, especially as to the use of the waters. "As to navigable streams, the doctrine seems to be that the water and the soil thereunder belong to the State, and are under its sovereignty and domain, in trust for the people, and can not, therefore, be subject of a claim of property therein, or the right to the use thereof by an adjoining landowner. . . . The waters in such streams would be held to be *publici juris*, and not be subject to riparian claims by the adjoining landowner."[11] The court is inconsistent in its holding upon this point. It holds that riparian rights do attach to the smaller nonnavigable streams of the State. As said by Lord Chelmsford, in the case of Lyon v. Fishmongers' Company,[12] there is "no sound principle upon which the distinction between the two descriptions of natural streams can be supported." Riparian rights certainly naturally attach to both navigable as well as nonnavigable streams. The Court was also unfortunate in its citation of authorities.[13]

The cases cited do not decide that riparian rights do not attach to navigable streams. But what they do decide, as far as the subject under discussion is concerned, is that *each State has the power to decide for itself whether or not such rights shall attach to such streams*, and whether or not the riparian owner or the

13 See last note, *supra*.

State shall be the owner of the soil under the water. Under these authorities, however, we can not doubt the power of the Nebraska Court to decide the case as it did, in holding that riparian rights attach to nonnavigable streams but do not to navigable streams.[14]

§ 470. **Natural water courses—Rights attach to the flood waters of streams.**—Riparian rights attach to all parts of the flow of water courses. This, of course, includes the flood or storm waters of streams, especially where such waters are confined to their natural channels.[1] But as to the extent to which riparian rights attach to flood waters of a stream the authorities do not quite agree. The more modern rule is that, as against the rights of an appropriator for nonriparian use of the water, the riparian rights of the owner of the banks of the stream only extend to the natural flow of the stream, unless actual damage is shown by the diversion of the water. The Nebraska Court held that the riparian owner, at most, "was entitled to only the ordinary and natural flow of the stream, or so much as was found necessary to propel his mill machinery, and could not lawfully claim, as against an appropriator, the flow of the flood waters of the stream."[2] Other authorities hold that riparian rights attach to all flood waters of the stream which can be counted upon as certain to occur annually, but do not attach to the waters caused by extraordinary and unexpected floods. As was said in a California case: "But the rights of the riparian proprietor do not depend upon the quantity of water flowing in the stream. Nor can that flow be said to be extraordinary which can be counted upon as certain to occur annually and to continue for months."[3] This subject will be further discussed in other portions of this work.[4]

14 See, also, upon this subject, Secs. 325-332, 374.

For the abrogation of riparian rights, see Secs. 588-594.

1 For flood or storm waters of streams, see Sec. 319.

3 Heilbron v. Fowler Switch Canal Co., 75 Cal. 426, 17 Pac. Rep. 535, 7 Am. St. Rep. 183.

4 For the rights of appropriators as against those of riparian owners, see Secs. 810-823.

For the right of injunction against the appropriation of flood waters, see Sec. 563.

**§ 471. Natural water courses—Rights attach to certain subterranean waters.**—Riparian rights also attach to certain classes of subterranean or underground waters.[1] To underground water courses, the waters of which flow in known and defined channels, riparian rights attach the same as to surface streams. Riparian rights also attach to the underground flow of surface streams.[2]

While there are no riparian rights which attach to the ordinary percolating waters, to those underground waters which underlie lands in artesian basins[3] or catchment basins[4] under the more modern rule governing these waters as laid down in California in the case of Katz v. Walkinshaw,[5] it is held that the rights of the owners of land over these basins in and to the waters are analogous to the rights of riparian proprietors to the waters of streams adjoining which their lands lie. As said in a California case: "The land being so situated that it has the natural advantages afforded by the underlying water, the conditions are analogous to those affecting land riparian to a stream, which, because of its situation with reference to the stream, is given rights to the waters thereof," etc.[6]

The entire subject of subterranean or underground waters will be discussed in a separate portion of this work.[7]

**§ 472. Natural water courses—Interstate rivers and streams.**—Riparian rights also attach to interstate rivers and streams and also to other interstate bodies of water. Upon the same stream, there may be two distinct systems governing the use of waters. In one State through which such a stream runs may be the doctrine of riparian rights, while in another these rights may be entirely abolished. This was illustrated in the case of Kansas v. Colorado,[1] where it was held that each State had the right to adopt such rule

as it saw fit governing and controlling the waters within its boundaries, and that "Congress can not enforce either rule upon any State,"[2] but that the power of a State in this respect was subject to the jurisdiction of the General Government to take all needed measures to preserve the navigable capacity of the navigable water courses of the United States, even against any State action; and that in the absence of any specific authority from Congress a State can not by its legislation destroy the rights of the United States, as the owner of lands bordering upon a stream, to the continued flow of its waters; so far, at least, as may be necessary for the beneficial uses of Government property.[3]

The subject of interstate waters, however, will be more thoroughly discussed in another chapter.[4]

**§ 473. Riparian rights do not attach to artificial water courses unless by lapse of time they are deemed natural.**—As to whether or not any riparian rights can attach to artificial water courses depends entirely upon their origin and character. If they are clearly artificial channels, such as canals, ditches, conduits, or aqueducts, used to convey the water from the stream or other body of water, riparian rights can not attach.[1] In order to acquire the

L. 590; Chamberlain v. Hemingway, 63 Conn. 1, 27 Atl. Rep. 239, 22 L. R. A. 45, 38 Am. St. Rep. 330; Ligare v. Chicago, M. & N. R. Co., 166 Ill. 249, 46 N. E. Rep. 803.

That no riparian right can attach to artificial ponds, see Burrows v. Lang, 2 Ch. 502, 70 L. J. Ch. N. S.

right to the use of water flowing in artificial channels, they must be based upon other considerations than that of the ownership of the land through which or adjoining which the streams run. It must depend upon some grant or agreement, either proved or presumed, from or with the owner of the ditch, or upon some other legal origin, such, for instance, as prescription.[2] Upon the other hand, however, the authorities hold that a water course, although constructed artificially, may have originated under such circumstances as to give rise to all the rights that riparian proprietors have in a natural and permanent stream, or have been so long used as to be deemed by prescription natural water courses.[3] Such is the case where the whole stream is diverted into the new channel, and thereby the artificial channel is substituted for the natural. Where this is done under such circumstances as to indicate that it is to be permanent, riparian rights may attach to the artificial channel.[4] And it is further held that where the artificial water course was not created by joint action of the owners, it may become such a one to which riparian right may attach, if the various owners along its course have always treated it as such.[5]

5 This was the case in Baily v. Clark, 86 L. T. N. S. 309, where it had existed for several centuries, and had always been treated as a natural water course.

See, also, Roberts v. Richards, 50 L. J. Ch. N. S. 297, 44 L. T. N. S. 271.

See, also, irrigation as a riparian right from artificial water courses, Sec. 473.

In a recent case in Texas,[6] it was held that the canal of an irrigation company, which had condemned all of the waters of a stream, should be treated the same as the stream as affecting the question whether land of a purchaser from the company on the line of the canal is riparian land. It is also held that an artificial mill pond, maintained as such for more than forty years and sold for the establishment of an ice business for the continued maintenance of the pond, is changed from its artificial condition to a natural one, and that the grantor can not remove the dam, or sell it to another for removal, after his sale of the pond to the ice company.[7] The proprietor of a stream who diverts it into an artificial channel and continues such change for a time exceeding the statute of limitations is estopped, as against a person making beneficial use of the water below, to return it to its natural channel to the latter's injury.[8]

§ 474. **Lakes and ponds—General rule.**—The riparian rights of proprietors whose lands border upon lakes and natural ponds, as well as the ownership of the soil under the same, do not appear to have been settled by the early English authorities.[1] In the case of Paine v. Woods, Wells, J., said: "The English books offer little light on this subject. . . . But the question whether the title in the land under the fresh water pond or lake is in the proprietor of the lands adjoining or in the Crown does not seem to have been ever judicially determined in England."[2] But in this country, in general, we may say that the same rules relative to riparian rights attach to the ownership of the soil bordering upon an inland lake or pond as those which govern the ownership of the banks of streams or rivers regardless of the fact as to whether they are navigable in fact or not, or whether the owners of the bank are also owners of the soil under the water or not. This is especially so concerning the particular uses and appropriation of water by riparian owners. The weight of authority seems to hold that riparian rights proper rest upon the title to the bank of the lake, and not upon the title to the soil under the water, and they are the same whether the

6 McKenzie v. Beason, —— Tex. Civ. App. ——, 140 S. W. Rep. 246.

7 Marshall Ice Co. v. La Plant, 136 Iowa 621, 111 N. W. Rep. 1016, 12 L. R. A., N. S. 1073.

1 Marshall v. Ulleswater Nav. Co., 3 B. & S. 732; *Id.*, L. R. 7 Q. B. 166.

2 Paine v. Woods, 108 Mass. 160.

riparian owner owns the soil under the water or not.[3] So the owner of lands upon a navigable lake has, as such, the exclusive right of access to and from the lake in front of his land and the right to construct there buildings, piers, and wharves not interfering with the public easement of navigation.[4] Also, if a lake, whether navigable or not, recede gradually and insensibly, the derelict land belongs to the adjacent riparian proprietor. The right of access is not lost by the gradual and imperceptible recession of the water, but the land gained by the reliction belongs to the owner of the contiguous land to which the addition is made.[5]

So, in general, we can say that every owner of land abutting upon a natural inland lake or pond has, like the owner of land bordering upon a river or stream, a usufruct in the waters of the lake or pond, and has a common right with his neighbors to the natural flow of the water in its accustomed place, without unnatural detention or substantial diminution in quantity or deterioration in quality; and none can make any use of it that shall in any way be prejudicial to the other owners, unless he has acquired a right to so use it by license, grant, or prescription.[6] Where the water of a lake recedes gradually and imperceptibly from the shore, the new land belongs to the riparian owner; but, upon the other hand, if the recession is sudden, the title to the land remains in the former owner.[7] The owner of land on a natural lake or pond has a right to have the natural level of the water maintained, so that he may enjoy his riparian rights. Therefore the owners lower down will

[3] Diedrich v. N. W. Union Ry. Co., 42 Wis. 248, where the Court held that, distinguished from appropriation and occupation of the soil under the water, a riparian owner upon navigable water, whether or not he owns the soil to the thread of the river or stream, has a right (unless prohibited by local law) to construct in shoal water, in front of his land, proper wharves in aid of navigation. not be permitted to draw off the water below its natural low water line.[8] The same rule applies to the raising of the level of lakes and ponds to the injury of abutting owners.[9] In the Western States it is held that riparian rights attach to lakes, ponds, or sloughs, as well as to streams and water courses.[10]

**§ 475. Riparian rights also attach to natural lakes and ponds—Western rule.**—In the Western States, holding to the common law, natural water courses or flowing streams are not the only waters to which riparian rights attach. They also attach to bodies of still or standing waters.[1] As said in a recent California case: "No authority is cited in favor of the proposition that riparian rights exist only in flowing streams. After a somewhat exhaustive search, we have not succeeded in finding any decision to that effect. That such rights exist in any body of water, whether flowing or not, is shown by the following quotations from the decisions of other States."[2] It may be considered as settled that, where riparian

rights are allowed at all, they attach to natural lakes and ponds in the same manner, and in favor of the same lands and persons as the riparian rights on the natural rivers and streams.[3] Therefore further discussion upon this particular point is unnecessary here. The extent of the rights in lakes and ponds will be discussed in other portions of this work.[4]

[3] See, also, for lakes and ponds, Secs. 294-299, 327.

## CHAPTER 24.

### WHO ARE RIPARIAN PROPRIETORS.

§ 476. Scope of chapter.
§ 477. The owners of the fee.
§ 478. In certain cases the owners of less than fee—In inchoate rights.
§ 479. Those entitled to the exclusive right of possession of riparian lands may use such rights.
§ 480. The United States as a riparian owner.
§ 481. A State as riparian owner.
§ 482. A municipal corporation as riparian owner.

**§ 476. Scope of chapter.**—Having discussed in the preceding chapters of this part the nature of riparian rights,[1] upon what lands such riparian rights attach,[2] and to what waters riparian rights attach,[3] in the present chapter we will discuss as to who are entitled to riparian lands, or, in other words, who are riparian proprietors.[4]

**§ 477. The owners of the fee.**—As riparian rights are a part and parcel of the lands to which they are attached,[1] it must necessarily follow that only the owners of the fee to such lands are the absolute owners of such rights. The question as to who has the right to use riparian rights is another matter and will be discussed in a subsequent section.[2] As we have also discussed in a previous section,[3] the ownership of the riparian rights in a natural stream depends upon the ownership of the bank or banks of the stream, and not upon the ownership of the soil over which the water flows. The ownership of the soil under the water is but one of the riparian rights which attaches by virtue of the ownership of the bank.[4] It therefore follows that one who merely owns the soil under the

1 See Chap. 21, Secs. 451-456.
2 See Chap. 22, Secs. 457-466.
3 Secs. 468-475.
4 See Secs. 477-482.

1 For the nature of riparian rights, see Secs. 451-456.
For the lands to which riparian rights attach, see Secs. 458-466.
Secs. 328, 329.

2 See Sec. 479.
3 See Sec. 451.
4 For the ownership of the soil under public or navigable waters, see Secs. 328, 329.
For that of private or non-navigable waters, see Secs. 537, 541, 542.

water is not a riparian owner or the owner of riparian rights in the stream.[5] Hence it follows that whoever is the owner of the land, which includes the bank or banks of the stream in fee simple, is also the absolute owner of the riparian rights in and to the stream or water course or the waters flowing therein.

**§ 478. In certain cases the owners of less than fee—In inchoate rights.**—In certain cases the owner of an inchoate right to the bank of a stream may also be the conditional owner of the riparian rights in the stream. Such would be the case where a tract of land had been entered under some one of the land laws of the United States,[1] such as a valid homestead or other valid entry of lands which include the bank or banks of a stream in the Western States where riparian rights are allowed. Upon the fulfillment of all of the conditions by the settler, he is given a patent by the Government and he then becomes vested with all of the riparian rights in the water course and other waters flowing therein. His riparian rights will then relate back to the very inception of his title to the land, or the first step taken to acquire title to the same.[2] But if the settler fails to comply with the conditions prescribed by the Act of Congress, under which he seeks to acquire title to the land, the inchoate title to both the land and also to the riparian rights attached then lapses and reverts to the Government.[3]

Where a riparian proprietor settled upon his land while it was Indian country, but continued to reside thereon when the country was opened to settlement, and thereafter acquired title to his lands,

See, however, the case of McCarter v. Hudson Water Co., 70 N. J. Eq. 695, 65 Atl. Rep. 489, 14 L. R. A., N. S. 197, 118 Am. St. Rep. 754, 10 Am. & Eng. Ann. Cases 116; affirmed, 209 U. S. 349, 52 L. Ed. 828, 28 Sup. Ct. Rep. 529.

[1] For the disposal of lands by the United States to individuals, see Secs. 332-441.

[2] For the Doctrine of Relation, see Secs. 742-756.

For the rights of appropriators as against settlers, see Secs. 810-823.

Rights to land attach when, see Sec. 445.

[3] For the Government as a riparian owner, see Sec. 480.

The right of a pre-emptor of such lands bordering on a stream, to use the water of said stream as riparian owner, is rendered worthless by the claimant's abandonment before pro-

such title would relate back to the date of the opening and his riparian rights date from that event.[4] The owner of a mining claim, located in accordance with the laws of Congress providing for such locations, has also inchoate right to the waters of the stream adjoining which his lands lie, which right becomes absolute upon his obtaining his patent to the mining claim from the Government, but upon the abandonment of such claim his rights to both the land and riparian rights are forfeited.[5] A mere trespasser upon the lands, either upon those of the United States, of a State, or individuals, acquires no right or ownership to the riparian rights in and to a stream which may adjoin such lands.[6] But a distinction must be made in the case of settlers upon the unsurveyed public lands of the United States, who have settled upon such lands with the *bona fide* intention that, upon the land being surveyed, they will make entry in the land office for the same. This class of settlers are protected by the statute upon their making the proper entry for the land, within the time limited by the statute after such lands shall have been surveyed.[7] However, even this class of

curing the receiver's receipt for the same. Conklin v. Pacific Improvement Co., 87 Cal. 296, 25 Pac. Rep. 399.

4 Redwater Land & Cattle Co. v. Reed, 26 S. D. 466, 128 N. W. Rep. 702.

5 Crandall v. Woods, 8 Cal. 136, 1 Morr. Min. Rep. 604, in which it is said: "One who locates upon public lands with a view of appropriating them to his own use, becomes the absolute owner thereof as against every one but the Government, and is entitled to all the privileges and incidents which appertain to the soil, subject to the single exception of rights antecedently acquired. He may admit that he is not the owner in fee, but his possession will be sufficient to protect him as against trespassers."

6 Alta Land & Water Co. v. Hancock, 85 Cal. 219, 24 Pac. Rep. 645, 20 Am. St. Rep. 217.

In the State of Washington it is held that persons holding a possessory right to land abutting on a natural stream shall be entitled to use any water not otherwise appropriated for irrigation, etc., and is declaratory of the then existing law, that title acquired through patent from the United States relates back to the date of the settlement or filing, but does not authorize a mere trespasser or squatter of public land who subsequently sells or abandons his claim to acquire riparian right to a stream flowing through the land; for the reason that riparian rights are a mere incident to ownership in the soil and do not vest until the patent is issued. Kendall v. Joyce, 48 Wash. 489, 93 Pac. Rep. 1091.

7 See Secs. 445, 815-817.

In a recent case in California it was held that one in possession of unsurveyed public lands with intent to procure title thereto, is the owner of the lands within the articles of incorporation of a corporation organized

settlers have no rights in and to the lands upon which they have settled, or to the water adjoining the same, which they can assert against the Government where it reserves the land from entry for some special purpose.[8]

The same rule also applies to State lands. The disposition of State lands is entirely in the control of the legislature, which may withdraw or reserve from State sale any part of the same. As was said in a recent case in California,[9] after reviewing the decisions upon the subject: "The effect of these decisions is to put the applicant for the purchase of State lands in a position similar to that of one who enters Federal lands under the pre-emption laws of the United States. Under those laws it was uniformly held that no right, as against the United States, vested in a claimant until he had made or tendered the required payment. Up to that time the land might be withdrawn from sale."

§ 479. **Those entitled to the exclusive right of possession of riparian lands may use such rights.**—As to the use of riparian rights, such as the right to the use of water in general, it may be said that any person entitled to the exclusive right to possess and

to secure a supply of water for irrigation purposes and to distribute the same among its stockholders for use on land owned by them. The Court said: "We are of the opinion that, upon the facts alleged, the plaintiff must be held to be the owner of the land for which he desires water, within the meaning and intent of the articles of incorporation. The absolute ownership thereof is, of course, in the United States; but the plaintiff is in the undisputed possession thereof, having settled upon the same with intent to procure a Government title when it can be obtained, and he is deemed the owner and entitled to maintain his possession and use of the land as against all except the Government, or some one hereafter deriving title from the Government." Miller v. Imperial Water Co. No. 8, 156 Cal. 27, 103 Pac. Rep. 227, 24 L. R. A., N. S. 27.

[9] Messenger v. Kingsbury, 158 Cal. 611, 112 Pac. Rep. 65.

enjoy the banks, is entitled to use the riparian rights, although he does not own the fee.[1] Such would be the case of a lessee of the land to which the riparian rights were attached, where he is simply holding under his lease and does not own the title to the land. The title to the land in such a case and also the riparian rights attached thereto remain in the owner of the fee.[2] In a California case it was said: "The estate of the plaintiffs is sufficient to enable them to maintain this action. They were lessees for a term of ten years with the privilege of purchasing during that time."[3]

§ 480. **The United States as a riparian owner.**—By the Louisiana Purchase and the Treaty of Guadalupe Hidalgo,[1] the United States acquired vast tracts of unoccupied lands, through which many of the rivers and smaller streams flow, and within which there were many natural lakes and ponds. There is no question, except as to those lands and waters which had been granted by the predecessors of this Government to individuals, but that prior to the settlement of these lands, the United States was the owner of both the lands and the waters of this portion of the country. The United States having adopted the common law as governing the waters of the country prior to these treaties, and at this period being the owner of both the sides and the beds of these waters, the Government became what is known as the sole riparian owner of these lands, and the waters flowing through the same. This riparian ownership of the Government was recognized by the early California decisions during the formative period of the doctrine of appropriation hereinafter discussed.[2] In one case it was said:[3] "If the Government, which in this instance is the riparian proprietor, had granted to the defendants the right to divert from the creek a given quantity of water, without restriction as to the place of diversion, it is clear that the right could be exercised at any point on the stream, though the effect of the grant would not have been to

convey any property in the *corpus* of the water, for no such property is vested in the Government."[4]

But these lands were finally opened up for settlement,[5] and the General Government relinquished its right to much of the waters flowing over the public domain, to be used by appropriators of the same for beneficial purposes.[6] It also relinquished the government and control of the waters within the boundaries of a State upon its admission to the Union.[7] But there are certain rights which the Government as the owner never relinquished to the individual settlers or to the States. These are: First, the right to continue unimpaired the navigable capacity of all of the navigable waters of the United States, regardless of any individual appropriation or diversion of the waters, or the rule of law adopted by any State.[8] Second, the right of the United States, as the owner of lands bordering on a stream or other body of water, to continue the flow of the waters; so far, at least, as may be necessary for the beneficial uses of the Government property.[9] In fact it is somewhat indefinite as to just what the Government now claims or may claim in the future under the second subject, but the language of the Supreme Court of the United States in the Rio Grande Dam and Kansas v. Colorado cases intimates, at least, that the Government has a right to the flow of the waters so far as may be necessary for the *beneficial uses* of the Government property, not by virtue of its riparian rights, but by virtue of appropriations or reservations for "bene-

[9] As to what uses the water may be put, see Secs. 690-705.

See, also, Kansas v. Colorado, 206 U. S. 46, 51 L. Ed. 956, 27 Sup. Ct. Rep. 655; *Id.*, 185 U. S. 125, 46 L. Ed. 838, 22 Sup. Ct. Rep. 552; United States v. Rio Grande Dam & Irr. Co., 174 U. S. 690, 43 L. Ed. 1136, 19 Sup. Ct. Rep. 770; *Id.*, 184 U. S. 416, 46 L. Ed. 619.

ficial uses." And in two cases the Courts have held that the Government had a preference right to the use of the water flowing through Government lands for these purposes, and that, too, when individuals were claiming the water for the same purposes.[10]

As far as the riparian rights of the Government are concerned, as we view the subject, the Government has no further or exclusive rights than an individual upon the same stream would have, and therefore the same rules govern between the Government and an individual as between individuals. Otherwise the common law upon this subject would not be followed. So, if a stream flows over the public land upon which there are also settlers, the water of the stream may be taken and used by the Government for any purpose, provided the rights of the riparian owners are not injured. This has also been the holding of the Courts.[11] The power of the Government to make reservations of its lands and waters has been discussed in previous sections.[12]

§ 481. **A State as riparian owner.**—A State may also be a riparian owner on streams which flow through or by lands owned by the State. But its rights in this respect are no greater than those of the individual owners upon the same stream. Otherwise the common law would be extended. To be sure the State has the sole jurisdiction of the waters flowing within its boundaries. It may dedicate all of its waters to the State, or to the public, and may make such laws governing the same as it sees fit so long as those laws do not conflict with the rights of the United States, as discussed

10 Winters v. United States, 207 U. S. 564, 52 L. Ed. 340, 28 Sup. Ct. Rep. 207, affirming *Id.*, 148 Fed. Rep. 684, 78 C. C. A. 546, sustaining *Id.*, 143 Fed. Rep. 740, 74 C. C. A. 666; United States v. Winans, 198 U. S. 371, 49 L. Ed. 1089, 25 Sup. Ct. Rep. 662.

11 See Nevada Ditch Co. v. Bennett, 30 Ore. 59, 45 Pac. Rep. 472, 60 Am. St. Rep. 777; Lux v. Haggin, 69 Cal. 255, 4 Pac. Rep. 919, 10 Pac. Rep. 674; Union Mill & M. Co. v. Ferris, 2 Sawy. 176, Fed. Cas. No. 14,371, 8 Morr. Min. Rep. 90; Vansickle v. Haines, 7 Nev. 249, 15 Morr. Min. Rep. 201; Farm Investment Co. v. Carpenter, 9 Wyo. 110, 61 Pac. Rep. 258, 50 L. R. A. 747, 87 Am. St. Rep. 918.

12 For the authority of the Government to make reservations, see Secs. 413, 414, 448.

For effect of the dedication of waters by a State as against the rights of the United States, see Sec. 388.

in previous sections.[1] But where the State owns lands bordering upon waters, and where it claims certain rights in the waters by virtue of the common-law theory of riparian ownership, it can claim no further rights than are accorded to the individual under the same law. So the taking of lands, through which certain streams run, by a State for park purposes, gives to the State under the common law no further rights than the individuals whose lands touch upon the same streams have.[2] Neither do riparian rights extend so as to authorize a State to supply with water from a stream a sufficient amount for its penitentiary and insane asylum, where from 1300 to 1500 people are kept in confinement, and where one of such institutions is situated a considerable distance from the stream.[3] But where the State has sold lands upon which riparian rights had previously attached, it is held that the grantees were also entitled to the same rights.[4]

§ 482. **A municipal corporation as riparian owner.**—A municipal corporation under the common law may also be a riparian owner upon a stream or other body of water, but only as to the lands actually owned by it. Riparian rights are strictly limited to the lands or lots which front on the water. If these are owned by the city, the city has the riparian rights incident to the lots; however, if the lots are owned by individuals, they alone are entitled to the riparian rights. Hence it follows that a municipal corporation can not, as a riparian proprietor, claim the right to supply the needs of all its inhabitants from a stream, upon the ground that the stream flows by the city. As a riparian owner the city can not claim a greater or more extensive right to the waters of a stream which washes by it, than the other riparian owners upon the same stream.[1] The right of a municipality to take the water from a

stream flowing through or by the same is based upon entirely different considerations than those which govern its rights as a riparian owner.[2] As we shall see in a future portion of this work, this right may be acquired by purchase, by long continued custom, by the right of eminent domain, and in the Western States by appropriation and diversion for municipal purposes. However, if a city is the owner of riparian rights, it has the right to exercise the use of them, having due regard to the correlative rights of the other riparian owners upon the stream. And equity will enjoin a municipal corporation from taking a water supply from a stream to the injury of the lower riparian proprietors.[3]

In an Ohio case, however, it is held that an incorporated municipality situated upon a natural flowing stream is, in its corporate capacity, a riparian proprietor and has the right to use out of such stream all the water it needs for its own proper purposes, and that

## CHAPTER 25.

### RIGHT TO THE USE OF WATERS.

§ 483. Scope of chapter.
§ 484. The relative rights of owners on the same stream.
§ 485. The relative rights of owners on the same stream—Mr. Justice Story's opinion.
§ 486. Classification of uses under the common law.
§ 487. "Natural uses" and "artificial uses" distinguished.
§ 488. The use for natural wants may be extraordinary.
§ 489. The use of water for "artificial wants" must be reasonable.
§ 490. Reasonable use defined.
§ 491. The use of water by diversion an extraordinary one.
§ 492. What is a reasonable use for power purposes.
§ 493. What is a reasonable use in cutting ice.
§ 494. The manner of taking the water must be reasonable.
§ 495. The manner of the use must be reasonable.
§ 496. All surplus water must be returned to the stream after use.
§ 497. No priority of right at common law.

**§ 483. Scope of chapter.**—Having discussed in the preceding chapters of this part the nature of riparian rights,[1] upon what lands riparian rights attach,[2] to what waters riparian rights attach,[3] and who are riparian proprietors,[4] under the doctrine of the common law of riparian rights, in the present chapter we will discuss the right of riparian proprietors to the use of waters flowing by or through their lands under the rule of the common law. The discussion in this chapter will not include the right of riparian proprietors to use the waters of streams for the purpose of irrigating their riparian lands, except as that subject may be incidentally referred to. The right to use waters for irrigation will be discussed in a separate chapter herein, entitled "Irrigation as a Riparian Right."[5]

**§ 484. The relative rights of owners on the same stream.**—As we have seen in previous sections,[1] a riparian proprietor has no

1 See Chap. 21, Secs. 450-456.
2 See Chap. 22, Secs. 457-466.
3 See Chap. 23, Secs. 467-475.
4 See Chap. 24, Secs. 476-482.
5 See Chap. 26, Secs. 498-525.
1 See Sec. 455. See, also, Secs. 288, 289.

ownership in the water itself, running in a natural stream, except as to his usufructuary property thereto. The right of a riparian owner to use the water of a water course flowing by his land, may be divided into two classes. First, the ordinary use of the water; and second, the extraordinary use. These uses are based upon what are called the natural and artificial wants of man. Water used to supply man's natural wants is an "ordinary use," and to supply man's artificial wants is an "extraordinary use." The real difference pointed out by the authorities between these two classes of uses, is that under the first water may be used for ordinary purposes without regard to the effects of such use in case of a deficiency to those below on the stream, while in reference to the extraordinary uses, the effect upon those below must always be considered in determining its reasonableness. As, for example, for domestic uses the entire stream may be consumed, but for all other uses it depends upon the reasonable use based upon the correlative rights of the other owners on the stream. In the English case of Miner v. Gilmour,[2] Lord Kingsdown said: "By the general law, applicable to riparian proprietors, each has a right to what may be called the ordinary right of a use of water flowing past his land—for instance, to the reasonable use of the water for domestic purposes, and for his cattle, and this without regard to the effect that such use may have in case of deficiency upon the proprietors lower down the stream. But further, he may have use of it for any purpose or what may be deemed the extraordinary use of it, provided he does not thereby interfere with the lawful use of it by other proprietors, either above or below him." Subject to this condition a riparian proprietor may dam up a stream for the purpose of a mill, or divert the water for the purpose of irrigation. But he has no right to interrupt the regular flow of the stream, if he thereby interferes with the lawful use of water by other proprietors, and inflicts on them a sensible injury.[3] So, in this country, the rule is, that riparian proprietors have an equal

or correlative right to the use of the water, and the right of each qualifies that of all the others; the question between them is whether the use made of the water by one is reasonable and consistent with a correspondent use by the rest.[4]

The common law does not deprive the riparian owners of the right to use the waters of the streams which run through or by their land, but it allows all to use the water in any manner not incompatible with the equal or correlative rights of all of the other owners upon the same stream. As was said by Mr. Justice Nelson in Howard v. Ingersoll:[5] "Streams of water are intended for the use and comfort of man, and it would be unreasonable and contrary to the universal sense of mankind to debar a riparian proprietor from the application of water to domestic, agricultural, and manufacturing purposes, provided the use works no substantial injury to others."[6] This right to the use of the water necessarily implies a right to exercise a certain degree of control over the water, and to some extent to diminish its volume. Therefore, when it is said that a riparian proprietor has the right to have the stream continue

through his land as it was wont to flow by Nature, it is not intended to be said that he has the right to all the water that naturally flows in the stream, for that would render the stream, which belongs to all the proprietors, of no use to any.[7]

The general principles of law which govern the rights of the upper and lower riparian owners are well settled and the upper riparian owner has no more right, nor can he use the water to any greater extent, than the lower riparian owner upon the same stream.[8] In the Western part of this country, which still adheres to the common law of riparian rights, the same rule has been adopted as to the relative rights of the riparian owners to the use of the waters of the same stream adjoining the lands, and which rights extended to all portions of the flow of the stream, subterranean as well as surface. As was held in the recent California case of Hudson v. Dailey,[9] to the effect that the application of the principle should be made to the case of percolating waters feeding the stream and necessary to its continued flow, the Court saying: "There is no rational ground for any distinction between such percolating waters and the waters in the gravels immediately beneath and directly supporting the surface flow, and no reason for applying a different rule to the two classes with respect to such rights, if, indeed, the two classes can be distinguished at all. Such waters, together with the surface stream supplied by them, should be considered a common supply, in which all who by their natural situation have access to it have a common right, and of which they may each make a reasonable use upon the land so situated, taking it either from the surface flow or directly from the percolations beneath their lands. The natural rights of these defendants and the plaintiff in this common supply of water would therefore be coequal, except as to quantity, and correlative."[10]

**§ 485. The relative rights of owners on the same stream—Mr. Justice Story's opinion.**—The rules of the common law as to the use of riparian waters, as we have said, are well settled, and the only difficulty which arises is in the application of the rules to the facts which may surround each particular case. The principles governing this use can never be better stated than it was by Mr. Justice Story in the early case of Tyler v. Wilkinson,[1] abstracts of which opinion are so often quoted upon different phases of the subject under consideration. We can do not better here than to quote a portion of that opinion: "*Prima facie* every proprietor upon each bank of a river is entitled to the land covered with water, in front of his bank, to the middle thread of the stream, or, as it is commonly expressed, *usque filum aquae.* In virtue of this ownership he has a right to the use of the water flowing over it in its natural current, without diminution or obstruction. But, strictly speaking, he has no property in the water itself, but a simple use of it while it passes along. The consequence of this principle is, that no proprietor has a right to use the water to the prejudice of another. It is wholly immaterial whether the party be a proprietor above or below in the course of the river; the right being common to all the proprietors on the river, no one has a right to diminish the quantity which will, according to the natural current, flow to a proprietor below, or to throw it back upon a proprietor above. This is the necessary result of the perfect equality of right among all the proprietors of that which is common to all. The natural stream, existing by the bounty of Providence for the benefit of the land through which it flows, is an incident annexed, by operation of law, to the land itself. When I speak of this common right, I do not mean to be understood as holding the doctrine that there can be no diminution whatsoever, and no obstruction or impediment whatsoever, by a riparian proprietor, in the use of the water as it flows, for that would be to deny any valuable use of it. There may be, and there must be, allowed of that which is common to all, a reasonable use. The true test of the principle

1 4 Mason 397, Fed. Cas. No. 14,312.

and extent of the use is, whether it is to the injury of the other proprietors or not. There may be a diminution in quantity, or a retardation, or acceleration of the natural current indispensable for the general and valuable use of the water, perfectly consistent with the existence of the common right. The diminution, retardation, or acceleration, not positively and sensibly injurious by diminishing the value of the common right, is an implied element in the right of using the stream at all. The law here, as in many other cases, acts with a reasonable reference to public convenience and general good, and is not betrayed into a narrow strictness, subversive of common sense, nor into an extravagant looseness which would destroy private rights. The maxim is applied, *sic utere tuo, ut non alienum laedas.* . . .

"These are the general principles which appear to me applicable to the present case. They will be found recognized in many cases, but are in none more fully and accurately weighed and discussed than in" the following cases.[2]

"With these principles in view, the general rights of the plaintiffs can not admit of much controversy. They are riparian proprietors and, as such, are entitled to the natural flow of the river without diminution to their injury."

**§ 486. Classification of uses under the common law.**—Under the common law there are three classes of uses which the riparian proprietors may or may not make of the waters of a stream flowing by their lands. These are: First, natural or primary uses for which any riparian proprietor may take the waters of the whole stream;[1] second, artificial uses or uses which are not classified as those for natural wants;[2] and, third, uses of the water which may

See, also, irrigation as a riparian right, Chap. 26, Secs. 498-525.

not be made at all; such, for example, would be the use of water by a riparian owner upon nonriparian lands.[3]

The first two classes will be discussed in the following sections of this chapter,[4] but the third class applies more to the subject of irrigation and will be discussed under the chapter on Irrigation as a Riparian Right.[5]

**§ 487. "Natural uses" and "artificial uses" distinguished.**—The classification made in the preceding section,[1] although followed by some of the earlier common law cases, even under the development of the common law of riparian rights, is somewhat fanciful. "Natural uses" or the uses for "natural wants" as variously defined by the authorities mean those uses of water which are based upon the immediate necessities of the case, such as those uses which must be immediate in order to sustain life.[2] "Everything, as it serveth more immediately or more nearly for food and use of man (as shall be said hereafter) hath the precedent dignity before any others."[3] And as to these uses it is generally held that one owner may consume the entire flow of the stream regardless of the rights of the other proprietors upon the same stream.[4] Therefore the words "natural" and "necessary" seem,

3 That the use must be upon riparian lands, see Secs. 457-466, 514-517.

4 That the use of water for natural wants may be extraordinary, see Sec. 488.

But in one English case it was held that the question whether the amount of water taken from a stream for use in a house is wrongful, depends upon its quantity in relation to that which remained in the stream, and is for the jury. Norbury v. Kitchin, 9 Jur. N. S. 132, 7 L. T. N. S. 685.

See, also, Hough v. Porter, 51 Ore. 318, 372, 95 Pac. Rep. 732, 98 Pac. Rep. 1083, 102 Pac. Rep. 728; Hazeltine v. Case, 46 Wis. 391, 1 N. W. Rep. 66, 32 Am. Rep. 715; Kimball v.

when used by the early English authorities in this connection, to be practically synonymous; while upon the other hand "artificial uses" or uses for "artificial wants" are those uses which do not depend so much upon the immediate necessities of this case as upon the question of business, profit, pleasure, or comfort. Therefore, under these authorities, the right of the use of water for irrigation is considered an artificial and not a natural use.[5] As was well defined by the South Dakota Court in a recent case: "These rights of riparian owners have at all times been divided into two classes, dependent upon the use to which the water is to be put, which uses have been variously denominated 'ordinary' or 'extraordinary' and 'natural' or 'artificial.' The so-called ordinary or natural use includes the use of the water for domestic purposes and for watering stock. The extraordinary or artificial use includes manufacturing, mining and irrigation. A wide difference in the nature of these two classes of use for water will be readily recognized. The one use is directly necessary to the preservation of animal life; the other, at best, but indirectly needful. From this difference in the inherent nature or purpose of the two uses has grown a wide difference in the rules applicable to the two."[6]

As stated before, the old common law classification is fanciful, and it is now practically obsolete, the question being left to that of the reasonable use of the water by the riparian proprietors, in all cases, rather than to an attempted arbitrary classification. Under these old authorities, the use of the water for irrigation not being considered a natural use of the water, it was held that such use could only be reasonable as compared with the rights of all riparian proprietors upon the same stream. But in a hot, dry, and arid country, where the use of water for irrigation is an absolute necessity in order to raise any crops, it can be readily seen that the use merges from what is strictly known under the common law classification as an "artificial use" into a "natural use," or one upon which the immediate necessities of life depend. Therefore, the

authorities are generally drifting toward the common proposition that any use of the water of the stream by a riparian proprietor must depend upon reason or a reasonable use, after taking into consideration all of the facts and circumstances surrounding each particular case, and that, too, whether the uses are for strictly domestic purposes or whether the uses are for the irrigation of land, the development of power, or the many other uses which are made of the waters of the streams. As was said in the case of Brown v. Collins,[7] in disapproving of the opinion of Lord Cairns in the case of Rylands v. Fletcher:[8] "The distinction made . . . between a natural and a nonnatural use of land, if he meant anything more than the difference between a reasonable use and an unreasonable one, is not established in the law. Even if the arbitrary test were applied only to things which a man brings on his land, it would still recognize the peculiar rights of savage life in the wilderness, ignore the rights growing out of a civilized state of society, and make a distinction not warranted by the enlightened spirit of the common law; it would impose a penalty upon efforts, made in a reasonable, skillful, and careful manner, to rise above a condition of barbarism. It is impossible that legal principles can throw so serious an obstacle in the way of progress and improvement. Natural rights, are, in general, legal rights; and the rights of civilization are, in a legal sense, as natural as any others. 'Most of the rights of property, as well as of person, in the social state, are not absolute but relative.' "[9] And in Lux v. Haggin,[10] it was said, relative to the common law classification: "The distinction between natural and artificial wants would be, under supposable conditions, somewhat fanciful."

In Harris v. Harrison,[11] it is said that: "According to the common-law doctrine of riparian ownership as generally declared in England and in most American States, upon the facts in the case at bar the plaintiffs would be entitled to have the waters of Harrison Canyon continue to flow to and upon their land as they were naturally accustomed to flow, without any substantial deterioration in quality or diminution in quantity. But in some of the Western and

Southwestern States, where the year is divided into one wet and one dry season, and irrigation is necessary to successful cultivation of the soil, the doctrine of riparian ownership has by judicial decision been modified, or rather enlarged, so as to include the reasonable use of natural water for irrigating the riparian land, although such use may appreciably diminish the flow down to the lower riparian proprietor." As held in an Illinois case,[12] "In an arid country water for irrigation may become a natural want of man as exigent as when needed for domestic purposes, since without it vegetation would cease, and the sources of life be indirectly destroyed."[13] And as said in a Nebraska case,[14] "The purpose of the law is to secure equality in the use of water by riparian owners, as nearly as may be, by requiring each to exercise his rights reasonably and with due respect to the rights of other riparian proprietors to apply the water to the same or other purposes. *This purpose is not subserved by any arbitrary classification,* and in regions where water must be carefully husbanded, and is in great demand for agricultural purposes, it is obviously better to incline toward such a rule with further equality and a wide participation in the benefits of a stream."[15] It, therefore, follows that, owing to the difficulty of classifying these uses and also in maintaining such a classification or classifications, the tendency now is to ignore the same and let the question as to the right to use the waters, as far as the common law is concerned, depend upon the reasonable use thereof, which use may be either natural or artificial, under the old common law rule classifying the same.[16]

**§ 488. The use for natural wants may be extraordinary.**—Under the rule of the common law, a riparian proprietor in the uses of the first class, as set forth in the preceding section,[1] for the

purpose of supplying his natural wants, has the right to an extreme or extraordinary use of the water of a stream flowing past his land, and that, too, even if in supplying these wants all of the water of the stream is consumed, and none of which is permitted to flow down to the lower proprietors, and such a use is *damnum absque injuria* as to such lower owners.[2] These natural wants are limited in number—and are for domestic purposes, which include culinary and household purposes, cleansing and washing, and supplying the wants of the ordinary quantity of horses and stock.[3] The rule permitting the owner to supply his natural wants from a stream is ordinarily applied to navigable streams as well as those which are nonnavigable.[4] And, according to the great weight of the common law authorities, where the supply of water is very small for these natural wants, the upper riparian proprietor may, if necessary, consume all of the water of the stream to supply his natural wants, but not for any other purpose, and thus leaving no water to go down to the lower riparian owners or other users of the water.[5]

authorities the use of water for culinary purposes and for cattle must not deprive the other proprietors of an equal enjoyment of the same right.[7] Therefore, in these cases the rule is laid down upon the subject that the reasonable use of a quantity of water, for any purpose whatever, is always relative; and that it does not depend upon the convenience of, or the profitable results to, any particular proprietor, but upon the reasonable use, reference being had to the needs of all the other proprietors upon the stream. These cases, however, hold that it depends entirely upon the circumstances of each particular case.[8] As we have said before, the arbitrary classification of uses of water into natural and artificial is somewhat fanciful.[9] The better and more modern rule is to abolish such a classification, and to let each case stand upon the question of reasonable use, after taking into consideration the nature and extent of the use and all the other facts surrounding it.[10]

**§ 489. The use of water for "artificial wants" must be reasonable.**—The second class of uses under our classification made in a

For use of water for irrigation, a natural or artificial want, see Secs. 499-506.

10 For reasonable use, see Secs. 489-496.

previous section are the so-called artificial uses, or those which are not immediately necessary for natural wants to sustain life.[1] These uses are for purposes of profit, comfort, trade, or improvement. The right of the riparian proprietors to use the water of a stream which runs through or adjoins their lands, to supply their extraordinary or artificial wants, or, in other words, all those wants which are not natural,[2] is common to them all. These uses include water for the running of machinery,[3] diversion in some instances for irrigation,[4] any other use where the diversion of the water from its natural channel is required,[5] and also the use for bathing, boating, and many other purposes, which are not included among those immediately necessary to support life.[6] For these uses, one riparian proprietor can never take all of the water in the stream to the exclusion of the other riparian proprietors upon the same stream.[7] However, if the supply of water is sufficient, any proprietor can use the water of the stream for any purpose whatever, provided that none of the other proprietors or the public are injured, or have any of their rights infringed upon by his so using it.[8] In other words

of its application; its object, extent, and necessity; the kind of business to which the water is subservient; the importance and necessity of the use claimed by one party; and the extent of the injury caused by that use to the other.[10] There is no fixed rule of law for the determination of what will constitute a reasonable use by a riparian owner of the waters of a natural stream, but whether the use is reasonable depends upon the particular circumstances of each particular case.[11]

In the early case of Beisell v. Scholl,[12] an action for diverting a water course, decided by the Supreme Court of the United States, it was held that every man in this country has the unquestionable right to erect a mill upon his own land, and to use the water passing through his land as he pleases, subject only to this limitation, that his mill must not be so constructed and employed as to injure his neighbor's mill, and that after using the water he returns the stream to its ancient channel. In a more recent Michigan case Mr. Justice Cooley thus states the rule: "As between different proprietors on the same stream, the right of each qualifies that of the other, and the question always is, not merely whether the lower proprietor suffers damage by the use of the water above him, nor whether the quantity flowing on is diminished by the use, but whether under all the circumstances of the case the use of the water by one is reasonable

and consistent with a corresponding enjoyment of the right by the other."[13]

According to all of the common law authorities, the only right of property in the water, flowing in its natural channel, is usufructuary; and that, after so using it, if the water has been diverted from its natural channel he must return it to the stream without material diminution of quantity or alteration of quality, for it is an ancient and well-established principle of the common law that the water of a stream can not lawfully be diverted unless it is returned again to its accustomed channel before it passes to the land of the proprietor below.[14] But, under the common law, this right to the extraordinary use of water is inferior and subordinate to the right of its ordinary use for the supplying of natural wants; for if the water of a stream is barely sufficient to supply the natural wants of the different proprietors none of them can use the water for such extraordinary purposes as irrigation or manufactures, or for any other purpose, except to supply himself and family with a sufficient quantity for domestic purposes, if in so using it he infringes upon the rights of any of the other riparian proprietors.[15] The two most important of the extraordinary uses under this class are the use of the water for the working of machinery and mills,[16] and the second is the use of water for irrigation under the common law. The first use is more important in the Eastern portion of our country, while

the latter use is to be found in the extreme Western Coast States and the States of the Middle West, in which there is an attempt to reconcile the appropriation and diversion of waters from the natural streams for the purpose of irrigation with the common law.[17] Both of these subjects, however, will be treated in subsequent chapters.[18]

§ 490. **Reasonable use defined.**—As stated in the preceding section,[1] the use by a riparian proprietor of the water of the stream flowing by his lands must be reasonable; and as to what is a reasonable use depends upon the circumstances surrounding each particular case. Now, the question arises, What is a reasonable use as a question of law? No arbitrary classification as to just what may or may not be a reasonable use in all cases has been or can be made by any court, but there are certain rules which have been laid down by the appellate courts, which aid the jury, or the trial courts, in trying the case without a jury, in arriving at their conclusions. It must be distinctly understood, however, as to whether or not the facts surrounding any particular case come within the general rules laid down by the courts, as what is a reasonable use of water is one of the facts for the jury to decide.

Among the general rules laid down by the courts are to be found: First, the use to be reasonable must work no unnecessary injury to other riparian proprietors upon the same stream;[2] second, the char-

17 For irrigation under the common law, see Chap. 26, Secs. 498-525.

18 For use of water for power purposes, see Secs. 847-855.

For irrigation under the common law, see Chap. 26, Secs. 498-525.

See, also, upon this subject, Katz v. Walkinshaw, 141 Cal. 116, 70 Pac. Rep. 663, 74 Pac. Rep. 766, 64 L. R. A. 236, 99 Am. St. Rep. 35.

1 See Sec. 489.

2 One riparian proprietor can not appropriate a specific portion of the water of a stream to his own use to the exclusion of those below him, and to the injury of their rights. Plumleigh v. Dawson, 6 Ill. 544, 41 Am. Dec. 199; McCartney v. Londonderry Railway, App. Cas. (1904) 301; Salem etc. Co. v. Lord, 42 Ore. 82, 69 Pac. Rep. 1033, 70 Pac. Rep. 832.

See, also, cases cited in the notes of the preceding section, 489.

But so long as there is no larger portion of water running through the land than is just and reasonable, it can not be considered to be wrongful or injurious to a proprietor lower down the stream. Elliot v. Fitchburg R. Co., 10 Cush. (Mass.) 191, 57 Am. Dec. 85; Tyler v. Wilkinson, 4 Mason 397, Fed. Cas. No. 14,312; Baltimore v. Appold, 42 Md. 442; Townsend v. Bell, 70 Hun, 557, 24 N. Y. Sup. 193;

acter and extent of the particular use in its relation to the size of the stream and custom of the country;[3] and, third, the necessities of the one making use of the water. As was held in a Minnesota case,[4] what constitutes a reasonable use is a question of fact, having regard to the subject-matter and the use; the occasion and manner of its application; its object, extent, and necessity; the nature and size of the stream; the kind of business to which it is subservient; the importance and necessity of the use claimed by one party; and the extent of the injury caused by it to the other.[5] The rule of equality of right is what determines the quantity to be used by each riparian proprietor.[6]

In a leading case upon the subject in Massachusetts,[7] it was said:

Union Mill & Min. Co. v. Dangberg, 2 Sawy. 450, Fed. Cas. No. 14,370.

See, also, *Id.*, 81 Fed. Rep. 73; Wright v. Howard, 1 Simon & Stuart 190, 1 L. J. Ch. 94, 24 Rev. Rep. 169.

3 White v. Whitney Mfg. Co., 60 S. C. 254, 38 S. E. Rep. 456; Pool v. Lewis, 41 Ga. 162, 5 Am. Rep. 526.

See, also, Snow v. Parsons, 28 Vt. 450, 67 Am. Dec. 723, where it was held that the question of reasonableness of the use of the stream is one of fact when it is not settled by custom, as in the question of irrigation, propelling machinery, and watering cattle, and when it is in its nature doubtful.

See, also, Jacobs v. Allard, 42 Vt. 303, 1 Am. Rep. 331.

4 Red River Roller Mills v. Wright, 30 Minn. 249, 15 N. W. Rep. 167, 44 Am. Rep. 194.

See, also, Tourtellot v. Phelps, 4 Gray 370.

5 See, also, Meng v. Coffey, 67 Neb. 500, 93 N. W. 713, 60 L. R. A. 910, 108 Am. St. Rep. 697; Crawford v. Hathaway (Hall), 67 Neb. 325, 93 N. W. Rep. 781, 60 L. R. A. 889, 108 Am. St. Rep. 647; Gehlen Bros. v. Knorr, 101 Iowa 700, 70 N. W. 757, 36 L. R. A. 697, 63 Am. St. Rep. 416; Willis v. Perry, 92 Iowa 297, 60 N. W. Rep. 727, 26 L. R. A. 124; White v. Whitney Mfg. Co., 60 S. C. 254, 38 S. E. 456; Gutierrez v. Wege, 145 Cal. 730, 79 Pac. Rep. 449; *Id.*, 151 Cal. 587, 91 Pac. Rep. 395; McEvoy v. Taylor, 56 Wash. 357, 105 Pac. Rep. 851, where it is said: "The parties being riparian owners, their respective rights to the use of the water are to be determined by their rights as such riparian owners. These rights are now well established. As a riparian owner is entitled to reasonable use of the waters as an incident to his ownership, and, as all owners upon the same stream have the same right of reasonable use, the use of each must be consistent with the rights of others, and the right of each is qualified by the rights of others."

See, also, City of Aberdeen v. Lytle etc. Co., 58 Wash., 368, 108 Pac. Rep. 945.

6 Pinney v. Luce, 44 Minn. 369, 46 N. W. Rep. 561.

See, also, Crook v. Hewitt, 4 Wash. 749, 31 Pac. Rep. 28.

7 Elliot v. Fitchburg R. Co., 10 Cush. (Mass.) 191, 57 Am. Dec. 85.

"The right to flowing water is now well settled to be a right incident to property in the land; it is a right *publici juris,* of such a character that, while it is common and equal to all through whose land it runs, and no one can obstruct or divert it, yet, as one of the beneficent gifts of Providence, each proprietor has a right to a just and reasonable use of it as it passes through his land; and so long as it is not wholly obstructed or diverted, or no larger appropriation of the water running through it is made than a just and reasonable use, it can not be said to be wrongful or injurious to a proprietor lower down. What is a just and reasonable use may often be a *difficult question,* depending upon various circumstances."[8] No hard and fast rule can be laid down defining what would be a reasonable use of the water in every case by a riparian proprietor. And, after a careful study of the authorities upon the proposition, we will only add that about the only definition that can be given of the term reasonable use by one riparian proprietor is that it must be reasonable, taking into consideration the facts and circumstances surrounding each particular case and the equal or correlative rights of all of the other riparian proprietors upon the same stream. As was said in a Pennsylvania case: "Each proprietor may make any reasonable use of the water upon the premises; he may diminish the quantity, but the use must be a reasonable one."[9] The difficulty of defining "reasonable use" in cases of this nature was also recognized in a recent Massachusetts case,[10] wherein it is said: "It is difficult, if not impossible, to reconcile all the decisions which have been made upon the question of the right of riparian proprietors to use the waters of streams flowing through or along their lands. This is a com-

[8] The doctrine in the above case was reaffirmed in the late case of Parker v. American Woolen Co., 195 Mass. 591, 81 N. E. Rep. 468, 10 L. R. A., N. S. 584.

See, also, Cary v. Daniels, 49 Mass. 8 Met. 466, 4 Am. Dec. 532; Thurber v. Martin, 2 Gray, 394, 61 Am. Dec. 468; Gould v. Boston Duck Co., 13 Gray 442; Pitts v. Lancaster Mills, 13 Met. 156; Springfield v. Harris, 4 Allen 494, 81 Am. Dec. 715; Snow v. Parsons, 28 Vt. 450, 67 Am. Dec. 723; O'Riley v. McChesney, 49 N. Y. 672; Brown v. Kistler, 190 Pa. 499, 42 Atl. Rep. 885; Wadsworth v. Tillotson, 15 Conn. 336, 39 Am. Dec. 391; Lancey v. Clifford, 54 Me. 487, 92 Am. Dec. 561.

[9] Brown v. Kistler, 190 Pa. 499, 42 Atl. Rep. 885.

mon right, and each must exercise it with due regard to the rights of others, and each must submit to that degree of inconvenience and hardship in the exercise of his rights which results from the existence of like rights in others. In such cases each proprietor is entitled to use the stream in such reasonable manner, according to usages and wants of the community, as will not be inconsistent with a like use by other proprietors above and below him."

**§ 491. The use of water by diversion an extraordinary one.**—All uses of the water which require a diversion of the same from the natural channels thereof come under the class of artificial or extraordinary uses. Under the common law priority of appropriation is not recognized, and the first appropriator of running water has no right to divert the stream to the injury of other riparian proprietors, who may afterward seek to use the stream.[1] In fact, under a strict construction of the common law, especially in the early cases, both in England and in this country, the diversion of a water course, even where there was no actual injury to the riparian owners lower down the stream, legally imports damage, because it is an infringement of a right.[2] Mr. High says: "A riparian proprietor, owning to the center of the stream, is en-

The diversion of a water course from its ancient channel is a nuisance. Shields v. Arndt, 4 N. J. Eq. 234.

See, also, Weiss v. Oregon Iron Co., 13 Ore. 496, 11 Pac. Rep. 255.

titled to the aid of equity to prevent a diversion of the water from the natural channel. Nor does the neglect of complainants to use or appropriate the water-power, or the fact that they have as yet sustained but small pecuniary damage, or that the defendant would be subjected to heavy expense if compelled to restore the water to its original channel, present such objections as would warrant a Court of Equity in refusing relief."[3] In the later cases, however, it is held that the use by diversion is but one of the methods of using the water for extraordinary uses, and that the same rule applies as to those extraordinary uses where the water is not diverted.[4] In other words, a riparian owner has the right to the use of the stream by diverting a portion of the same, but this right must be reasonably exercised, and the water must be returned to the channel unpolluted and without any essential diminution or waste, and before the water reaches the lands of the lower proprietors.[5] Such uses of a stream by riparian proprietors is to some extent a question of degree, and in all such cases the size and capacity of the stream are to be considered, and the amount of the water diverted and for what purpose. The amount taken out from a large running river which would cause no sensible or practical diminution of its benefits to the lower proprietors would, if taken from a small stream, materially diminish its quantity and

The upper proprietor may divert the water for use on his own land, provided he restores it to the stream before it reaches the land of the lower proprietor. Webster v. Fleming, 2 Humph. 518.

See, also, Norton v. Valentine, 14 Vt. 246, 39 Am. Dec. 220; Stein v. Burden, 29 Ala. 127, 65 Am. Dec. 394; Canfield v. Andrew, 54 Vt. 1, 41 Am. Rep. 828; Plumleigh v. Dawson, 6 Ill. 544, 41 Am. Dec. 199; Blanchard v. Baker, 8 Me. 253, 23 Am. Dec. 504; Perkins v. Dow, 1 Root (Conn.) 535.

The erection of a dam which causes the water to spread out over a large tract of land and be lost by evaporation and percolation, is a wrongful diversion of the water. White v. East Lake Land Co., 96 Ga. 415, 23 S. E. Rep. 393, 51 Am. St. Rep. 141.

work a manifest injury to those below. All the common law authorities concur that, when the amount abstracted perceptibly or materially diminishes the quantity of the stream, so that injury results to those below, such a use of it by a riparian owner is unreasonable, and an infringement on the rights of other riparian owners, for which the law furnishes redress. Neither does necessity make any difference. As was said by Black, J., in Wheatley v. Chrisman: "The necessities of one man's business can not be the standard of another's rights in a thing which belongs to both."[6]

Again, the diversion of a water course, or a part of it, by an upper riparian proprietor for generating power, or for other manufacturing purposes, without restoring to the natural channel the water after it has passed through the machinery is never allowed. In fact, any use of the water of a stream can not be considered a reasonable one which involves substantial diminution and waste.[7] As was held in a very recent California case, a riparian owner has the right to make any use of the water, beneficial to himself on the riparian land, including the generating of electric power, which his situation enables him to make; but, if his use involves the consumption of the water, he can not use more than his reasonable share as compared to the other riparian owners, and he must not pollute the water to the injury of the others entitled to it, and the water he does not consume must be returned to the stream before it passes his land.[8] As to what constitutes a reasonable use of water by diversion under the common law rule, is primarily a question of fact, to be settled by the jury in view of all the circumstances of each particular case.[9]

The subject of irrigation and the diversion of the waters of

streams where all of the water is practically consumed in those States which adhere to the common law doctrines of riparian rights and at the same time permit the appropriation and diversion of water for these uses we will discuss in a subsequent chapter of this work.[10]

§ 492. **What is a reasonable use for power purposes.**—A riparian owner also has the right to the use of the waters of a stream flowing by his land for the development of power, either by direct power developed from the flow of the water itself, or by the generation of electric energy for transmission of electricity to other places than at the point where the same is developed upon the stream. The use of any riparian proprietors of the water for this purpose must be reasonable as compared to the like or other uses by other riparian proprietors upon the same stream. If the water is diverted from the stream for the purpose of getting a fall and thus developing power, after its use it must be returned to the stream for the use of the other riparian proprietors below. Any other disposition of the water after use would be termed an unreasonable use of the water. But it is not our intent at this point to discuss this subject at length, for the reason that the subject of use of water for power purposes, both under the common law of riparian rights and under the Arid Region doctrine of appropriation, will be fully discussed together in a subsequent chapter of this work.[1]

§ 493. **What is a reasonable use in cutting ice.**—The rights of riparian owners to the use of the water of a stream are not affected by the fact that it is proposed to remove the water in its congealed or frozen state. It therefore follows that the cutting of ice from a stream of water is the use of the water. As was said in an Iowa case:[1] "The use of ice is water in another form—is congealed water." It is therefore held that the taking of ice in a running stream in most respects is subject to the same rules which govern the rights of the riparian proprietor to the water. In other words,

10 For Irrigation Under the Common Law, see Secs. 498-525.

1 For Power and Mill Rights, see Chap. 47, Secs. 847-855.

1 Brown v. Cunningham, 82 Iowa 512, 48 N. W. 1042, 12 L. R. A. 583.

that the riparian proprietor's right to the use in the stream is the same as in the water before it is congealed, is a proposition well settled.[2] And it is further held that the erection of a dam on a nonnavigable stream by a riparian owner to form a pond in which to harvest ice is not an unreasonable use of the water which will entitle the lower mill owner to an injunction, it appearing that about 25 per cent of the power used by the mill was furnished by the water, and that it took only two days and a night to fill the upper pond.[3] The general rule upon this proposition is that the riparian owner of a nonnavigable water course has the right to cut and remove the ice from the stream adjoining his land in any quantity and to any extent for his own use, or for storage, or for sale, if he does not thereby appreciably diminish the quantity of the water flowing in the stream down to the lower riparian proprietors to their actual and substantial damage.[4]

**§ 494. The manner of taking the water must be reasonable.**—The manner of the taking of water from the natural stream by riparian owners, whose lands border thereon, is immaterial so long as such taking is within the rule of reasonable use, as discussed in the previous sections of this chapter,[1] and providing, of course,

S., 1073, where it is held, that one who, after maintaining a mill dam for more than forty years, sells land under the pond for the establishment of an ice business for which the continued maintenance of the pond is necessary, will not be permitted subsequently to remove the dam, for the reason that the sale made the artificial condition the natural one.

1 See Secs. 488-493.

that there is no waste of the water. The taking may be by dam, constructed in the stream and through a ditch.[2] The riparian owner may also store the flood waters of the stream which come down to him during the wet season, and when a reasonable amount is so stored, taking into consideration the like rights of the other riparian proprietors, he may have the sole use of the waters so stored.[3] It may be by means of pumps, which raise the water to a sufficient height to enable it to run to the place of use.[4] The water may be also taken by means of tunnels driven so that the waters of the stream may seep therein, and from which they will flow to the places of use.[5] Two or more riparian proprietors may be tenants in common in the ditch or canal constructed for the purpose of taking the water, and they may join in common diversion if they take no more water than their combined share of the flow of the stream, and thereby the rights of others are not injured or interfered with. A riparian proprietor may change the point of diversion so long as he does not do unreasonable injury to the rights of the lower owners upon the stream.[6]

Where the riparian owner owns the land on both sides of the stream he has the right to make any change upon his own lands of the course of the stream. This is also true where the riparian owner upon the opposite side of the stream does not object or assists in this change. However, in such cases the flow of the water must be returned to the natural channel before it reaches the lands of the riparian owners below.[7] "It is a settled principle

of the common law that a proprietor may change the whole course of a stream within the limits of his own land, provided he restores the water undiminished to its original channel before leaving his premises, and other persons are not injured by such diversion."[8] The diversion from the natural stream may be also made upon the lands of others and the waters carried over such lands to the riparian lands of the owner making such diversion, provided, of course, that rights of way may be acquired over the lands of the intervening owners.[9]

§ 495. **The manner of the use must be reasonable.**—It was also held that under the common law the manner of the use of the water by riparian owners must be reasonable and always made after taking into consideration the rights of the other owners upon the same stream. The use must be such that there will be no waste. It is a settled rule of the common law that all waste is prohibited; and if brought to the attention of the Court in a proper action will be enjoined.[1] The method of the application of the water is entirely immaterial so long as the riparian owner applying the same keeps within the rule of reasonable use as fixed by the principles of the common law and the rights of others are not materially and substantially injured by such use.[2] So in a case where the riparian owner in the use of water permits the

Rep. 825, where it was held that although a water course flowing through a tract of land has been changed to an artificial channel, at the time a railroad constructs its roadbed through such tract the company is bound to provide for the flow of the waters through a channel and through ways for freshets the same as though the channel were a natural one, if it had existed for a number of years and is to all appearances permanent.

same to spread out so that a large proportion will be lost by unnecessary evaporation, such use is unreasonable, and wasteful.[3] And again, where it is ditched through porous soil in such a way that much or all is lost before the water actually reaches the place of intended use.[4] The use of the water by one owner must also be such that it does not flood the lands of other riparian owners.[5] Again, the use must not unreasonably accelerate, or retard, the flow of the stream from which the water is taken.[6] It must be borne in mind that in all cases of use of waters by any riparian proprietor the method of use is immaterial so long as it does not materially and substantially injure the rights of other riparian proprietors on the same stream. As was held in a recent California case, a riparian proprietor has the right to make any use of the water beneficial to himself on the riparian land which his situation enables him to make; but if his use involves a consumption of water he can not use more than his reasonable share, as compared with the other riparian owners, and he must not pollute the water to the injury of others entitled to it.[7]

**§ 496. All surplus water must be returned to the stream after use.**—There is one well-settled rule of riparian rights to the use of the waters and that is, after diversion and use of the water, all surplus water must be returned to the natural stream from which it was taken before it reaches the lands of the riparian owners below the lands of the one so using the water. And, as regarding this return of the water, it makes no difference as to the purpose for which it was originally diverted. It might have been diverted for irrigation, for mill purposes, for the development of power, or

7 Mentone Irrigation Ditch Co. v. Redlands Electric Light & Power Co., 155 Cal. 323, 100 Pac. Rep. 1082, 22 L. R. A., N. S., 382, 17 Am. & Eng. Ann. Cas. 1222; Gould v. Eaton, 111 Cal. 639, 44 Pac. Rep. 319, 52 Am. St. Rep. 201; Bathgate v. Irvine, 126 Cal. 135, 58 Pac. Rep. 442, 77 Am. St. Rep. 158.

for any other purpose to which the use of the waters of natural streams is applied; but after this use, or after any water is diverted which is not used, it must all be returned to the natural stream from which it was taken so that those below who are entitled to the same right of use may not be injured. If the water is not so returned it is considered a wasteful, unnecessary, and unreasonable use of the water.[1] The manner of making the return of the water to the natural stream is immaterial, but it must be returned.[2] As was said in a recent California case upon the subject of the return of the water to the stream by a riparian owner: "The water he does not consume must be returned to the stream before it passes his land."[3] This subject, however, will be more thoroughly investigated when we come to a discussion of Irrigation as a Riparian Right.[4]

§ 497. **No priority of right at common law.**—As we have seen, at common law the right of every proprietor on a stream to the use of the running water thereof exists only as an incident to the private ownership of the bank bordering on the stream, and arises *ex jure naturae*,[1] and is equal in all the proprietors whose lands adjoin the same stream. And, as we have seen, this right to the reasonable use of the water of a stream, as it passes through or by a proprietor's lands, depends upon all of the circumstances of each particular case; and, also, after a riparian owner has made a so-called "reasonable use" of it, he must return it without substantial

diminution in quantity, or alteration in quality, to its natural bed or channel before it leaves his own land, so that it will reach the proprietor below him in its full, original, and natural condition. If he is the owner of the land adjoining the stream his rights exist in and to the waters thereof, whether he chooses to exercise them or not, and he may begin to exercise them when he will.[2]

So, under the common law, a prior settlement on the land, or a prior use of the water by any one riparian owner, is not recognized as giving any superior right, either higher up or lower down on the stream, or as against any of the other proprietors abutting on either side of him on the shores of a lake. Therefore an exclusive right to the use of the water by one owner as against the others can not be successfully claimed by virtue of mere prior use or occupancy, as against the equal or correlative rights of all the other proprietors whose lands touch upon the same stream, unless he has acquired a grant from all the other proprietors affected by such use, or sufficient time has elapsed for him to obtain title to such use by prescription, which, of course, presupposes a grant.[3] In other words, priority of use is not recognized, and the doctrine of prior appropriation is not the doctrine of the common law.[4] In

the language of Mr. Justice Story, in the case of Tyler v. Wilkinson:[5] "There may be an appropriation by general consent or grant. Mere priority of appropriation of running water, without consent or grant, confers no exclusive right. It is not like the case of mere occupancy, where the first occupant takes by force of his priority of occupancy. That supposes no ownership already existing, and no right to the use already acquired."[6] Also, in a

Goddard's Law of Easements, 250; Mason v. Hill, 5 B. & Ad. 1, 2 Nev. & M. 747, 2 L. J. K. M. N. S. 118, 110 Eng. Reprint 692; Rutland v. Bowler, Palmer, 290, 81 Eng. Reprint 1087; Howard v. Wright, 1 Shaw 64; Van Bergen v. Van Bergen, 3 Johns. Ch. 282, S. C., 8 Am. Dec. 511.

Goddard in his Law of Easements, p. 251, declares: "That all riparian owners of natural streams have a riparian right to the use of water as it flows past their land, as long as they do not interfere with the natural rights of other riparian owners, and to sue for disturbance is now an established doctrine of law." . . . He adds: "The doctrine (of appropriation) was not established until comparatively modern times," etc. He states, after referring to some of the early decisions, that the theory of appropriation was much modified by various decisions, "as the nature of riparian rights was brought more fully under consideration." He concludes: "Appropriation of the water of flowing streams has thus gradually fallen from being considered the means of acquiring important rights to being deemed of *no importance whatever.*"

See 32 Edward III; Angell on Water Courses, 93; Year Book, 14 Henry VIII, 31.

In Chasemore v. Richards, 7 H. L. Cases 384, Lord Wensleydale declares: "We may consider, therefore, that this proposition is indisputable, that the right of the proprietor to the enjoyment of a water course is a natural right, and is not acquired by occupation"; Shury v. [5] 4 Mason 397, Fed. Cas. No. 14,312.

[6] See, also, the opinion of the same learned judge in Whipple v. Cumberland Mfg. Co., 2 Story (Cir. Ct.)

North Carolina case Mr. Chief Justice Ruffin said: "There is no prior or posterior right in the use, for the land of each enjoyed it alike from the origin of the stream, and the priority of a particular new application or artificial use of the water does not, therefore, create the right to that use."[7] Again, in the case of Dumont v. Kellogg,[8] that great expounder of the law, Mr. Justice Cooley, said: "We may dismiss from our mind the fact that the plaintiff has first

661. There is, however, a class of English cases which seem to hold to the contrary of the above rule, evidently upon the theory of the civil law as laid down by the earliest authorities upon the subject. These cases are notably, Bealey v. Shaw, 6 East 208, 2 Smith 321, 102 Eng. Reprint 1266; Saunders v. Newman, 1 B. & Ad. 258, 106 Eng. Reprint 95; Williams v. Morland, 2 Barn & C. 910, 107 Eng. Rep. 620, 915; Cox v. Mathews, 1 Vent. 137.

But, so far as we can see, this principle was never approved in America to any great extent. However, see Hatch v. Dwight, 17 Mass. 289, 10 Am. Dec. 145; and opinion of Duncan, J., in case of Strickland v. Todd, 10 S. & Rawle's 69, who in construing the following passage of Blackstone: "If a stream of water is unoccupied, a person may erect a mill thereon and detain the water yet not so as to injure his neighbor's prior mill, *for he has by first occupancy acquired a property in the current*" (2 Blackstone Com. 403), said: "My own opinion is, that this doctrine ought not to be applied here."

Had this rule been adopted, it would have thrown to the ground the fundamental principles of the common law relating to running water, and all the leading cases respecting the usufructuary rights of riparian proprietors. As Chief Justice Thompson of the Supreme Court of New York said in the case of Platt v. Johnson (15 Johns. N. Y. 213, 8 Am. Dec. 233), "to give such an extension to the doctrine of occupancy would be dangerous and pernicious in its consequences. The elements," he adds, "being for general and public use, where the benefit is appropriated to individuals by occupancy this occupancy must be regulated and guarded with a view to the individual rights of all who have an interest in its enjoyment, and the maxim, *sic utere tuo ut alienum non laedas*, must be taken and construed with an eye to the natural rights of all."

[7] Pugh v. Wheeler, 2 Dev. & B. (N. C.) 55.

See, also, Heath v. Williams, 25 Me. 209, 43 Am. Rep. 265, and note; Smith v. Rochester, 92 N. Y. 463, 44 Am. Rep. 393; Platt v. Johnson, 15 Johns. 213, 8 Am. Dec. 233; Gilman v. Tilton, 5 N. Kennedy, 43 Ill. 67; Cowles v. Kidder, 24 N. H. 364, 57 Am. Dec. 287; McCarter v. Hudson etc. Co., 70 N. J. Eq. 695, 65 Atl. Rep. 489, 14 L. R. A., N. S., 197, 118 Am. St. Rep. 754, 10 Am. & Eng. Cas. 118, affirmed 209 U. S. 349, 52 L. Ed. 828, 28 Sup. Ct. Rep. 529.

[8] 29 Mich. 420, 18 Am. Rep. 102.

put the waters of the stream to practical use, since that fact gave him no superiority in right over the defendant. The settled doctrine is now that priority of appropriation gives to one proprietor no superior right to that of the others, unless it has been continued for a period of time, and under such circumstances, as would be requisite to establish rights by prescription."[9]

Coming down to the Western States of this country, which adhere to the common law of riparian rights as one of the systems governing waters and water rights, we find that in construing such rights the Courts adopt the present rule in England to the effect that there is no priority of right as between riparian owners upon the same stream, but that their rights are equal or correlative without regard to the time of the settlement of the land adjoining the stream or of the time of the first use of the water. In the case of Lux v. Haggin[10] it is said: "In examining the numerous cases which establish that the doctrine of appropriation is not the doctrine of the common law, we meet an embarrassment of abundance." And in a leading case in Oregon[11] it is said: "There is no such thing as a prior riparian ownership, so far as distribution of water for irrigation purposes between riparian owners is concerned."[12] In the case of Williams v. Altnow[13] it was said: "But in this respect the rights of all the riparian proprietors are equal, regardless of location on stream, or date of acquiring title. There can be no priority of rights as between riparian proprietors. The right of the first settler is not superior to that of the last."

§ 519. Riparian owner and prior appropriator at the same time.
§ 520. Manner of taking the water.
§ 521. Change in manner of taking the water—Change of use.
§ 522. Surplus water must be returned to the natural stream.
§ 523. Mere possession without title gives no riparian right.
§ 524. Right to water in artificial water courses.
§ 525. Conclusions.

**§ 498. Scope of chapter.**—In the previous chapters of this part we have discussed the common law theories of riparian rights.[1] In

[1] See Chaps. 21-25, Secs. 450-497.

the following part we will discuss the rights in waters and water courses under the civil law of the Romans, and how that law, as modified by various nations, was introduced into different portions of this country and still forms the basis of many of our laws upon the subject of waters.[2]

In this chapter we will endeavor to show how in certain States the old common law rule of England has been modified and changed to the extent of instead of enforcing the strict rule of the common law as it is known in England and some of our Eastern States, to the effect that the waters must be permitted to run in their natural channels, and undiminished in quantity and undeteriorated in quality, they may, under certain conditions and limitations, even under the common law, as modified, be diverted from the natural channels and applied to the irrigation of the soil.[3] In another portion of this work we will show how in other States, owing to the peculiar physical conditions of the country, the common law upon the subject of water has been entirely abrogated, either by statute or by Court decision, and what is known as the "Arid Region Doctrine" of appropriation has been substituted in its stead.[4]

**§ 499. Use of water for irrigation a natural or artificial want—Upon principle.**—There has been a great deal of academic discussion among the Courts and others as to whether the use of water for irrigation was to supply a natural or an artificial want; and the authorities upon the subject seem to differ considerably. The distinction between "natural" and "artificial" wants is the basis for the common law distinction between the use of water for "ordinary" and "extraordinary" purposes, discussed in previous sections.[1] As these terms are applied under the common law rules, "natural wants" may be supplied by the "extraordinary" use of the waters of a stream;[2] while upon the other hand, the "artificial wants" must be supplied by the reasonable use of the water, these latter being secondary in right of use to the first. In other words, the first class belong to those uses which are absolute necessities, and the latter class of uses belong to those which simply

add to the profit, comfort, convenience, or the prosperity of the proprietor.[3] The difficulty into which the Courts in rendering the decisions upon this subject have fallen seems to have been from endeavoring to apply the common law principles of uses for natural and artificial wants to mixed classes of these wants of the water, and also to apply the same to the peculiar conditions of the respective localities and jurisdictions where the decision was rendered, as the only criterion.[4]

It must be borne in mind that the physical conditions of different portions of our country differ greatly. We have localities where the rainfall is so great that there is no question upon the subject of sufficient moisture to raise crops, but the principal question, relative to water in these localities, which comes before the Courts, is that of drainage. Upon the other hand, we have localities with exceedingly rich soil, which are so hot and dry and so absolutely devoid of moisture that were they without irrigation ten acres would produce enough to give a horned toad but a scanty livelihood. But with irrigation they will produce such crops of all kinds as are a surprise to the world, and especially to the Eastern farmers. It must also be borne in mind that due largely to this difference in conditions two separate and distinct systems of water rights have grown up in different portions of the country, and even in different portions of this Western country: One, the Arid Re-

3 See Union Mill & M. Co. v. Ferris, 2 Sawy. 176, Fed. Cas. No. 14,371, 8 Morr. Min. Rep. 90; Gould on Waters, Secs. 205-209; Miner v. Gilmour, 12 Moore P. C. C. 121, 7 Week. Rep. 328, 14 Eng. Reprint 861.

See, also, Hough v. Porter, 51 Ore. 318, 95 Pac. Rep. 732, 98 Pac. Rep. 1083, 102 Pac. Rep. 728, where the Court classifies water for the proper irrigation of such garden produce as may be necessary for the proper sustenance of a settler and his family among the absolute necessities, and hence a natural want.

4 "This subject has been confused needlessly by the unfortunate use of the words 'natural' and 'ordinary' in this connection to distinguish those uses which the common law does not attempt to limit, and 'artificial' and 'extraordinary' to designate those which are required to be within reasonable bounds." Meng v. Coffey, 67 Neb. 500, 93' N. W. Rep. 713, 60 L. R. A. 910, 108 Am. St. Rep. 697.

See, also, on same subject, Brown v. Collins, 63 N. H. 442, 16 Am. Rep. 372; Crawford Co. v. Hathaway, 67 Neb. 325, 93 N. W. Rep. 781, 60 L. R. A. 889, 108 Am. St. Rep. 647; Jones v. Conn, 39 Ore. 30, 64 Pac. Rep. 855, 65 Pac. Rep. 1068, 54 L. R. A. 630, 87 Am. St. Rep. 634; Rogers v. Overacker, 4 Cal. App. 333, 87 Pac. 1107.

See, also, for ordinary and extraordinary uses, Secs. 486-491.

gion Doctrine of appropriation, based upon the priority of the appropriation of water for beneficial uses; and the other, the common law doctrine, whose basis is equality of use between all those who own lands bordering upon the streams, and that, too, regardless of the question as to whether the use of water for irrigation comes within the class of natural or artificial wants, discussed in the preceding sections.[5] We will say that man, in order to supply even his natural wants, must eat, as well as drink. And, in our opinion, it is left to the Court of the State where water is not needed to any extent for irrigation to make the correct distinction. The Supreme Court of Illinois, in the case of Evans v. Merriweather,[6] after holding that in that State the use of water for irrigation was to supply an artificial want, and not absolutely necessary to man's existence, said: *"In countries differently situated from ours with a hot and arid climate water doubtless is indispensable for the cultivation of the soil, and in these water for irrigation would be a natural want."* And upon the question of the difference in conditions in portions of the West, and even in different portions of the same State, the California Court, in the case of Lux v. Haggin,[7] said: "It may be that, under the physical conditions existing in some portions of the State, irrigation is not, theoretically, a 'natural want' in the sense that living creatures can not exist without it; *but its importance as a means of producing food from the soil makes it less necessary, in a scarcely appreciable degree, than the use of water by drinking it."* Again, as was said in a much later California case:[8] "In an arid country water for irrigation may become a natural want of man, as exigent as when needed for domestic purposes, since without it vegetation would cease, and the sources of life be indirectly destroyed."[9]

Hence, as a conclusion from the above argument, it must follow that it depends entirely upon the climatic and physical conditions of the locality where the question is raised, whether or not the use of water for irrigation is a natural or artificial want. In England and in the Eastern States, and in some localities of the West,

[9] See, also, late case of Hough v. Porter, 51 Ore. 318, 95 Pac. Rep. 732, 98 Pac. Rep. 1083, 102 Pac. Rep. 728.

the use of water for irrigation may be regarded as an artificial or extraordinary use.[10] And, upon the other hand, in the arid portions of the country, where irrigation is absolutely necessary in order to raise any crops, upon principle, the use of water must be regarded as a natural want.[11]

**§ 500. Use of water for irrigation a natural or artificial want—The common law classification.**—What we have said in the preceding section are our views as to the use of water for irrigation being a natural or an artificial want, as based upon principle and common sense.[1] There is no more reason in holding that a person can consume the flow of the entire stream in order to furnish water for drink for a family and for cattle than there is that he can consume it for the purpose of irrigating a small patch of garden, where the absolute necessity requires it in order to supply food for the same household. They both tend to fill the immediate necessities of life.

But when we come to the common law classification, even in the Western States, of the right to the use of water for irrigation, we find it almost always classified as an artificial want calling for an extraordinary use of the water. Therefore, among riparian owners, under the strict construction of the common law doctrine, the use of water for irrigation is an extraordinary use, and is beyond question a use to supply an artificial want. All the rights of the riparian proprietors upon the same stream are equal; and, after having had their natural wants supplied, and there is still water

1 See Sec. 499.

in the stream, they have all an equal right to use the surplus for any artificial purpose or want, including that for the irrigation of lands.[2] And in those States which hold to the common law rule, it is held that where the water is insufficient to supply all the natural wants, the use for irrigation by one proprietor must be held in subordination to the use for domestic purposes and for drink for man and beast.[3]

The common law distinction discussed above is well set forth in a recent Oregon case[4] in the following language: "For domestic use, including water not only for his household, but also for such animals as are essential for the proper sustenance of his family, the upper riparian owner may take so much of the water of a natural stream as may be necessary for that purpose, although none may be left for the lower riparian owners. So far the use is grounded on actual necessity. But irrigation is not so essentially a vital requirement, and riparian use for that purpose is limited

at all times by the condition that it must be so exercised as not to materially injure the rights of other riparian owners in the proportional use of the water of the same stream for the irrigation of their riparian lands. On the other hand, an appropriator, subject to rights in existence at the time his appropriation is made, may take all the water he can use reasonably and without waste for a beneficial project, although it may be the lion's share and none may be left for those who come afterward. In other words, a riparian owner using water in that capacity is, in a sense, always a tenant in common with other riparian owners on the same stream whose rights, at least for irrigation, he is bound not to injure materially by his riparian use of the water. The appropriator, however, is always a tenant in severalty, owing no duty or respect to those endeavoring to use the water by title subsequent to his own." In many of the States, by statutory enactment, an order of preference rights to the use of water is fixed, usually giving the first right to the purpose of domestic uses.[5]

§ 501. **Early English doctrine.**—In England the use of water for the purpose of irrigation is practically unknown, especially as compared with its use for that purpose in the United States, or even in some of the British Provinces, notably India,[1] Australia,[2] Egypt,[3] South Africa,[4] or even in her possessions in America—Canada and the Northwest Territories.[5] That country having small rivers, and a damp, humid climate with plenty of rainfall, has never found it necessary to use the water in her natural streams for the purposes of irrigation as have certain portions of the United States. But, as England is the source from which we obtain the principles of law known in the history of jurisprudence as the common law, we naturally turn to that country to learn what were her ideas upon the subject of irrigation and her rules governing the same. Owing to the comparatively unknown practice of irri-

gation in England, we find that the cases decided in that country are few as compared with the number of decisions in this country, in which the controversy has been in respect to the diversion of water from a water course for the purpose of irrigating land, and also that the English law upon this subject is today unsettled. Nevertheless, the authorities seem to agree upon two propositions, and these are, that the water of a natural stream can not be so diverted to the material diminution of the quantity of water which naturally flows in the water course by one riparian proprietor to the prejudice and injury of the rights of any of the others; and, that the water must not be diverted at all, unless it be again returned into the water course with no other diminution than that caused by absorption and evaporation.[6]

In a case cited by Mr. Angell in his work on "Water Courses"[7] an action was brought for the disturbance of a water course and the plaintiff was nonsuited, on the ground that the water after being used for irrigation was returned to the channel. But afterward the Court of King's Bench set aside the nonsuit, because it was shown that a portion of the water was lost by the process of evaporation and absorption. This case would seem to hold that the common law did not recognize at all the right to use the water of natural streams for the purpose of irrigation, for without the loss of some portion of the water by absorption and evaporation its use for that purpose would be a physical impossibility.[8] So also in all the decisions of England, although the term "natural and artificial wants" does not seem to be used, the Courts hold that the use of water for the purpose of irrigation, if permitted to be exercised at all, can only be exercised by one riparian pro-

prietor so that the rights of any of the other proprietors will not be prejudiced or infringed upon.[9]

§ 502. **Later English doctrine.**—The present English law upon the subject is much more liberal in the use of water for irrigation than the earlier cases cited in our last section. However, as late as 1859, the English Courts were reluctant to change their position upon the subject, although in America the old common law rule in this respect had been considerably modified. In the case of Chasemore v. Richards [1] Lord Wensleydale (Baron Parke), after discussing the case of Wood v. Waud,[2] in which it was said that a very liberal use of a stream for the purpose of irrigation was permitted in America, said: "It is not clear that a user, to that extent, would be permitted; nor do we mean to lay down that it would in every case be deemed a lawful enjoyment of the water if it was again returned into the river with no other diminution than that which was caused by absorption and evaporation attendant on the irrigation of lands of the adjoining proprietor. This must depend upon the circumstances of each case." And he held that it was a matter of correlative rights among the various owners upon the stream. That, upon the one hand, it could not be permitted that the owner of a tract of many thousands of acres of porous soil, abutting on one part of the stream, could be permitted to irrigate them continually by canals and drains, and so cause a serious diminution of the quantity of the water, though there was no other loss to the natural stream than that arising from the necessary absorption and evaporation of the water employed for that purpose; on the other hand, one's common sense would be shocked by supposing that a riparian owner could not dip a water-

ing pot into the stream in order to water his garden, or allow his family or his cattle to drink of it. He further held that it was entirely a question of degree, and that it was very difficult, and indeed impossible, to define in a general rule the precise limits which separate the reasonable and the permitted use of the stream for this purpose from its wrongful application; but that there was no difficulty in deciding whether a particular case falls within the permitted limits or not. In other words, the question depended entirely upon the facts of each particular case. That the right to have the stream flow in its natural state, without diminution or alteration, was an incident to the property through which it passes; that the water was *publici juris* in the sense only that all may reasonably use it who have the right of access to it. But he also held that the right to the benefit and advantage of the water flowing past the land of a riparian owner was not an absolute and exclusive right to the flow of *all the water* in its natural channel and in its natural state; but it was a right only to the flow of the water and the enjoyment of it, subject to the similar rights of all the proprietors of the bank of each side of the stream to the reasonable enjoyment of the same gift of Providence. It is only, therefore, for an *unreasonable and unauthorized use* of this common benefit that an action will lie; but for such a use it will. This case may be considered the opening wedge for the modern English doctrine upon the subject of the use of the waters of a stream for the purpose of irrigation, under the common law. But in America, owing to the different conditions, a much broader rule was being adopted upon the subject, even in our Eastern States, as we shall see in the next sections. And the rule which was established in the Eastern portion of the United States, was afterward adopted in England, to the effect that the right of irrigation is a common law right of a riparian owner, still, however, to a limited extent, provided that no injury is done to the other riparian owners.[3] Under this rule no exclusive right to the water can be obtained, but the right must be common to all of the riparian owners.

[3] Swinton Waterworks Co. v. Wilts etc. Co., L. R. 7 H. L. 697, 45 L. J. Ch. N. S. 638, 33 L. T. N. S. 513, 24 Week. Rep. 284; Embrey v. Owen, 6 Exch. 352, 20 L. J. Exch. N. S. 212, 15 Jur. 633, where the Court held that no action will lie for taking an inappreciable amount of water from a stream for the purpose of irrigation.

**§ 503. Early Eastern American doctrine.**—During the early history of this country, when the population was comparatively sparse, even in the Eastern States, the right of a riparian proprietor to divert the water from a natural stream and use it for the purpose of irrigation was recognized to a considerable latitude. It was even held at this period that the diversion of water for this purpose, by a riparian proprietor, was to supply a natural want.[1] One of the earliest cases in this country upon this subject is that of Perkins v. Dow,[2] and in that action it was decided by the Supreme Court of Connecticut that a riparian proprietor may take the water from a stream running through his land to fertilize his meadows; provided that he does not deprive the adjoining proprietors below of a sufficiency of water for kitchen purposes, or for watering their cattle; and provided the water which is diverted for irrigation shall (*unless absorbed on the land*) be returned to its natural channel before the stream leaves his land. And if a person by absorption on his own land can dispose of the whole of the water, excepting only a bare sufficiency for the purposes before mentioned, he has the prior right because he is first on the stream and has the first opportunity. Also, in the case of Weston v. Alden,[3] the Supreme Court of Massachusetts held that, "A man owning a close on an ancient brook may lawfully use the water thereof for the purposes of husbandry, as watering his cattle or irrigating his close; and he may do this either by dipping water from the bank and pouring it upon the land or by making small sluices for the same purpose; and if the owner of a close below is damaged thereby it is *damnum absque injuria.*" This case essentially holds that the upper riparian proprietor on a stream has a right to use all the water of a stream without any regard to the wants of those below, and not even leaving enough in the stream for their "domestic purposes." That such was not the English rule has been shown above, and that such was not the later rule of the Eastern States which have adopted the common law upon this subject will be seen in the following section.

1 Gould on Waters, 2d Ed., Sec. 205. See, also, Perkins v. Dow, 1 Root (Conn.) 537; Weston v. Alden, 8 Mass. 136, 8 Morr. Min. Rep. 82; Hayward v. Mason, 1 Root (Conn.) 537; Blanchard v. Baker, 8 Greenl. (Me.) 253, 23 Am. Dec. 504.

For irrigation as a natural or artificial want, see Secs. 499, 500.

2 *Supra.*

3 *Supra.*

**§ 504. Later Eastern American doctrine.**—As the Eastern States became more thickly settled and the demand for water became greater the same States which had formerly allowed a very liberal use of water for the purpose of irrigation gradually restricted that use, until they had practically adopted all the common law rules upon the subject. And, according to the later decisions of the common law authorities of this country, this use of the water comes properly under the head of extraordinary uses, to supply an artificial want; and the use of the stream for this purpose by one riparian proprietor upon the same must be reasonable and must not materially injure or affect the rights of any of the other riparian proprietors upon the same stream.[1] In regard to the early Connecticut decisions, cited in our last section,[2]

1 Colburn v. Richards, 13 Mass. 420, 7 Am. Dec. 160; Cook v. Hull, 3 Pick. 269; Anthony v. Lapham, 5 Pick. 175; Blanchard v. Baker, 8 Greenl. (Me.) 253, 23 Am. Dec. 504.

In Baker v. Brown, 55 Tex. 377, the Court held: "That the right to use the water for the purposes of irrigation, when its use is not indispensable, but is resorted to for the purpose of increasing the products of the soil, must be subordinate to the rights of a co-proprietor to supply his natural wants, and those of his family, tenants, and stock by using the water for necessary domestic purposes. Davis v. Getchell, 50 Me. 602, 79 Am. Dec. 636, where it was held that a diversion of a large portion of the waters of a stream, by a proprietor of land through which the water course ran, rendered him liable to an action on the case by a proprietor of land below, from whom the water is thus diverted; although the latter thereby sustains no present actual damage.

in the opinion of Mr. Chief Justice Swift, rendered in the later case of Ingraham v. Hutchinson,[3] they reverse the common law, and are repugnant to a statute of that State in affirmance of that law. The Judge, in giving the opinion of the Court, and referring directly to the cases cited above, says: "It was decided that a man may divert a stream of water to manure and enrich his meadows, to the prejudice of a mill that had been erected on the stream below more than twenty years. This *is reversing the common law*, and not only gives to the upper proprietors on rivers the advantages to which the lower are entitled, but denies that even seventy years' exclusive enjoyment of water, in a particular manner, will confer an absolute right." This rule, restricting the use of water for irrigation, is especially true when the rights of other riparian proprietors for the purpose of supplying their natural wants and domestic necessities, or to irrigate their own lands, are invaded, unless the first irrigator has gained the right in some mode known to law, as by grant or prescription. In other words, at common law the right to use water for irrigation is subordinate to the natural wants and equal with all other artificial wants, and is so restricted and hemmed in by the rules of that law that its practice, as the same is known in the arid regions of the United States, is rendered almost an impossibility.

In a still later Connecticut case, that of Gillett v. Johnson,[4] the Court thus speaks of the right of the defendant to use the water of a stream to irrigate lands, as limited and restricted: "She was bound to apply the water in such a reasonable manner and quantity as not to deprive the plaintiff of a sufficient supply for his cattle. The claim of the defendant was, that she had a right to divert the whole for the purpose of irrigation, regardless of the rights of plaintiff. Such diversion was unreasonable and therefore illegal." Also in another case, decided by the Supreme Court of New York, the parties in which were owners of adjoining farms. On the farm of the defendant, within five or six rods of the land of the plaintiff, there was a spring, from which the water in its natural channel ran over the land of the plaintiff. The defendant diverted the water from the spring and caused it to flow upon his meadow for the purpose of irrigation, to the extent of three or four acres, for which diversion in the Court below the plaintiff recov-

[3] 2 Conn. 584.

[4] Gillett v. Johnson, 30 Conn. 180.

ered judgment. In rendering the opinion of the Supreme Court, on appeal, the Chief Justice said: "The defendant has a right to use so much as is necessary for his family and cattle, but he has no right to use it for irrigating his meadow if thereby he deprives the plaintiff of the reasonable use of the water in its natural channel." [5]

**§ 505. Later Eastern American doctrine—Chancellor Kent's opinion.**—One of the most frequently quoted and respected American writers upon this subject is Chancellor Kent. Writing, as he did, at a comparatively early period in the history of American jurisprudence, and before statutory enactments and case law had invaded the precincts of the common law of England to any great extent in this country, and standing at the very head of his profession both as a law writer and expounder of the law, he certainly can be quoted as among the very highest authorities of his day upon this subject of the use of waters of natural streams and lakes by riparian proprietors. "Every proprietor," he says, "of lands on the banks of a river has naturally an *equal* right to the use of the water which flows in the stream adjacent to his lands, as it is wont to run (*currere solebat*), *without diminution or alteration.* No proprietor has a right to use the water to the prejudice of other proprietors above or below him, unless he has a prior right to divert it, or a title to some exclusive enjoyment. He has no property in the water itself, but a simple usufruct while it passes along. *Aqua currit et debit currere ut currere solebat* is the language of the law. Though he may use the water while it runs over his land as an *incident to the land, he can not* unreasonably detain it *or give it another direction,* and he *must return it* to its ordinary channel when it leaves his estate. Without the consent of the adjoining proprietors, *he can not divert or diminish* the quantity of water which would otherwise descend to the proprietors below, nor throw the water back upon the proprietors above, without a grant, or an uninterrupted enjoyment of twenty years which is evidence of it. This is the clear and settled doctrine upon the subject, and all the difficulty that arises consists in the application. The owner must so use and apply the water as to work no *material* injury or annoyance to his neighbor below him, who has an *equal right* to the sub-

5 Arnold v. Foot, 12 Wend. (N. Y.) 330.

sequent use of the *same water;* nor can he, by dams or any obstruction, cause the water injuriously to overflow the grounds and springs of his neighbor above him."

Then follows the passage that is often quoted to prove that water, under the common law, can not be employed for irrigation. It is as follows: "Streams of water are intended for the use and comfort of man; and it would be unreasonable and contrary to the universal sense of mankind to debar every riparian proprietor from the application of the water to domestic, *agricultural,* and manufacturing purposes, provided the use of it be made under *the limitations which have been mentioned;* and there will no doubt inevitably be, in the exercise of a perfect right to the use of the water, some evaporation and decrease of it, and some variations in the weight and velocity of the current. But, *de minimis non curat lex,* and a right of action by the proprietor below would not necessarily follow from such consequences, but would depend upon the nature and extent of the complaint or injury and the manner of using the water. All that the law requires of the party by or over whose land a stream passes is, that he should use the water in a reasonable manner, and so as not to destroy, or render useless, or *materially* diminish or affect the application of the water by the proprietors above or below on the stream." [1]

"The unquestioned rule of the common law was, that every riparian owner was entitled to the continued natural flow of the stream. It is enough, without other citations or quotations, to quote the language of Chancellor Kent." [2]

§ 506. **Later Eastern American doctrine—Conclusions.**—As we have seen, according to a few of the earlier common law authorities of the United States the practice of irrigation seems to have been permitted under great latitude.[1] But this liberal doctrine was repudiated by the later common law authorities, and the right of a riparian proprietor to divert the waters of a stream running through his land was classified among those to supply his artificial wants, or those which were not absolutely necessary to his exist-

2 Mr. Justice Brewer in United States v. Rio Grande Dam & Irr. Co., 174 U. S. 690, 43 L. Ed. 1136, 19 Sup. Ct. Rep. 770, quoting from above section from Kent.

1 See Early American Doctrine, Sec. 503.

ence,[2] and could only be exercised in common with all the other proprietors whose lands touched upon the stream. As was said in the case of Blanchard v. Baker:[3] "Although by the case of Weston v. Alden,[4] the right of irrigation seems to be general and unlimited, yet subsequent cases have restrained it consistently with the enjoyment of the common bounty of Nature, by other proprietors, through whose land a stream has been accustomed to flow.[5] And the qualification of the right, by these later decisions, is in accordance with the common law." And the rule, especially in the Eastern States of this country, that an owner of riparian land has the right to have the stream flow through his land in its natural state, without diminution of quantity or change of quality, is qualified by the limitation that each of such owners is entitled to the correlative right to a reasonable use of the water for agricultural purposes.[6] But where the stream is small and does not furnish water more than sufficient to supply the natural wants of the different proprietors living on it, none of the proprietors can use the water for irrigation.[7]

It will be noticed that the law upon this subject in the Eastern States of this country is similar to the later English doctrine discussed in a previous section.[8] This is to the effect that the water of a stream may be used for irrigation to a very limited extent. If the stream is large and there is plenty of water for all, until

8 See for later English doctrine, Sec. 502.

some riparian proprietor objects upon a legal ground that some one of his rights upon the stream has been infringed upon, the water may be used by another proprietor for irrigating his land. If, upon the other hand, the stream is small and there is not water enough to supply all of the riparian proprietors their correlative rights in the stream, including that of using the water for irrigation, then no one proprietor has the right to use it for that purpose, if this use infringes upon the rights of the other owners. As was held in the English case of Embrey v. Owen,[9] no action will lie for taking an *inappreciable amount of water for irrigation;* but the Court holds that an action would lie for taking an appreciable amount for that purpose.[10] In addition to the above, many of the common law authorities hold that in case of any diversion of the water from a natural water course by one riparian proprietor, even without actual injury to any of the other riparian owners upon the stream, the common law authorities hold that a cause of action would lie against the diverter, on the ground that a right had been infringed upon. This is a doctrine powerfully sustained by the American common law authorities. Also, that for any purpose whatsoever, for any essential diminution of water which Nature directed should flow in a certain channel, the law will interfere;[11] for, as was said in the case of Tillotson v.

Smith,[12] "It is a long established principle of the common law that wherever any act injures another's right, and would be evidence in future in favor of the wrongdoer, an action may be maintained for an invasion of a right without proof of any specific injury."[13]

It will be here noticed how inapplicable the strict common law rule of riparian rights is to an arid region. As a general thing lands are not irrigated by "inappreciable" amounts of water. It takes large quantities of water to irrigate any extent of arid land. And if the common law rule, as it is laid down by the later English and Eastern American authorities, were strictly enforced in a great portion of this Western country, there would be plenty of water for all of the riparian owners to drink, but there would be very little food to eat if they had to depend upon what they could raise without irrigation.

We will now take up the question of the riparian right to irrigate land under the Western American doctrine, or in those jurisdictions which still adhere to certain portions of the common law relative to waters, but where, in certain localities at least, in order to raise crops irrigation is necessary.

**§ 507. Western American doctrine versus the doctrine of appropriation—Classification of States.**—We have seen in former portions of this work,[1] that under the strict common law rule of riparian rights, as recognized and enforced by the English authorities and also by the Eastern States, a riparian owner is only permitted to use so much of the waters of a stream upon which

[13] But see Bullard v. Saratoga Mfg. Co., 77 N. Y. 525.

[1] See Secs. 484, 485, 489-491.

his land touches and in such a manner as will not materially diminish its quantity or alter its quality.[2] In previous sections of this chapter we have shown that this rule is especially true as to the diversion of the water for the purpose of irrigation.[3] The rights of one proprietor in this respect are equal, or correlative, to use the more modern term, with the rights of all the other proprietors upon the stream. It will also be noticed that under the common law, English and Eastern American authorities, the Courts seem very reluctant to permit the use of the water at all for the purpose of irrigation. And, if the right is permitted, it always seems to the reader of the opinion as though the Court had strained a point to grant it. Coming to the arid and semi-arid regions of the United States, we find that all of the States formed out of these sections of the country adopted the common law of England as the foundation of their systems of jurisprudence, together with all of the common law theories of riparian rights. The fundamental principle of appropriation of water for beneficial purposes as originally established by the miners' customs has been adopted in all of the 18 States and Territories which are formed out of the arid and semi-arid regions. These States and Territories are Alaska, Arizona, California, Colorado, Idaho, Kansas, Montana, Nebraska, Nevada, New Mexico, North Dakota, Oklahoma, Oregon, South Dakota, Texas, Utah, Washington, and Wyoming.[4]

To be sure, later, in some of these jurisdictions, it was decided by the legislatures, or by the Courts, that certain features of the common law were inapplicable to the arid conditions of certain sections of this country, and in those States the common law upon the subject of waters was directly abrogated and the Arid Region Doctrine of appropriation substituted in its stead.[5] These latter States, seven in all, situated in the very heart of the arid region, followed the lead of Colorado in their abrogation of the common

5 For common law inapplicable to arid regions, see Secs. 588-594.

law as to this subject, and are Arizona, Colorado, Idaho, New Mexico, Nevada, Utah, and Wyoming.[6]

Other States situated either in the semi-arid region of the Middle West or on the extreme Western coast have adhered to the common law of riparian rights, and at the same time have adopted and enforced the Arid Region Doctrine of appropriation of water for beneficial uses. Thus in these States we have dual systems of law governing waters which are antagonistic in principle, and, consequently, are continually clashing. These States, counting the Territory of Alaska, are eleven in number, and are Alaska, California, Kansas, Montana, Nebraska, North Dakota, Oklahoma, Oregon, South Dakota, Texas, and Washington. These latter States followed largely the rule first laid down by California in its attempt to reconcile a rule governing waters, the very foundation principle of which is, that the water must continue to flow in its natural channel as it was wont to flow by Nature, with a rule which requires that in order to secure a right the water must be diverted from its channel and applied to some beneficial use or purpose. Those States which have totally rejected the common law theories as to the acquisition of water rights and the use of the water and rely wholly upon the doctrine of appropriation, are seven in number and are Arizona, Colorado, Idaho, New Mexico, Nevada, Utah, and Wyoming.[7] Hence it follows that there are two distinct systems or rules of law that govern the use of the waters flowing in the natural streams and lakes of the arid and semi-arid West—right to the use of the water by an appropriation of the same, and right to its use by virtue of an ownership of the soil adjoining which the stream runs. Of these two systems one has its foundation in the equal rights of *all* the riparian owners upon the same stream to the flow of the current in its natural or accustomed channel without material diminution in quantity or alteration in quality, regardless of any priority; and the other, which is almost the converse of the first, has for its basis a right, by virtue of priority, and without any ownership

[6] For abrogation of common law by these States, see laws of respective States named.

See, also, Arid Region Doctrine, Secs. 585-594.

[7] For Constitutional provisions declaring the use of waters to be a public use, see Secs. 378-385.

See, also, Arid Region Doctrine of Appropriation, Secs. 585-594.

of the soil being necessary, to appropriate and divert the water from its natural channel, without obligation upon the part of the appropriators to turn any of it back into the natural stream, and, if necessary for this purpose and within the extent of his appropriation, to use the whole of the water of the stream.

These two systems are antagonistic in their very foundation principles, and therefore antagonistic when it comes to the application of those principles. Had the Government of the United States taken as much pains in disposing of the waters of the public domain in as uniform and systematic a manner as it did of the public lands in the arid region, over which those waters ran, and the greater portion of which lands are absolutely worthless without the application of the water, the laws regarding water rights would not be in their present unsettled and inharmonious condition. But it is not the purpose of this work to debate what the law ought to be or what it might be, but what it is. And we will now proceed to discuss the general nature and extent of rights of riparian proprietors in and to the waters of the streams in those States in the arid West where the common law riparian rights are recognized and protected.

§ 508. **Western American doctrine—California rule.**—As we have seen in a previous section,[1] in some of the States and Territories of the Western portion of this country, riparian rights as defined by the common law have been entirely abolished; we will add that in others they have been modified to a great extent, and in still others they exist with but few modifications as they are interpreted by the Courts of England and the Eastern States.[2] We have also shown in previous sections,[3] that although irrigation of the soil under certain circumstances was perhaps allowed under the strict application of the common law theories, it was so restricted by certain rules and restraints placed upon its practicable workings that those theories unmodified were found to be wholly inapplicable to irrigation as it is known and applied in the "Great Arid West." In that part of the country, in order to make the soil productive, there must be an application of the

1 See Sec. 507.

2 For the exact difference, see the rules in the separate States and Territories, Part XIV.

3 See Secs. 500-506.

waters of the streams upon it. In order to apply it to the soil there must be an actual diversion from the natural stream; and, owing to the porous soil, the hot sun, and dry atmosphere, a certain loss or diminution in quantity must necessarily follow as a result of its application and use for irrigation. Hence, in all of the States and Territories in the arid West, even in those where the common law theories are most strongly applied to riparian rights, there has been a modification of these theories to this extent, that a riparian proprietor may take water from the stream and may make a reasonable use of it for purposes of irrigation. It is considered in the Pacific States that irrigation must be held in that climate "to be a proper mode of using water by a riparian proprietor," and the lawful extent of the use depends upon the circumstances of each particular case.[4] In other words, the right of a riparian proprietor to irrigate his lands, to the extent that it is permitted under the Western American doctrine of riparian rights, is a great modification and extension of that doctrine as defined by the later English and Eastern American authorities. And, strange as it may seem, it fell to the lot of California, the very State where the doctrine of appropriation of the water for beneficial uses originated, to lead off in this modification of the common law rule of riparian rights. The most famous case upon the subject, although not the first, was that of Lux v. Haggin,[5] in which Mr. Justice McKinstry, in rendering the opinion of the Court, quoted from Chancellor Kent the portion which has been so often referred to by the common law authorities as a high authority that water can not be employed for irrigation, and sometimes that it may, which is as follows: "Streams of water are intended for the use and comfort of man; and it would be unreasonable, and contrary to the general sense of mankind to debar any riparian proprietor from the application of water for domestic, agricultural, or manufacturing purposes, provided the use of the water be made under the limitation that he do no material injury to his neighbor below him, who has an equal right to the subsequent use of the same water."[6]

[4] Union M. & M. Co. v. Ferris, 2 Sawy. 176, Fed. Cas. No. 14,371, 8 Morr. Min. Rep. 90.

[5] 69 Cal. 255, 10 Pac. Rep. 674.

[6] 3 Kent Com. 439. It will be noticed that the above is not an exact quotation, but is a portion of two sentences. For the exact quotation, see Sec. 505.

The Justice, in construing this, said: "It seems to us that the foregoing, although a very distinct statement of the general proposition, *ought not to be taken literally*, unless the words 'material injury' be impressed with the signification the equivalent of a *substantial deprivation* of capacity in a lower proprietor to employ the water for useful purposes. The adjective is prefixed to injury, and the words seem to have reference to the enjoyment of the use by the inferior owner, not to his mere abstract right to the use as against others than riparian owners, and to intimate that he can not complain of a reasonable exercise of the use by another who possesses the general right in common with himself. The passage as a whole may fairly be said to convey the idea that water may be used for agricultural or manufacturing purposes when such use does not materially deprive the lower proprietor of water either for drinking or agriculture."

The case of Lux v. Haggin is cited as the leading case upon the subject, not only in California, but by the Courts of other States, which follow the California rule in adhering to riparian rights; and the case holds to the effect that it is the law of the State of California that riparian proprietors are entitled to a reasonable use of the waters of a stream flowing by or through their lands for the purpose of irrigation; and that what is a reasonable use is a question of fact, and depends upon the circumstances of each particular case. The Federal Court also recognizes this use of the water in California. In the case of California Pas. & Ac. Co. v. Enterprise Canal & L. Co.,[7] Wellborn, J., said: "The riparian doctrine, with irrigation as one of its uses, is the settled law of California."[8]

**§ 509. Western American doctrine—Enlargement of the common law.**—In order for a riparian proprietor to have the right to divert the water from a stream which runs through or by his land by virtue of his riparian ownership, and to the extent that it is permitted under the California rule, there is but one conclusion which can be reached, and that is that the common law in this

7 124 Fed. Rep. 741.

8 Citing Lux v. Haggin, 69 Cal. 255, 4 Pac. Rep. 919, 10 Pac. Rep. 674; Hargrove v. Cook, 108 Cal. 72, 41 Pac. Rep. 18, 30 L. R. A. 390; Gould v. Eaton, 117 Cal. 539, 49 Pac. Rep. 577, 38 L. R. A. 181.

respect has been greatly enlarged and extended to fit the conditions of the country.[1] In fact, that this is so has been generally recognized by the California and other Courts adhering to the rule. For instance, if a tract of patented land is in a State where the English common law doctrine of riparian ownership is enforced to the full, strict construction of the same, the owner of the land, if it is situated on a natural water course, would have the right to have the water of the stream flow down to his land without any material diminution in quantity, and could have the upper riparian proprietor enjoined from diverting the water in any way or for any purpose which would materially diminish its flow.[2] But, as was held in a recent California case,[3] such right would not accrue to the riparian owner of land in an arid region of a Western State, where irrigation is necessary to successful agriculture, and where the original rule as to riparian ownership *"has been modified"* so as to allow a riparian proprietor to divert a reasonable amount of the water of a stream and use it to irrigate his riparian land, although a material part of the water would be absorbed and prevented from flowing down to the lower proprietor. It was also held in an earlier California case that the doctrine of riparian ownership has "by judicial decision been modified, or rather, enlarged," so as to include the reasonable use of natural water for irrigating riparian land, although such use may appreciably diminish the flow to the lower riparian proprietor.[4]

Conn, 39 Ore. 30, 64 Pac. Rep. 855, 65 Pac. Rep. 1068, 54 L. R. A. 630, 87 Am. St. Rep. 634; Mentone etc. Co. v. Redlands etc. Co., 155 Cal. 323, 100 Pac. Rep. 1082, 22 L. R. A., N. S. 382, 17 Am. & Eng. Ann. Cas. 1222.

The reason for this modification or extension of the common law in this respect is, as held in a recent California case, if the rule of the common law is unfitted to conditions existing in a State, so that its application will work hardship and wrong rather than betterment and good, the Supreme Courts will refuse to follow it, but will adopt some more equitable rule.[5] And in the famous case of Katz v. Walkinshaw,[6] Mr. Justice Shaw, in rendering the opinion of the Supreme Court upon the motion for rehearing, held that the true doctrine upon the subject is that the common law by its own principles adapts itself to varying conditions, and modifies its own rules so as to serve the ends of justice under different circumstances. And, in stating the reason for the modification of the rule, held that whenever it is found that, owing to the physical features and character of the State where the common law is to be applied, and the peculiarities of its climate, soil, and productions, the application of a given common law rule tends constantly to cause injustice and wrong, rather than the administration of justice and right, then the fundamental principles of right and justice, on which that law is founded and which its administration is intended to promote, require that a different rule should be adopted.[7] Again, in a very recent case in Oregon[8] Mr. Justice King, in commenting upon the decision in the Kansas-Colorado case,[9] held that there was a strong and commendable tendency upon the part of the Supreme Court of the United States to recognize that the rigid rules of the common law, as interpreted and sought to be applied by those insisting upon the "undiminished flow" theory, are inapplicable to the many new and intricate questions necessarily arising under our form of government throughout the arid and semi-arid sections.[10] And so the common law of riparian rights has been modified and extended

so that the use can be made of the water of the natural streams, by virtue of riparian ownership, for the purpose of irrigating land, in those jurisdictions following the California rule in this respect, and that, too, where a considerable amount of the water of the stream is consumed. The modified rule does not limit the water which can be used for this purpose to an "inappreciable" amount, as was held to be the rule under a strict construction of the common law right.[11]

Some attempt has been made, by the Courts and others, to reconcile the irrigation of land as a riparian right, to the extent that it is exercised in California, upon the theory, as a Kansas Court puts it, that "The authorities are unanimous to the effect that the use of water for irrigation is one of the common law rights of a riparian proprietor"; and hence, already having that right, there has been no modification of the rule in the Western States, where the common law is adhered to.[12] The Kansas Court is incorrect in the statement that the authorities are unanimous upon the subject, as there are many powerful English and American authorities to the effect, that under a strict construction of the common law, water can not be diverted at all from a natural stream by a riparian proprietor for the irrigation of his lands, upon the theory that it would be an infringement on the rights of the other riparian owners.[13] To be sure, other cases hold that the right may be allowed, but the question of "reasonable use" of the water is held to an insignificant amount, as compared with the amount that is allowed under the Western American doctrine under discussion. It must be to the extent only of "an inappreciable amount," or "provided no injury" is done to any of the other

proprietors.[14] A careful study of the common law rules upon the subject will prove to the most obtuse mind that there has been a gradual modification and extension of the common law rules of riparian rights, from the earliest English and Eastern American cases down to the doctrine of the Western American States. It is not our purport here to enter into an academic discussion as to *how* the Western theory was adopted, whether it was through the flexibility of the common law to adapt itself to different conditions in different States, or, whether it was by a direct modification by the Courts in holding that the strict construction of the common law rule was inapplicable to the Western portion of the country, and hence to that extent it must be amended. However, we will say that in the ten Western States in this country, named in a preceding section,[15] a riparian proprietor has the right by virtue of his ownership of lands through which or by the side of which a natural stream flows to divert the water from the stream and use the same for the irrigation of his riparian lands, to a reasonable extent.[16] As was said by the Supreme Court of

California in one of the most recent decisions upon the proposition, in a case where it was contended by the plaintiffs that a riparian owner had the common law right to the full flow of the stream through his land: "The rule is evidently not suited to the conditions of a dry climate such as we have in this State. It is accordingly well settled here, that each riparian owner has a right to a reasonable use of the water on his riparian land for the irrigation thereof, and that the so-called common law right of each to have the stream flow by his land without diminution is subject to the common right of all to a reasonable share of the water.[17]

We will now take up the subject as to what extent water may be diverted for irrigation by riparian proprietors as one of their riparian rights under the Western American doctrine and as between each other, leaving the question of the right of appropriations subsequent to vested riparian rights on the same stream to another portion of this work.[18]

**§ 510. Western American doctrine—Extent to which water may be diverted.**—As we have seen in the previous sections, irrigation, especially in the arid and semi-arid States of this country, is held to be a proper mode of using the water of the natural streams by a riparian proprietor.[1] The question now is, To what extent

in the common law States may water be diverted for this purpose? An examination of the authorities upon the subject will disclose the fact that they differ materially in the different States. And in some of the States there are different rules applicable to different localities, varying according to the physical conditions. The State of Texas is divided into two divisions, arid and not arid, or humid.[2] In the arid portion water for irrigation is held to supply a natural want,[3] and the Court holds that in the arid districts the waters of all natural streams may be diverted and used by an upper riparian proprietor for the irrigation of his riparian lands, to the exclusion of the use thereof by a lower riparian owner for such purposes.[4] In other portions of the State, however, the Court holds that the use of the water of a stream for irrigation will not justify the upper owner in exhausting the water to the injury of proprietors lower down on the stream.[5] Although the State of Texas has the authority to adopt what rule governing and regulating the use of waters within its boundaries as it sees fit,[6] as long as there is no interference with navigation,[7] the above rule adopted for the arid portion of the State is not in accord with the rule adopted by the other Western common law States upon the subject. The general rule of the Western American doctrine is to the effect that a riparian proprietor is not entitled to divert and use all of the water of a stream without regard

See, also, Tolle v. Correth, 31 Tex. 362, 98 Am. Dec. 540, where the Court held that the maxim, "The water runs, and let it run," or "Every one has a right to have the advantage of a flow of water in his land without diminution or alteration," as applied by England and the Eastern States, where water is useful only in its flow, had no application to a State where water was useful for irrigation, and instead thereof the Court substituted the rule, "Water irrigates, and let it irrigate."

See, also, Mud Creek Irr. Co. v. Vivian, 74 Tex. 170, 11 S. W. Rep. 1078, where the Court also held that the old common law rule did not apply.

The rights of an upper riparian proprietor to the use of the water of the stream for irrigation purposes are superior to those of a lower proprietor. Cornick v. Arthur, 31 Tex. Civ. App. 579, 73 S. W. Rep. 410.

5 Fleming v. Davis, 37 Tex. 173.

6 For right of State over its waters, see Sec. 593.

7 For right of navigation, see Secs. 341-357.

to the wants and necessities of other riparian proprietors, although the amount so diverted and used was no more than is necessary for the irrigation of his riparian lands, unless the proprietor has acquired a title to the use of the excess of the water over and above the amount to which he is entitled by virtue of his ownership of the land, by means of a grant, prescription, or by means of a prior appropriation for beneficial uses, under the Arid Region Doctrine.[8] And in the latter case, of course, the rules applicable to that doctrine in the State where the appropriation is made will apply. In fact, there is but one state or condition where a riparian proprietor as such is permitted, under the Western American doctrine of riparian rights, to use all of the waters of a natural stream, and that is when they are necessary for domestic and household uses, and for the watering of a limited number of horses and cattle. In this case and for such necessities, where the stream is small, he may consume all of the water flowing naturally in the same.[9] But outside of this right, and especially under the common law right to divert the water for irrigation, as was said in the case of Lux v. Haggin, the leading case upon the subject, "An entire diversion of a water course by an upper riparian proprietor for irrigation is never allowed."[10] It is also held that no use of the

Conn, 39 Ore. 30, 64 Pac. Rep. 855, 65 Pac. Rep. 1068, 54 L. R. A. 630, 87 Am. St. Rep. 634; Stenger v. Tharp, 17 S. D. 13, 94 N. W. Rep. 402.

water, however great, by a riparian owner can give him rights by adverse user against another riparian owner.[11] In other words, the use of water for irrigation, under the Western American doctrine of riparian rights, as is also the case under the English and Eastern doctrine, is proper so long as it is kept within the limit, that it must not unreasonably prevent the possibility of a correlative use by all the other proprietors upon the same stream. That is to say, the use must be reasonable with reference to the rights of all the other proprietors.

We will now discuss the proposition as to what is a reasonable use by riparian proprietors of the waters of a natural stream for the purpose of irrigation, as it is declared under the Western American doctrine.[12]

**§ 511. Western American doctrine—Extension of the rule of "reasonable use."**—As we have seen in the previous sections, in the Western common law States, in those portions where irrigation is necessary to the successful cultivation of the soil, the doctrine of riparian ownership has by judicial decision been modified, or rather, enlarged, so as to include the reasonable use of the water from natural streams for irrigating riparian land, even though such use may appreciably diminish the flow down to the lower riparian proprietors.[1] It is a well-known fact that in the Western portion of this country the majority of the streams are comparatively small; hence, if any considerable amount of water is diverted, it will diminish the flow down to the lower proprietors. And, as it usually takes a considerable amount of water to irri-

This rule may prevent the use of any water from some of the streams for irrigation purposes, if they are so small that all of the water is required for domestic purposes; or one owner can not take out water for irrigation and still leave a proportionate share for the other owners. Baker v. Brown, 55 Tex. 377.

11 Walker v. Lillingston, 137 Cal. 401, 70 Pac. Rep. 282; Crawford Co. v. Hathaway (Hall), 67 Neb. 325, 93 N. W. Rep. 781, 60 L. R. A. 889, 108 Am. St. Rep. 647; Dunn v. Thomas, 69 Neb. 683, 96 N. W. Rep. 142; Mud Creek Irr. Co. v. Vivian, 74 Tex. 170, 11 S. W. Rep. 1078.

See, also as to prescription as between riparian proprietors, Sec. 1040.

12 See Secs. 511-517.

1 See Secs. 500-506.

See, also, Harris v. Harrison, 93 Cal. 676, 29 Pac. Rep. 325; Wiggins v. Muscupiabe Land & W. Co., 113 Cal. 182, 45 Pac. Rep. 160, 32 L. R. A. 667, 54 Am. St. Rep. 337; Bathgate v. Irvine, 126 Cal. 135, 58 Pac. Rep. 442, 77 Am. St. Rep. 158.

gate a tract of land in a proper manner, and the most of the water used is consumed in the operation so that it does not reach the lower proprietors at all by way of the natural channel of the stream, in order for a riparian owner on a small stream to be permitted to irrigate his land as one of his riparian rights, the common law rule as to "reasonable use" for this purpose had to be enlarged and extended so as to meet the physical conditions of that portion of the country, in those Western States where the common law is adhered to. So the Courts had one of three propositions to decide upon: A strict construction of the common law rule in this respect; a modification of the rule, so as to permit a practical use of the water for irrigation; or the entire abrogation of the common law of riparian rights, and the adoption of the Arid Region Doctrine only in these States, which doctrine is based upon prior appropriation and diversion for beneficial uses. As was said in the case of Meng v. Coffey:[2] "If the existence of a rule better applicable to parts of the State were of itself sufficient ground for judicial overturning of the law, the question would arise, What principle are we to adopt?" And the Courts and legislatures in these ten States, having theretofore adopted the common law upon the subject of riparian rights, rather than the "overturning of the law" in this respect[3] decided, as was their right, to extend the common law rule of "reasonable use," as it is recognized and enforced by the laws of England and the Eastern States, so that enough water might be diverted from the streams, as a riparian right, to be of some benefit to the owner in the irrigation of his lands, even if the owners below on the stream were technically injured, according to the strict construction of the common law rule, in their riparian rights, by the flow of the stream being considerably lessened when it reached their lands.[4] As was said in the case of Meng v. Coffey, "Nor do we believe that the common law rule of equality among riparian owners, *administered liberally with respect to the circumstances of particular localities,* is necessarily prohibitive of irrigation anywhere. . . . It would be impolitic to give an arbitrary or hard and fast

[2] 67 Neb. 500, 93 N. W. Rep. 715, 60 L. R. A. 910, 108 Am. St. Rep. 697.

[4] See cases cited, *supra.*

For strict construction of common law rule, see Sec. 504.

meaning to the word 'reasonable' in this connection. The use of the water for irrigation always involves some loss, and we do not think it would be wise to declare every perceptible diminution of the waters of a stream to be unreasonable. The necessity of a liberal view of what constitutes a reasonable use of water for irrigation has been judicially recognized."[5]

It was also held in a leading case in Oregon[6] that the strict rule of the common law, so often stated and reiterated in the books, that a riparian proprietor is entitled to have the entire flow of the stream come down to his premises, is subject to the *important limitation* that an upper riparian proprietor may make such use of the water as does not work any actual, material, and substantial damage to the common right which each proprietor has; and whether a use of the water for irrigation is of the character referred to, and therefore reasonable, depends upon the correlative rights of the other proprietors. And the Court further held that under this Western doctrine of the common law, that an owner was not a wrongdoer when he used the waters of a stream for the purpose of irrigation; nor does the fact that his land lies above the level thereof, so that it can not be irrigated by means of ditches wholly on his own lands, affect his right to the use of the water.[7] This extension of the rule of "reasonable use" is also so applied in the case of the smaller streams, in cases where the water for the entire stream is needed for irrigation by any one proprietor; and in these cases it is held that the Court of Equity has the power to apportion or divide the use of the water for irrigation according to time, when each appropriator may use the entire flow of the stream for a certain number of hours or days, as the case may be, and then it passes to the other proprietors for their use in the same manner.[8]

From the holding of the Courts in these ten Western common-law States and the liberal construction given to the rule of "reasonable use" the conclusion is irresistible that in this portion of the country, as to the use of the water for irrigation, the rule has been very much enlarged and extended, so that instead of permitting an "inappreciable" amount to be used, as is the rule under

5 Citing the above cases.

6 Jones v. Conn, 39 Ore. 30, 64 Pac. Rep. 855, 65 Pac. Rep. 1068, 54 L. R. A. 630, 87 Am. St. Rep. 634.

7 See, also, Charnock v. Higuerra, 111 Cal. 473, 44 Pac. Rep. 171, 32 L. R. A. 190, 52 Am. St. Rep. 195.

See, also, Remedies, Part XIII.

the strict construction of the common law,[9] an appreciable amount, or an amount which is of some practical use to the owner, is permitted. In the State of South Dakota it was recently held that where a water right is subsequent and inferior to another's riparian rights, the latter may use all the water required for domestic purposes and for proper irrigation of the land riparian to the stream before he permits any to flow down.[10]

§ 512. **Western American doctrine—Reasonable use of water for irrigation by riparian proprietors.**—In general, the term "reasonable use" of water for irrigation, as permitted in the Western States, which follow the common-law rule governing the use of water for irrigation, as a riparian right, is always relative.[1] This use does not depend upon the convenience of, or the profitable results to, any particular proprietor upon a stream; however, these questions may be considered with the other facts in any particular case. The question does depend upon the size, character, and situation of the stream, the fall of the water, its volume and velocity, the prospective rise and fall, the season of the year, the nature of the region, the character of the soil, the amount of water required to irrigate the land per acre, the number of the riparian proprietors, and the extent of the riparian land on the stream susceptible of irrigation, owned by each proprietor, the use to which the water may be put by all of the proprietors, the kind of crops to be irrigated, and their need of water, the means adopted for returning the water to the natural channel, and a variety of other circumstances and conditions surrounding each particular case.[2] So,

[1] For the ten States which adhere to the common law, see Secs. 507, 621.

It must be noted that in all of these States the laws also allow the appropriation of water under the Arid Region Doctrine. See Secs. 507, 621.

[2] Meng v. Coffey, 67 Neb. 500, 93 N. W. Rep. 713, 60 L. R. A. 910, 108 Am. St. Rep. 697; Jones v. Adams, 19 Nev. 78, 6 Pac. Rep. 442, 3 Am. St. Rep. 788; Harris v. Harrison, 93 Cal. 676, 29 Pac. Rep. 325, in which the Court said: "In such a case, the length of the stream, the volume of the water in it, the extent of each ownership along the banks, the character of the soil owned by each contestant, the area sought to be irrigated by each—all these and many other considerations enter into the solution of the problem; but one principle is surely established, namely, that no proprietor can absorb all the water of the stream so as to allow none to flow down to his neigh-

where a riparian proprietor claimed the right to the use of water upon lands which were valueless for irrigation purposes, as against the actual use of the water for beneficial purposes, the Court said: "A riparian proprietor's claim to make such a use of the waters of a stream is of course without legal foundation."[3]

A recent Washington case held that Section 6327 of the Remington and Ballinger Code which provides that any person owning lands, who is not the riparian proprietor or who being such has not sufficient frontage to attain a sufficient flow of water to irrigate his lands, shall be entitled to a right of way over lands lying between his lands and the stream or above or below it; but it was further held that the section "does not give a right to take water already appropriated, or to take away the rights of a superior riparian owner."[4]

Under the rules of the common law the term "reasonable use" must be liberally construed, with reference to the rights of all of the riparian proprietors on a stream, and it is declared by all of the authorities upon this subject that it is impossible to lay down any precise rule which will be applicable to all cases.[5] But there are some features of the subject upon which all the authorities agree as questions of law. One of these is that in no case can a riparian proprietor for the purpose of irrigation, as against the other proprietors either above or below him on the stream, use or successfully claim all of the water of a stream, in the absence of a prior legal appropriation. That can be done, if at all, only where the whole of the stream is absolutely necessary for strictly domestic

bor." Union M. & M. Co. v. Ferris, 2 Sawy. 176, Fed. Cas. No. 14,371, 8 Morr. Min. Rep. 90, where the Court said: "The question of reasonable use is not to be determined solely by the wants of the party using the water—whether the amount is sufficient for his own lawful purposes—but reference must also be had to the rights and needs of other proprietors upon the stream. 'The necessities of one man's business can not be made the standard of another man's rights in a thing which belongs equally to both.'"

purposes and to furnish drink for man and beast.[6] Again, an upper owner has no superior right to the use of the water by virtue of his position on the stream, but can divert only such an amount of the water as will represent his proportion of it, when all the circumstances in the case, including the number of other owners and their rights in the water, are taken into consideration.[7] So, again, the authorities agree that the water must not be used by a riparian proprietor for the irrigation of nonriparian land. We will more fully discuss this question in subsequent sections.[8] An-

[6] In an action by a lower riparian owner to restrain the diversion by an upper owner of the waters of a stream, a decree ordering that the whole of the water be allowed to flow unrestricted to plaintiff's lands in the natural flow, except a given number of inches, is erroneous, since defendant would thereby be deprived of the reasonable use of any part of the water for irrigation or other necessary purposes as riparian proprietor. The use of water for irrigation as a riparian right is limited by the condition that it must be so used as not to materially injure other riparian owners in their proportional use of the water from the same stream for the irrigation of their riparian lands. Caviness v. La Grande Irr. Co., —— Ore. ——, 119 Pac. Rep. 731.

[7] Jones v. Conn, 39 Ore. 30, 64 Pac. Rep. 855, 65 Pac. Rep. 1068, 54 L. R. A. 630, 87 Am. St. Rep. 634; Gould v. Stafford, 77 Cal. 66, 18 Pac. Rep. 879; *Id.*, 91 Cal. 146, 27 Pac. Rep. 543; *Id.*, 101 Cal. 32, 35 Pac. Rep. 429; Learned v. Tangeman, 65 Cal. 334, 4 Pac. Rep. 191.

other rule is that the water must not be used by an upper proprietor in a wasteful manner, so as thereby to prevent a reasonable use of the water by the lower owners.[9] And, again, the surplus water must be returned to the natural stream so that it can be used by the owners below.[10]

It follows as a conclusion from the above that a riparian proprietor in the Western States named may use the water of the natural streams for the irrigation of his riparian land, subject to the above limitations imposed by law. In all cases the use must be reasonable under all the circumstances of the case. What is a "reasonable use" under the liberal construction of the term by the courts of the Western States is a question of fact for the determination of the jury, within the limitations above set forth, under proper instructions of the Court. In the use by one proprietor no actual or substantial rights of the others must be infringed upon, or an action will lie, against the owner wrongfully using the water, at law for damages, or in equity for an injunction. It is also plain why, in the arid West (whose agricultural resources depend almost entirely upon the extent of irrigation) a strict construction of the common law was found to be a very inadequate and impracticable guide governing the right to the use of the waters of the natural streams; and why in the States formed from the country lying west of the one hundredth meridian the common law should have been modified in all, especially as to the use of the water for irrigation, and entirely abolished in some.[11]

§ 513. **Correlative rights of the several proprietors.**—Where the rights of riparian proprietors are referred to by the authorities as being "equal," that is not always what is meant in the strict sense of the word. Especially is this true under the Western American doctrine where the use of water for irrigation is allowed the owners on the banks of streams as one of their riparian rights. The terms "correlative rights," or "relative rights" are more ap-

propriate in this connection. No one would contend for a moment that it would be equitable to allow an owner who had but a few rods fronting on the stream, or a very few acres of land susceptible of irrigation, to have the same right to the use of the waters of the stream as an owner who had a mile or more fronting on the stream with, say, 1,000 acres susceptible of irrigation, especially where there was water in the stream enough for both, if divided according to their relative needs. So, again, a person who had 1000 acres fronting on the stream, and only ten acres susceptible of irrigation, should not be allowed the same right as one who had but 100 acres, all of which might be irrigated. Hence it is the rule in these Western States that a riparian owner's right to irrigate exists as an incident to the soil of the full amount of irrigable riparian land which he owns, as compared to the same character of land owned by all of the other riparian proprietors on the same stream. In other words, his right is measured by his necessities, with due regard to the correlative rights and necessities of the other owners on the same stream. Of course in cases where there are a large number of riparian proprietors whose rights are involved, there is great difficulty in determining what is a reasonable use by all. Many circumstances must be taken into consideration, and the result must depend upon the peculiar circumstances appearing in each particular case.[1] As an extreme illustration of this principle, in one California case it was held that where none of the land of a riparian owner was irrigable, "a riparian proprietor's claim to make such a use of the waters of a stream is of course without legal foundation."[2]

Upon this subject it was said by Judge Hawley, Federal Judge for Nevada: "Under the rules of the common law riparian proprietors would have all the right to a reasonable use of the waters of a stream running through their respective lands for the purpose

of irrigation. It is declared in all of the authorities upon this subject that it is impossible to lay down any precise rule which will be applicable in all cases. The question may be determined in each case with reference to the size of the stream, the velocity of the water, the character of the soil, the number of proprietors, the amount of water needed to irrigate the lands per acre, and a variety of other circumstances and conditions surrounding each particular case; the true test being whether the use is of such a character as to materially affect the equally beneficial use of the waters of the stream by the other proprietors."[3]

A riparian owner has a right to make a reasonable use of the waters of a stream flowing over or along his lands for the purpose of irrigation. This right should be measured primarily by the amount of water in the stream available for such purpose, the number of persons who use it, the size, situation, and character of the stream, and nature of the region.[4] However, the right of each proprietor having been once ascertained, an agreement may be made between all the owners that each take a portion of the water to irrigate their lands for all or a portion of the time; or, if the stream is small, that the apportionment may be by periods of time instead of by quantity or volume of the water.[5] Again, if an

5 For agreements as to apportioning water between riparian owners, see Sec. 535.

For the appropriation of water by periods of time, see Sec. 586.

agreement can not be reached between the various riparian claimants to the water, a court of equity has the authority to make the apportionment, in a proper action, and award to each owner either a definite share of the flow for continual use,[6] or all of the stream for a portion of the time.[7] These subjects will be more thoroughly discussed in other portions of this work to which references have been made.[8]

**§ 514. What lands may be irrigated by a riparian proprietor—Must be riparian and lie within the watershed of the stream.**—As we have seen in a previous portion of this work, lands, in order to be riparian, must border or touch upon the water of a stream or other body of water. In other words, the riparian owner must own the bank in order for his lands to be riparian.[1] This principle is also adhered to in the Western States which follow the common law and allow a liberal use of the waters of the natural streams for irrigation.[2] The question now arises, as to how far back from the stream the lands may lie, so that they may be irrigated as a riparian right, under the Western American construction of the common law. Upon this subject the States in question have adopted practically the same rule. For the present we will disregard the question of title,[3] and discuss the question from the standpoint of the water-

[6] For actions to apportion the water between riparian owners, see Remedies, Chap. 78.

See, also, Harris v. Harrison, 93 Cal. 676, 29 Pac. Rep. 325; Lone Tree Ditch Co. v. Cyclone Ditch Co., 15 S. D. 519, 91 N. W. Rep. 352; *Id.*, 26 S. D. 307, 128 N. W. Rep. 596; Verdugo W. Co. v. Verdugo, 152 Cal. 655, 93 Pac. Rep. 1021, where the Court held that where riparian land was partitioned, and water apportioned to the several tracts, it did not change the character of the rights of the respective parties; but the right assigned to each was a riparian right, and that one party will not be permitted to decrease the underground waters essential to the existence and preservation of the surface water, to the injury of the other riparian proprietors.

For riparian right in subterranean waters, see Secs. 1148, 1211.

[7] Wiggins v. Muscupiabe Land & W. Co., 113 Cal. 182, 45 Pac. Rep. 160, 32 L. R. A. 667, 54 Am. St. Rep. 337; Hough v. Porter, 51 Cal. 318, 95 Pac. Rep. 732, 98 Pac. Rep. 1083, 102 Pac. Rep. 728.

[3] As to title as affecting the riparian right to irrigate lands, see Sec. 518.

shed. The great weight of authority in these States holds that land in order to be riparian, and hence entitled to be irrigated as a riparian right, should lie within the drainage basin or watershed of the stream to which the riparian rights are claimed. This is so for the reason that, as soon as the land passes over the ridge or "divide" separating its drainage basin from another, it becomes tributary to another stream; and, therefore, if it touches this stream, it is riparian to it; if it touches no stream, it is not riparian land. So, if a divide cuts in two a tract of land held under one ownership, that portion only which lies within the drainage basin of the stream may rightfully be irrigated.[4]

If we are to adhere to the principles of the common law, this rule is undoubtedly the correct one. We have seen in previous sections,[5] that the use of the water for irrigation must be a reasonable one. We will also see in a subsequent section [6] that after its use all water not actually consumed must be returned to the natural stream, for a like use by the other riparian proprietors below. Now to run the water by means of tunnels, or otherwise, under the divide to another watershed, so that both the percolation and the surplus could not be returned to the stream from which it was taken, but

[4] In the case of the Anaheim Union Water Co. v. Fuller, 150 Cal. 327, 88 Pac. Rep. 978, 11 L. R. A., N. S. 1062, the Court held that land which is not within the watershed of a river was not riparian thereto, and is not entitled, as riparian land, to be irrigated from the water of the river, although it may be a part of an entire tract which does extend to the river. The principal reasons for the rule are, that where the water is used on such land, it will, after such use, return to the stream, so far as it is not consumed; and that, as the rainfall on such land feeds the stream, the land is in consequence entitled to the use of its waters. Where two streams unite, the Court held that each is to be considered a separate stream, and that land lying within the watershed of one stream is not to be considered as riparian to the other stream.

Irvine, 126 Cal. 135, 58 Pac. Rep. 442, 77 Am. St. Rep. 158; Southern Cal. Irr. Co. v. Wilshire, 144 Cal. 68, 77 Pac. Rep. 767; Wiggins v. Muscupiabe W. Co., 113 Cal. 182, 45 Pac. Rep. 160, 32 L. R. A. 667, 54 Am. St. Rep. 337; Watkins Land Co. v. Clements, 98 Tex. Civ. App. 578, 86 S. W. Rep. 733, 70 L. R. A. 964, 107 Am. St. Rep. 673; Pomona Land & W. Co. v. San Antonio W. Co., 152 Cal. 618, 93 Pac. Rep. 881; Clark v. Allaman, 71 Kan. 206, 80 Pac. Rep. 571, 70 L. R. A. 971.

[5] See Secs. 510, 511.

[6] See Sec. 522.

would flow to another stream, would be a most unreasonable use of the water, when taking into consideration the rights of the other proprietors on the first stream, and would also give to the proprietors on the second stream water to which they were not entitled. However, the Oregon Court, in the case of Jones v. Conn,[7] intimated that the irrigation of riparian land can not be prevented by the fact that it is divided from the stream, which will prevent the return of the water to the stream, when the amount of water taken and used by the defendant was not sufficient to materially injure the plaintiffs, or to interfere in any substantial way with their rights as riparian proprietors. It was also held in a Texas case,[8] while recognizing the rule as stated above, that circumstances might exist that would authorize the Court to extend the rule; for example, if the drainage area be small and the supply of water abundant, so that other riparian proprietors would not be deprived of an ample supply, it might not be an unreasonable use to carry the water beyond the watershed.[9] These cases thus made the question of reasonable use of the water, and the needs of the other riparian proprietors the basis for their suggestions. However, in deciding the cases both held against the extension of the rule. In the Oregon case it was conceded that under the claim alone of riparian rights the owner of land can not, to the injury of another riparian proprietor, take water beyond the watershed; and where the defendant claimed the absolute right to sufficient water to irrigate his land, regardless of the effect it might have upon the other proprietors, the Court held that the plaintiffs were entitled to such a decree as would prevent its use from ripening into an adverse title, and therefore the Supreme Court affirmed the decree of the trial Court perpetually enjoining and restraining him (the defendant) from diverting any of the waters of the river to irrigate such land, "to the actual and perceptible injury of the plaintiffs as riparian proprietors upon their riparian lands." In the Texas case the Court also held against the extension of the rule, and limited the lands which might be irrigated from a stream to those which lie within the watershed.

In regard to lands upon tributaries of streams, or those lying

[9] Citing Jones v. Conn, *supra*.

within the major watershed of a stream system, and the minor watershed of any individual tributary, the rule is that they must be considered separately, and water taken from a tributary must be used within the watershed of that tributary.[10]

**§ 515. What lands may be irrigated—The question of title to different adjoining tracts.**—As we have seen, land, in order to entitle it to be irrigated from a natural stream as a riparian right, must border or touch on the stream.[1] All land is riparian, as far as title is concerned, which abuts upon the stream, which at the time of the use is in one contiguous tract and held in one ownership, and from which the stream may be reached without passing over other lands the title to which is in another.[2] With the furthermost boundary of a single tract of the land from the stream held in a single ownership, the riparian character of the land ceases, for the reason that there is no direct access to the stream from other lands beyond this boundary. We now come to the question as to whether a person who owns several tracts of land, only some of which touch upon the stream and are strictly riparian, can extend his riparian right to irrigate them all, where after the purchase they formed one contiguous tract. Upon this subject the rule in the different States is not the same. One rule is that, where lands are acquired by an entryman or purchaser by different entries or purchases, the boundary of the riparian land is restricted to the land bordering on the stream which was acquired by one transaction, and beyond which the riparian right of irrigation can not extend. This is the rule laid down by the California Courts, which hold that the riparian right of irrigation should be limited to the smallest tract touching the stream in the history of the title while in the hands of the owner at the time of his claim of the right.[3] Upon this point

For what are riparian lands, see Secs. 454, 458, and cases cited.

3 Boehmer v. Big Rock Irr. Dist., 117 Cal. 19, 48 Pac. Rep. 908; Anaheim Water Co. v. Fuller, 150 Cal. 327, 88 Pac. Rep. 978, 11 L. R. A., N. S., 1062.

There is nothing in the case of Alta Land & Water Co. v. Hancock, 85 Cal. 219, 20 Am. St. Rep. 217, contrary to the rule stated in the text. It is true that the land in question was 1280 acres. The case does not

the Nebraska Court also holds with California that the riparian land stops at the outermost edge of a single original Government entry, and that the riparian right to irrigate this land can not be extended by purchase or subsequent entries to lands contiguous to the riparian land but not themselves touching on the stream.[4] Upon the other hand, the Courts of Oregon and Kansas hold that, in determining the quantity of land lying along a stream which a single proprietor may irrigate, the question of equality of right should control, irrespective of the matter of governmental subdivisions of the land, or the acquisition of lands through different sources of title. And that where the stream is sufficient, all land held under one ownership, regardless of the area or the different subdivisions, may be irrigated as a riparian right, where it does not work any material and substantial damage to the common rights of the other proprietors.[5]

Claiming the right to the use of the water as riparian owners, the rule as laid down in the latest cases seems to be correct in principle, as the use of water under that law must be reasonable in all respects, as between riparian owners. It is not a too liberal construction of the common law as to what are riparian lands. The common law recognizes no Government surveys, but holds that all lands touching upon a stream held in a common ownership and within the same watershed are riparian. And, if riparian, they may be irrigated, if such a use is permitted as a riparian right in the jurisdiction where the case arises. This liberality also is the correct rule when there is an ample supply of water in the stream

show how title was acquired, and only decides that land can not be segregated from a riparian tract by the temporary possession of a "squatter" holding without right.

There is also nothing in the case of Lux v. Haggin, 69 Cal. 255, 4 Pac. Rep. 919, 10 Pac. Rep. 674, contrary to the rule. This case as far as it touched upon the subject simply decided the question of relation, as between an appropriator of water, and the right to its use by a riparian proprietor.

[4] Crawford Co. v. Hathaway (Hall), 67 Neb. 325, 93 N. W. Rep. 781, 60 L. R. A. 889, 108 Am. St. Rep. 647. The Court in this case also intimates that a rule confining the riparian rights to the smallest legal subdivision recognized by the Government in disposing of its lands, namely, 40 acres, would be even more equitable. However, it does not decide this to be the rule in that State.

[5] Jones v. Conn, 39 Ore. 30, 64 Pac. Rep. 855, 65 Pac. Rep. 1068, 54 L. R. A. 630, 87 Am. St. Rep. 634; Clark v. Allaman, 71 Kan. 206, 80 Pac. Rep. 571, 70 L. R. A. 971.

and none of the other proprietors are injured by the use. But in times of scarcity, or when the country becomes more settled and the demand for the water is greater, this liberality must be restricted and the right limited to the common law rule of "reasonable use."[6] The States which follow the common law in permitting the irrigation of land as a riparian right should follow that law in respect to the area of the land with the common law limitations and restrictions, otherwise the doctrine of appropriation which is also permitted in all of the States should be followed. To be sure, no man should be permitted to irrigate a vast tract of land acquired no matter from whom, nor under what titles, nor how far from the stream, by virtue of the ownership of a small tract of land which is actually riparian. This is especially true if this use infringes upon the rights of the other riparian proprietors or appropriators, who have acquired rights through the Arid Region Doctrine of appropriation.[7] This use, as we have said, of water in another watershed would be a most unreasonable one. In the case of Jones v. Conn[8] the Oregon Supreme Court quoted from the first edition of this work,[9] to the effect that a riparian proprietor is entitled to any use of the waters which "does not work actual, material, and substantial damage to the common right which each proprietor has, as limited and qualified by precisely the equal right of every other proprietor." This was intended to convey the meaning that a riparian proprietor might convey waters to any lands which he might own bordering upon the stream regardless of their extent or source of title, provided that the rights of the other owners were not materially and substantially injured. In other words, that the whole question should depend upon the common law rule of "reasonable use," after taking into consideration the rights of all the other riparian proprietors upon the same stream.[10] This is in fact the only rule which is recognized by the common law in any event, and under this rule the rights of all the proprietors upon the same stream must always be considered. A man with 10 acres which are riparian to a small stream might not be permitted to irrigate any of it, for the reason that the flow of

[7] For rights of appropriators, as against riparian owners, see Secs. 775-803.

[8] 39 Ore. 30, 64 Pac. Rep. 855, 65 Pac. Rep. 1068, 54 L. R. A. 630, 87 Am. St. Rep. 634.

[9] See Kinney on Irrigation, First Ed., Sec. 276.

[10] See Secs. 490, 511.

the stream might be sufficient only for the actual domestic and culinary uses of all of the riparian owners upon the same. Upon the other hand, a man with 1000 acres upon a large river might be entitled to irrigate all, provided always that the rights of the other owners are not materially and substantially injured thereby. Therefore, it seems to us that the only correct rule is the question of reasonable use by one owner, rather than any rule attempting to limit that use to a narrow strip of his land which actually borders upon the stream and was acquired from a single source of title.

§ 516. **Nonriparian owner has no right.**—As we have seen, riparian rights of all kinds depend upon the ownership of the banks of the streams or other bodies of water. The lands for which they are claimed must touch upon the water.[1] Hence it follows that one who is not a riparian owner can not use the water of a stream for irrigation as a riparian right. His claim would lack the essential element—ownership of the bank of the stream.[2] No person can take water from a stream, under the common law right, for the purpose of irrigating his tract of land which is separated from the stream by intervening lands belonging to other and riparian proprietors. Neither can a squatter gain title to the use of the waters of a stream belonging to another by diverting and using them for the purpose of irrigating land for which he has no title.[3] If an owner of land, the whole tract of which is riparian while the title remains in him, sells a portion which does not touch upon the stream, he thereby cuts off from the part so conveyed all participation from the use of the stream and from all riparian rights therein, unless the conveyance declares to the contrary.[4] It is held in California that land thus severed from the stream can never regain the riparian right, although it may thereafter be reconveyed to the person who originally owned it and who owns the part abutting on the stream.[5] He becomes as to this tract a nonriparian owner.[6] Any

right to the use of the water of the natural stream by nonriparian owners or by a riparian owner for nonriparian land must be acquired by the right of appropriation for beneficial uses, according to the Arid Region Doctrine. This subject will be discussed in a subsequent chapter.[7]

**§ 517. Riparian proprietor has no right to irrigate nonriparian land.**—A riparian proprietor has no right to irrigate nonriparian land, by virtue of his title to other lands which touch upon the water of a stream and therefore are themselves riparian. Whatever may be his right to a reasonable use of the water of the stream to irrigate his riparian land, he has no right to conduct any of the water to irrigate other lands not riparian.[1] In this respect the common law as it is enforced in England and in the Eastern States is in accord with the Western American doctrine.[2] The rule as stated above is correct, and that, too, whether there is any injury to any other riparian proprietor on the stream or not. There is nothing

more completely antagonistic to the common-law theory of riparian rights, nothing which would more completely destroy the last vestige of the common law in the Western States adhering to that doctrine, than would the granting of the right of the diversion of the waters of a stream and conducting the same by means of ditches and canals for the irrigation of lands not adjoining the stream, by any persons who are not, with respect to such lands, riparian proprietors. As we have seen in previous sections, it is by a strained construction of the common law upon the subject that irrigation is permitted to the extent that it is practiced in the Western States, as a riparian right. As was held in a recent California case, the very theory upon which the right of a riparian owner to be protected in the use of the waters of a stream to which his lands are riparian is that, Nature having given these lands the benefit of the flow and the natural advantage of its use on the lands, one riparian owner may not divert these waters to lands not riparian to the injury of another riparian owner who can use them.[3]

The old common law rule has been modified and extended by liberal construction by the Courts of the Western common law States, in order to permit the right as it is there recognized and allowed. We have also seen that the common law right is based upon equality and equity and the right to a reasonable use of the water of a certain stream by all of the riparian owners thereon. Hence by permitting any one of these owners by virtue of his riparian ownership of a strip of land bordering upon the stream to irrigate great tracts of nonriparian land, would indeed abrogate the very principle of equality upon which the common law rule is based, and establish a rule based upon inequality and injustice. We would then have neither the common law rule nor the rule of the Arid Region Doctrine, which is based upon prior appropriation and diversion for beneficial purposes, but not upon the ownership of riparian land.[4] If the irrigation of nonriparian lands was permitted by a riparian owner, even if there was no material injury to

those below him on the stream, by prescription and adverse user, it might ripen into a right, which would result in great loss to the other owners on the stream.[5]

§ 518. **Priority of use gives owner no exclusive right.**—We have seen in a preceding section that under the common law a riparian proprietor can acquire no exclusive right to the use of water for any purpose based upon priority.[1] This is also the rule in the Western States which adhere to the common law in relation to the use of waters by riparian proprietors. In accordance with the principles of the common law a riparian proprietor can not, by mere prior settlement of his land and the use of water, acquire the exclusive right as against other proprietors to divert the entire stream or an unreasonable proportion thereof for irrigation. As was said by Mr. Justice McKinstry, in the case of Lux v. Haggin,[2] "In examining the numerous cases which establish that the doctrine of 'appropriation' is not the doctrine of the common law we meet an embarrassment of abundance." Thus in the Western States, as well as in the Eastern and in England, under the common law, this principle is indisputable, that the right of a riparian proprietor to the use of the waters of a water course for the purpose of irrigation, as well as for other purposes, is a natural right, *ex jure naturae*, and is not acquired by use or occupation; hence it follows that an exclusive right can not be acquired by prior use or occupation.[3]

5 As to riparian lands under the strict construction of the common law, see Secs. 457-466.

1 See Sec. 497.

2 69 Cal. 265, 390, 4 Pac. Rep. 919, 10 Pac. Rep. 674.

3 See late case of Hough v. Porter, 51 Ore. 318, 95 Pac. Rep. 732, where the Court held that there is no such thing as prior riparian ownership so far as the distribution of the water for irrigation purposes is concerned; and that the right of the riparian owner, being a variable one, depends on the use by the other proprietors.

See, also, later decision of same case, 51 Ore. 318, 98 Pac. Rep. 1083; Hill v. Newman, 5 Cal. 445, 63 Am. Dec. 140, 4 Morr. Min. Rep. 513; Pope v. Kinman, 54 Cal. 3; Creighton v. Evans, 53 Cal. 55; Ferrea v. Knipe, 28 Cal. 340, 87 Am. Dec. 128; Hale v. McLea, 53 Cal. 578; Hanson v. McCue, 42 Cal. 303, 10 Am. Rep. 299; Pomeroy on Riparian Rights, Sec. 133.

See, also, Williams v. Altnow, 51 Ore. 275, 95 Pac. Rep. 200; *Id.*, 97 Pac. Rep. 539, where the Court held that there is no priority between the rights of riparian proprietors to the use of the water of a non-navigable stream, but that their rights were equal, regardless of their location on the stream, or the date of acquiring title.

We will see in a subsequent portion of this work, however, that a prior use by a riparian proprietor of the waters of a stream, continued for a period of time and under such circumstances as are requisite to establish rights by prescription, will give him an exclusive right to the use of a certain amount of water.[4]

**§ 519. Riparian owner and prior appropriator at the same time.**—As was said in a previous section, in all the Western States which adhere to the doctrine of riparian rights the appropriation of water for beneficial purposes is also allowed.[1] Thus, as will be readily seen, there are dual systems of laws governing the use of waters in these States, the doctrines of prior appropriation and riparian rights, which are continually clashing or "jostling" with each other as it were, yet still existing side by side.[2] This subject will be more thoroughly discussed in a subsequent portion of this work.[3]

The question which concerns us now is, Can a person be both a riparian proprietor and an appropriator under these dual systems of laws at the same time? Our answer to this question is in the affirmative. Both rights may be acquired by original and derivative acquisition; they may exist together and be held in common as property, and each is entitled to the protection of the law.[4]

As we view the law, there are two circumstances where a riparian proprietor upon a stream may also become an appropriator. These are, first, when he is among the first of the settlers upon the stream, and he makes his appropriation when the water was not needed by others and would otherwise run to waste; and, second, in times when there is a surplus or overflow of the waters of the stream. If a person enters a piece of land through or adjoining

4 Lux v. Haggin, first hearing (Cal.), 4 Pac. Rep. 919, 928; Duckworth v. Watsonville Water & L. Co., 150 Cal. 520, 89 Pac. Rep. 338; *Id.*, 158 Cal. 206, 110 Pac. Rep. 927; Healy v. Woodruff, 97 Cal. 464, 32 Pac. Rep. 528, in which the Court said, "It would certainly be strange if the first comer to a stream who acquires title to some land upon it has less right to the water of the stream than one who owns no land there at all."

See, also, Edgar v. Stevenson, 70 Cal. 286, 11 Pac. Rep. 704.

which a stream runs, and appropriates the water to some useful purpose including that of irrigation, before other persons have entered other lands upon the stream, who might be injured by his appropriation, he stands in the position of a prior appropriator as to subsequent settlers to the extent of his appropriation; and, within this extent, he may divert all of the water of the stream, if it is actually necessary for the purpose for which it is appropriated, without any obligation upon his part to return any of it to the natural channel.[5] And, in a case of this kind, bearing in mind that by his appropriation he is limited by its extent, if the water appropriated is not sufficient for his needs, he may claim as against the other riparian proprietors above upon the stream the right to have the water flow down to his riparian land, less what they may need for their domestic uses.[6] The two rights may exist in the same person as long as there is no waste of the water taken under either system or both systems. Upon the other hand, after the needs of a prior appropriator of the waters of a stream are satisfied, he, as a riparian proprietor, is not entitled to have the excess flow down to him in the channel of the stream.[7] And in Oregon the rule is, that a settler on a non-navigable stream has an election either to rely upon his rights as a riparian proprietor or to make an appropriation of

[5] For extent of the right of appropriation, see Secs. 776-786; Duckworth v. Watsonville W. Co., 150 Cal. 520, 89 Pac. Rep. 338.

[7] Low v. Schaffer, 24 Ore. 239, 33 Pac. Rep. 678.

See, also, the case of North Powder Mill Co. v. Coughanour, 34 Ore. 9, 54 Pac. Rep. 223, where the Court held that the first settler on the stream might elect his right, but he can not do both, as the two rights are incompatible. Brown v. Baker, 39 Ore. 66, 65 Pac. Rep. 799, 66 Pac. Rep. 193.

See, also, Seaweard v. Duncan, 47 Ore. 640, 84 Pac. Rep. 1043; Davis v. Chamberlain, 51 Ore. 304, 98 Pac. Rep. 154; Williams v. Altnow, 51 Ore. 275, 95 Pac. Rep. 200, 97 Pac. Rep. 539.

the water if it is free and subject to appropriation; but he can not do both. However, in a great majority of the Western common law States this is not the rule, but both rights may be held by the same person.[8]

Upon the second proposition stated above, at times when there is a surplus or overflow of water, and no injury is done to any of the lower riparian proprietors, one proprietor may make a legal appropriation of the surplus water of the stream, and acquire a title to the use of the same, which will be valid as against all the riparian owners upon the stream and also as against all subsequent appropriators.[9] "It is the advantage which the law gives and which necessarily follows prior occupancy and appropriation."[10] The Oregon rule is upon the theory that the riparian owners are tenants in common, and that the appropriators are owners in severalty. As was said in a recent case upon this subject: "It is the established doctrine in this State that a settler upon public lands which border upon a non-navigable stream may claim the use of the water, either as a riparian owner or as an appropriator, but he can not do both. A reason for this is that one can not at the same time hold title to the same thing both as tenant in common and in sev-

[8] For the rule in Oregon, see cases cited *supra*.

But see the late case of Hough v. Porter, 51 Ore. 318, 95 Pac. Rep. 732, 98 Pac. Rep. 1083, 102 Pac. Rep. 728, where the Court held that every riparian owner, regardless of the date of settlement, is entitled to a quantity of water reasonably essential to his domestic use and for the watering of his stock, including a sufficient supply for the proper irrigation of such garden produce as may be essential to the proper sustenance of his family; but that for the further irrigation of his lands he must make an appropriation, by taking some step towards the diversion of the water, or by some other good and sufficient notice.

Dixon, 13 Cal. 33; McKinney v. Smith, 21 Cal. 374, 1 Morr. Min. Rep. 650; Nevada Co. v. Kidd, 37 Cal. 282; Smith v. O'Hara, 43 Cal. 375, 1 Morr. Min. Rep. 671; Kaylor v. Campbell, 13 Ore. 596, 11 Pac. Rep. 301; Healy v. Woodruff, 97 Cal. 464, 32 Pac. Rep. 528.

[10] Healy v. Woodruff, *supra*.

In Senior v. Anderson, 130 Cal. 290, 62 Pac. Rep. 563, the Court held that a lower riparian owner, who had given notice of the appropriation of a certain amount of water flowing through his land, is entitled to the quantity reasonably necessary for the uses named in his notice, if such quantity would naturally flow in the stream at the point of diversion, as against all above him on the same stream, subject to rights antecedently acquired.

eralty."[11] This reasoning may be correct as to the different claims for the same water, but as to the different rights to the water there is no reason why a person may not be both an appropriator and a riparian proprietor at the same time.

§ 520. **Manner of taking the water.**—Where a person has the riparian right to irrigate land the manner of taking the water from the stream is immaterial, so long as it does not interfere with the rights of the other proprietors. The water may be taken out by means of ditches and canals conducting the water from the stream to the place where it is used. We do not see any reason why the ditches may not be taken out above the lands of the owner, if arrangements can be made with the owners of the lands above to that effect. Of course this would prevent the water diverted from washing the riparian lands between the intake of the ditch and the lands of the user. So, if the intervening owners refuse to permit this, either on account of actual injury, or to prevent such a diversion from maturing into a right, an injunction will lie.[1] The water may be taken by means of an intercepting tunnel; however, the right to the water can not be extended by this means to the application to a use to which the stream itself can not be properly applied.[2] Pumps run by any kind of power may be used to raise the water to the height where it is needed.[3] Several riparian proprie-

tors may join in the diversion of the water by means of pumps or otherwise for their common use, provided that they take no more than the amount they are all entitled to.[4]

A very common method of diverting the water in certain localities is by means of water wheels run by the current of the stream. The amount actually diverted by this means is usually very small, and it can be elevated but a few feet. But there is another question which enters into the consideration of this feature of the case, and that is the amount of water required to flow in the stream to run the wheel is very great as compared with the water lifted. Now the question is, can a riparian owner not only lay claim to the water of a stream running through his premises to the extent of the water actually used in irrigation, but also may he compel the owners above, who have the same rights of irrigation that he has, to let water flow down to his land, for which water he has no use except to run his wheel to raise a small quantity thereof? We are of the opinion that he can not do this, and would consider this an antiquated and wasteful method of using the water. This question has never been decided as regarding the rights of riparian proprietors. But the Circuit Court of Appeals, in the case of Schodde v. Twin Falls Land & Water Co.,[5] held that, as between appropriators, this right could not be claimed.[6] All of the authorities hold that a riparian owner must use the water reasonably with reference to the correlative rights of the other owners on the same stream. We would classify this as a most unreasonable and wasteful use of the water, especially in a section where the water is scarce.

**§ 521. Change in manner of taking the water—Change of use.**—There is no doubt but that a riparian owner has the right to change the place of diversion of the water, when others are not injured by the change.[1] In like manner a change in the locality of the ditch

may also be made. "All that the law requires is, that the mode or manner of using the water should not have been materially varied, to the prejudice of others."[2] So, also, may the change of the place of use be made from one portion of his land to others, so long as he keeps the water on lands which are strictly riparian.[3] Also a change of the use itself may be made, so long as it does not interfere with the rights of others. However, as is the case of appropriators, the use can not be changed from one which does not consume the water to one where the water is practically consumed. Hence an owner, having the right to divert water and run it in a ditch or flume along the higher levels and thence down into the stream for the purpose of developing power, has no right to change the use to that of irrigation, where the water would be consumed, if other rights have intervened which would be injured by the change.[4]

**§ 522. Surplus water must be returned to the natural stream.**—After a reasonable use of the water for the irrigation of his land, it is the duty of every upper riparian owner to return to the natural channel of the stream, by safe, adequate, and water-tight appliances, above the lands of the next lower riparian owner, all the surplus water which may have been taken out by him and not absorbed and used upon his lands entitled to such water.[1] This is the

common law rule of England and the Eastern States, as well as that of the Western States, and that, too, whether the water is used for irrigation or for some other purpose.[2] An injunction for all waste of the water will lie against the owner, where, after the use, he permits it to run where it will, without providing the means for its return to the natural stream.[3] And, although a riparian proprietor is, as we have seen, entitled to a reasonable use of the water for irrigation,[4] he can not dam it up and so spread out the water and cause its loss by evaporation, so that it will cause injury to the lower proprietors.[5] The manner of the return of the surplus to the stream is immaterial, so long as it is practically all returned before the land of the lower proprietor is reached.[6] And, so long as his rights to the water are not impaired, he can not require the upper proprietor to return it in any particular manner.[7]

§ 523. **Mere possession without title gives no riparian right.**—Riparian rights are mere incidents to the ownership of the soil through which or adjoining which the stream runs; and, while they may relate back by fiction of law to the date of the *bona fide* settlement or filing upon the land, by virtue of the patent subsequently

7 Gould v. Eaton, 117 Cal. 539, 49 Pac. Rep. 577, 38 L. R. A. 181.

issued, yet they do not vest until the patent issues.[1] Hence it follows that one who squats upon and occupies and cultivates a tract of land bordering upon a stream, without acquiring any title to the land, acquires no riparian rights to irrigate the land in his possession, or any other riparian rights in and to the waters of the stream.[2]

But in this connection a distinction must be made between a squatter and an actual and *bona fide* settler upon the public lands under the laws of the United States. Even though the latter's rights be in an incomplete and inchoate condition, if he has fully complied with all the laws and requirements relative to his settlement he is entitled to all the riparian and other rights connected with the land as though he had already received his patent.[3] And, where a party has a contract for the purchase of land adjoining a stream upon conditions not yet fulfilled by him, and he has not yet acquired the fee, the doctrine of riparian rights can not be invoked in his favor, although they may be invoked in behalf of the real owner.[4] And again, one who squats upon, occupies, and cultivates a portion of riparian land belonging to another, claiming adversely under the belief that it is Government land, can not gain any title to the use of the waters of the stream by diverting and using them for the purpose of irrigating such land.[5]

**§ 524. Right to water in artificial water courses.**—As we have seen in a previous section, there are circumstances under which riparian rights may attach to artificial water courses.[1] One of

these is where the artificial channel is entirely substituted for the natural channel. When this is the case there is no reason on principle, in those Western States which still adhere to the common law, why an owner of land through which or adjoining which the artificial stream runs may not, by virtue of his ownership, have the right to make a reasonable use of the water for irrigation. Such a stream, however, must be created under such circumstances as to indicate that it is to be permanent the same as though it was created by Nature.[2] There are very few cases that have arisen in the Western States, where irrigation is mostly practiced, which involve this precise point. And the general rule is that in all artificial channels, such as canals, ditches, conduits, or aqueducts used to convey the water from a natural stream, riparian rights can not attach.[3] However, the Oregon Court, in a very recent case,[4] has taken a rather advanced position in this respect, and holds that, after channels are artificially opened, and as such are acquiesced in, as branches of the main stream for the period prescribed by the statute of limitations, they have become fixed, and the owners of lands adjacent thereto are entitled to the same consideration and to the same rights as are those on the main and unquestioned natural channel.[5]

§ 525. **Conclusions.**—From the discussion in this chapter it will be readily seen that irrigation as a riparian right is recognized as one of the principal rights of riparian owners to the use of the waters of natural streams in the ten Western States which adhere

to the common law theories of riparian ownership.[1] That in order to attain to the use of water for this purpose, as it is permitted in these States, the strict rule of the common law, upon this subject, has been extended and enlarged until it practically exists as a fiction only.[2] We will also see in the future chapters of this work that in these very States, side by side with this common law rule, there exists another system for the use of water, based upon a prior appropriation for some beneficial use. On principle these two systems are directly opposed to each other, and, hence, necessarily, there is more or less clashing between them. In fact it will be noticed that in the States endeavoring to uphold both of these rules there is much more litigation than there is in the States which have abolished the rule of riparian rights, and have adopted the Arid Region Doctrine of appropriation. Especially is this true in States which have a strong system of State control, notably Wyoming. We can not but believe that had a State adopted either one rule or the other, and not attempted to uphold both, it would have been much better for the commonwealth and also for the water users. Or better still, had the Government in the early history of the opening of its public lands for sale adopted some equitable rule for the disposition of its water with the lands, so that each settler could approximate what right he had to the water when he made his entry, we would not have had this endless confusion of rights and litigation which we are having. This has been done in other new countries, notably Canada and the Northwest Territories, where, profiting by our lack of system, or rather too many systems, at an early period of the opening for settlement of the public lands, a uniform system for the use of the waters of all natural streams was adopted, with a strong Governmental control. And in this country, in an English Province, it is especially noticeable that the English rule of the common law is abolished, and also

how few cases which involve the question of water rights have gone to the Courts of last resort.[3]

But our Congress, in its wisdom, did not see fit to adopt such a rule in the early history of its public land system, hence we have inherited this endless confusion as to water rights. Claimants must prosecute their cases to the Courts of last resort at sometimes ruinous expense, only to have that Court overturn some supposed well-settled theory of the case and adopt an entirely new one. The doctrines of appropriation and riparian rights are not only clashing with each other, but often with themselves; and, in order to keep up the interest, both of these doctrines are always at war with the statutory enactments, known as Irrigation Acts, or Codes, or Water Codes, adopted in nearly every Western State, and no two of which are alike. And not only is there endless litigation upon the subject, thereby encumbering our Reports, but also text books must be written upon the subject, attempting to reconcile some of these questions, and also to define what rights an individual or corporation may have under certain conditions in and to the waters of the natural streams and other sources of natural supply. All these, and many kindred and now necessary evils, have developed on account of the lack of foresight upon the part of the National Government in not taking into consideration the fact that the waters in this Western arid country were of at least equal value and importance as the lands through which they flow.

## CHAPTER 27.

### GRANTS AND CONTRACTS OF RIPARIAN RIGHTS.

§ 526. Scope of chapter.
§ 527. Public grants of rights in public waters.
§ 528. Public grants of rights in private waters.
§ 529. Private grants of riparian rights.
§ 530. Private grants—Rights of grantee limited to the terms of the deed.
§ 531. Private grants—Rights included with the land.
§ 532. Private grants—Division of land at water's edge.
§ 533. Private grants—Reservation of riparian rights.
§ 534. Private grants—Grants of riparian rights only separate and apart from the land.
§ 535. Private grants—Grants of riparian rights involving the consumption of water.

**§ 526. Scope of chapter.**—The relative or correlative rights of riparian owners may be changed by grant or contract.[1] In this chapter we shall not attempt to discuss all of the phases of grants or conveyances of riparian rights, but will discuss only those which we think are pertinent to the main subject of this work.

**§ 527. Public grants of rights in public waters.**—In the early history of the common law it was held that the Crown could grant to a subject the soil under tide waters and could also grant exclusive rights of fishery in such waters.[1] But in modern times it has been decided in England that it is incompetent for the Crown to abbreviate or destroy by its own act the public rights either of navigation or fishery, as it can not confer upon its grantee a greater power in that respect than that with which it itself is invested.[2] And, in general, we may say that in this country the Federal Gov-

S. 59, 9 Jur. 1090.

[2] 1 Bla. Com. 286; Doe v. York, 14 Q. B. 81; 37 and 38 Vict., Chap. 40;

ernment and the several States have followed the earlier common law decisions of England in this respect to the effect that the State may grant to individuals or corporations the soil of public navigable waters or the exclusive right of fishery in them,[3] subject, of course, to the public right of navigation.[4]

§ 528. **Public grants of rights in private waters.**—As respects private water courses, as we have seen in the previous sections, riparian owners, who own the soil bordering upon the same, have all the rights that attach to such ownership and which are under the common law called riparian rights. So in that part of the country designated as the public lands, the United States as the proprietor of such lands had or has the same rights and property in the streams flowing through them that would be possessed by any other riparian proprietor.[1] And, in the absence of legislation by Congress limiting the effect of the grants, patents for public lands from the General Government pass together with the fee of the soil and as incident thereto all of the common law rights of the natural streams, which flow through them, provided, of course, that the laws of the State including such public lands have not abolished or abrogated the common law of riparian rights.[2] But, in a case of legislation by Congress, all Acts limiting the effect of the grant are in the nature of a reservation by the Government, and the patents issued thereafter must be subject to them. Such is the case of the Act of Congress of July 26, 1866, hereafter further discussed.[3] The effect of this statute is to preserve the priority

3 See Secs. 611-618.

See U. S. Rev. Stat., Sec. 2339, which reads as follows: "Whenever, by priority of possession, rights to the use of water for mining, agricultural, manufacturing, or other purposes, have vested and accrued, and the same are

against those who have received patents to their lands, subsequent to the enactment.[4]

In this country a grant by a State conveying a tract of territory, in the absence of legislation reserving any portion to the contrary, carries with it to the grantee a right of property in all the water courses within the boundary of the grant and hence all the riparian rights that attach to those water courses as an incident to the soil.[5] In fact it may be said that the same rule of law applies in the case of public grants as applies in private grants to the effect that unless a reservation is made the grant passes title to all riparian rights incident to the ownership of the land by which the stream flows.[6]

§ 529. **Private grants of riparian rights.**—In this country when an individual has once acquired an ownership in a watercourse, as an incident to his land adjoining the same, by a grant from the State, an individual, or from any other source, he may in turn convey his ownership to another in whole or in part. He may convey

recognized and acknowledged by the local customs, laws, and decisions of the Courts, the possessors and owners of such vested rights shall be maintained and protected in the same; and the right of way for the construction of ditches and canals for the purpose aforesaid is hereby acknowledged and confirmed."

O'Conors, 8 Watt. 470 (Pa.), where the Court held that a grant from the commonwealth of vacant land bounded by a stream which has not been declared navigable by law, and following its courses and distances, passes the right to the soil to the middle of the stream, and although the stream may subsequently to the grant be declared a public highway that does not devest the property previously acquired by a grant from the commonwealth.

[6] For private grants of riparian rights, see Secs. 530-536.

all or a part of his riparian rights, and his grantee will take all the title and rights that the grantor himself had and which had been conveyed to him, but of course no more. Such owner may convey the riparian rights in the stream to one person and the adjoining land to another; or he may reserve certain of his rights in the stream; or he may convey the land, without making any reservation in the deed, to his grantee, who, in that case, would be the riparian proprietor in the grantor's stead, and would own to the middle of the stream and be entitled to all the riparian rights that are attached to the land.[1] But it is held that a grant of a stream by that name will not pass the land over which the water runs. It must be described as so much land covered by water.[2] Also an owner, by a reservation in the instrument of conveyance directly expressed or clearly implied to such effect, may grant the land adjoining the watercourse and may reserve to himself all the property in the watercourse itself and all the rights attached thereto by virtue of his former ownership in the land adjoining.[3]

In all cases of grants, however, by riparian owners it must be understood that they can be made only subject to the right of non-contracting owners. This is especially true where the right granted involves a use or a consumption of the water. The rights of the riparian owners who did not join in the conveyance, and who are entitled to an equal or correlative use of the water in common with the grantor, are not affected by the conveyance. This will be further discussed in subsequent sections of this chapter.[4]

**§ 530. Private grants—Rights of grantee limited to the terms of the deed.**—As between the grantor and the grantee the rights granted are always limited by the terms of the instrument of conveyance.[1] The grantee may be limited by the terms of the deed in the application of the water to a certain particular use. The words

in the indenture, the situation of the parties, the uncertainty as to the quantity of the water granted, and the usage by the grantee, may all be introduced in evidence as tending to show that it was intended to limit the quantity to the particular use for which it was granted and originally intended to be applied.[2] In general we may say that the right to the use of the water course, *ex jure naturae*, or as an incident to the land, under the common law, is subject to be abridged, enlarged, or modified by grant. But the extent of such abridgement, enlargement, or modification is to be measured by the express stipulation contained in the grant or instrument of conveyance itself.[3] These special rights that may be acquired in watercourses sometimes approach those rights which are classified by law writers as easements, and can only be created by deed,[4] and when so created the grantor can not derogate from the terms of the deed, and the nature and extent of the rights of the parties can only be determined by the terms of the instrument of conveyance itself.[5]

Rep. 661, where it was held that an owner of a tract of land upon and through which a stream of water rises and flows, in selling parts of the tract fronting upon the stream, may reserve exclusive water privileges, and when in selling the residue of the tract he sells the land and especially conveys the water privileges theretofore reserved such grantee holds such privileges as against another vendee holding a part of the tract upon the stream, but in whose deed the water privileges were reserved.

**§ 531. Private grants—Rights included with the land.**—Riparian rights are a part of an estate and usually constitute a large proportion of its value, especially if the stream upon which the land borders is of any considerable size. As we have seen, these rights are of value and are counted as property.[1] As such, they are a part of the estate which will pass to the grantee under any general conveyance of the estate, unless they are expressly reserved, or circumstances showing the intention to reserve them are so strong as to overcome the presumption that they were conveyed. But, in general, if the grant is made of land bounded by a stream or other body of water, a conveyance of the land will also convey all riparian rights incident to the ownership of the land.[2] So when an owner conveys land bounded by a stream or other body of water, without making any reservations in the deed, the law infers an intent to convey all rights under the water and in front of it; this rule is too valuable to be varied, except by clear and distinct proof of a contrary intent upon the part of the grantor.[3] The rule above stated by which riparian rights pass with a grant of the

land, also includes accretions already formed or which may possibly be formed in the future. Accretions that are already formed are considered a part of the estate and will pass by a general grant of the land without any express mention being made of them in the deed.[4]

§ 532. **Private grants—Division of land at water's edge.**—The banks of streams and the land under the water forming, as they do, different parts of one entire estate, there is nothing to prevent the separation of the estate at the water line, so as to permit the soil under the water to be owned by one person and the upland by another. Therefore, by a deed or deeds of conveyance, an estate may be divided at the water's edge and the land adjoining the water, and the land below the water pass to different persons.[1] When such a grant is made, separating the land at the margin of the stream, it results in conferring the ownership of the water, so far as it can rest in an individual, upon the one who owns the bed of the stream, and such ownership carries certain of the riparian rights. But there are certain other riparian rights, such as the use of the water upon the adjoining land, which depend upon the adjacency of such land to the water and of which the riparian owner can not be deprived by the separation of the bottom of the stream from the upland. One of these rights is to make use of the water for domestic purposes, and another is the right of irrigating the adjoining lands.

§ 533. **Private grants—Reservation of riparian rights.**—A riparian owner may grant his land without any reservation, or in the

Bates, 13 Pick. 255, 23 Am. Dec. 678; Mayhew v. Norton, 17 Pick. 357, 28 Am. Dec. 300; People *ex rel.* Highway Commissioners v. Madison Water Co., 125 Ill. 9, 17 N. E. Rep. 147; Valentine v. Piper, 22 Pick. 85, 33 Am. Dec. 715; State v. Black River Phosphate Co., 32 Fla. 82, 13 So. Rep. 640, 21 L. R. A. 189; Watson v. Peters, 26 Mich. 508; Bradshaw v. Duluth Imperial Mill Co., 52 Minn. 59, 53 N. W. Rep. 1066.

grant he may reserve to himself any of his riparian rights. These are different parts of the same estate and may be granted as a whole or separately.[1] A riparian owner may grant the right to the use of the water, as permitted him under the common law rules, to another, or in making his deed to the entire estate he may reserve these uses to himself, and as between himself and his grantee such a deed is binding.[2] Such, for example, is the case of a riparian owner who reserved to himself the use of the water for a limited purpose, such as for a hydraulic ram, and the California Court held that the reservation was not lost by non-use for that purpose.[3]

**§ 534. Private grants—Grants of riparian rights only separate and apart from the land.**—Certain riparian rights may be granted separate and apart from the land to which they are naturally attached. The right of fishing and hunting comes within this class.[1] The right to cut ice and other rights to the use of the water may be either granted separately or reserved in the deeds of conveyance. The grant of the upland may be so divided that the portion granted in fact will not touch the water, in which case the grantor reserves to himself not only his riparian privileges in the use of the water, but also all accretions. Also under this rule the right of boating and gathering ice as well as the title of the soil of the grantor under the water may be granted by deed.[2]

1 For the conveyance of water rights, see Chap. 53, Secs. 994-1032.

2 *Ex parte* Miller, 2 Hill 418; Bardwell v. Ames, 39 Mass. 22 Pick. 333; Boston Water Power Co. v. Gray, 6 Mete. 131 (Mass.); Kennedy v. Scovil, 12 Conn. 317.

3 Walker v. Lillingston, 137 Cal. 401, 70 Pac. Rep. 282, wherein the Court said: "It is also contended that all rights under the reservation were lost by abandonment and adverse user. The fact that defendant abandoned the use of the ram and secured the benefit of the water by other means is not deemed material by the Court. The defendant's right to the use of the water did not cease when he ceased to use the ram. Unless a contrary intention is plainly manifest, a reservation of water power for certain machinery is not to be held as fixing the manner of the use, but as fixing the measure of the quantity of water reserved."

See, also, Yocco v. Conroy, 104 Cal. 468, 38 Pac. Rep. 107; Hall v. Stirling Iron R. Co., 148 N. Y. 432, 42 N. E. Rep. 1056; Duckworth v. Watsonville etc. Co., 150 Cal. 520, 89 Pac. Rep. 338; *Id.*, 158 Cal. 206, 110 Pac. Rep. 927.

1 See Sec. 365.

2 Mitchell v. D'Olier, 68 N. J. L. 375, 53 Atl. 467, 59 L. R. A. 945; Dexter v. Jefferson Paper Co., 22

It is also held in the Western States, which hold to the common law of riparian rights, that, as between the parties to the grant or their successors in interest, riparian rights may be conveyed separate and apart from the land, if it is so expressly intended by the deeds of conveyance.[3] But, as we shall contend, the rights granted affect only the rights of the parties to the grant and do not affect the rights of others.[4]

§ 535. **Private grants—Grants of riparian rights involving the consumption of water.**—In general it may be said that the use and occupancy of the water may be granted separate and apart and thus severed from the upland. There is no question upon this point where the right of use is granted for the purpose of operating power or other plants along the stream and where the water is not consumed. In such a case the grantee must exercise the rules of reasonable use, discussed in previous sections of this part,[1] taking into consideration the rights of the riparian owners below; and, as we have seen, one element of this reasonable use is to return the water to the stream before it reaches the riparian lands of those below, practically undiminished in quantity, and undeteriorated in quality, in order that they may be permitted to make a like or other use of the water to which they are entitled.[2] In such cases, all the parties to the grant are bound in accordance with its terms; and the other riparian owners upon the same stream, who are not injured, can not object simply upon the ground of the change of ownership of the use above. As far as all practical purposes, therefore, are concerned all parties upon the stream are bound by such a conveyance.

Again, there seems to be no question but that one riparian proprietor may grant to another riparian proprietor upon the same stream the right to the use of the water or a certain amount of the water included in the grantor's riparian rights, and even if the

2 Concord Mfg. Co. v. Robertson, 66 N. H. 1, 25 Atl. Rep. 718, 18 L. R. A. 679; Hanford v. St. Paul & D. R. Co., 43 Minn. 104, 42 N. W. Rep. 596, 44 N. W. Rep. 1144, 7 L. R. A. 722; Mansfield v. Balliett, 65 Ohio St. 451, 63 N. E. Rep. 86, 58 L. R. A. 628.

grantee consumes the water or a reasonable proportion thereof, and no one is injured by the change of ownership or the change in place of use, such a grant practically binds all the riparian owners upon the stream. It binds the parties to the grant according to its terms; and it binds the other riparian owners, because they are in no position to object to the change of ownership or the change of use.[3] Again, where there is but one riparian owner, as would be the case where the entire length of the stream is upon the lands of one person, he may grant all of the riparian rights to the use of the waters of such stream, even if by that use it is all consumed by the grantee. This is for the reason that the grantor had dominion and ownership of it. It was his property and he could dispose of it as he saw fit.[4] Again, where all the riparian owners upon the stream join in such conveyance, no question can arise as to the use of the water by any grantor, unless such use should be reserved by him.[5]

But, upon the other hand, where a grantor grants his riparian right to the use of the water of a stream for the purpose of some use where the water is wholly or partially consumed, as, for example, would be the case for the irrigation of nonriparian lands, or to supply a municipality and its inhabitants with water, and the rights of the other riparian owners on the stream are materially and substantially injured by such a diversion and use made by the grantee, the grant, while binding between the immediate parties to the same, and their successors in interest, is not binding upon noncontracting riparian owners.[6] Such a conveyance by one owner

[3] Rose v. Mesner, 142 Cal. 322, 75 Pac. Rep. 905; Fuller v. Azusa etc. Co., 138 Cal. 204, 71 Pac. Rep. 98; Gould v. Stafford, 77 Cal. 66, 18 Pac. Rep. 879; Churchill v. Baumann, 104 Cal. 369, 36 Pac. Rep. 93, 38 Pac. Rep. 43; Painter v. Pasadena etc. Co., 91 Cal. 74, 27 Pac. Rep. 539; Outhouse-Cottel v. Berry, 42 Ore. 593, 72 Pac. Rep. 584; City of Salem v. Salem etc. Co., 12 Ore. 374, 7 Pac. Rep. 497; Yocco v. Conroy, 104 Cal. 468, 38 Pac. Rep. 107.

[4] In a Scotch case decided in 1848 of Blantyre v. Dunn, 10 Dunlop 509, it is said: "Where a stream rises, flows, and falls into the sea within the lands of one owner, his right of property is unaffected by any other interest, and his absolute dominion over it is uncontrolled."

[5] See Duckworth v. Watsonville etc. Co., 158 Cal. 206, 110 Pac. Rep. 927; Fergusson v. Shireff (Scotch), 6 Dunlop 1374.

[6] Hudson v. Daley, 156 Cal. 617, 105 Pac. Rep. 748; Yocco v. Conroy, 104 Cal. 468, 38 Pac. Rep. 107; Alhambra etc. Co. v. Mayberry, 88 Cal. 68, 25 Pac. Rep. 1101; Gould v. Stafford, 77 Cal. 66, 18 Pac. Rep. 879; Duckworth v. Watsonville etc.

will not be binding upon other riparian owners upon the same stream, unless for some reason they should be estopped from asserting their rights. In other words, one riparian owner can only grant the riparian rights to the use of the water which he himself owns, and he can grant no rights to the use of the waters of a stream which are owned by the other riparian proprietors. One of these rights, as we have seen, is that the water must continue to flow in the natural stream by the lands of the lower owners, except an amount as may be reasonable for the various uses of the upper riparian proprietors; and, after these uses, the surplus or unused water must be returned to the natural channel, in order that it may flow down to those below, who are also equally entitled to its use.[7]

In the Western States it is universally held that in a sale of water, where under the use put by the grantee it is entirely consumed, noncontracting riparian proprietors are not affected by such sale, unless for some reason they should be estopped from asserting their rights. In such a case it is held that if such noncontracting proprietors are materially and substantially injured by such use of the water by the grantee of another proprietor they have the right of action, either for injunction or for damages.[8]

As we have seen, a riparian proprietor is only entitled to a reasonable use of the water upon riparian lands. He himself can not divert and use the water upon nonriparian lands. It therefore follows that he can not sell his right to a grantee who attempts to divert and use the waters upon nonriparian lands to the injury of the other riparian proprietors upon the same stream. The same principle is followed by the California Courts in the case where one owner over an artesian or catchment basin attempts to draw off the water which underlies the lands of all the other owners, as well as his own, and sell the same for use upon distant lands to the material and substantial injury of the other owners.[9]

# CHAPTER 28.

## VARIOUS RIPARIAN RIGHTS.

§ 536. Scope of chapter.
§ 537. Ownership of the beds of private streams.
§ 538. Accretion, reliction, and avulsion.
§ 539. Avulsion.
§ 540. The right of access to and from estate.
§ 541. Title to the beds under small lakes and ponds—English rule.
§ 542. Lakes and ponds—Title to soil in United States.
§ 543. Right to natural flow of waters—In general.
§ 544. Right to natural flow—Right to whole flow.
§ 545. Right to natural flow—Obstructing flow.
§ 546. Right to natural flow—Accelerating flow.
§ 547. Right to natural flow—Backing up water.
§ 548. Rights of riparian owner to the products of the water.
§ 549. The modern Western rule of the "undiminished flow" of streams.
§ 550. Other miscellaneous riparian rights.
§ 551. Summary and conclusions.

§ 536. **Scope of chapter.**—In this chapter we will discuss certain miscellaneous riparian rights which the owners of riparian lands have by virtue of their lands touching or bordering upon the stream or other natural source of water supply. There will be no attempt to discuss all of these rights and we will discuss only those that are pertinent and necessary to the main subject of this work.

§ 537. **Ownership of the beds of private streams.**—As we have discussed before, riparian rights do not attach to lands through the ownership of the soil over which the water flows, but through the ownership of the bank or banks adjoining the water. The ownership of the soil under the water is but one of the riparian rights which vests in the owner of the banks.[1] In public or navigable waters, as we have seen, the riparian owner may or may not, as one of his riparian rights, own the soil under the water. This depends upon the rule adopted by the State where the claim is made.[2] But the rule as to the title of the beds of fresh water non-navigable streams is uniform in all jurisdictions and is vested in the riparian

1 See Secs. 451, 452, 458.

2 See Secs. 325-332.

owners whose lands border upon the waters of such streams. Fresh water streams which are not a common passage way are private property, and the title to the bed of the river, *ad filum aquae,* is in the proprietors of the banks bordering upon the streams, in severalty and not in common.[3] This is true whether their tenure is freehold, copyhold, or leasehold.[4] And if the banks on both sides of the stream are owned by the same person he owns the whole of the bed, according to the extent of his lands in length. If, however, his land is bounded by the stream he owns to the thread of the same; or, as it is termed in common law, *ad filum aquae;*[5] unless from prior grants from himself, his vendors, or the State before his land became private property, such a construction can be negatived.[6]

There is but one difference between a stream running through a man's land, and one that runs by the side of it; in the former case he owns the whole of the bed, and in the latter but half, or to

3 Rex v. Wharton, Holt 499, 12 Mod. 510, 88 Eng. Reprint 483; Devonshire v. Pattinson, L. R. 20 Q. B. Div. 263, 57 L. J. Q. B. N. S. 189, 58 L. T. N. S. 392, 52 J. P. 276; Tyler v. Wilkinson, 4 Mason 397, Fed. Cas. No. 14,312; Hoy v. Sterritt, 2 Watts 327; Ball v. Slack, 2 Wharton (Pa.) 508, 25 Cent. L. J. 539; Hatch v. Dwight, 17 Mass. 289, 10 Am. Dec. 145; Mead v. Haynes, 3 Rand 33; Morrison v. Keene, 3 Greenl. 474; Middleton v. Pritchard, 4 Ill. 510, 38 Am. Dec. 112; Jones v. Soulard, 65 U. S. 24 How. 41, 16 L. Ed. 604, in which the Court held that a riparian proprietor upon the Mississippi was entitled to all the accretions as far out as the middle of the stream.

See, also, Canal Com's v. People, 5 Wend. 423; People v. Canal Appraisers, 13 Wend. 355; King v. King, 7 Mass. 496; Lunt v. Holland, 14 Mass. 149; Coovert v. O'Conner, 8 Watts (Pa.) 470; Holyoke Water Pr. Co. v. Lyman, 82 U. S. 15 Wall. 500, 21 L. Ed. 133; Stolp v. Hoyt, 44 Ill. 219; Berry v. Snyder, 3 Bush. 266, 96 Am. Dec. 219.

4 Gould on Waters, Sec. 46; Tilbury v. Silva, 45 Ch. D. 98, 62 L. T. N. S. 254.

5 *Ibid.* Tyler v. Wilkinson, 4 Mason's Cir. Ct. 397, Fed. Cas. No. 14,312; Hay v. Sterritt, 2 Watts 327; 2 Cooley's Blackstone 18, and note 3; Angell on Water Courses, Sec. 10; Lord Hale's Treatise, De Jure Maris. The Latin term, *ad filum aquae,* is defined by Bouvier as meaning, "to the thread of the stream; to the middle of the stream." The word thread is defined by Johnson, "a small line, anything continued in course"; Jones v. Soulard, 65 U. S. 24 How. 41, 16 L. Ed. 604; Wadsworth v. Smith, 11 Me. 278, 26 Am. Dec. 525, in which the Court said: "If a man be owner of the land on both sides of the stream or river, in common presumption he is the owner of the whole river."

6 Hatch v. Dwight, 17 Mass. 289, 10 Am. Dec. 145.

the thread of the stream.[7] As was recently said in an Oregon case:[8] "Though the title to the soil under navigable rivers is not involved herein, the subject has been mentioned in order to distinguish between such rights of property in those streams and in non-navigable rivers above tide waters. The middle line of the latter streams has been determined in this State to be the boundary of a riparian proprietor's land. Such, also, is the general rule."[9] This is also the rule on public or navigable rivers in those States which have relinquished their rights to the beds of the same and permit their ownership by the riparian owners. This subject, however, has been discussed in another portion of this work.[10] This is true even in those States which have abrogated the common law of riparian rights as to the use of the water.

§ 538. **Accretion, reliction, and avulsion.**—We have seen in previous sections that riparian rights have their very foundation in the contact of the lands of the riparian proprietor with the water. Regardless of the ownership of beds of the streams a lateral contact

7 Starr v. Child, 20 Wend. 149, in which Mr. Justice Cowan in construing the terms used in a deed said: "But suppose we expunge the words *to the river*, and take the shores as the boundary; the grantees become the proprietors of the shore which, when applied to a fresh water river, means the bank."

Johnson's Dictionary, *Shore* and *Bank*, signify the earth arising on each side of the water. *Id.*, Bank. . . . "The bank and the water are correlative. You can not own one without touching the other. But the bank is the principal object; and when the law once fixes the proprietorship of that, the soil of the river follows as an incident, or rather as a part of the subject matter, *usque filum aquae*. . . . It is true that parts of the thing may be excluded or excepted from the grant, or it may exist in separate bonds by prescription, or they may be granted by some together with the land; but in no case *does the mere omission to mention them operate as an exclusion.*" See, also, *Ex parte* Jennings, 6 Cowan 518, 16 Am. Dec. 447, and authorities cited.

8 Micelli v. Andrus, —— Ore. ——, 120 Pac. Rep. 737.

9 Citing Shaw v. Oswego Iron Co., 10 Ore. 371, 45 Am. Rep. 146; Hanlon v. Hobson, 24 Colo. 284, 51 Pac. Rep. 433, 42 L. R. A. 502.

10 For ownership of the beds of fresh water navigable streams, see Secs. 328-332.

See, also, Johnson v. Johnson, 14 Idaho 561, 95 Pac. Rep. 499, 24 L. R. A., N. S., 1240; Lattig v. Scott, 17 Idaho 506, 107 Pac. Rep. 47; Fischer v. Davis, 19 Idaho 493, 116 Pac. Rep. 412; Drake v. Russian River Co., 10 Cal. App. 654, 103 Pac. Rep. 167; Foss v. Johnstone, 158 Cal. 119, 110 Pac. Rep. 294.

is all that is necessary.[1] If the boundary line of the owner was fixed on a particular meander line, at a certain time when the water was in actual contact with his land, and was immovable from that line, it would often happen that the owner's land would be left high and dry and separated from the stream by a strip of land of a greater or less width, and he would lose all of his riparian rights for the reason that the contact of his land with the water no longer existed.

This loss of contact of a certain line with the water results from one of three causes: First, accretion, or the gradual and imperceptible addition to the land by the deposit of silt and sediment along the edge of the water, so that the land is extended into the water. Second, reliction, or the gradual withdrawal of the water from the land, by the lowering of its surface level from any cause. Third, avulsion, by which a large quantity of land is suddenly added to the shore by some freak of the stream in severing it bodily from its former location. The contact of the owner's land must continue to exist in order for him to hold his riparian rights. The question is well settled at common law that the person whose land is bounded by a stream of water which changes its course gradually, by alluvial formations, or the water of which gradually receded, shall still hold the same boundary upon the stream, including accumulated soil; this is so without regard to the question whether such accumulations or relictions were formed wholly by natural causes or by such causes influenced by the artificial works of others, and also without regard to the questions whether such stream is navigable or nonnavigable, private or public.[2] Upon the other

Risley, 77 U. S. 10 Wall. 91, 19 L. Ed. 850; Jones v. Johnson, 59 U. S. 18 How. 150, 15 L. Ed. 320; Handly v. Anthony, 18 U. S. 5 Wheat. 374, 5 L. Ed. 113; Barney v. Keokuk, 94 U. S. 324, 24 L. Ed. 224; Jefferis v. East Omaha L. Co., 134 U. S. 178, 33 L. Ed. 872, 10 Sup. Ct. Rep. 518; County of St. Clair v. Lovingston, 90 U. S. 23 Wall. 46, 23 L. Ed. 59, 10 Sup. Ct. Rep. 518; Fowler v. Wood, 73 Kan. 511, 85 Pac. Rep. 763, 6 L. R. A., N. S., 162, 117 Am. St. Rep. 534; McBride v. Seinwenden, 72 Kan. 508, 83 Pac. Rep. 822; Lammers v. Nissen, 4 Neb. 245; affirmed, 154 U.

hand, the right to accretions depends upon the original actual contiguity of the owner's land with the stream, and any separation, however slight, of his land from the accretion by the land of another defeats his claim. As was laid down in the case of Bates v. Ill. Cent. R. Co.,[3] "Before a proprietor can set up his claim to accretions and the like he must first show that he owns the shores; and if he fail to establish his ownership, judicial inquiries respecting his rights in or under the waters adjoining are abstractions and useless."[4]

An accretion or reliction, to vest a title in the owner of the land abutting upon the stream, must be so slow that its increase should be imperceptible, or, as some courts hold, so gradual that no one can judge how much is added from time to time.[5] However, a riparian owner can have no vested right to future accretions.[6] If

[5] Lammers v. Nissen, 4 Neb. 245; affirmed, 154 U. S. 650, Appendix 14 Sup. Ct. 1189, 25 L. Ed. 562; Saunders v. New York etc. R. Co., 144 N. Y. 75, 38 N. E. Rep. 992, 26 L. R. A. 378, 43 Am. St. Rep. 729; Warren v. Chambers, 25 Ark. 120, 91 Am. Dec. 538, 4 Am. Rep. 23.

See, also, cases cited above. Angell on Water Courses, Sec. 53; Halsey v. McCormick, 18 N. Y. 147; Emans v. Turnbull, 2 Johns. (N. Y.) 313, 3 Am. Dec. 427; Mulry v. Norton, 100 N. Y. 424, 3 N. E. Rep. 581, 53 Am. Rep. 206; Cook v. McClure, 58 N. Y. 437, 17 Am. St. Rep. 270; Lovingston v. St. Clair, 64 Ill. 56, 16 Am. Rep. 516; *Id.*, 18 Wall. 628 U. S., 21 L. Ed. 813, 23 Wall. 46, 23 L. Ed. 59.

The legal meaning of the word "imperceptible" seems to have been settled in the case of King v. Lord Yardborough, 3 B. & Cress. 91, S. C. 10 Eng. Com. Law 19; affirmed in the H. L. 2 Bigh. N. S. 147, 1 Dow. J. C. 176. That there is no distinction in this respect between soil gained by accretions and that uncovered by relictions, see Handly v. Anthony, 18 U. S. 5 Wheat. 374, 5 L. Ed. 113; Boorman v. Sunnuchs, 42 Wis. 233; Linthicum v. Coan, 64 Md. 439, 53 Am. Rep. 210.

[6] Cohen v. United States, 162 Fed. Rep. 364.

the addition to the land is sudden and considerable it belongs to the sovereign or State,[7] where the State was the original owner; but in those States, where the riparian owner was also the owner of the bed of the stream, it remains in him.[8] And, conversely, every proprietor whose land is thus bounded by a stream is subject to loss by the same means which may add to his territory; and as he is without remedy for his loss in this way he can not be held accountable for his gain.[9] These principles have been sustained throughout the Western States, where the common law principles have been for the most part modified. No other rules than these can be applied on just principles, and their effect is that where a person's lands actually border upon the stream and his riparian rights have once accrued by virtue of the ownership in the lands so situated none of those rights can be lost by the gradual formation of new soil upon the margin of the water, caused by the action of the tides or current. Were this otherwise the whole system of riparian rights would be overthrown and the riparian owners whose estates derive a greater part of their value from the very fact that they border upon a water course would suffer hardship and injustice by being deprived of all the rights belonging to them by virtue of their situation through the action of the tides or current working up a line of alluvion in front of their premises.[10]

Therefore, in the Western States, even those which have rejected the common law of riparian rights as to the use of the water flowing

in streams in favor of the Arid Region Doctrine of appropriation, the common law riparian right of accretion remains so long as the stream has not been diverted by any appropriator.[11] The doctrine, therefore, may be regarded as well settled in this country that when lands border on rivers and streams and the banks are changed by that gradual and imperceptible process known as "accretion," the boundaries of the riparian proprietor still remain at the river, although, as a consequence of such change in the shore line, the area of the possession may be changed, as was said by the Circuit Court of Appeals: "A boundary on a river implies a boundary changing as the shore line changes by accretion or erosion in the absence of definite intention to the contrary."[12]

§ 539. **Avulsion.**—Avulsion is where, by some sudden freak the stream breaks through its banks and forms another channel, or cuts off a large quantity of land from one owner and adds it to the bank of another. As was held in a recent Kansas case, to constitute avulsion the bank of the stream must be destroyed or removed suddenly, visibly, rapidly, violently, in a substantial quantity, and in a manner unusual to that particular river; and to constitute avulsion it was not essential to be torn away or be removed intact so as to be capable of location or identification.[1] Avulsion is different from accretion in this: Accretion is through imperceptible changes, while avulsion is sudden and may come in a single day. It follows, therefore, that riparian rights may be lost by the sudden change made in the channel of the stream

through avulsion.[2] Where avulsion occurs the former riparian owner has no right to ditch the stream back to its former water course; and, as said by the California Court: "The foundation of a riparian proprietor's right rests upon the universally accepted maxim, adopted by the common law from the civil law, *Aqua currit et debet currere ut currere solebat ex jure naturae.* These rights thus draw their support from the laws of Nature, but they do not rise superior to those laws. When, by their operation, the flow is lost the right is lost with it. The new channel itself becomes the natural channel. Otherwise a riparian proprietor would hold all lands above him in extraordinary and perpetual servitude. If, by the forces of Nature, the stream should change its course at a point miles above him, he would still be empowered to subject any and all of the intermediate territory to operations requisite to enable him to turn the water back upon his own premises, and this power would be his to the very foundation head of the stream. Such a doctrine could not be tolerated."[3] However, a riparian owner has the right to take all necessary steps in strengthening the banks of the stream against sudden changes by freshets and washouts provided that he can do so without trespassing upon the land of another.[4] If the change is gradual instead of sudden the riparian owner's right of access to the stream is not lost under the rule of accretion.[5] Therefore he retains all of his riparian rights.

**§ 540. The right of access to and from estate.**—As discussed in previous sections, land in order to be riparian must actually touch or border upon the stream or other natural body of water.[1] It therefore follows that in order to continue its riparian character this condition must also continue. In other words, there must

For what are riparian lands, see Secs. 457-466.

always be a direct access from the land to the stream. Any intervening right between such lands and the water's edge cuts off the riparian rights from such lands and they are no longer considered as riparian.[2] And we have also seen that in order to maintain this continuity of access it is the rule that all accretions formed at the edge of the water also belong to the riparian owner.[3] Therefore, although the locality of the line of access may be changed, it is always there, even if the stream recedes to a considerable distance, and adds a considerable area to the land of the riparian proprietor. If the access to the stream is lost, through any legal means, the lands are no longer riparian; and, conversely, the riparian owner is always given the right of access to and from his estate and the water, by virtue of the fact of his lands touching upon the stream. This right of access is, therefore, one of the most important of riparian rights, and the one upon which all of the other riparian rights depend. It not only applies to non-navigable but to navigable streams and water courses, and also to all other natural bodies of water, to which riparian rights may attach.[4]

The right of access to enter from one's own estate upon a water course which runs by the same, and to pass from the water course back to the estate, exists only in the riparian owner of such estate. Having alone this exclusive right of access, the riparian proprietor only has the exclusive right to all uses of the water permitted under the common law.[5] This right is exclusive in the proprietor and extends to all portions of his domain fronting on the water, whether it is ever used by him or not, as long as it has not been lost by adverse possession by another.[6] Any interruption of it is an encroachment upon a private right, whether caused by a public or private nuisance, or authorized by legislative enactment, unless

6 For loss of riparian rights by prescription, see Secs. 1039-1041.

proper condemnation proceedings have been had for it, and upon the payment of just compensation.[7] This riparian right of access is property and is valuable, and the owner can not, directly or indirectly, be deprived of it except by a constitutional exercise of the power of the State to appropriate private property for a public use.[8] The right exists by virtue of his riparian ownership, and is entirely different from the public right of navigation and of passing and repassing along the highway of the river.[9] Upon the other hand the riparian owner has the exclusive right to make a landing, wharf, or pier from his own land out into the stream, provided that

he does not interfere with the general right of the public to navigation upon the stream.[10]

There have been many attempts to deprive the riparian owners of this right of access. But the courts have almost universally held that this right was a property right and of value and held by as sacred a tenure by the riparian owner as he holds the land from which it emanates, and hence he can not be deprived of it except by due process of the law of eminent domain, and then only upon just compensation.[11] Wharves or piers can not be erected in such a way as to interfere with the owner's right of access either by the public or by private individuals;[12] nor any other structures, such as embankments.[13] Nor can logs be boomed so as to cut off the access.[14] The access can not be destroyed by changing the level of the water,[15] nor by changing the channel of the stream.[16]

As we have seen in a previous section, the right of access in the majority of the States can not be taken away from the riparian proprietor, without compensation, even for the improvement of navigation.[17] As far as the Federal Courts are concerned, it is left

to the laws and decisions of the respective States to determine the rule in this respect. This subject, however, has been discussed in another portion of this work relating to public waters and navigation.

**§ 541. Title to the beds under small lakes and ponds—English rule.**—The early English authorities are indefinite respecting property in land covered by lakes and ponds. As to riparian rights, it was first regarded as not necessary to determine whether the soil of lakes and ponds, like that of fresh water rivers, *prima facie* belongs to the owners of the land or of the manors on either side, *ad medium filum aquae*, or whether it belongs *prima facie* to the King, by right of his prerogative. But later it was laid down [1] in the House of Lords, in the case of Bristow v. Cormican, that the Crown has no *de jure* right to the soil or fisheries of an inland non-tidal lake, which rule has been followed by other decisions. So the law of England is settled that the Crown and the public have no such rights in fresh water lakes as they possess in water courses subject to the ebb and flow of the tide; that the owners of the land bordering upon the lake or pond are the owners of the soil and the fisheries in them, and that the public have no greater privileges in them than in fresh water rivers.[2]

1 Marshall v. Ulleswater Steam Nav. Co., 3 Best. & S. 732; Com. Dig. Prerogative (D. 50); Hale, De Jure Maris, Chap. 1; Devonshire v. Pattinson, 2 Q. B. D. 263; Perry v. Thornton, 23 L. R. Ir. 402; Hunt on Boundaries and Fences, 19; Grey's Case, Owen, 20; Pollenfen v. Crispin, 1 Vent. 122; Bell's Law of Scotland, 171.

See, also, for rights of public to beds of lakes and ponds, Sec. 327.

2 Bristow v. Cormican, L. R. 3 App. Cas. 641, S. C. Ir. 10 C. L. 398, 2 L. R. Ir. 118. In this case Lord Cairns, who was then Lord Chancellor, said: "The Crown has no *de jure* right to the soil or fisheries of a lough like Lough Neagh. Lough Neagh is, as your Lordships are aware, the longest inland lake in the United Kingdom, and one of the largest in Europe. It is from fourteen to sixteen miles long and from six to eight miles broad. It contains nearly one hundred thousand acres; but though it is so large, I am not aware of any rule which would *prima facie* connect the soil or the fisheries with the Crown, or disconnect them from the private ownership, either of riparian proprietors or other persons." Lord Blackburn said: "It is clearly and uniformly laid down in our books, that where the soil is covered by the water forming a river in which the tide does not flow, the soil does of common right belong to the owners of the adjoining land; and there is no case, or book of authority, to show that the Crown is of common

**§ 542. Lakes and ponds—Title to soil in United States.**—In the United States, as we have seen in previous sections,[1] our great navigable lakes are regarded as public property, and are not susceptible of private ownership any more than the sea. But upon these bodies of water the riparian owner's title extends to the edge of the water at low water mark, and grants bounded by such waters extend to that line.[2] But upon the other hand, in this country a lake or pond too small to be really useful for navigation, although of considerable size as compared with other fresh water streams, may be private property, and as such is subject to the common law rules as to fresh water streams respecting the ownership of the soil under them.[3] This rule, however, varies, especially in the

right entitled to land covered by water where the water is not running water forming a river, but still water forming a lake. . . . It is, however, necessary to decide whether the Crown has of common right a *prima facie* title to the soil of a lake; I think it has not. I know of no authority for saying it has, and I see no reason why it should be."

See cases cited above as to the right of the public to navigate upon lakes. See Marshall v. Ulleswater Steam Nav. Co., 3 B. & S. 732, L. R. 7 Q. B. 166; Bloomfield v. Johnson, Ir. R. 8 C. L. 68; Bristow v. Cormican, 3 App. Cas. 641, S. C. Ir. R. 10 C. L. 398, 2 L. R. Ir. 118; Mackenzie v. Banker, 3 App. Cas. 1324.

Eastern States.[4] But in the Western States it is held that the owners of land bordering upon non-navigable lakes and ponds situated within the original Government surveys own the beds of the lakes to the center, as in the case of non-navigable fresh water streams.[5] But if the lakes are large and navigable they are public property, and the riparian owners take only to the water's edge.[6] This right of title to the beds of lakes is, like the title to the beds of fresh water streams, based upon the actual contact of the riparian owner's land with the edge of the water of the lake, and with this

contact he is entitled to all of the riparian rights to which an owner is entitled upon the fresh water streams.[7]

§ 543. **Right to natural flow of the water—In general.**—The right to a water course, under the theories of the common law, begins *ex jure naturae*, and, having taken a certain course naturally, it can not be diverted or so used by one proprietor, to the deprivation of the rights of the other riparian owners on the same stream or other body of water. *Aqua currit et debet currere, ut currere solebat*, is the language of the ancient common law.[1] The more modern general principle is, that every owner of land, through which a natural stream flows, has a usufruct in the water of the stream as it passes along, and has an equal right with those above and below him to the natural flow of the water in its accustomed channel, at its usual level, without unreasonable detention or substantial diminution in quantity or quality, and that none of the owners can make any use of it prejudicial to the rights of the other owners, unless he has acquired a right to do so by license, grant, or prescription. And this is so whether the water is navigable or non-navigable, so long as the use does not interfere with the navigation.[2] Or, as the rule is laid down by Mr. Justice Story, but upon

Ch. 94, 24 Rev. Rep. 169, in which

the theory of the ownership of the bed of the stream rather than the bank,[3] "*Prima facie*, every proprietor on each bank of a river is entitled to the land covered with the water to the middle of the thread of the stream, or, as is commonly expressed, *usque ad filum aquae*. By virtue of this ownership he has a right to the use of the water flowing over it, in its natural current, without diminution or obstruction. But strictly speaking he has no property in the water itself but a simple use of it as it passes along."[4]

it was held that every owner on the banks of a river has, *prima facie*, an equal right to use the water, and can not acquire a right to throw the water back on the proprietor above, or to divert it from the proprietor below; without a grant or twenty years' enjoyment, which is evidence of a grant.

By the rules of common law all proprietors of lands have precisely the same right to waters flowing through their domains, and one can never be permitted to so use the stream as to injure or annoy those who are situated on the course of it, either above or below him. And if any person on the river interposes an impediment, interrupts or diverts the course of the water to the injury of others, successive actions on the case would lie until the interruption should be removed.[5] This right to use the water of a stream at its ordinary flow is regarded and protected by the common law authorities as

[5] In the case of Ingraham v. Hutchinson, 2 Conn. 584, Chief Justice Swift laid down the law as follows: "By common law every person owning land on the banks of rivers has a right to the use of water in its natural stream without diminution or alteration; that is, he has a right that it should flow *ubi currere solebat;* and if any person on the river above him interrupts or diverts the course of the water to his prejudice, the action will lie. This will give to every one all the advantage he can derive from the water which does not injure the proprietor of lands on the river below him." Arnold v. Foot, 12 Wend. 330, where a spring of water rises upon the land of one owner, and from it runs a stream on to the land of another, the owner of the land upon which is the spring has no right to divert the stream from its natural channel, although the waters of the stream are not more than sufficient for his domestic uses, for his cattle, and for irrigating his land.

The natural flow of a stream can not be deflected by jetties built out into the stream. Morton v. Oregon S. L. R. Co., 48 Ore. 444, 87 Pac. Rep. 151, 7 L. R. A., N. S., 344, 120 Am. St. Rep. 827; Chicago, R. I. & P. Co. v. Groves, 20 Okla. 101, 93 Pac. Rep. 755, 22 L. R. A., N. S., 802.

property,[6] not as a mere easement or appurtenance to the land, but as inseparably annexed to the soil itself.[7] In the case of Lux v. Haggin[8] the Court explains this principle as follows: "By common law the right of the riparian proprietors to the flow of the stream is inseparably annexed to the soil and passes with it, not as an easement or appurtenance, but as part and parcel of it. Use does not create the right, and disuse can not destroy or suspend it. The right in each extends to the natural and usual flow of all the water, unless the quantity has been diminished as a consequence of the reasonable application of it by other riparian owners for purposes hereafter to be mentioned."[9]

The right of a riparian owner to have the water of a stream run through his land is a vested right, and any interference with it imports at least nominal damages, even if there be no actual damages. See, also, Ferrea v. Knipe, 28 Cal. 340, 87 Am. Dec.

The right to the natural flow of the water, being but one of the riparian rights, does not depend on the ownership of the soil over which the water flows, as was held in some of the early cases, but upon the ownership of the bank by which it flows.[10] In the common law Western States it is also held that riparian owners have a right to have the stream flow past their land in its usual course, and this right, so far as it is of regular occurrence and beneficial to their land, is a right of property and a part and parcel of the land itself, and such right may not be taken away except under the power of eminent domain.[11]

**§ 544. Right to natural flow—Right to whole flow.**—The right of one or more proprietors of several to the flow of a stream can not be divided if the division is opposed by the others. So, if a water course divides two estates, the riparian owner of neither can lawfully carry off any part of the water without the consent of the owner opposite; and not only this, but he must also obtain the consent of all the proprietors above and below who would be affected, or damaged by the diversion. In other words each proprietor is entitled not to half, or other proportion of the water, but to the whole bulk of the stream undivided and indivisible. The joint proprietors must use it as an entire stream in its natural channel. A severance would destroy the rights of all. It is impossible from the very nature of things that one proprietor can take water only from his side, as an equal portion from the other side of the stream must have mingled with all that was diverted. All parties are entitled *per my et per tout*, to their proportion of the whole stream as it naturally flows in its course, and no proprietor can divert any portion of it, although the portion diverted be less than

11 Miller & Lux v. Madera Canal & Irr. Co., 155 Cal. 59, 99 Pac. Rep. 502, 22 L. R. A., N. S., 391; Dement Bros. Co. v. City of Walla Walla, 58 Wash. 60, 107 Pac. Rep. 1038; Hayward v. Mason, 54 Wash. 649, 104 Pac. Rep. 139.

The right of a riparian owner to the natural flow of the waters of a stream across his lands is a part of the land itself, and passes by a grant as realty. Menthow Cattle Co. v. Williams, 64 Wash. 457, 117 Pac. Rep. 239.

See, also, Still v. Palouse Irr. & Power Co., 64 Wash. 606, 117 Pac. Rep. 466.

any proprietor be actually entitled to.[1] This right to the flow of the water is a natural right.[2] "The unquestioned rule of the common law was that every riparian owner was entitled to the continued flow of the stream. It is enough, without other citations or quotations, to quote the language of Chancellor Kent,"[3] and, under a strict construction of the common law rule, a riparian owner has the right to have the entire stream continue to flow through or by his land, whether he has any use for it or not.[4] So sacred do the common law authorities hold this right of the riparian owners to the flow of the water in its natural channel without material diminution or obstruction that they even go so far as to hold that an owner above on the stream, in protecting his own land from injury, can not cut off the water of the stream by a dam, if it obstructs or diminishes the flow of the stream to those below him.[5] So, also, the right to the continuance of the natural and ordinary flow of the water across and past his lands can not be taken or damaged for a public use without just compensation.[6]

As was stated by the learned author, in Washburn on Easements:[7] "The right of enjoying this flow without disturbance or interruption by any other proprietor is one of *jure naturae,* and is an incident of property in the land, not an appurtenance to it, like the right he has to enjoy the soil itself, in its natural state, unaffected by the tortious acts of a neighboring landowner. It is an inseparable incident to the ownership of land, made by an inflexible rule of law an absolute and fixed right, and can only be lost by grant or twenty years' adverse possession." And again, the common law upon the subject as laid down by Professor Pomeroy in equally clear and explicit language, is as follows: "The use of the stream, and of the water flowing through it, forms a part of the rights incident to and involved in the ownership of the lands upon its borders. This is the principle recognized by the common law, and which should be recognized by any auxiliary legislation. It is, moreover, a natural law, an inevitable fact, which no legislation can change. Any statute denying this fact simply attempts an impossibility."[8] And, the Supreme Court of Oregon, commenting upon the rule in the case of Benton v. Johnsox,[9] said: "While the doctrine announced by the foregoing authorities has never, so far as we are advised, been directly denied, it has been apparently ignored by the courts in some of the Pacific States and Territories, on the theory that the principles and rules of the common law respecting the rights of private riparian owners were inapplicable to the condition and necessities of the people of the particular localities where the causes of action arose."

**§ 545. Right to natural flow—Obstructing flow.**—The rule stated in a previous section that the riparian proprietors have the right to have the stream flow down to their lands as it is wont to flow by nature and without material diminution, applied to obstructing the flow of the stream even temporarily. An action for the diversion of a water course is grounded on the deprivation of water; and, hence, if the owner complaining is deprived of the water by any means the law will interfere. It is as illegal to detain the water unreasonably as to divert it, for although each

[7] 4th Ed., pp. 316, 317.

[8] Pomeroy on Riparian Rights, Sec. 152.

[9] 17 Wash. 277, 49 Pac. Rep. 496, 39 L. R. A. 107, 61 Am. St. Rep. 912.

owner has the equal right to use the water as it passes his land for the purpose of propelling machinery and the like, yet he must so construct his works, and so use the water, that the flow of the stream must not be unreasonably obstructed, and that all of the owners below may participate without interruption in the enjoyment of the same water and for the same purposes should they desire it.[1] It must not be understood, however, that by the above doctrine there can be no diminution of the flow, or that there can be no obstruction or impediment whatever, by a riparian proprietor in the use of the water as it flows, for that would deny any valuable use of it at all. There may be and there must be allowed that which is common to all—a reasonable use. The reasonableness of detention of the flow of the stream by a riparian proprietor above, causing injury to those proprietors below, depends upon all of the circumstances of each particular case, including the size of the stream, the time the water was detained, and the use that was made of the water by all interested.[2] The mere detention of a stream for a short time, in order to fill a pond, and then after it is filled to let down the entire flow of the stream, may be permitted.[3] However, the supply to the lower proprietor

1 See use of water for power purposes, Sec. 492; Angell on Water Courses, Sec. 115; Embrey v. Owen, 6 Exch. 352, 20 L. J. Exch. N. S. 212, 15 Jur. 633; Miner v. Gilmour, 12 Moore P. C. must not depend upon the convenience or caprice of the upper proprietor, or upon accident or mere chance, as upon the raising of a flood gate or overflow of a dam or leakage through it, but his supply must be substantially according to the natural flow, subject only to such interruption as is necessary and unavoidable by the reasonable and proper use of the water in the stream above.[4]

**§ 546. Right to natural flow—Accelerating flow.**—The rule as to the right of the riparian proprietors to the natural flow of the water of a stream[1] also applies to the acceleration of the current of a stream, whereby the lower proprietor is injured. The lower proprietor has the right to insist that the water flow as it is wont by Nature.[2] Hence it follows that an upper proprietor has no right to accumulate a large head of water, by any means, and then discharge the accumulated flow upon the works and lands of the proprietors below.[3] So, also, an upper proprietor has no right to discharge the natural drainage of his land, or the sur-

face water accumulated thereon in ponds, or the water drawn from wells therein, into a natural water course, if in so doing he thus accelerates the natural flow and increases the volume of the water in the stream to a point whereby the capacity of the stream is exceeded and the riparian proprietors below are injured in any manner.[4]

§ 547. **Right to natural flow—Backing up water.**—A riparian proprietor has the right to have the water flow by or off his land at its natural height; and hence a lower owner has no right to make obstructions in the stream on his own land which will have the effect of backing up the water and submerging the land of an upper owner.[1] And an action will lie for backing up water as soon as it interferes with a use to which the upper proprietor attempts to put his land, although he was not making such use of the land when the dam was built.[2] So, too, a dam which sets the water back so as to interfere with the drainage of the land of the upper owner is a violation of his rights.[3] Again, a lower proprietor has no right to construct his dam so as to throw the water back on the lands of the upper owner in times of ordinary

freshets. But he is not responsible for damages caused by extraordinary floods.[4]

§ 548. **Rights of riparian owner to the products of the water.**—In addition to the rights enumerated in this and other chapters of this part, riparian owners have certain rights to the products of the waters of the streams which adjoin or run through their lands. As we have discussed in a previous section, they have the exclusive right to the ice which forms on the stream in front of their lands, provided the streams are private and not subject to such right by the general public;[1] but, as we have before stated, the taking of the ice is, in fact, the taking of water itself.[2] Other rights may be enumerated, as the exclusive right to take the fish from the water opposite the owner's land.[3] He has the right to take the sand and gravel from the bed of the stream, where he can do so without injury to other riparian owners, or to the public.[4] He also has the right to take the driftwood floating down the stream, where he can capture it, as it passes through or adjoining his lands.[5] There are many other rights to which such owner is entitled which are unnecessary to enumerate here. But, in general, it may be stated that he is entitled to all the rights to the water of the stream, and to its products, which do not materially and substantially interfere with the rights of the other riparian proprietors upon the same stream, or with the rights of the public.

5 The owner of a bank of a river has an absolute ownership of the driftwood which lodges upon his lands, or at least a qualified, possessory title good as against a trespasser or stranger to the title, and which is the subject of grant. Yuba Consol. Goldfields v. Hilton, 16 Cal. App. 228, 116 Pac. Rep. 712.

**§ 549. The modern Western rule of the "undiminished flow" of streams.**—In the preceding sections we have discussed the right of a riparian proprietor to the undiminished flow of a natural stream which washes his lands, more from the standpoint of the strict construction of the common law. But, as we have seen, in the Western States of this country the common law rules of riparian rights have been modified to a great extent, and especially relative to the use of the waters of natural streams, thereby permitting, even under the common law as it is applied in these States, a more liberal use of the water, especially for the irrigation of lands.[1] As water must be diverted from the natural streams for the purpose of irrigation, and as a considerable portion of the same is consumed in the operation, it must follow that the old rule of the common law of the "undiminished flow" of the water can not be followed with the same degree of strictness as it is in England and in the Eastern States, where such a use of the water is not made to any great extent. And, upon this subject, it may be said that in no respect have the rules of the common law, as they have been handed down to us, been modified or extended more than upon the subject of the undiminished flow.

In the case of Sturr v. Beck[2] it was held by the Supreme Court of the United States, following the strict construction of the common law, to the effect that the plaintiff could make no appropriation of the water as against Beck, who was a riparian proprietor and by virtue of that right was entitled to the undiminished flow of the stream. The Court, quoting from the former case of Atchison v. Peterson,[3] said: " 'The Government being the sole proprietor of all the public lands, whether bordering on streams or otherwise, there was no occasion for the application of the common law doctrine of riparian proprietorship with respect to the waters of those streams.' " The Court then concluded its remarks upon this branch of the subject by saying: "When, however, the Government ceases to be the sole proprietor, the right

of the riparian owner attaches, and can not be subsequently invaded. As the riparian owner has the right to have the waters flow *ut currere solebat*, undiminished except by reasonable consumption of upper proprietors, and no subsequent attempt to take the water only can override the prior appropriation of both land and water, it would seem reasonable that lawful riparian occupancy with intent to appropriate the land should have the same effect."

But, even the Supreme Court of the United States has materially changed its views in this respect. In the case of the United States v. Rio Grande Dam & Irrigation Co.[4] the Court said: "By the Act of March 3, 1877,[5] the right to appropriate such an amount of water as might be necessarily used for the purpose of irrigation and reclamation of desert land, part of the public domain, was granted, and it was further provided that 'all surplus water over and above such actual appropriation and use, together with the waters of all lakes, rivers, and other sources of water supply upon the public lands and not navigable, shall remain and be held free for the appropriation and use of the public for irrigation, mining, and manufacturing purposes, subject to existing rights.'"[6] Also in the case of Kansas v. Colorado[7] the same claim was asserted upon the part of Kansas as a riparian owner, as was decided in the case of Sturr v. Beck,[8] and Kansas insisted that large quantities of the water were being diverted from the Arkansas River by the inhabitants of Colorado, a large number of whom were claiming a prior appropriation and diverting the water to nonriparian lands, as against Kansas, a riparian proprietor. The Court refused injunctive relief and dismissed the bill, stating,

For a specific statement of the facts in this case disclosing that many of the defendants were using water on riparian lands, see the first opinion, which was on demurrer, Kansas v. Colo., 185 U. S. 125, 46 L. Ed. 838, 22 Sup. Ct. Rep. 552.

For decision upon the facts in the case, see 206 U. S. 46, 51 L. Ed. 956, 27 Sup. Ct. Rep. 655.

[8] *Supra.*

in substance, that if the riparian doctrine should prevail in Kansas as against Colorado, and against the nonriparian users, whose rights were involved therein, Oklahoma and its citizens lower down on the Arkansas River might invoke the same rule in opposition to the citizens of Kansas and Colorado to their great injury, which doctrine, it is observed, would be ruinous in effect. The Court in dismissing the bill indicated that no injunction would lie until a more substantial injury could be shown, and at the same time held that the interference by a large number of the appropriators above in the State of Colorado materially depleted the flow to the riparian lands of the plaintiff State. In commenting upon this decision Mr. Justice King, in rendering the decision of the Supreme Court of Oregon, also a common law State, in the case of Hough v. Porter,[9] said: "The opinion in the Kansas-Colorado case not only brushes aside the rule claimed to have been announced in Sturr v. Beck, regarding riparian rights, but discloses what, in the opinion of the writer, is a strong and commendable tendency on the part of that great Court to recognize that the rigid rules of common law, as interpreted and sought to be applied by those insisting upon the "undiminished flow" theory, are inapplicable to the many new and intricate questions necessarily arising under our form of Government and throughout the arid and semi-arid sections."

The Supreme Court of the United States also in the case of Boquillas Land & Cattle Co. v. Curtis,[10] while not deciding the contention as to the effect of the Desert Land Act in reserving the waters for appropriation regardless of the rights of the patentees of land, but referring to the decision in the case of Hough v. Porter,[11] said: "The Supreme Court of Oregon has rendered a decision to that effect on plausible grounds."[12] But this is not all. The Supreme Court of California, the State that has most strenuously insisted upon the common law right of the "undimin-

11 *Supra.*

12 See, also, the later Oregon case of Berman v. Blackmon, —— Ore. —, 118 Pac. Rep. 848, wherein it is said: "By this Act the General Government made the water, not only of lakes and rivers but also other sources of water supply upon the public lands and not navigable, the subject of appropriation."

ished flow," and that, too, whether the riparian owner actually used the water or was actually damaged by its diversion or not,[13] by others for use, has also modified its views, and by its later cases holds to the effect that an injunction against an appropriation of the water for beneficial uses will not be granted on behalf of a riparian owner without use, or, in other words, without his showing actual, material, and substantial damage. As was said in a recent case:[14] "Even if at common law or under the civil law it was a part of the usufructuary right of the riparian owner to have the water flow by for no purpose than to afford his pleasure in its prospect, such is not the rule of decision in this State. *The lower claimant must show damage to justify a Court of Equity in restraining an upper claimant from his beneficial use of the water.* The fair apportionment and economic use of the waters of this State are of the utmost importance to its development and well-being. The problems presented never came within the purview of the common law. They have been of necessity, therefore, and must continue to be solved by this Court as cases ~~of first~~ impression, and, as in the past so in the future, if a rule of decision at common law shall be found unfitted to the radically changed conditions existing in this State, so that its application will work wrong and hardship rather than betterment and good, this Court will refuse to approve and follow the doctrine." But this decision of California does not stand alone and is based upon earlier decisions of the same Court. In the case of Modoc Land & Live Stock Co. v. Booth[15] it was said: "A riparian owner ought not to be permitted to invoke the power of a Court of Equity to restrain the diversion of water above him by a nonriparian owner,

[13] Gould v. Eaton, 117 Cal. 539, 49 Pac. Rep. 577, 38 L. R. A. 181; Barneich v. Mercy, 136 Cal. 205, 68 Pac. Rep. 589; Ferrea v. Knipe, 28 Cal. 340, 87 Am. Dec. 128; Lux v. Haggin, 69 Cal. 255, 4 Pac. Rep. 919, 10 Pac. Rep. 674; Bliss v. Johnson, 76 Cal. 597, 16 Pac. Rep. 542, 18 Pac. Rep. 785; Heilbron v. Last Chance D. Co., 75 Cal. 117, 17 Pac. Rep. 65; Heilbron v. Fowler etc. Co., 75 Cal. 426, 17 Pac. Rep. 535, 7 Am. St. Rep. 183.

The Nevada Court, referring to the above decisions, said: "The California decisions cited for the appellants may no longer be considered good law even in the State in which they were rendered." Twaddle v. Winters, 29 Nev. 88, 85 Pac. Rep. 280.

[14] San Joaquin etc. Co. v. Fresno etc. Co., 158 Cal. 626, 112 Pac. Rep. 182.

[15] 102 Cal. 151, 36 Pac. Rep. 431.

when the amount diverted would not be used by him and would cause no loss or injury to him or his land, present or prospective, but would greatly benefit the party diverting it. If this be not so, it would follow, for example, that an owner of land bordering on the Sacramento River in Yolo County could demand an injunction restraining the diversion of any water from that river for use in irrigating nonriparian lands in Glenn or Colusa County, and yet no one, probably, would expect such an injunction, if asked for, to be granted, or, if granted, to be sustained."[16] In fact, it may be stated that in all Western States which follow the common law of riparian rights the early English rule of "undiminished flow" has been modified and extended in accordance with the principles stated above. This subject, however, will be discussed more in detail when we come to the discussion of the right of injunction and damages by riparian owners.[17]

But the Supreme Court of Washington, in a recent case,[18] adheres to the old common law rule as to the undiminished flow in the following language: "A riparian owner, such as respondents are here shown to be, has a right to the natural flow of the waters in their natural and accustomed channels without diminution or alteration, subject only to the same right and use in every other riparian owner, a right that is as much included in the ownership

16 See, also, Fifield v. Spring Valley Water Works, 130 Cal. 552, 62 Pac. Rep. 1054; Miller v. Bay City Water Co., 157 Cal. 256, 107 Pac. Rep. 115, 27 L. R. A., N. S., 772; Miller & Lux v. Madera Canal Co., 155 Cal. 61, 99 Pac. Rep. 502, 22 L. R. A., N. S., 391; Mentone Irrigation Co. v. Redlands etc. Co., 155 Cal. 323, 100 Pac. Rep. 1082, 22 L. R. A., N. S., 382, 17 Am. & Eng. Ann. Cas. 1222.

And the Court, after citing some of the early common law cases cited *supra*, in a case decided in 1909, said: "It is obvious, of course, that, if this supposed rule were strictly enforced against riparian owners, as well as appropriators, the waters in the streams of the State could not be used at all, but would flow to the sea, or until they disappeared in the sands and washes, without benefit to any one, except in the few instances where flood waters might escape naturally and flow upon lands situated similar to those of the plaintiff. The rule is evidently not suited to the conditions of a dry climate such as we have in this State." Turner v. James Canal Co., 155 Cal. 82, 99 Pac. Rep. 520, 22 L. R. A., N. S., 401, 132 Am. St. Rep. 59, 17 Am. & Eng. Ann. Cas. 823.

17 For right of injunction of riparian proprietors, see Chap. 81.

For actions for damages by riparian proprietors, see Chap. 83.

18 Still v. Palouse Irr. & Pr. Co., 64 Wash. 606, 117 Pac. Rep. 466.

of the land as the soil itself, and can no more be interfered with by the acts of others. And, while the application of this doctrine has in some of the Western States sometimes been denied, on the theory that the rules of the common law respecting riparian owners were inapplicable to conditions and necessities of the people in the particular localities where the cause of action arose, it has since its first announcement here invariably been upheld in this State, except where it has been subjected to a priority of appropriation." [19]

§ 550. **Other miscellaneous riparian rights.**—There are a number of other rights which the proprietors of land bordering on water courses have by virtue of their ownership under the common law. Some of these it will be unnecessary to discuss, as they do not properly come within the scope of this work; others will be or have been discussed under their respective heads. These are the right and liabilities of polluting waters;[1] the common law right to divert water for irrigation,[2] and for power purposes;[3] the right of fishing and hunting;[4] the common law rules as to subterranean waters;[5] the loss of riparian rights by eminent domain;[6] the common law right to use riparian rights under license;[7] and the loss of riparian rights by prescription and adverse user.[8] We shall also discuss the applicability of the common law theories as applied to the arid West.[9]

We shall also discuss in the course of this work the rights of appropriators as against the rights of riparian proprietors.[10] Also the right of action by riparian proprietors for injunctions,[11] dam-

10 See Secs. 810-823.

11 See Chap. 81.

ages,[12] and the division or apportionment of the waters between riparian owners for the individual use of each.[13]

§ 551. **Summary and conclusions.**—In summing up this chapter, we will say that under the common law doctrines, in their most general forms, all property in water courses and inland lakes and ponds, whether the same are actually navigable or not, is held sacred to the common use alike of all the riparian owners upon their borders; that the basis and foundation of this right is that their lands must touch upon the waters; that the nature of the ownership of the water is simply usufructuary, and that each proprietor may reasonably use the water for any purpose as it passes through or by his land; that the rights of all being equal, no one can use the water to the extent that it will injure those below; that after having used the water, if it has been diverted, he must return it without any substantial diminution in quantity or any material change in quality to its natural bed or channel before it leaves his own land, so that it will reach his neighbor below in its full, original, and natural condition. We have also seen that the natural current of a stream must neither be obstructed nor accelerated by any proprietor; that the riparian proprietor is entitled to all accretions and relictions that may be added to his land by the influence of the winds or tides, and thus always giving him frontage on the water and the right of access to and from his estate to the water, or to and from the water to his estate; that he also has the exclusive right of fishery opposite his land, and that no one can bar him from that right. Also we have seen that, contrary to the Arid Region Doctrine of appropriation, under the common law, priority of use by any one proprietor can give him no higher or more extensive rights than those which belong to all the other proprietors, either higher up or lower down the stream; and, although some of them may have come long after the first proprietor settled upon the stream, all whose lands touch upon the stream must share equally in the use of its waters. And, if one proprietor acquires more extensive rights than he is entitled to by virtue of his own riparian lands against the other proprietors, he must do so by a grant or license from all who are affected thereby or by prescription, which presupposes a grant.

12 See Chap. 83. 13 See Chap. 78.

And, lastly, we shall see that these riparian rights may be lost by virtue of the right of eminent domain;[1] that the State, under this right, may acquire them; but it can not take, injure, or impair any of these rights in and to the waters of the stream, or any riparian proprietor, without due process of law, for a public purpose, and then only upon just compensation being paid to the owner of the same.

We shall also see, in the future discussions of this work, that the common law theories of riparian rights are, in the main, wholly inconsistent with the Arid Region Doctrine of appropriation of the water by diverting it from its natural channel for irrigation and other beneficial uses, and especially where that appropriation is based upon priority. Owing to the natural conditions of the greater portion of the arid West, the common law rules of riparian rights are wholly inapplicable to that portion of our country which is known as the arid region, and in many States these rules have been wholly abrogated, while in certain other States portions of the common law only have been retained.[2]

1 See Secs. 1089-1091.

2 That the common law is inapplicable to the arid region, see Secs. 585-594.

**§ 552. Scope of part and chapter.**—The law of appropriation and diversion of waters for beneficial uses, as the same is in force in the Western States of this country, finds its basis in two systems of laws. First, the common law doctrines of riparian rights upon the subject of use of waters, which have been discussed in previous chapters of this work;[1] second, the civil law, the rules of which govern waters, which we shall discuss in this part of this

[1] For the common law rules as to the use of water, see Chap. 25, Secs. 483-497. For irrigation as a riparian right, see Chap. 26, Secs. 498-525.

work. It will be noticed that the law of appropriation in principle follows the civil law more closely than it does the common law, although the California Courts and the Courts of some of the other States attempt to justify the diversion of water for irrigation and other uses which consume the water under the common law.[2]

In the following chapter we shall also endeavor to trace the civil law in its various modifications under the French, Dutch, Spanish, and Mexican rule down to the Louisiana Purchase,[3] the Treaty of Guadalupe Hidalgo,[4] and the Gadsden Purchase, and thus show the conditions of the country respecting waters in those portions of our territory acquired by this country at the time of their acquisition. In this manner we can show the growth and progress of the American system of the appropriation of waters, for beneficial uses, by the diversion of the same from the natural streams and applying it to those uses.

§ 553. **The civil law—Historical.**—The term "civil law" or Latin equivalent, *jus civile,* has been used in a great variety of meanings, both in ancient and modern times. In the sense in which it is used here, it is that great system of laws handed down to the modern world by the genius of the Roman people. Our knowledge of the Roman law is almost entirely found in that great codification made under the authority of the Roman Emperor, Justinian, known as "*corpus juris civilis,*" and generally called "The Pandects," but sometimes "The Digest," which included all of the earlier Roman laws found in "The Code," "The Digest," and "The Novels." The work was done by commissioners appointed by Justinian and the objects of this codification, as determined from the orders given by the Emperor, were, to peruse all of the writings of all authorized jurists, and to extract from these works, giving credit to the original authors, whatever was of most permanent and substantial value, with power to change the expressions of the original authors wherever conciseness or clearness would be thereby promoted, or wherever such a change was needed in order to adapt their language to the condition of the law as it was in effect in Justinian's time. The commissioners were to avoid repetitions and contradic-

2 See Chap. 26, Secs. 508-511.
3 See Secs. 572-575.
4 See Secs. 576-583.

tions by giving only one statement of the law upon any one point, and were to insert nothing at variance with any of the provisions in the *Codex Constitutionum*. The work of the commissioners was completed in the year 533 A. D., and in the same year the Emperor published it as an imperial statute. It is from this work that the civil law comes to us, and it has exerted a great influence both upon the common law of England, as will be seen in various portions of the same, and also upon the modern American law. This seems especially true upon the subject of waters, through the Dutch in New York, the French in Louisiana and other Southern States, and the Spanish and Mexicans in Texas and that great portion of this country known as the "arid region" of the United States, acquired from Mexico under the Treaty of Guadalupe Hidalgo and by the Gadsden Purchase.

While the Pandects were being codified the Emperor, Justinian, gave another order, that an abstract be prepared of the fundamental laws to be found in the Pandects, which work might be used as an elementary text book by law students. This work was also published as a statute with full legal validity shortly before the Pandects, and called "The Institutes of Justinian." This is the only work which has been fully translated into English, and embodies some of the fundamental principles of the Roman law upon the subject of waters.[1]

We will now take up the subject of the Roman law of waters, after which we will endeavor to trace that law through the early Dutch, French, Spanish, and Mexican occupants of certain sections of this country down to the present time.

**§ 554. Public and private waters.**—Under the ancient Roman law, as the same is to be found in the Pandects and the Institutes of Justinian, the rivers and other bodies of water were divided into public and private, while the running water itself was counted as public. Things common to mankind by the law of Nature, are the air, *running water*, the sea, and consequently the shores of the sea, is the language used.[1] As to whether a body of water was

[1] See Cooper's Institutes of Justinian, 1852; Sander's Institutes of Justinian, 1876; Sohm, Institutes of Roman Law; Walton, Civil Law in Spain and Spanish America; Howe, Studies in Civil Law, 1905; Ware, Roman Water Law, 1905.

[1] Inst. Lib. 2, T. 1, Sec. 1.

See, also, for the classification of waters, Secs. 287-291.

public or private depended upon the fact as to whether or not it was navigable. Some rivers were regarded as public, others not. Cassius defined a public river as a perennial river, that is, one that flowed at all seasons of the year.[2] This is practically the classification under the common law.[3] In fact, many of the principles and terms of the common law are taken directly from the civil law. The name of "riparian proprietor," indicating the owner of the *ripa* or bank of a stream, is borrowed from the civil law. As is stated by Mr. Angell:[4] "The owners of water courses are denominated by the civilians riparian proprietors, and the use of the same significant and convenient term is now fully introduced into the common law." In fact, many of the principles of the common law were taken directly from the earlier civil law, and the terms used by the civil law have been adopted and carried down to us through the common law.[5]

**§ 555. The ownership of the running water.**—The common law borrowed from the civil law many things relative to the government and use of waters, and among these is the question of the ownership of the *corpus* of the running water. The civil law authorities upon the subject of the ownership of running waters may be summed up as follows: That the running water was a natural resource and was classed by the civil law writers, which also include the Institutes of Justinian, with the air and those things which can not be owned in their natural state and condition, or those which belong, according to the civil law rights, to the "negative community," or which belong to nobody. As was

said by Vattel: "There are things which in their own nature can not be possessed. There are things of which nobody claims the property, and which remain common, as in their primitive state when a nation takes possession of a country; the Roman lawyers called these things *res communes*, things common; such were, with them, the air, the running water, the sea, the fish, and wild beasts."[1] As was said in the Digest or Pandects of Justinian,[2] there are certain things which by natural law are common, certain organizations, certain things belonging to nobody, and other things, the property of individuals acquired in various ways. The things which by natural law are common are as follows: The air, the running water, and the sea, and, it therefore follows, the shores of the sea; also the stones, gems, and the like, which we find upon the shore, by natural law immediately become ours. But almost all the rivers and harbors are public.

As we have seen in previous sections,[3] the common law in adopting the principles of the civil law, as to the title to the *corpus* of running water, eliminated the negative element to the effect that they belong to nobody, or do not belong to anybody, and held to the effect that they were the common property of everybody, and therefore the title to the body of waters could not be acquired by an individual while it continues running in its natural channel.[4] Both the civil and common law authorities classify the property in running waters by analogy with the property in wild animals or fishes swimming in the sea. As is said by Justinian, after referring to the property in flowing water, "Likewise wild animals, birds, and fishes, since before capture belong to no one, after capture belong to him who captures them."[5]

**§ 556. The ownership of severed water.**—It is held by the authorities both under the civil law and the common law, as we have seen in preceding sections,[1] that there can be no individual property in running water. But it is further held in both of these systems of laws that water, after it has been severed from the natural stream and taken into reservoirs, tanks, or other receptacles, belongs to the possessor of the same.[2] As was said in a late Oregon case,[3] "The water had been segregated by the plaintiff from the general supply, was impounded in his ditch, and was intended to be appropriated to his own use. It was under his control and had become his property."

**§ 557. The right of navigation.**—All navigable waters being public, the general public had the right to use them for any lawful purpose; the ports were also public; hence the right of fishing in ports or in public rivers was common to all.[1] Special stress was laid upon the preservation and facilitating of navigation. Therefore the interdict of the Praetor was to do nothing either in the stream itself or on the banks thereof whereby the landing or the

See, also, for the right of navigation, Chap. 16, Secs. 341-357.

navigation was made worse.[2] The law went further than the common law in permitting the banks of rivers, although the title to the same was in the adjoining property owners, to be used by the public in navigating the streams; and all persons had the same right to bring their vessels to the land, and to fasten them to the trees growing upon the banks, and to unload them there, as they had to navigate the river itself.[3] As was said in the Pandects, rivers which flow perennially are public, and therefore their banks are also public.[4] The banks of the rivers might be improved and strengthened so long as navigation on that account was not injured, but such improvements were only tolerated when they made no impediment to navigation.[5] And any person who wanted to strengthen the banks of a public river was compelled to give security against future damages, and this security must be given before the work was done. The same rule applied to the strengthening of the banks of lakes, canals, and ponds. The use of public streams was held common to all, just the same as the public roads and the shores of the sea. In these places it was held to be a public right for any one to build up improvements or to tear them down, provided, however, that this was done without injury to any one else; for, as was held, to build on the banks of a river was allowed by the law of nations, unless the public use is impaired.[6]

It will be noticed that all of the law tends to preserve the rights of the general public, especially in the right of navigation. Even in the case of a lake, which was entirely within the boundaries of a private estate, the right of navigating it was given if it aided in reaching a neighboring estate.[7] If a stream was navigable no right could be given to divert the water in such quantity that it became less navigable, even if by such act another stream became navigable.[8] So we can see from this that the ruling of the Supreme Court of the United States in the Rio Grande dam case and the case of Kansas v. Colorado, that the navigable capacity of the

navigable waters of the United States must be preserved, has a precedent in the laws of ancient Rome.[9]

§ 558. **Rights of riparian owners based on access.**—The rights of riparian owners, whose lands border on streams and other natural bodies of water did not originate with the common law of England; but these rights were recognized and protected in the days of ancient Rome, and also in the days of the later Roman Emperors. The banks of a river were held to be the property of those whose lands they adjoin, and consequently the trees growing upon them were also the property of the same persons.[1] All riparian rights recognized under the civil law were based on lawful access to the water or other natural bodies of water, which touched or bordered upon the water itself. In other words, the waters, while they continued in the streams, were subject to the common use of all who could legitimately gain access to them for the purposes necessary to the support of life.[2] This principle also applies to the right to take and use the waters at civil law. This right was in those who are known under the common law as riparian proprietors, because of their legal right of access to the stream.[3]

It will be seen from a comparison that the rights of riparian owners under the civil and common law are practically the same as originally formed in the civil law and later embodied in the rules of the common law, as discussed in previous chapters of this work.[4] The rights of the riparian owners under each sys-

9 See Secs. 354, 355; United States v. Rio Grande Dam & Irr. Co., 174 U. S. 690, 43 L. Ed. 1136, 19 Sup. Ct. Rep. 770; Kansas v. Colorado, 206 U. S. 46, 51 L. Ed. 956, 27 Sup. Ct. Rep. 655.

See, also, Louisiana Code, Art. 657, wherein it is said: "He whose estate borders on a running water, may use it as it runs, for the purpose of watering his estate or for other purposes. He, through whose estate water runs, whether it originates there or passes in from lands above, may use it while it runs over his lands; but he can not stop or give it another direction, but is bound to return it to its ordinary channel where it leaves his estate."

See, also, Code Napoleon, Article 644, to the effect that the rights of the use of water of running streams are given only to the riparian proprietors; that is, to the proprietors of the estates contiguous to the flow of the water.

4 For the common law, see Secs. 451, 452, 458, 540.

For the rights of riparian owners

tem were based upon a legal right of access to the waters of the stream. In other words, their lands must touch or border upon the stream.[5]

**§ 559. Miscellaneous rights of the owners of the banks.**—As we discussed in the previous section, the right of ownership of the use of the waters of natural streams, under the Roman civil law, was only in those who had lawful access to the waters, or who were the owners of the banks.[1] This is also true under the common law rule.[2] But, as we have seen, under the civil law the banks were subject to the use of the public in landing from the river, where the same was navigable.[3] Where the river changed its course, the old bed became the property of the owners on each side.[4]

But the ownership of the banks of a river or other body of water was subject to certain servitudes, such as the right of others of drawing of water, the watering of cattle, and the digging of sand.[5] Also, where such fields bordered on large streams, it was permissible for others than the owners to construct dikes and ditches on the land, if they were necessary in order to use the water. If no fixed law governed the fields, ancient custom took the place of law; for in servitudes the rule was followed that, where the servitude was found not to be imposed by law, he who has for a long time exercised the right without force, stealth, or variation was regarded as having a servitude by ancient custom or fixed law. They could not, however, compel a neighbor to build the works on his own land, but the others who claimed the servitude had the right to go upon the land and build them. And a suit might be brought to enforce this right.[6] The servitude of drawing water might be established, although a public road intervened between the riparian land and the water.[7] The law of accretions was similar to that of the common law of the present day, a species of property by possession called "*pro suo,*" for in

such a manner the possessor owned all those things which he captured in the sea, earth, or sky, or which became his by alluvion. If a river suddenly changed its course to a new channel farther away the riparian owner could not follow the river to its new channel; but if alluvion, little by little, formed on his land, he might follow the river.[8] If an island formed in a river it did not become the common property, in undivided shares, of those whose estates bordered on the river side, but in definite parts. Each had so much as lay in front of him, measured by a straight line through the island in prolongation of the boundaries of his estate.[9] The water might be used by the riparian proprietors, but must be used in such a way as not to exhaust the water of public rivers to the injury of the other riparian proprietors. Neither could the course of the water be changed, nor made deeper, nor more constricted, whereby the current became more rapid, to the detriment of those who dwelt adjacent.[10] The riparian owner had the right to build any structure upon the banks, provided the rights of the other owners or the rights of the public were not interfered with. For building on the banks of a river is allowed by the law of nations, unless the public use is impaired.[11] Levees, in order to strengthen the banks, might also be built, but could not be so constructed to the damage of those dwelling along the river. This right was to be determined from the facts in each case, and in most cases the utility of the work decided the case.[12] Before permission was granted to build levees the owner was compelled to give a bond against apprehended injury to neighbors and property owners across the river, good for a period of ten years.[13]

It will be noticed from a perusal of the above that many of the common law rights of riparian owners were taken directly from the civil law.[14]

§ 560. **Surface waters.**—We also find that elaborate laws were in force during the time of the Roman Emperors, relative to the protection from surface water, or "rain water," as it is called in the Pandects. The ancient action of *aquae pluviae arcendae* (*aq. plu. ar.*) might be brought either before or after actual damage had been done, provided that something had been done by the man from which damage was feared; that is, when something was done by the hand of man which caused the water to flow differently than it would flow by Nature; for instance, if the water is made to flow in greater volume, or more rapidly, or more violently, or if restraint caused it to overflow the land of another. However, if water in its natural flow did damage, then the said action did not lie.[1] If, however, the water was forced to a higher level, or drained to a lower level, by any barriers to its natural flow the action would lie.[2] The action would lie by an upper land owner against a lower owner, lest the water in its natural flow be artificially prevented from flowing through the latter's field; and by a lower against an upper owner, lest the water is sent down in a manner different from its natural flow.[3] There was, however, one act of man excepted from the action, and that was the tilling of the fields in the natural way.[4]

In a subsequent chapter of this work we will discuss more at length the subject of what is technically known as surface water.[5] Here it will suffice to say that there are two rules in this country adopted by the laws of the respective States relative to surface water and its control. One, the civil law rule, which is to the effect that the rights of the land owners are to be determined by the natural situation of their lands, so that the owner of land at a higher level has a right of an easement over the land of his neighbor below, to have the surface water pass off naturally, and which right the lower owner can not interfere with.[6] The common law rule recognizes no such easement of the upper owner of lands, but calls surface waters a "common enemy," which the lower owner may keep from coming from the upper lands, and which either owner may get rid of as best he can. Both rules, how-

6 See Chaps.. 81, 83.

ever, provide to the effect that there must be no artificial accumulation of the water which may be subsequently discharged upon another's lands.[7]

§ 561. **The acquisition of water rights.**—Under the Roman laws a water right, or the right to the use of water, might be acquired or lost for certain reasons. This right might be for the use of the water as it flowed in the stream, or it might be by diverting the same in canals and ditches from the natural streams and conducting it to the place of use. Even in the public rivers this might be done, provided that the navigable capacity was not impaired. The interdict that nothing be done in a public river whereby the water was made to flow otherwise than as during the summer before was interpreted to apply only to the course of the stream, and not to apply to the quantity of the water flowing therein.[1] However, if the stream was navigable, water could not be taken from it in such quantity as to make the stream less navigable.[2] Water rights could also be acquired from the public reservoirs and canals, under strict regulations, severe penalties being prescribed for any violations of the regulations, even to the extent of loss of the water right and confiscation of the offender's estates.[3] In order to draw water from public reservoirs and canals and other public waters, permission had to be granted by the Emperor, no one else having the authority.[4] This permission might be given either to the estates or to a person. When given to the estate, it was not extinguished on the death of a person; but, when given to a person, it was extinguished with his death.[5]

A water right whose origin is time out of mind has a duly constituted existence.[6] So, what were known as ancient water rights were recognized and protected. If it could be proved that a flow of water through certain places was according to "ancient custom," and according to observation it showed usefulness in irrigating certain tracts of land, it was provided that no new innovation against the old form and established custom was permitted.[7] The

amount taken, however, in order to hold an ancient right, was that amount which had been taken by custom and had been used continuously. It will be noticed in our chapter on Irrigation in Italy that these ancient rights are still in force in many of the Provinces of Italy, and that they are an obstacle against the progress of the country.[8] In order to prove one of these ancient rights, the owner was not compelled to show the title by which the right originated, as if by devise or some other way. The owner also had a right of action against any injury to his right, and in his claim he might set forth the number of years he had been in possession of the use of the water without force, stealth, or variation.[9]

As to the other water rights than those known as ancient, they might be acquired by permission of the Government; and the right of diverting water from the same place in the stream might be given or granted to many persons, and could be granted for different days and different hours.[10] And, if the supply was sufficient, the right might be given to many persons in the same place, as well as for the same day or the same hour.[11] The right, however, could not be used for any part of the estate except for which it was acquired. And if a portion of the estate was sold the water right followed the purchaser, in proportion to the area of the part sold and the part kept, regardless of the need of the different portions for the water.[12] The right of diverting water appertained, not to the owner of the land, but to the land itself. Usage was the basis of the right, and this might be for irrigation, watering cattle, embellishment or ornamental works, and beautifying grounds.[13] The use of the water must be confined to the exact time for which it was granted, and if one had a right to use the water during a certain hour of either day or night, he did not have the right to use the water at any other hour.[14] Severe penalties were provided for the violation of any of these laws, which included forfeiture of all water rights, and even life imprison-

ment of the offender, where water was stolen or taken "through furtive channels."[15]

§ 562. **Right to the waters of springs.**—Water originating in springs in the land of one can not be conducted off without the consent of him to whom the use of the water belonged, whether this was the owner of the land or another.[1] However, the right to the use of the water of a spring could be acquired by grant, or by adverse user. And any violence to him who, adversely to another, had been using the water of a spring as he used it during the past year, without force, stealth, or variation, was especially forbidden.[2] The right was also given to clean out springs where the right to the use of the water was claimed by adverse possession.[3]

§ 563. **The right to subterranean waters.**—If one person in digging in his own land turned away the source of his neighbor's spring, nothing could be done; nor even could an action for fraud be brought, if that which he did was for the purpose of benefiting his own field, and not with the intention of injuring his neighbor.[1] Under this rule all rights to subterranean waters belonged to the owners of the soil. This rule was followed by the common law.[2] However, the right to discover water on an estate might be granted by the owner of an estate to another, and he, having found it, had the right to convey it away.[3] Under the Partidas, or the Spanish Code, which had for its basis the civil law of Rome, it was provided that when a man has a fountain or well upon his land, and his neighbor wishes to make one upon his land, in order to procure water for his use, the latter may do it and the former can not prevent him, notwithstanding the water in the first well or fountain may be diminished thereby, unless the person wishing to make the new well has no need of it, and acts maliciously.[4]

§ 564. **Grants of rights by riparian owners.**—The rule as to the grant of conveyance of water rights by riparian owners either to other riparian owners, or to others, is practically the same in both the civil and common law. As riparian owners under both systems are entitled to an equal or correlative share of the water flowing in the stream which adjoins their respective properties, no one riparian owner may grant his share of the water to another, where the water is consumed and thereby the rights of the other owners are injured. It is also held that all grants of riparian rights are valid as between the contracting parties, but are invalid as between noncontracting parties whose rights are permanently and substantially injured or interfered with.[1] This subject, however, has been fully discussed in previous sections of this work.[2]

§ 565. **Loss of water rights.**—The Roman water laws provided that a water right might be lost in one of several ways. One who violated the ordinance governing public reservoirs and canals not only lost the water rights which had theretofore been granted him, but also he was severely punished, according to his station in life.[1] Any right might be lost by nonuser for the period prescribed for its loss.[2] So, also, for using the water in a different manner than that prescribed, the right was forfeited. And, in case of a sale, the time during which the preceding owner did not use it was reckoned up against his successor.[3]

§ 566. **Use of water for irrigation.**—The use of water for irrigation was amply provided for under the Roman laws, and, of course, in order to irrigate lands the water had to be diverted from its natural channel. Hence the rule that water which springs up

1 See Digest of Justinian, D. 8, T. 3, Sec. 24; Ware's Roman Law, Sec. 257, where it is said: "From my water right, so Labeo says, I may accommodate any of my neighbors with water; on the other hand, Proculus holds that the water may not be used for any other part of the estate than that for which the right was acquired. The opinion of Proculus is the truer one."

in a river bed belongs to him who leads it off.[1] The water might be taken from the river by canals and ditches, or it might be raised from the rivers by wheels, and when the right was once acquired it was preserved to the owner.[2] Water originating in the land of another could not be conducted off his land to irrigate other lands if it was needed by the owner, unless the right to its use had been lost by nonuser.[3] A right might also be granted to take water for irrigation from the public reservoirs and canals.[4] The use of the water was divided into two classes—"daily" and "summer." Daily water was that which was used continuously, both summer and winter, while the summer water was used only during the irrigation period of each year.[5] The summer time was defined as beginning at the vernal equinox, March 22, and ending with the autumnal equinox, September 22.[6] The right to the water was not based upon the acreage, but the use to which the water was put measured the right.[7] So, under our modern laws of appropriation of water, the use for a beneficial purpose is the culmination of title.[8] Also, as in our own times, the right to the use of the water might be acquired for different days or for different hours of the day or night.[9] Specific laws were set forth for the repair of the ditches and canals, and for changes in their location provided no injury was done to others. Violence was forbidden against any one who was repairing or cleaning canals, conduits, or headgates to facilitate the conveying of water, because it was permitted him, although adversely to others, so to do, as long as the water was not conveyed otherwise than it was the last summer, without force, stealth, or variation.[10]

§ 567. **Rights of way.**—The right of way for canals and aqueducts over the lands of another was carefully provided for by the

laws of the Roman Emperors. Also where one had the right of drawing water from a river by grant, the right of way to and from the river was also granted.[1] With the right of way for canals and aqueducts, certain other rights follow: First, the right to repair canals or aqueducts; second, the right of the owner and his workmen to go upon the land to make repairs; third, the right of a strip on each side of the channel to make the repairs, and the right to deposit material for the same.[2] However, this must all be done without impairing the rights of the servient estate. A right of way could also be acquired by adverse possession through the property of another. And, if one had exercised the right of conducting a flow of water through the property of another with his knowledge, a servitude of a permanent character was, in time, acquired. The time required to secure this right was ten years, if the owner was present and knew of the use, and twenty years if the owner was absent, where it was presumed that he knew of the use. If, however, the right of way was forbidden by the owner, within the periods named, then no right of way could be acquired, and the expenses incurred therefor were in vain, because the ownership of any improvements made on the land of another, as long as it remains in the same estate, belongs to the owner of the land.[3]

The right is also given under the civil law of condemnation of rights of way for ditches and canals over the lands of others. Where lands border upon streams it was permissible for others than the owners to construct dikes and ditches on the land, if it were necessary in order to conduct the water to the place of use.[4] Under the later common law this right is also granted, and it is also granted under the laws of all of the respective States of this country. The right granted under the civil law and as it has been carried down to the modern European countries under their form of government is even greater than the right which is granted under the common law, or the statutory laws of this country. Less particularity is exercised in the distinction between private and public rights for which rights of way may be condemned. Then

again, under the Constitution of the United States and our State constitutions, private property may not be taken even for a public use without just compensation and upon due process of law. Under the civil law the private rights of the individual were not guarded to the extent, in this respect, as are the rights of the individual in this country.[5]

§ 568. **Remedies.**—Not only was the substantive law governing waters fully covered, but also the subjects of remedies and procedure were treated in great detail by the laws of the Roman Emperors. There was an action for damages where property of one was injured by the waters used by another, or by the water breaking out of the reservoirs and canals,[1] or when the flow of the waters is interfered with so that it did not reach the rightful owner.[2] The measure of damages was to be fixed by an appraisement of the damages by the Judges upon the facts, that is, what damages shall appear to have been inflicted.[3] An action might also be brought for anticipated damages called *damni infecti*—threatened damages. This action was to compel the giving of security or a stipulation against anticipated damages in the future.[4] An action for an injunction, *quod vi*, against the pollution of water;[5] against the injury from water;[6] and in this action damages might also be assessed.[7]

There was also a special action which could be brought concerning surface water, and this action embodied almost all the other forms of actions. The action was called "*aquae pluviae arcendae,*" and originally only related to actions concerning rain water. But later the scope of the action was extended so as to include nearly all forms of actions, but still being confined to

5 For the right of eminent domain, see Chap. 55, Secs. 1059-1098.

the subject of surface waters, it being decided that it did not include hot waters or spring waters, upon the ground that they were not surface waters.[8] This action might be brought against both the landlord and tenant, or against any other person causing the injury.[9] The scope of the action included injunction for the wrongful diversion of water so that it was prevented reaching the field of the one to whom it was rightfully entitled.[10] It also might be brought by an upper owner against a lower owner to permit the water to flow down through the lower field as it was wont.[11] It also included damages by surface water, when something was done by the hand of man which caused it to flow differently than it would flow by Nature; for instance, if it was made to flow with greater volume, or more rapidly, or more violently, or if restraint had caused it to overflow the land of another.[12] In the judgment in this form of action future damages were also considered.[13] The action also included the remedy by mandamus, as, for instance, to compel an upper land owner to clean a ditch running through his land to the land of a lower owner;[14] also for the removal of an obstruction to the natural flow of the water, such as dikes, or trees planted to restrain the water;[15] also, if one made trenches from which the water was liable to do damage, the Judge had the power to compel him to fill up the trenches; in all cases, if the defendant refused to obey, the Judge had the authority to sentence him to punishment.[16] In fact, the object of this action seems to have been to adjudicate all subjects appertaining to the flow of surface water and to provide a remedy for the same.

the Pandects and Institutes of Justinian, a brief abstract of which has been set forth in the preceding sections,[1] with the civil law as adopted and modified by other later nations,[2] upon the same subject, will show that the laws of the Romans were much more perfect than the laws of the later nations. These Roman laws were adopted for a country which in many portions was hot and arid; and where, in order for the land to produce anywhere near up to its full capacity, irrigation of the soil was necessary. Prior to the codification of the Pandects these laws had been in the process of formation for over 1,000 years. They were therefore well settled and covered every point which was liable to arise upon the subject. The modern doctrine of appropriation of water for beneficial uses more nearly follows the civil law than does the common law, although there are many features of the common law which were taken directly from the laws of the Roman Emperors. For instance, the law upon the subject of riparian rights, with the exception of the right to have the stream run as it was wont by Nature and the use of the water, was, in the main, taken directly from the civil law.[3] The law governing surface waters also came from the civil law. As to the use of the water itself, especially by diverting the same from the natural streams and applying it to some beneficial purpose, as, for instance, irrigation, the common law and the civil law are diametrically opposed to each other. This difference can be explained by the fact that the physical features of the two countries were different as respecting the needs of water, especially for irrigation. In England, where the common law originated, water was not needed for irrigation. It was more of a question how to drain the water off the land than how to conduct it on the land. Hence the change in this respect. The modern law of appropriation more nearly follows the civil law than it does the common law, although the common law was adopted in this country, where the same was applicable.[4] Again, we say this was due to the physical condition of the country. The Western portion of this country being hot and arid, water is necessary to irrigate the soil in order, in many places, that they produce any crops at all. It also will be noticed that even England, in all of her Provinces where irrigation is nec-

2 See Secs. 571-583.
3 See Secs. 450-551.
4 See Secs. 586-594.

essary, in order for the land to produce crops has also discarded the old common law theory that the water must be permitted to flow in its natural channel as it was wont to flow by Nature, and has adopted the rule of the civil law that the water may be diverted from the streams and applied to beneficial purposes. That this is true, see the water laws of India, Egypt, Australia, South Africa, and Canada. In the meantime, in the very country where the civil law originated, there is the most perfect system of laws governing waters, and especially as to that portion used for irrigation, of any civilized country on earth. From this just and equitable system of laws the people of that country have built up an irrigation system that has been the model and example of many countries, including our own.[5]

§ 582. The Mexican water laws—Pueblo rights—Right to extend the use of water to territory annexed to pueblos.
§ 583. The Mexican water laws—As affecting the rights to water on Mexican land grants.
§ 584. Conclusions.

**§ 570. Scope of chapter.**—In the preceding chapter we discussed the Roman civil law as its principles were applied to the subject of waters in the various countries of the Old World, and from the time of the ancient days of Rome to the days of the Roman Emperors. In the present chapter we will discuss how, through various sources, the civil law has been brought to this country and its principles are now embodied in many respects in the jurisprudence of many sections of the United States. It was brought by the Dutch to New York,[1] by the Spanish to many of the Southern States,[2] by the French to Louisiana, and by the Mexicans to that portion of the country which now includes the majority of the States of the arid West.[3] It is more with the latter section of the country with which we have to deal. And we will endeavor to show how the civil law as modified by the Spanish and Mexicans has left its impress upon the laws governing the waters in many portions of the West.

1 See Sec. 571.
2 See Secs. 572, 573.
3 See Secs. 574, 575, 576-584.

**§ 571. Brought by the Dutch to New York.**—The civil law upon the question of waters was brought to this country by the Dutch, when they settled New York, and its influence is still felt in that State. This State was one of the original States of the Union and was the first part of the United States that had been formerly governed by the civil law. However, as we in this work have very little to do with the question of waters in the State of New York, our discussion upon this subject will be very brief. The civil law of the Dutch was superseded by the common law, when the English acquired possession of New Amsterdam, as it was then called. The question relating to waters first arose in regard to the title of the beds of navigable nontidal streams, whether the beds of these streams were in the public, according to the American interpretation of the civil law in this respect,[1] or whether the common law prevailed and the title to the beds of these streams was in the riparian owners.[2] The question was finally settled that in the valleys of the Hudson and Mohawk Rivers the titles granted to the original Dutch settlers, as construed by the rules of the civil law then prevailing in the Netherlands, did not convey to the riparian owners the banks or beds of any navigable streams; and, upon the surrender of this territory by the Dutch, the guaranty assured by the English authorities to its inhabitants of the peaceable enjoyment of their possessions simply confirmed the right already possessed, and the beds of the navigable streams, never having been conveyed, became vested in the English Government as ungranted lands, and the State of New York, as a consequence of the Revolution, succeeded to the rights of the mother country.[3] It was afterward held that a riparian proprietor having a patent from the Dutch, and having

1 See Canal Appraisers v. People, 17 Wend. 571, Lockwood's Rev. Cas. 51; Angell on Tidewaters, Appx. 223.

But it seems that even the Dutch had trouble in deciding this question. Vinnius, one of the leading Dutch authorities, asserts that by the Roman law the title to the beds of navigable rivers was in the riparian owners, subject to the easement of the public of passage and of mooring on the banks. Vinnius, Justinian, Secs. 2, 4.

See, also, Lorman v. Benson, 8 Mich. 18, 77 Am. Dec. 435.

2 For common law rule as to title to beds of non-navigable streams, see Secs. 537, 541, 542.

3 Smith v. Rochester, 92 N. Y. 463, 44 Am. Rep. 398; People v. Canal App., 33 N. Y. 461; People v. Page, 39 App. Div. 110, 56 N. Y. Supp. 834.

afterward secured one also from the English King, owned the bed of a navigable nontidal stream. In other portions of New York, where the title was derived wholly from the English, it is held that the beds of the streams are in the riparian owners.[4]

§ 572. **Brought by the Spanish to the Southern States.**—The civil law was also brought to this country by the Spanish, who settled in that portion of the country which now forms some of the Southern States. Upon the subject of waters, however, it was brought in a somewhat modified and much inferior form from the law of the Roman Emperors, discussed in previous sections of this work.[1] The history of this modification is that in the year 1256 A. D. King Alfonso IX gave a royal order to certain eminent lawyers to compile and codify the laws of Spain. The order was complied with, and seven years later what are known as "The Seven Partidas" were published as an original work. They are, however, nothing but a poor compilation of the Pandects, that great codification of all the laws of the Romans, made under the authority and direction of the Emperor Justinian, the principal features of which, concerning waters, have been discussed in the previous chapter.[2] The Partidas, however, became the law in Spain, and continued in force down to and after the time of the discovery of America; and, of course, were brought to this country direct from Spain by the Spanish, who settled in Florida and other Southern States. By this means the civil law found its way to another portion of this country and left its influence there, which is still felt in many respects. We will now discuss the principal features of the Partidas governing waters.[3]

§ 573. **By the Spanish—The Partidas.**—The Partidas of the Spanish upon the subject of waters are very meager, and embody

4 See title to the beds of streams, Secs. 328-332.

See, also, Canal Fund Comrs. v. Kempshall, 26 Wend. 404.

1 See Secs. 552-569.

For the general law governing waters in other Spanish-American countries, including Guatemala, Chile, Colombia, Uruguay, see Walton's Civil Law in Spain and Spanish America, 1900, Secs. 407-425, 552-563, 586-588.

2 See Secs. 553-569.

3 See translation of the Partidas, by L. Moreau Liset and Henry Carleton, 1820; Ware, Roman Water Law, 1905.

only the most fundamental principles. They declare that things belonging, in common, to all the living creatures of the world are the air, rain, water, the sea and its shores; and every creature may use them according to his wants.[1] It will be noticed that this statement goes further than the Roman law, which was confined to *running water.* Also the last expression, "and every creature may use them," is added. This is considered, in the famous English case of Mason v. Hill, as an incorrect statement of the civil law upon the subject.[2] This is undoubtedly true as to the Roman law upon the subject as embodied in the Pandects, and Institutes of Justinian,[3] but it is also true that the above statement is correct as adopted by royal authority in the Partidas of Spain, and that the same was brought to America by the Spaniards. It is further declared that rivers, ports, and public roads belong to all men in common.[4] This rule was even carried to the extent that it was also held that strangers coming from foreign countries may make use of them in the same manner as the inhabitants. The banks of the rivers belonged to the owners of the estates touching upon the water, although, as under the Roman law, they might be made use of by those navigating the streams.[5]

The right of navigation was also protected, and any obstruc-

That this portion of the Spanish law has its influence as far north as Missouri, see the case of O'Fallon v. Daggett, 4 Mo. 343, 29 Am. Dec. 640, where the Court held that a grant of land by a government must be interpreted by the law of the country in force at the time when it was made, and therefore a grant made by the King of Spain of land bordering on a river must be interpreted by the Spanish law then in force; and that banks of navigable rivers, granted to private owners, may, by the Spanish law, be used by navigators for the purpose of landing, fastening, and repairing vessels, but they can not obstruct the owner's enjoyment thereof beyond the reasonable limits of necessity.

tions to the same might be removed and destroyed.[6] The law of accretions was practically the same as the rule of the Roman law.[7] In no place is it provided how the water might be acquired and used for irrigation or for other purposes by individuals, but it was evidently so used, as it was provided that estates might serve one another by receiving aqueducts or other conduits for water to pass to mills, or to water gardens, or other estates of other persons. Provisions were also made as to how these conduits must be constructed, and for their care, in order that they do no damage to the dominant estate.[8] The law of surface waters was similar to that of the Roman law.[9] The erection of any new works by which damage was done to another's estate by the flow of water might be demolished.[10] If one by digging upon his own land destroyed a well or spring upon the land of his neighbor, the latter could not prevent him or recover damages unless it was done maliciously.[11] In the Partidas upon the subject of subterranean waters it was provided, as follows: "When a man has a fountain or well in his house, and his neighbor wishes to make one in his house likewise in order to procure water for his use, the latter may do it, and the former can not prevent him, notwithstanding the water in the first well or fountain may be thereby diminished, unless the person wishing to make the new well has no need of it and acts maliciously."[12]

§ 574. **Brought by the French to Louisiana—Code of Domat.**—The civil law in this country had another source than those named in the previous sections, and that was through the French in their settlement of Louisiana; and up to the time of the Louisiana Purchase it was the governing law, somewhat modified to fit French conditions, and of that great section of this country acquired from France. The civil law has left its impress in many ways in this

section of our country. The history of the civil law of France is somewhat similar to that of Spain. It, too, had its codifiers, who collected the Roman laws and changed them so as to fit the conditions of France. Domat in 1694 was the first to undertake this work.[1] In this work we find that rivers, the banks of rivers, and highways are things public, the use of which is common to all persons, according to the respective laws of the countries. And these kinds of things do not appertain to any particular persons, nor do they enter into commerce, but it is the sovereign that regulates them. This law, especially as to the use of the banks of rivers, is still followed in Louisiana. In that State the public have a right of way along the banks of all navigable waters and the right to use them for any purpose connected with navigation, and the riparian owner can make no use of the banks or shore which will interfere with this public right.[2] We also find in Domat that the right to the water of springs on the land of another was provided for.[3] Also that the water of streams might be conducted from one piece of ground to another in aqueducts either above or below ground.[4] Nonnavigable streams are declared to be the property of the particular persons whose lands they cross.[5] The law upon the subject of surface waters was declared to be that he who has the upper grounds can not change the course of the water, either by turning it some other way, or rendering it more rapid, or making any other changes in it to the prejudice of the owner of the lower grounds. Neither can he who has the lower estate do anything which may hinder his grounds from receiving the water which they ought to receive from the estates above.[6] The law of accretion is also provided

for similar to that of the Roman law.[7] It will be noticed that under the French civil law there are no provisions for the irrigating of lands. However, at the time of Domat irrigation was practiced in France.[8]

**§ 575. Brought by the French to Louisiana—Code Napoleon.**—France later had another codification of its laws, under the Emperor Napoleon, and the civil law that was in force at the time of the Louisiana Purchase was this code. Although little is said in this code relative to the rights in fresh water rivers and streams, and the question of irrigation, there is more than there is in the Domat code.[1] It is provided that he whose property borders on or is intersected by running water may employ it in its passage for the watering of his property, but, on condition of restoring it at the boundaries of his field to its ordinary course. If a dispute arose between proprietors who used the water the Courts had the authority to render judgment settling such disputes, and might reconcile the *interest of agriculture* with respect to other property rights. In all cases particular and local regulations on the appropriation, course, and the use of waters must be observed.[2]

It will be noticed that the appropriation and diversion of water was left to local custom. It will be also noticed that no right was given under the law as abstracted above for the use of waters on lands other than those owned on the borders of the streams. This is also the construction of eminent French writers upon the passage that the rights granted were only to those whose estates

2 Code Napoleon, Secs. 644, 645; Ware, Sec. 6.

See, also, the Louisiana Code, which has come down from the Code Napoleon, Art. 657, of which is as follows: "He whose estate borders on running water may use it as it runs for the purpose of watering his estate, or for other purposes. He through whose estate water runs, whether it originates there, or passes from the lands above, may make use of it while it runs over his lands; but he can not stop or give it another direction, and is bound to return it in its ordinary channel where it leaves his estate."

bordered or were contiguous to the flow of the stream.[3] In this respect the civil law does not seem substantially different from the later construction of the common law, where the water may be diverted from the natural channels and used for irrigation or for other useful purposes.[4] The law also provided for surface waters in making the lower lands servient to those above. The proprietor above, however, could do nothing where the natural servitude due by the estate below might be rendered more burdensome; neither could the proprietor below build any obstruction which would prevent the natural flow of the water.[5]

§ 576. **Brought by the Mexicans to the Western States.**—There is still another source by which the civil law was brought to this country and that was by the Mexicans, who brought it to that great area of territory including the whole of the Western portion of this country ceded to the United States by the Treaty of Guadalupe Hidalgo, the territory acquired by the Gadsden Purchase, and the State of Texas. By the civil law we do not mean the civil law in its purity as we find it in the Pandects and Institutes of Justinian,[1] but that law the basis of which was the civil law of the Roman Emperors, which had been modified by the Partidas and other laws of Spain to fit Spanish conditions,[2] and which had been still further modified by the Mexicans to fit Mexican conditions.[3]

The various laws enacted and promulgated, at different periods from the time of the Spanish settlements in America, for the government of the Indies and Mexico, in the form of *cédulas*,[4]

4 *Cedulas* were orders emanating from a superior tribunal, promulgated in the name and by the authority of the sovereign.

*decretos*,[5] *resoluciones*,[6] *reglamentos*,[7] *ordenamientos*, and *pragmátisas*,[8] were collected and codified under the order of Philip IV and published in 1861. These, with the Partidas,[9] then in force, governed the Spanish-American Colonies and Provinces down to the year 1787, when a Mexican Judge, Don Eusebio Ventura Beleña, published at the City of Mexico his work entitled, "*Recopilacion Sumaria de todos los Autos Acordados de la Real Audiencia y Sala del Crimen de esta Nueva España*," etc. This work, although not official, is constantly quoted and relied upon as unquestionable authority, and contains all the laws governing the Indies and Nueva España, or Mexico, in force at that date, not contained in the Partidas. The laws of Mexico alone, prior to 1787, may be found in the work of Beleña, and from that date to the year 1821, the date of the independence of Mexico, in the "*Collecion de los Decretos y Ordenes de las Cortes de España, que se reputan vigentes en la Republica de los Estados Mexicanos*," which was published by authority in the City of Mexico in 1829. From the time of the independence of Mexico down to the present time Mexico has been governed by its constitution and the laws enacted by the Mexican Congress for the government of that country. But the basis of the Mexican laws is the civil law of the Roman Emperors. This was modified by the Laws of Spain as set forth in the Partidas of 1256, and further modified by the subsequent laws of Spain down to the independence of Mexico, and then again modified by the constitution and laws of the Republic of Mexico down to the year 1848, the date of the Treaty of Guadalupe Hidalgo and the date that this great Western country was ceded to the United States.

Thus the civil law of the Roman Emperors, through the various sources named in this section and in preceding sections, became the fundamental law upon certain subjects regarding waters. And here it is opportune to say that it is not only the written laws of Mexico, as found in the books, which were transmitted to this country, but also the local customs in acquiring water rights and the uses of

5 *Decretos* were similar orders in ecclesiastical matters.

6 *Resoluciones* were opinions formed by some superior authority on matters referred to it for decision.

7 *Reglamentos* were written instructions given by competent authority.

8 These were orders emanating from the king.

9 For the Partidas, see Sec. 573.

water. We will now discuss the influence that the Mexican laws have had upon the laws now in force governing waters in all the territory of this country which formerly was a portion of Mexico.[10]

**§ 577. The Mexican water laws—In general.**—Under the civil law, as it was enforced by the Roman Emperors, the waters of non-navigable streams were subject to the common use of all who could legally gain access to them for all purposes to support life; this use also included the diversion of the waters from their natural channels for the purpose of irrigation.[1] The right of access was generally regarded to include only the right of those who owned lands touching upon the water, or those who, under the common law, are deemed riparian owners. The right to the use of the water was also confined to the riparian lands.[2] As was said in the case of Lux v. Haggin, relative to the right of access or to the rights granted by access under the Mexican law, "The waters of innavigable rivers, while they continued such, were for the common use of all who could legally gain access to them for purposes necessary to the support of life."[3] By the time the civil law had been sifted down through the various transformations down to the Government of Mexico, at the time of the Treaty of Guadalupe Hidalgo, the civil law rules upon the subject of waters had been modified in a number of ways. Under the Mexican law at this period the rivers and streams belonged to the nation, the use of the waters to the inhabitants in common. That is to say, as long as the waters were flowing in their natural channels they were "*publici juris*," "*res communes*," "*bonum vacans*," or the common property of all the inhabitants. In this state or condition no individual owned the *corpus* of the water.[4]

10 For the Mexican legislation from the date of independence to the present time, see the *Recopilacion de Leyes Mexicanas*, by Dublan and Lozano.

2 See Sec. 558.

3 Lux v. Haggin, 69 Cal. 255, 4 Pac. Rep. 919, 10 Pac. Rep. 674.

4 For the ownership of the water itself, see Secs. 288, 289, 555.

As to the meaning of "*publici juris*," etc., see Mason v. Hill, 5 Barn. & Adol. 1, 2 Nev. & M. 747, 2 L. J. K. M. N. S. 118, 110 Eng. Reprint 692; Embrey v. Owen, 6 Exch. 352, 20 L. J. Exch. N. S. 212, 15 Jur. 633; Lux v. Haggin, 69 Cal. 255, 4 Pac. Rep. 919, 10 Pac. Rep. 674; Vansickle v. Haines, 7 Nev. 249, 15 Morr. Min. Rep. 201; United States v. Conrad Inv. Co., 156 Fed. Rep. 123; affirmed, 161 Fed. Rep. 829, 88 C. C. A. 647; Liggins v. Inge, 7 Bing. 692, 5 Moore P. C. C. 712, 9 L. J. C. P. 202;

However, according to the Mexican law, the Mexican Government possesses the power of retaining the waters in their natural channels; or, by way of convenience, of conferring the exclusive use of a portion or the whole of the waters of a certain stream to individuals or corporations upon such terms and conditions and with such limitations as it saw fit to establish by law, and that, too, whether they were riparian owners or not. It was, however, the policy of the Mexican Government to foster and protect navigation, and the laws prohibited any diversion or obstruction of the waters of a river by riparian proprietors or others which would impair or interfere with the navigation of streams. Also in this respect the Mexican law followed the civil law and permitted the use of the banks of rivers by those who used the streams for their navigation.[5] In a number of respects, however, rights were acquired in Mexico which were a departure from and at variance with the ancient civil law rules. Among these was the exclusive right which might be acquired in the waters of a stream to irrigate nonriparian lands. Others were the rights acquired by pueblos, known under the Mexican law as "pueblo rights."[6]

The United States took this portion of the country from Mexico with these rights in full force, and they have ever afterward exercised a powerful influence upon the laws governing waters, especially in the Southwestern portion of our country. We will now take up these various rights which were acquired under the Mexican laws in that portion of the country afterward acquired by the United States and endeavor to trace their influence upon the modern laws in force in the Western part of this country, and especially as relating to the Arid Region Doctrine of appropriation of water for useful purposes.[7]

6 See, for Pueblo Rights, Secs. 581, 582.

7 For the Arid Region Doctrine of Appropriation, see Chaps. 31-40.

**§ 578. The Mexican water laws—Acquisition of private rights.**—We find that under the Mexican law an exclusive right to the use of a part or the whole of the waters of nonnavigable streams might, under certain circumstances, be legally acquired by individuals for their own private use. The Mexican law permitted diversion from the rivers and streams not navigable, and by those who were not riparian owners, and for the irrigation of lands not riparian. As was held by the Supreme Court of the United States in a recent decision,[1] in adopting the language of the Territorial Court: "Whatever may have been the general law throughout the Republic of Mexico on the subject of water, it is reasonably certain that in the State of Sonora the doctrine of appropriation, as now recognized, was to some extent in force by custom. In this Territory irrigation was practiced in the Santa Cruz Valley prior to the cession, and it is well known that the right of appropriation, without regard to the riparian character of the lands, was there in force probably from the time when the Spaniards first settled in the valley."[2] Again, the Spanish law in some respects followed the civil law of riparian rights, and it was provided that, "If water passes between estates of different owners, each one of these can use it for irrigation of his estate or for any other object, but not the whole of it, but only the part which corresponds to him, because both have equal rights and the one can consequently oppose use of it all by the other, or even a part considerably more than his own."[3]

In order to acquire private rights to the use of water, the individual so seeking the same must have been the owner of the land, not necessarily, however, upon the border of the stream. As was said in an Arizona case:[4] "Arizona, prior to its organization as a Territory, constituted a part of the Territory of New Mexico, but originally, and before the annexation under the Treaty of

1 Boquillas Land & Cattle Co. v. Curtis, 113 U. S. 339, 53 L. Ed. 822, 29 Sup. Ct. Rep. 493. For same below, see 11 Ariz. 128, 89 Pac. Rep. 504.

2 For irrigation laws of Arizona, see Part XIV.

3 Hall's Mexican Law, Sec. 1391.

See, also, for the Code Napoleon upon the same subject, Sec. 575.

Guadalupe Hidalgo and the subsequent purchase, under the Gadsden Treaty, of that part of the Territory lying south of the Gila River, constituted a part of the State of Sonora. The first legislation by the Territory followed closely the old Spanish and Mexican laws upon the subject of water rights, as these had been incorporated in the statutes of New Mexico. Under these Mexican and Spanish laws, enforced in the State of Sonora, the *holding of land was the basis* for any valid appropriation or use of water from a public stream. The community ditch or 'public acequia,' as termed in the Howell Code, was the usual and ordinary means for the diversion of water. Each village or group of farmers constructed its own common ditch. The management and control of this ditch was regulated by law, and not by the agreements and contracts of the users of water under it. Such ditches were recognized and treated as public property, in much the same way that a public road under our laws is regarded. Hence every *land owner* under it, whether he used water or not, was required to contribute his quota of labor in the maintenance and preservation of the ditch."[5]

§ 579. **Mexican laws—The acquisition of private rights by way of Government concessions.**—Under the laws of Mexico the Government had a strong supervisory power. It had the power of retaining the waters in their natural channels, or by way of concessions permitting the exclusive use of the waters to individuals and corporations for the purpose of irrigation or other uses, upon such terms and conditions, and with such limitations as it saw fit to establish by law.[1] The Government had the power to concede private rights to the exclusive use of the waters of nonnavigable streams, even if the consequence should be the entire deprivation of the common use by the public in general. Those who appropriated and diverted the waters of a nonnavigable stream in accordance with the laws of Mexico, of course, obstructed to that extent the common use. No one had any exclusive right in or to the water until he had complied with the conditions which

4 Slosser v. Salt River Valley Canal Co., 7 Ariz. 376, 65 Pac. Rep. 332.

5 See, also, Hagerman Irrigation Co. v. McMurry, —— N. M. ——, 113 Pac. Rep. 823.

1 Lux v. Haggin, 69 Cal. 255, 4 Pac. Rep. 919, 10 Pac. Rep. 674.

authorized him to appropriate it. Upon the other hand, every one who had complied with the conditions imposed by the Government, in the appropriation and use of the water, acquired a vested right in such water, at least while he continued to use it, except in the single case where he merely acquired a conditional right. It has been held that where one had acquired the right to the exclusive use of a portion of the waters of a stream under the Mexican law, he can not be deprived of his right by the laws of a State or Territory of the United States after the cession of his lands to the United States.[2]

It seems that it was not the policy of the Mexican Government to make grants of these exclusive rights to waters. But a private right to the exclusive use of the waters could be acquired under the Mexican law by prescription, or on compliance with the established conditions. It will be noticed that this rule is similar to the rule of appropriation in vogue in the entire portion of this country acquired from Mexico. And, although neither in the civil law nor in the Mexican law is there any mention of an acquisition of an exclusive water right based upon priority of appropriation, both the Mexican law and the original civil law, before it was modified by the laws of Spain and Mexico, are followed by the modern law of appropriation for beneficial uses or purposes to a far greater extent than is the common law of England. The question of exclusive rights by a priority of appropriation forming its basis was an innovation in the law of waters adopted by the settlers of this Western country after the territory was acquired from Mexico; and, therefore, it might be termed a modification of the Mexican law as to the use of waters, incorporated into our own laws by the Treaty of Guadalupe Hidalgo.[3]

§ 580. **Use of water not confined to riparian lands.**—Under the Mexican laws the use of water from the natural streams was not confined to lands which were strictly riparian thereto, but this use was extended to other lands, subject to the regulation and control of the public authorities. In the case decided by the Supreme Court of the United States of Gutierres v. Albuquerque

2 Lux v. Haggin, *supra*. See, also, Mexican grants, Sec. 583.

3 For priority of appropriation, see Secs. 776-782.

Land & Irrigation Co.[1] it was conceded by both sides that, by the laws of Mexico in force when the Territory of New Mexico was ceded to the United States, the use of waters of both navigable and nonnavigable streams was not limited to riparian lands, but extended as well to lands which did not lie upon the banks of rivers and streams, and that such use was subject to be regulated and controlled by the public authorities. However, the diversion from the navigable streams was only permitted when it did not interfere with navigation.[2] And, in the recent case decided by the Supreme Court of New Mexico of Hagerman Irrigation Co. v. McMurry,[3] it was said: "Indeed, riparian ownership, as known to the common law, has never, it would seem, been recognized in New Mexico. As pointed out in Gutierres v. Albuquerque L. & I. Co.,[4] by the Mexican law in force here at the time the United States acquired the territory, the use of the water of the streams was not limited to riparian lands, but extended to others, subject to regulation and control by the public authorities. And the Mexican law, as well as the law of Indian tillers of the soil who preceded the Spaniards here, as it may be gathered from the ruins of their irrigation systems, did but recognize the law of things as they are, declaring that such must of necessity be the use of the waters of streams in this arid region."

§ 581. **The Mexican water laws—Pueblo rights—The plan of Pictic.**—Another feature of the Mexican laws upon the subject of waters, based upon the civil law as modified by Spanish and Mexican authorities, and which was transmitted to this country by the Treaty of Guadalupe Hidalgo, the acquisition of Texas, and the Gadsden Purchase, was the right of pueblos or agricultural villages. There are many cities and towns in the Southwestern portion of this country, especially in California, Texas, Arizona, and New Mexico, which were founded as Mexican pueblos. They originally differed from our municipalities in many respects. They had no charters, and were always subject to the control and su-

1 188 U. S. 545, 47 L. Ed. 588, 23 Sup. Ct. Rep. 338, affirming 10 N. M. 177, 61 Pac. Rep. 357.

2 See, also, Lux v. Haggin, 69 Cal. 255, 4 Pac. Rep. 919, 10 Pac. Rep. 674.

3 — N. M. —, 113 Pac. Rep. 823.

4 188 U. S. 545, 23 Sup. Ct. 338, 47 L. Ed. 588.

pervision of superior officers of the Mexican Government, and this control was complete and constant. These officers could suspend, restrict, or enlarge the powers of the officers of the pueblos. These pueblos also constituted instrumentalities for the government of the neighboring country; and in many instances their jurisdiction extended over a large area of territory.[1] No grants of land were ever made to the pueblos by the Mexican Government, but as soon as a pueblo was organized it became entitled to have certain lands set apart to it for its use and the use of its inhabitants. This right was held by the cities and towns of Spain for a long period before her conquests in America, and was recognized in her laws and ordinances for the government of her colonies here.[2]

At first the plan for the establishment of these pueblos was for the King of Spain, in each case by special ordinance, to provide for the foundation of the pueblo, and to set apart for the use of the pueblo and its inhabitants a certain area of land, and to prescribe in the ordinance the rights of the pueblo and its inhabitants to the use of the waters flowing to those lands. Later, upon the establishment of the pueblo of Pictic in the State of Sonora, sixteen square leagues of land were thus set apart for the use of the pueblo and its inhabitants, and it was further provided:

"7th. The neighbors and natives shall likewise enjoy the use of the woods, water, and other benefits from the royal and vacant lands lying outside of the tract assigned to the new town, jointly with the residents and natives of the immediate and adjoining towns; which favor and right shall continue until by His Majesty the same shall be granted or alienated; in which case regulations will be made according to the provisions for concessions in favor of new possessors or proprietors."

And, further, it was also at this time provided by the King, by general ordinance, that thereafterward the provisions and rights granted and the general plan followed in the foundation of the

pueblo of Pictic should be followed in the foundation of any new pueblos in the jurisdiction of the commanding general of the internal Provinces of the West, of which California, Arizona, New Mexico, and Texas constituted a part. This scheme for the foundation of the pueblos we will designate as the "Plan of Pictic."[3] Relative to its right to waters under the Mexican law a pueblo, as a quasi corporation, had the power to distribute to the common lands and to its inhabitants the waters of a non-navigable stream on which the pueblo was situated. And our Courts have determined that the cities and towns in this portion of the country, where they were the successors of these pueblos, held the pueblo lands and waters in trust for the inhabitants, and that the legislatures of the respective States and Territories, as successors to the Mexican Government, can control the execution of this trust.[4] And this pueblo right to the use of water, or the right of all the inhabitants in common within the jurisdiction of the pueblo, was superior to the individual rights of appropriators, and also superior to the rights of the riparian proprietors, through whose fields the stream ran.[5]

[3] For a discussion as to the foundation of the pueblo of Nuestra Señora Reina de Los Angeles, in 1781, which pueblo embraces four square leagues of land included in and is now a part of the present City of Los Angeles, and where it was claimed before the commissioners under the Act of Congress of March 3, 1851 (9 Stat. L. 631, Chap. 41), that the Plan of Pictic should have been followed as to the area granted, but where the commissioners allowed but four square leagues, see Los Angeles Milling Co. v. Los Angeles, 217 U. S. 217, 514 L. Ed. 736, 30 Sup. Ct. Rep. 452; Dis. writ of error to the Supreme Court of California, 152 Cal. 645, 93 Pac. Rep. 869; The Pueblo Case, 4 Sawy. 563; Feliz v. Rep. 585; 63 L. R. A. 471 (writ of error) dismissed, 188 U. S. 314, 23 Sup. Ct. Rep. 395, 47 L. Ed. 487.

**§ 582. The Mexican water laws—Pueblo rights—Right to extend the use of water to territory annexed to pueblos.**—The pueblo rights described above were not confined strictly to the village or town included within any particular pueblo, but as stated in the seventh article of the "Plan of Pictic," the neighbors and natives shall likewise enjoy the use of the waters from the royal and vacant lands lying outside of the tract assigned to the new town jointly with the residents and natives of the immediate and adjoining towns.[1] And the government and control of the waters used by those on the outside was to be the same as the control of those waters used inside of the towns. It is therefore held by the Supreme Court of California in construing these pueblo rights that such a pueblo right to the water of a stream includes the right to take all the water that is reasonably necessary to give an ample supply to the use of its inhabitants and for all *municipal* purposes for which the city may require water; that this right is measured by the necessity, and if the needs increase in the future the right will expand to include them; and this, although the population of the city is not confined to the original pueblo limits.[2] In the late case of the City of Los Angeles v. Hunter,[3] it was said: "The right to use the water upon annexed territory not within the limits of the original pueblo is distinctly declared in the City of Los Angeles v. Pomeroy."[4]

Under the California rule of the extension of pueblo rights to lands other than those within the original pueblo limits, there is a question which might arise. Can a city or municipality, which has succeeded to the original Mexican pueblo rights to the use of water, so extend the area upon which the water may be used that such city or municipality may engage in the general irrigation business for the irrigation of lands far from the town boundaries? In answer to this we will say that there is nothing in the California decisions which permits the extension of the area beyond the limits of the *town or city* where the same has been extended beyond the original pueblo limits. And, although there seems to be no direct decision upon the question, upon principle, we can not see how under the "Plan of Pictic" the limit of the land irri-

1 See Sec. 581.

2 Los Angeles v. Pomeroy, 124 Cal. 597, 57 Pac. Rep. 585.

3 156 Cal. 603, 105 Pac. Rep. 755.

4 See *supra*.

gated by the pueblo can be extended beyond the town limits, where the town exceeds in limit the original pueblo. The right to the use of water under the "Plan of Pictic" was that the neighbors and natives should likewise enjoy the same use of the water as the inhabitants of the town, but the lands of both were limited to those of the pueblo itself. And to hold that a city or town by virtue of its being a successor to original Mexican pueblo rights could go into the irrigation business for the irrigation of lands on the outside of the original boundaries of the pueblo where such lands were not included within the boundaries of the town, as extended, we find no authorities. It is, therefore, our opinion that this can not be done.

§ 583. **The Mexican water laws—As affecting the rights to water on Mexican land grants.**—Prior to the cessions of the territory formerly owned by Mexico to the United States a large number of grants of land were made to individuals by the Mexican Government. In the treaty with Mexico it was provided to the effect that such actual and *bona fide* grantees should be protected in their titles to these lands, and that their right of ownership should be respected by the United States Government after the territory had passed to this Government. Following the treaty with Mexico Acts of Congress were passed to ascertain and settle the private land grant claims. Legal proceedings were had under these Acts of Congress,[1] and the titles to the land included in these *bona fide* grants confirmed in the respective grantees or their successors in interest. But the treaty with Mexico, while thus securing the title and ownership of the tracts of land which had been granted by Mexico, did not attempt to provide that this ownership should be governed and controlled by the laws of Mexico, nor by any other laws than by the laws of the United States, and of the States and Territories formed out of the domain acquired from Mexico including these land grants.[2] So, also, as to the water rights

1 See Act of Congress of March 3, 1851, 9 Stat. L. 631.

In the case of Los Angeles v. Los Angeles Farm & M. Co., 152 Cal. 645, 93 Pac. Rep. 869, the Court held that under the above Act it did not contemplate the presentation of claims to anything but "land"; the claims to water were not included.

2 Hagar v. Reclamation Dist. No. 108, 111 U. S. 701, 28 L. Ed. 569, 4 Sup. Ct. Rep. 663; *Id.*, 66 Cal. 54, 4 Pac. Rep. 945; Woodruff v. North Bloomfield etc. Co., 9 Sawy. 441, 18

on these grants. The riparian rights of a private proprietor under a Mexican grant duly confirmed are exactly the same, and governed by the same laws, as those held and enjoyed by any other private riparian proprietor within the same State. It is the title which governs and not the source of title. Therefore in those jurisdictions which uphold the common law theories of riparian rights, as, for instance, the State of California,[3] these rights attach to all lands whose title is deraigned from Mexican grants, as well as to those lands which were granted by the United States. Upon this question there is no controversy.[4] However, the question whether or not such water rights would attach as riparian rights to the lands included with our Mexican land grants is left for the respective States within which such grants lie to decide. As was held by the Supreme Court of the United States,[5] riparian rights asserted to have been secured by the treaty of Guadalupe Hidalgo, between the United States and Mexico, are not rights of Federal origin which, when denied, lay the basis for a writ of error from the Federal Supreme Court to a State Court, and, therefore, the case was dismissed for want of jurisdiction.

There is also no question but that an appropriation of water under the Mexican laws by the diversion of the waters of a stream and used for a beneficial purpose should be upheld after the cession to the United States; provided, of course, that there was a use of all the water for a beneficial purpose continued after that date.

Fed. Rep. 753, 8 Sawy. 628, 16 Fed. Rep. 25; Lux v. Haggin, 69 Cal. 255, 4 Pac. Rep. 919, 10 Pac. Rep. 674.

The Mexican Government on February 5, 1824, made a large number of grants of water to various grantees. On a subsequent day it made grants of water for other land, using the same language. Few grants were subsequently made. Each grant granted to the grantees "one day of water with a corresponding labor of land." The original grantees of both lands used the water for irrigating their respective lands concurrently. It was held by the Court in a recent Texas case that the grants did not give any superior right to any of the grantees, but distributed to each water rights in common. San Juan Ditch Co. v. Cassin, —— Tex. Civ. App. ——, 141 S. W. Rep. 815.

3 See Sec. 507.

4 See Los Angeles v. Baldwin, 53 Cal. 469; Pope v. Kinman, 54 Cal. 3; Vernon Irr. Co. v. Los Angeles, 106 Cal. 237, 39 Pac. Rep. 762; Los Angeles v. Pomeroy, 124 Cal. 597, 57 Pac. Rep. 585.

5 Los Angeles Farming and Milling Co. v. Los Angeles, 217 U. S. 217, 54 L. Ed. 736, 30 Sup. Ct. Rep. 452; for the same case below, see 152 Cal. 645, 93 Pac. Rep. 869, 1135.

And, therefore, where these Mexican land grants lie within jurisdictions which entirely reject the common law rule of riparian rights, as is the case in Arizona and New Mexico, another question presents itself. Upon examination of the Mexican law of waters, there can be no question but that there were certain rights which might be acquired by virtue of the ownership of the land along the stream. These rights therefore were somewhat analogous to the common law of riparian rights. It is denied that this was the case in the State of Sonora, and is held that the only personal right which could be acquired was by appropriation, and which might be acquired by concessions from the Government.[6] But as we understand the law of waters to have been under the Mexican law, the use of water of non-navigable streams was under the control of the Mexican Government, and as we have stated in a previous section it had the power of retaining the waters in their natural channels for the sole use of riparian owners; or, by way of concessions, the right of conferring the exclusive use of a portion or the whole of the waters of such a stream to individuals or corporations, for use on non-riparian lands.[7] Now this being true, the change of

6 "Whatever may have been the general law throughout the Republic of Mexico on the subject of water, it is reasonably certain that in the State of Sonora the doctrine of appropriation, as now recognized, was to some extent in force by custom. In this Territory irrigation was practiced in the Santa Cruz Valley prior to the cession, and it is well known the right of appropriation without regard to the riparian character of the lands was there in force probably from the time when the Spaniards first settled in the valley. Our statutes, as well as those of New Mexico, seem to have had their origin in the Mexican law, as modified by custom. To concede, therefore, to the owner of the grant in question riparian rights, would be in effect to concede to it what his predecessors in interest do not appear to have possessed prior to the cession under the Gadsden Purchase." Boquillas etc. Co. v. Curtis, 11 Ariz. 128, 89 Pac. Rep. 504. Of this statement it was said by the Supreme Court of the United States on appeal: "This is the statement of the Territorial Court, and we know nothing to control it. It is not met by arguments as to the general character of the Mexican law, or by inference from the situation and nature of the grant." The same doctrine seems to be implied by the Howell Code, Chap. 55, Sec. 25; 213 U. S. 339, 53 L. Ed. 822, 29 Sup. Ct. Rep. 493.

See the case of Los Angeles v. Los Angeles Farming Co., 152 Cal. 645, 93 Pac. Rep. 869; dismissed, 217 U. S. 217, 54 L. Ed. 736, 30 Sup. Ct. Rep. 452, where the whole claim of the defendant was based upon the riparian rights of a Spanish-Mexican land grant.

7 See Sec. 579.

sovereignty operated merely to transfer from Mexico to the Government of the United States and the States and Territories where these lands lie. And, as the local laws upon the subject of waters within their respective jurisdictions are left entirely to the States and Territories, the Territories might, therefore, confer common law rights upon the riparian owner; or, upon the other hand, it might establish the right to the use of the waters by prior appropriation and diversion for the irrigation of lands either riparian or non-riparian, or for other beneficial uses not connected with the common law rules of riparian rights. This latter the legislatures of the Territories of Arizona and New Mexico have seen fit to do; in other words, they have chosen to deny to riparian owners exclusive rights, and have conferred upon others rights to the use of the waters of these streams, without reference to the situation of the lands owned by the latter with respect to the streams from which such waters may be taken. Hence it follows that in these Territories riparian rights are not recognized as attaching to Mexican land grants made before the treaty of Guadalupe Hidalgo or the Gadsden Purchase.[8]

[8] Boquillas Land & C. Co. v. Curtis, 11 Ariz. 128, 89 Pac. Rep. 504; affirmed, 213 U. S. 339, 53 L. Ed. 822, 29 Sup. Ct. Rep. 493, where the Territorial Court upon this subject said: "If, under the Mexican law, the use of waters of innavigable streams was under legislative control, the change of sovereignty operated merely to transfer this right of control from Mexico to the Government of the United States. This being so, it must follow that the owner of the land grant, with the change of sovereignty, stood in exactly the same position as before, with relation to the right of the sovereignty to grant the exclusive use of waters of any innavigable stream, flowing through or adjoining the grant, to whomsoever it might choose. The United States, or its delegated authority, the Territory of Arizona, might, therefore, confer common law rights upon the riparian owner, or might establish the right of prior appropriation, and grant this right to others than riparian owners. As we have seen, the Legislatures of New Mexico and of Arizona, under their delegated authority from the sovereignty of the United States, to whom, under the doctrine stated in Lux v. Haggin, passed the right of control over innavigable waters by the treaty of cession from Mexico, have chosen to deny to riparian owners exclusive rights and to confer upon others rights to the use of such water without reference to the situation of the lands owned by the latter with respect to the streams from which such water may be taken."

See, also, Albuquerque and & Irr. Co. v. Gutierres, 10 N. M. 177, 61 Pac. Rep. 357; affirmed in 188 U. S. 545, 47 L. Ed. 588, 23 Sup. Ct. Rep. 338.

See, also, Trambley v. Luterman, 6

§ 584. **Conclusions.**—In this part we have endeavored to trace the authority for the system of appropriation of the waters of natural streams for irrigation and other beneficial purposes, as it is practiced in this Western country, back further than the origin of the common law of England, to the civil law of the Roman Emperors. We have shown how the civil law upon this subject has come down through the early Dutch, French, and Spanish settlers to different portions of this country. We have also shown how the civil law came to this country through the Spanish who settled in Mexico, by means of the acquisition by this country of the State of Texas, the treaty of Guadalupe Hidalgo, and the Gadsden Purchase. From the previous sections it is evident that the laws governing private rights in waters differed very little under Mexican rule at the time when the Southwest was ceded to the United States from those in force in California at the present time. The law of appropriation for beneficial purposes was known and recognized as authority, and the same is also true respecting the law of riparian rights. There were in Mexico prior to the cession of California the two systems separate and distinct that we find now under the law of that State. The Mexican law as it existed at the time of the cession of California recognized an inherent and vested right in riparian owners to the use of the waters of a stream; and also recognized a vested right in those who had actually appropriated the waters in the manner and under the conditions prescribed by the laws of that country. When the territory of the Southwest was transferred to the United States by the treaty of Guadalupe Hidalgo in 1848, and became subject to the laws of this Government, and finally to the laws of the respective States and Territories organized out of the same, the existing laws regarding private interests in and to the waters of streams and lakes were not found to be materially in conflict with the laws of the United States, or those finally adopted by the several States and Territories. So, in the change from the Mexican laws to those of the United States few obstacles were thrown in the way as regards water and other property rights of persons who were grantees of the Mexican Government to certain lands included within this tract, prior to the time of the treaty, and who claimed rights in the waters of flowing

N. M. 16, 27 Pac. Rep. 313; Millheiser v. Long, 10 N. M. 99, 61 Pac. Rep. 111; Barnett v. Barnett, 9 N. M. 205, 50 Pac. Rep. 337.

streams by virtue of their riparian ownership; also the rights of those persons at the time of the acquisition of the territory including their lands who were actually appropriating the waters of the streams and rivers by diverting them from their natural channels, and applying them to some beneficial purpose. The law governing waters in Mexico was always subject to Government control, and by the transfer of the title of these lands to this country, through which these waters flow, there was simply a change of sovereign and not a change of right. We have also shown that it is left entirely to the States and Territories formed out of the lands acquired from Mexico to adopt whatever rule as to waters they may see fit, whether it be the common law of riparian rights, the Western theory of water rights based only upon appropriation and diversion from the natural channels and the water applied to some beneficial use or purpose, or whether it be a combination of both rules as is the case in California and some of the other States. Under the civil law and as modified by the Spanish and Mexicans, the exclusive right to the use of waters for the irrigation of lands other than riparian, was entirely under the Government control and granted by way of concessions to the individuals applying therefor. The question of priority of appropriation, by simply going to a stream and taking the water therefrom prior to any one else doing the same thing, did not enter into their laws. This feature of the Western rule of appropriation of waters was left to the miners and settlers in the Western portion of this country, after its acquisition from Mexico. This subject will be discussed in future portions of this work.[1]

# PART VIII.

## THE APPROPRIATION OF WATERS FOR BENEFICIAL USES.

### CHAPTER 31.

### ARID REGION DOCTRINE OF APPROPRIATION.

§ 585. Review—Scope of present chapter.
§ 586. What it is—Judge Hawley's definition and description.
§ 587. What it is—Definition—In derogation of the common law.
§ 588. Physical cause of doctrine of appropriation.
§ 589. Physical cause of doctrine—Common law deemed inapplicable.
§ 590. Common law adopted where inapplicable—General rule.
§ 591. Common law deemed inapplicable—Cause of the change of rule in Nevada.
§ 592. Common law deemed inapplicable—The present situation in California.
§ 593. The question as to what law governs waters within the respective States is left entirely to the States to decide.
§ 594. The doctrine of appropriation, as against riparian rights—Practical workings of the two systems as to irrigation.

**§ 585. Review—Scope of present chapter.**—In the preceding chapters of our work we have seen that under the common law of riparian rights, as the same is strictly construed by both the English and American authorities, the rights of the riparian proprietors in the use of the waters of the natural streams or lakes upon which their lands touched were the only private rights in and to those waters recognized under that law.[1] This right was created by Nature, *ex jure naturae,* and was an incident to their ownership of the land bordering upon the water, and treated as a part of the same. Also that these rights of the riparian proprietor existed whether they chose to exercise them or not, to the ex-

1 For common law theories of riparian rights, see Chaps. 21-28, Secs. 450-551. For the rights of the public in waters, see Chaps. 15-18, Secs. 324-389.

clusion of all others desiring to exercise them; that these rights did not depend upon occupancy, and were not limited by the prior occupation of others not amounting to an adverse enjoyment by prescription, but that the rights of all of the proprietors upon a stream were equal, and each one entitled to a reasonable use of the stream, provided that he did not injure any of his neighbor's rights in and to the same, and that it was wholly immaterial as to who was first in time. We have also seen that one of the fundamental principles of the common law was that the streams must be permitted to flow in their natural channels as they were wont to flow by Nature, without any material diminution in quantity or alteration in quality. As Chancellor Kent said: "*Aqua currit et debit currere ut currere solebat* is the language of the law." Hence the use of the water must necessarily, under these restrictions, be very limited, as compared with the lawful uses of the present day rules. We have also seen how this strict rule of the common law as to the use of the water, in eleven of the States of this country, has been enlarged and extended so as to include the diversion of the water from its natural streams and its use for the irrigation of land, and that, too, where the greater portion of the water was consumed.[2]

We have also discussed in another chapter that portion of the civil law of the Roman Emperors upon the subject of waters, which has been handed down to us in a modified form by the Spaniards and Mexicans. Under this system of laws the water of the natural streams was considered *publici juris*, or as belonging to the public; the use of the water could be made by individuals, but it was always under strong governmental control.[3] This influence of the civil law is still felt in the Western States, in spite of the fact that in all of these States, primarily at least, the common law of England was adopted as their system of jurisprudence, which also included its law of waters. But, ever since that section of this country located west of the 100th meridian, and known as the "Arid Region," first began to be peopled by the Anglo-Saxon race, following at first mining as an occupation, and afterward with increasing numbers settling down to agricultural and mechanical industries, a great change from the old common law theories

2 See for irrigation as a riparian right, Chap. 26, Secs. 498-525.

3 For civil law governing waters, see Chaps. 29, 30, Secs. 552-584.

has been gradually taking place, until today in some of the States formed out of the "Arid Region" the common law theories upon the subject of waters are absolutely abolished, in others ignored, and in all modified, particularly with regard to the uses of the waters of inland streams and lakes. The present chapter will be devoted to showing how this change was brought about, and the application of the new doctrines to the lands and waters upon the public domain, or that part owned by the United States.

In this part we will discuss the appropriation of water for beneficial uses and purposes as the same is known under the Arid Region Doctrine of appropriation.

In the present chapter we will discuss the Arid Region Doctrine of appropriation, what it is, and how, because of the inapplicability of the common law principles of riparian rights to physical conditions of many portions of our arid West, this doctrine was adopted.

**§ 586. What it is—Judge Hawley's definition and description.**—No man better understands the cause of the adoption of the Arid Region doctrine of appropriation and its principles than did Judge Hawley, first Chief Justice of the Supreme Court of Nevada and afterward Federal Judge for the District of the State of Nevada. The judicial life of Judge Hawley practically coincides with the formative period of the Arid Region doctrine of appropriation. And there were tried before him probably as many important cases, involving all phases of this subject, as were tried before any other Judge of the country. In three important Federal cases—of Hewitt v. Story,[1] Union Mill & Mining Co. v. Dangberg,[2] and Rodgers v. Pitt,[3] wherein opinions were rendered by Judge Hawley, he used practically the same language in defining and describing the Arid Region doctrine of appropriation. We can do no better than to quote certain passages from these three opinions. He said:

"We consider the law to be well settled that the right to water flowing in the public streams may be acquired by an actual appropriation of the water for a beneficial use; that, if it is used for irrigation, the appropriator is only entitled to the amount of

1 64 Fed. 510, 30 L. R. A. 265, 12 C. C. A. 250, 29 U. S. App. 155; *Id.*, 51 Fed. Rep. 101.

2 81 Fed. Rep. 73.

3 89 Fed. Rep. 420, 129 Fed. Rep. 932.

water that is necessary to irrigate his land by making a reasonable use of the water; that the object had in view at the time of the appropriation and diversion of the water is to be considered in connection with the extent and right of appropriation; that if the capacity of the flume, ditch, canal, or other aqueduct, by means of which the water is conducted, is of greater capacity than is necessary to irrigate the lands of the appropriator, he will be restricted to the quantity of water needed for the purposes of irrigation, for watering his stock, and for domestic use; that the same rule applies to an appropriation made for any other use or purpose; that no person can, by virtue of his appropriation, acquire a right to any more water than is necessary for the purpose of his appropriation; that, if the water is used for the purpose of irrigating lands owned by the appropriator, the right is not confined to the amount of water used at the time the appropriation is made. He would be entitled, not only to his needs and necessities at that time, but to such other and further amount of water, within the capacity of his ditch, as would be required for the future improvement and extended cultivation of his lands, if the right is otherwise kept up; that the intention of the appropriator, his object and purpose in making the appropriation, his acts and conduct in regard thereto, the quantity and character of land owned by him, his necessities, ability, and surroundings, must be considered by the Courts, in connection with the extent of his actual appropriation and use, in determining and defining his rights; that the mere act of commencing the construction of a ditch with the avowed intention of appropriating a given quantity of water from a stream gives no right to the water unless this purpose and intention are carried out by the reasonable, diligent, and effectual prosecution of the work to the final completion of the ditch and diversion of the water to some beneficial use; that the rights acquired by the appropriator must be exercised with reference to the general condition of the country and the necessities of the community, and measured in its extent by the actual needs of the particular purpose for which the appropriation is made, and not for the purpose of obtaining a monopoly of the water, so as to prevent its use for a beneficial purpose by other persons; that the diversion of the water ripens into a valid appropriation only where it is utilized by the appropriator for a beneficial use; that

the surplus or waste water of a stream may be appropriated, subject to the rights of prior appropriators, and such an appropriator is entitled to use all such waters; that, in controversies between prior and subsequent appropriators of water, the question generally is whether the use and enjoyment of the water for the purposes to which the water is applied by the prior appropriator have been in any manner impaired by the acts of the subsequent appropriator. These general principles are of universal application throughout the States and Territories of the Pacific Coast. They have, in one form or another, been declared, upheld, and maintained by the Courts by a uniform current of decisions in California ever since the decision in Eddy v. Simpson."[4]

A better description of the Arid Region doctrine of appropriation can not be given than is embodied in the above statement.

**§ 587. What it is—Definition—In derogation of the common law.**—The Arid Region Doctrine of appropriation may be defined

[4] 3 Cal. 249, 58 Am. Dec. 408; also citing Kelly v. Natoma Water Co., 6 Cal. 105, 1 Morr. Min. Rep. 592; Kimball v. Gearhart, 12 Cal. 27, 1 Morr. Min. Rep. 615; Ortman v. Dixon, 13 Cal. 33; Weaver v. Eureka Lake Co., 15 Cal. 271, 1 Morr. Min. Rep. 642; McKinney v. Smith, 21 Cal. 374, 1 Morr. Min. Rep. 650; Hill v. Smith, 27 Cal. 476; *Id.*, 32 Cal. 166, 4 Morr. Min. Rep. 597; Nevada Water Co. v. Powell, 34 Cal. 109, 91 Am. Dec. 685, 4 Morr. Min. Rep. 253; Nevada County & S. Canal Co. v. Kidd, 37 Cal. 282; Mitchell v. Amador Canal & Min. Co., 75 Cal. 483, 17 Pac. Rep. 246; Peregoy v. McKissick, 79 Cal. 572, 21 Pac. Rep. 967; Cal. Civ. Code, Secs. 1410 *et seq.*

The same rules prevail in Nevada: Lobdell v. Simpson, 2 Nev. 274, 90 Am. Dec. 537; Ophir Silver Min. Co. v. Carpenter, 6 Nev. 534, 97 Am. Dec. 550, 4 Morr. Min. Rep. 640; Proctor v. Jennings, 6 Nev. 83, 3 Am. Rep. 240, 4 Morr. Min. Rep. 265; Barnes v. Sabron, 10 Nev. 217, 4 Morr. Min. Rep. 673; Simpson v. Williams, 18 Nev. 432, 4 Pac. Rep. 1213.

In Colorado: Wheeler v. Northern Colorado Irrigation Co., 10 Colo. 583, 17 Pac. Rep. 487, 3 Am. St. Rep. 603; Platte Water Co. v. Northern Colorado Irrigation Co., 12 Colo. 525, 21 Pac. Rep. 711; Combs v. Agricultural Ditch Co., 17 Colo. 146, 28 Pac. Rep. 966, 31 Am. St. Rep. 275; Fort Morgan Land & C. Co. v. South Platte Ditch Co., 18 Colo. 1, 30 Pac. Rep. 1032, 36 Am. St. Rep. 259.

In Idaho: Conant v. Jones, 3 Idaho 606, 32 Pac. Rep. 250.

See, also, Atchison v. Peterson, 1 Mont. 561; *Id.*, 87 U. S. 20 Wall. 507, 22 L. Ed. 414, 1 Morr. Min. Rep. 583; Basey v. Gallagher, 87 U. S. 20 Wall 670, 22 L. Ed. 452; Broder v. Natoma Water & Min. Co., 101 U. S. 274, 25 L. Ed. 790, affirming 50 Cal. 621; Gould, Waters, Secs. 228 *et seq.*

as that doctrine or rule of law which has grown up in this Western portion of our country, governing the use of the water of the natural streams and other bodies, by its appropriation for any useful or beneficial purpose, based upon the physical necessities of the case; and, whereby for the purpose of applying the water to some beneficial use, the water must be diverted from its natural channels, and, in contradistinction to the strict construction of the common law of riparian rights, the place of use may be on either riparian or nonriparian lands, and the right based upon priority.[1] In fact, this doctrine is in derogation of the common law, and as said in an early California case, it is "without judicial or legislative precedent, either in our own country or in that from which we have borrowed our jurisprudence."[2] In the early history of the doctrine, however, attempts were made in some of the California decisions to reconcile the doctrine of appropriation with the common law. But, for the reason that the very fundamental principles of the two doctrines are opposed to each other, this attempt at reconciliation did not get very far.[3]

1 For the definition of the appropriation of water, see Sec. 707.

That the Doctrine of Appropriation is in derogation of the common law, see Atchison v. Peterson, 1 Mont. 561; *Id.*, 87 U. S. 20 Wall. 507, 22 L. Ed. 414, 1 Morr. Min. Rep. 583; Basey v. Gallagher, 87 U. S. 20 Wall. 670, 22 L. Ed. 452, 1 Morr. Min. Rep. 683; Jennison v. Kirk, 98 U. S. 453, 25 L. Ed. 240, 4 Morr. Min. Rep. 504; Eddy v. Simpson, 3 Cal. 249, 58 Am. Dec. 408, 15 Morr. Min. Rep. 175.

It is "an innovation upon the old rules of law upon the subject." Crandall v. Woods, 8 Cal. 136, 1 Morr. Min. Rep. 604.

"The doctrine of 'appropriation,' so called, is not the doctrine of the common law." Lux v. Haggin, 69 Cal. 255, 10 Pac. Rep. 674.

2 Bear River Water Co. v. New York M. Co., 8 Cal. 327, 68 Am. Dec. 325, 4 Morr. Min. Rep. 526.

See, also, Hoffman v. Stone, 7 Cal. 49, 4 Morr. Min. Rep. 520; Pomeroy on Riparian Rights, Sec. 20; Yale on Mining Claims and Water Rights, pp. 129, 137.

3 It was said by Chief Justice Sanderson in the case of Hill v. Smith, 27 Cal. 476, 4 Morr. Min. Rep. 597: "Moreover, the entire charge impliedly if not expressly proceeds upon and sanctions the idea that as between ditch owners and miners using the water of a stream in the mineral regions of the State for mining purposes, the law tolerates and winks at some uncertain and indeterminate amount of injury by the one to the prior right of the other. This is due in great measure doubtless to the *notion*, which has become quite prevalent, that the rules of the common law touching water rights have been materially modified in this State upon the theory that they were inapplicable to the conditions found to exist here, and therefore inadequate to a

About the most that can be said of the two doctrines is that they may both exist in the same State at the same time;[4] but even then they are continually clashing.

§ 588. **Physical cause of doctrine of appropriation.**—There were manifest equities which demanded that the common law, hastily adopted by the Western States and Territories from a country so dissimilar in climate and other physical conditions to those of the arid region, should not be made applicable when it imperiled the most vital interests of some of the richest agricultural districts of the world. The rain does not fall alike over all the earth, and especially in mountainous countries. In some sections of the United States included in the arid West, the annual rainfall amounts to thirty or forty inches, while in other sections it amounts to only from six to ten inches per annum. This is due to a certain extent to the topographical features of the country, the proximity to the sea, and to other causes which have their influence in special localities.[1] The mighty peaks of the Rocky Mountains tap the rain clouds and drain them of their moisture before they reach the space over the valleys, which are thus, in their natural condition, left dry and arid. This is especially true during the summer months or during the cropping season, when the water is needed the most as an aid to agriculture. Also during the winter season, beginning with early fall, great masses of snow are piled up in the mountains, where, if the mountains are covered with timber and undergrowth, the snow remains in these reservoirs of Nature until the summer's sun causes it to gradually melt and run down into the canyon streams, then out from the mountains toward the sea, through the vast extent of dry valleys, where perhaps not a drop of moisture has fallen for months.[2] Thus it happens that when the water reaches the valleys in the arid region on its way

just and fair determination of controversies touching such rights. *This notion is without any substantial foundation.*"

4 Crawford Co. v. Hathaway (Hall), 67 Neb. 325, 93 N. W. Rep. 781, 60 L. R. A. 889, 108 Am. St. Rep. 647; Clark v. Allaman, 71 Kan. 206, 80 Pac. Rep. 571, 70 L. R. A. 971.

1 For influence of forests upon the rainfall, see Chap. 2, Secs. 47-57.

See, also, Secs. 5, 6.

2 For the influence of forests in storing water, see Chap. 2, Secs. 47-57.

to the ocean, instead of being precipitated nearly equally upon the earth, as is the case in what is known as the "humid region" or "rain belt," it is gathered in natural channels, which only touch a very small proportion of the land within the arid region. Under a strict construction of the rules of the common law, as we have seen in a previous portion of this work, a very few riparian owners would control all of the water in that part of the country to the exclusion of all others. Nature clearly designed, in spite of the facts set forth above as to the inequality of precipitation, that the rain should still be permitted to shed its blessings on all, and that a nonriparian land owner should not be prevented from securing his just proportion of the water, simply because of the topographical features of the country thereabouts, which are entirely beyond his control. The water which he should receive drains from its storage source in the mountains into streams which flow only by his neighbor's land, who, as an incident of his ownership of the soil adjoining the stream, controls all of its waters, although the same may be far in excess of what he and all other riparian owners may need. And, by a strict construction of the common law, this surplus water must not be diverted from its natural channel, but must be permitted to flow, without material diminution in quantity, on to the sea. And even under the Western American doctrine of riparian rights, as modified and expanded,[3] to the extent that water may be used for irrigation, it is the unanimous consensus of authority that the water can not be diverted to irrigate nonriparian lands.[4]

**§ 589. Physical cause of doctrine—Common law deemed inapplicable.**—The common law of riparian rights had its origin in Great Britain, under conditions of climate peculiar to its position, in the path of the great Gulf Stream, in an atmosphere laden with moisture, which is precipitated with lavish profusion upon that favored spot. The law gave to the riparian owners, as an incident to their ownership of the soil adjoining the water, the right to the natural flow of the stream without material alteration or diminution. One might use the water for any purpose, provided

[3] For common law riparian rights as expanded, see Secs. 511, 512.

[4] For riparian right of irrigation must be confined to riparian lands, see Secs. 516, 517.

that he in turn restored the same to its natural course, so that his riparian neighbor below might receive the same unaltered in quality and undiminished in quantity. He was not permitted to drain his land so as to increase the quantity of water in the stream to the injury of his neighbors below, nor dam the water back upon the lands to the injury of those above him; nor could there be, according to that law, any diversion or use of the water by one owner that would work material detriment to any other owner above or below him. Owing to the position of the country and its climatic influences the great problem there to be solved was how best to drain the water off the land and get rid of it, not how to save it in order to conduct it upon the land in aid of the husbandman.[1] This latter has been the great problem in the arid portions of the earth, from the earliest days,[2] and this is especially true in that part of this country west of the 100th meridian known as the arid and semi-arid regions. So the fundamental cause of the change in this portion of our country, from the common law rules of riparian rights, as the same are in force in England and in the Eastern States of the Union, to the Arid Region doctrine of appropriation, in all of our Western States where water is used for irrigation, can be attributed principally to the difference in the physical conditions of the arid region from that of England and the East as regards the equal, or rather, the unequal distribution of moisture. Out of this unequal distribution of rainfall grew the necessity of the early California system of the miners, relative to water rights, which system was based upon the principle of free land, to which discovery, appropriation, and use gave title.[3]

1 For common law theories of riparian rights, see Secs. 450-551.

2 For irrigation in the ancient countries, see Chap. 3, Secs. 63-87.

3 Reno Smelting & R. Works v. Stevenson, 20 Nev. 269, 21 Pac. Rep. 317, 4 L. R. A. 60, 19 Am. St. Rep. 364; Atchison v. Peterson, 87 U. S. 20 Wall. 507, 22 L. Ed. 415, 1 Morr. Min. Rep. 583, in which Mr. Justice Field said: "As respects the use of water for mining purposes, the doctrines of the common law, declaratory of the rights of riparian owners were, at an early day, after the discovery of gold, found to be inapplicable, or applicable only in a very limited extent, to the necessities of the miners, and inadequate to their protection."

See, also, Basey v. Gallagher, 87 U. S. 20 Wall. 670, 22 L. Ed. 452, 1 Morr. Min. Rep. 683; Broder v. Natoma W. Co., 101 U. S. 274, 25 L. Ed. 790, affirming 50 Cal. 621; Jennison v. Kirk, 98 U. S. 453, 25 L. Ed. 240; Osgood v. Eldorado W. & M. Co., 56 Cal. 571, 5 Morr. Min. Rep. 37.

In the case of Clough v. Wing,[4] decided by the Supreme Court of Arizona, which State is within the very heart of the arid region, after referring to several cases upholding the Arid Region doctrine as against that of the common law, the Court said: "These cases state a doctrine very different from the common law. . . . That law gave to the servient and dominant heritage the right to the natural flow of the water. The riparian owner might use the water in its course to turn his waterwheel or for other purposes, but was required to restore the same to its natural course. While he might not hinder the flow so as to injure those below him, he might depasture his domestic animals so as to drink therefrom, and take water for domestic uses. He might not drain his land so as to increase the flood, to injure those below, or dam the water back upon the lands above him. The problem there to be solved was how best to drain the water off the land and get rid of it, not how to save it, to be conducted on the land in the aid of the husbandman. The latter has been the problem in the arid portions of the earth. From 'time whereof the memory of man runneth not to the contrary' the rights of riparian owners were settled in the common law."[5] Again, in a later Arizona case, of Boquillas Land & Cattle Co. v. Curtis,[6] Mr. Justice Nave, in concurring in the main opinion, said: "Without

Wright, 30 Minn. 249, 15 N. W. Rep. 167, 44 Am. Rep. 194; Creighton v. Kaweah etc. Irrigation Co., 67 Cal. 221, 7 Pac. Rep. 658; Moore v. Clear Lake Co., 5 Pac. Rep. 494; Wilcox v. Hausch, 64 Cal. 461, 3 Pac. Rep. 108; Larimer etc. Co. v. People, 8 Colo. 614, 9 Pac. Rep. 794; Garwood v. N. Y. C. & H. R. R. Co., 83 N. Y. 400, 38 Am. Rep. 452; Pennsylvania R. Co. v. Miller, 3 Atl. Rep. 780; Totel v. Bonnefoy, 123 Ill. 653, 14 N. E. Rep. 687, 5 Am. St. Rep. 570; Peck v. Herrington, 109 Ill. 611, 50 Am. St. Rep. 627.

[6] 11 Ariz. 128, 89 Pac. Rep. 504; affirmed in 213 U. S. 339, 53 L. Ed. 822, 29 Sup. Ct. Rep. 493.

further elaboration of my reasons, I state my belief that the utter incompatibility of the doctrine of riparian rights with the conditions of life in this Territory is an all-sufficient reason, under the principles of the common law itself, to hold that that doctrine is not here in force."

Again, in the case of Farm Investment Co. v. Carpenter,[7] it is said: "This use and the doctrine supporting it are founded upon the necessities growing out of natural conditions, and are absolutely essential to the development of the material resources of the country. Any other rule would offer an effectual obstacle to the settlement and growth of this region and render the lands incapable of continued successful cultivation. The waters for the reclamation of the desert lands must be obtained, in a very large measure, from the natural streams and other natural bodies of water. The common law doctrine of riparian rights relating to the use of the water of natural streams and other natural bodies of water not prevailing, but the opposite thereof, *and one inconsistent therewith,* having been affirmed and asserted by custom, laws, and decisions of Courts, and the rule adopted permitting the acquisition of rights by appropriation, the waters affected thereby become, perforce, *publici juris.*"

From the above authorities cited in our notes, therefore, it can be readily seen, that primarily the cause of the change was the inapplicability of the common law rules to the physical characteristics of the arid West. There the greater portion of the country is extremely arid, and the soil absolutely unfit for cultivation unless irrigated. But with irrigation some of the greatest crops in the world can be raised. The general surface of the country is a table land traversed by parallel mountain ranges, cut through by deep gorges through which the waters flow. The topographical features, therefore, afford great natural advantages for conducting the water over the lands. The very condition of the country and the *necessities* of the situation impelled the first miners and settlers upon the public lands to resort to the diversion and use of water of the natural streams in violation of the strict rules of the common law.[8] This fact in itself is a striking illustration and a conclusive argument against the adoption of all of the rules of the common law

[7] 9 Wyo. 110, 61 Pac. Rep. 258, 50 L. R. A. 747, 87 Am. St. Rep. 918.

[8] For history of the change, see Secs. 595-626.

where certain portions of them are inapplicable. For, were the common law rules governing riparian rights the prevailing ones and strictly followed, the most of the water that is now being diverted from the natural streams to fertilize and irrigate the soil in this great arid region would be wasted in the sea.[9]

In the case of Willey v. Decker [10] it is said: "In this State, on the other hand, the common law doctrine concerning the rights of a riparian owner in the water of a natural stream has been held to be unsuited to our conditions, and this Court has declared that the rule never obtained in this jurisdiction.[11] It was said in the opinion in that case that: 'A different principle, better adapted to the material condition of this region, has been recognized. That principle, briefly stated, is that the right to the use of water for beneficial purposes depends upon a prior appropriation.' And, further, in explanation of the reasons for the existence of the new doctrine, it was said: '*It is the natural outgrowth of the conditions existing in this region of the country.* The climate is dry, the soil is arid, and largely unproductive in the absence of irrigation; but when water is applied by that means it becomes capable of successful cultivation. The benefits accruing to land upon the banks of a stream without any physical application of the water are few;

[9] See for irrigation as a riparian right, early common law authorities, Secs. 499-506.

See, also, Coffin v. Left Hand Ditch Co., 6 Colo. 443; Irwin v. Phillips, 5 Cal. 140, 63 Am. Dec. 113, 15 Morr. Min. Rep. 178; Conger v. Weaver, 6 Cal. 548, 65 Am. Dec. 528, 1 Morr. Min. and while the land contiguous to water, and so favorably located as to naturally derive any sort of advantage therefrom, is comparatively small in area, the remainder, which comprises by far the greater proportion of our lands otherwise susceptible of cultivation, must forever remain in their wild and unproductive condition unless they are reclaimed by irrigation. Irrigation and such reclamation can not be accomplished with any degree of success or permanency without the right to divert and appropriate water of natural streams for that purpose, and a security accorded to that right. *Thus the imperative and growing necessities of our conditions in this respect alone,* to say nothing of the other beneficial uses, also important, have compelled the recognition, rather than the adoption, of the law of prior appropriation.' "[12] But the legislatures and courts, at an early day, grasped the situation, and the result was that the Arid Region Doctrine of prior appropriation of the waters of the natural streams for beneficial uses was adopted in all of the Western States and Territories included within both the arid and semi-arid regions, where water is needed for irrigation. It is true that the common law doctrine of riparian rights has been retained in ten of these States,[13] side by side with the doctrine of appropriation, but it is in such a modified and expanded form that even under it the waters of the streams may be diverted and used for irrigation by each riparian owner upon the stream.[14]

**§ 590. Common law not adopted where inapplicable—General rule.**—As has been stated before, all of the States of the Western portion of this country adopted the common law of England as their system of jurisprudence.[1] By unanimous authority this adoption has been construed to mean that the common law was adopted

12 See, also, Coffin v. Left Hand Ditch Co., 6 Colo. 443; Stowell v. Johnson, 7 Utah 215, 26 Pac. Rep. 290; Drake v. Earhart, 2 Idaho 750, 23 Pac. Rep. 541; Union Mill & Mining Co. v. Dangberg, 81 Fed. Rep. 73; Sternberger v. Seaton etc. Co., 45 Colo. 401, 102 Pac. Rep. 168; Hagerman etc. Co. v. McMurry, —— N. M. ——, 113 Pac. Rep. 823.

13 For the ten States retaining the common law, see Sec. 621.

14 See modification of the common law of riparian rights, Secs. 508-512. For history of change, see Secs. 595-626.

1 See Sec. 587.

only so far as it is applicable to our situation, the characteristics of our country and our system of Government.[2] There is no com-

[2] "The common law, so far as it is applicable to our situation and Government, has been recognized and adopted as one entire system. . . . It has been assumed by the Courts of justice, or declared by statute . . . as the law of the land in every State. It was imported by our colonial ancestors as far *as it was applicable.*" 1 Kent Com. 473. See, also, pp. 472, 536.

"The common law of England was adopted by the founders of the American Colonies *to a limited extent only.*" Curtis Com., Sec. 16.

"The common law of England is not to be taken in all respects to be that of America. Our ancestors brought with them its general principles, and claimed it as their birthright; *but they brought with them and adopted only that portion which was applicable to their position.*" Mr. Justice Story in Van Ness v. Pacard, 27 U. S. 2 Pet. 137, 7 L. Ed. 374.

"As a general proposition, so much of these (the common law principles) as were suited to the condition of a people like that of the early settlers of this country was adopted by common consent as the original common law of the Colonies." Professor Washburn in his Law of Real Property, p. 36.

"There is nothing in *Magna Charta,* rightly construed as a broad charter of public right and law, which ought to exclude the best ideas of all systems and of every age; and as it was the characteristic principle of the common law to draw its inspiration from every fountain of justice, we are not to assume that the forces of its supply have been exhausted. On the contrary, we should expect that the new and various experiences of our own situation and system will mold and shape it into new and not less useful forms." Mr. Justice Mathews in Hurtado v. California, 110 U. S. 516, 28 L. Ed. 232, 4 Sup. Ct. Rep. 111.

That certain common law rules upon the subject of waters have been repudiated in other than Western States, see Edwards v. Charlotte, C. & A. R. Co., 39 S. C. 472, 22 L. R. A. 246, 39 Am. St. Rep. 746; Martin v. Biglow,

mon law of the United States as distinguished from that of the individual States.[3]

From the authorities, we are of the opinion that no legal doctrine is better settled in the United States than that such portions of the common law of England, as are not adapted to the necessities, society of our people, or the physical condition of any State or Territory of the Union, form no part of the law of that State or Territory, even if in general terms at an early day the common law was adopted as the general law of jurisprudence by that jurisdiction, and since that time there has been no specific repeal of the portion which is inapplicable. Its applicability to the physical conditions and necessities of any State or Territory of this country must be taken into consideration, bearing in mind that the common law was framed with special reference to the physical condition of a country and the needs of a people in many respects widely differing from our own. Hence it follows that the common law theories of riparian rights, especially as to the "undiminished flow" of the natural streams by the lands of riparian owners, although applicable in the country where the common law was adopted on

The common law rule of decision in a Federal Court is that of the State in which the Court is sitting. Lorman v. Clarke, Fed. Cas. No. 8,516, 2 McLean 568; Pennsylvania v. Wheeling & B. Bridge Co., 54 U. S. 13 How. 518, 14 L. Ed. 249.

account of its damp, humid climate, is entirely inapplicable to the conditions and necessities of the arid region of the United States, of which the State of Arizona and the State of Nevada, with their scanty rainfall, hot, dry climate, and parched soil, are good examples.[4] Furthermore, it is the rule of law that each State may adopt either the common law rule of riparian rights, or the doctrine of appropriation, or a dual system consisting of both rules as its law governing the waters flowing within its boundaries, as it shall see fit. The United States can not force either law upon a State.[5]

In the following sections, we will discuss more in detail the physical causes which led to the adoption of the Arid Region Doctrine of appropriation in all of the Western States and Territories, as at least one of the rules of law governing waters, and the abrogation of the common law of riparian rights in some of the States.[6]

§ 591. **Common law deemed inapplicable—Cause of the change of rule in Nevada.**—There is no better illustration to be found of the change from the law of riparian rights, after the common law governing the same had been adopted, and the direct cause of the change, than can be found in Nevada. In 1861, while Nevada was still a Territory, the common law of England was adopted by the legislature, in the following language: "The common law of England, so far as it is not repugnant to or inconsistent with the Constitution or laws of the United States, or the laws of the Territory of Nevada, shall be the rule of decision in all courts of this Territory."[1] And when Nevada became a State the above enactment was adopted in the Constitution by the following clause: "All laws of the Territory of Nevada in force at the time of the admission of this State, not repugnant to this constitution, shall remain in force until they expire by their own limitations or be altered or repealed by the legislature."[2] It will be noticed that

2 Const. of Nevada, Art. 17, Sec. 2.

the section is entirely silent upon the subject as to the applicability or non-applicability of the common law, or any portion thereof, to the conditions or necessities of the State of Nevada. And, when the question was first considered by the Supreme Court of the State, in the case of Vansickle v. Haines,[3] the Court in upholding the common law rule of riparian rights according to the strict construction thereof, after quoting the section of the statute above, said: "Hence, although the common law might, in the opinion of the judges, be inapplicable, still, if not in conflict with the constitutional laws of the United States or the constitution or laws of Nevada, it must nevertheless be enforced." Later the same Court in the cases of Jones v. Adams,[4] and Reno etc. Co. v. Stevenson,[5] without any further enactment upon the part of the legislature of that State, overruled the case of Vansickle v. Haines upon the only ground that the common law of riparian rights was unsuited to the physical conditions of that State, and they were thereby entirely abrogated, and the Arid Region Doctrine of appropriation of waters for beneficial uses was adopted in lieu thereof. These decisions upon the part of the Court in the later cases have been called by an Eastern writer upon the subject, in a somewhat hysterical manner, "one of the most flagrant examples of judicial legislation that was ever perpetrated."[6] But in view of the authorities cited in the previous sections,[7] the Court had this power; and, owing to the fact that Nevada is one of our most arid States, the physical conditions of which are such that the common law of riparian rights is entirely inapplicable, as it was construed in the Vansickle case, it will have to be admitted, by all who are at all familiar with the subject, that it was better for the Court to reverse its holding, than to persist in adhering to a wrong rule.

The direct cause of the change of rule from the common law to the absolute abrogation of the law as far as the use of the waters of natural streams is concerned is stated in the following cases. In the case of Jones v. Adams[8] it is said: "In all the Pacific Coast

States and Territories, prior to the passage of the Act of Congress of July 26, 1866, the doctrines of the common law, declaratory of the rights of riparian proprietors respecting the use of running waters, was held to be inapplicable, or applicable only to a very limited extent, to the wants and necessities of the people, whether engaged in mining, agricultural, or other pursuits; and it was decided that prior appropriations gave the better right to the use of the running waters to the extent, in quantity and quality, necessary for the uses to which the waters were applied. This was the universal custom of the Coast, sanctioned by the laws and decisions of the courts in the respective States and Territories, and approved and followed by the decisions of the Supreme Court of the United States."[9]

Again, this doctrine was reaffirmed in the case of the Reno Smelting, Milling & Reduction Works v. Stevenson,[10] wherein it was said: "It is contrary to the spirit of the common law itself to apply a rule founded on a particular reason to a law, when that reason utterly fails—*Cessante ratione legis, cessat ipsa lex.* In States where the common law has not been adopted by legislative enactment, courts have proceeded upon the hypothesis of its adoption, *subject always to its applicability to the locality.*[11] From these authorities we assume that the applicability of the common law rule to the physical characteristics of the State should be considered. Its inapplicability to the Pacific States, as shown in Atchison v. Peterson,[12] applies forcibly to the State of Nevada. Here the soil is arid and unfit for cultivation, unless irrigated by the waters of running streams. The general surface of the State is table land, traversed by parallel mountain ranges. The great plains of the State afford natural advantages for conducting water, and lands otherwise waste and valueless become productive by artificial irrigation. The condition of the country and the necessities of the situation impelled settlers upon the public lands to resort

to the diversion and use of waters. This fact of itself is a striking illustration and conclusive evidence of the inapplicability of the common law rule."

Again, in the later case of Walsh v. Wallace,[13] upon the same proposition as to the cause of the abrogation of the doctrine of riparian rights as to the use of water and the overruling of the decision in the case of Vansickle v. Haines,[14] the Court said: "Under two rules of the law may rights to the use of water flowing in a natural stream be acquired—under the rule of riparian rights, and under the rule of appropriation. It is conceded by counsel in this action, and it has been held by this Court that the doctrine of riparian rights is so unsuited to the conditions existing in the State of Nevada, and is so repugnant in its operation to the doctrine of appropriation, that it is not a part of the law, and does not prevail here."

**§ 592. Common law deemed inapplicable—The present situation in California.**—The Supreme Court of California since the case of Lux v. Haggin,[1] has been one of the most strenuous of the courts of the Western States in its adherence to the common law doctrine of riparian rights, especially as to the undiminished flow of the water in the natural streams and the use of such waters.[2] During the last few years, however, the views of this Court have been considerably changed upon at least two phases of the subject. First, the Court has absolutely abrogated the common law as to rights in percolating waters, in holding that instead of each land owner being entitled to all the percolating waters found upon his lands, that he had but a correlative or relative right to the percolating waters of catchment basins, and as stated by Mr. Justice Shaw in the late case upon the subject of Katz v. Walkinshaw,[3] this was upon the ground of the inapplicability of the common law rule to the conditions in the State of California. He said: "Whenever it is found that, owing to the physical features and character of this State, and the peculiarities of its climate, soil, and productions, the application of a given common law rule

3 141 Cal. 116, 70 Pac. Rep. 663, 74 Pac. Rep. 766, 64 L. R. A. 236, 99 Am. St. Rep. 35.

by our courts tends constantly to cause injustice and wrong, rather than the administration of justice and right, then the fundamental principles of right and justice on which that law is founded, and which its administration is intended to promote, require that a different rule should be adopted—one which is calculated to secure persons in their property and possessions, and to preserve for them the fruits of their labors and expenditures. The question whether or not the rule contended for is a part of the common law applicable to this State depends on whether it is suitable to our conditions under the rule just stated."[4]

The second phase, upon which the Supreme Court of California has materially changed its views as to the applicability of the common law to the conditions of that State, is relative to the question of the undiminished flow of streams. And, instead of holding, as the Court did in the earlier cases, that a lower riparian owner was entitled to the undiminished flow of the stream, and that, too, without actual damage or use upon his part,[5] the Court has materially modified its views in this respect and now holds that damage must be shown. The Court by a very recent decision,[6] modified its views as to the flow of surface streams, and held that a riparian owner must show some damage in order to restrain an upper owner from the beneficial use of the water, and the Court also placed its decision upon the ground that the common law rule as to the undiminished flow of streams was inapplicable to the conditions of the streams, and said: "Even if at common law or under the civil law it was a part of the usufructuary right of the riparian owner to have the water flow by for no purpose other than to afford him pleasure in its prospect, such is not the rule of decision in this State. The lower claimant must show damage to justify a court of equity in restraining an upper claimant from his beneficial use of the water. The fair apportionment and economic use of the

4 See, also, Wiggins v. Muscupiabe Land & Water Co., 113 Cal. 182, 45 Pac. Rep. 160, 32 L. R. A. 667, 54 Am. St. Rep. 337; Harris v. Harrison, 93 Cal. 676, 29 Pac. Rep. 325.

5 Gould v. Eaton, 117 Cal. 539, 49 Pac. Rep. 577, 38 L. R. A. 181; Barneich v. Mercy, 136 Cal. 205, 68 Pac. Rep. 589; Ferrea v. Knipe, 28 Cal. 340, 87 Am. Dec. 128; Lux v. Haggin, 69 Cal. 255, 4 Pac. Rep. 919, 10 Pac. Rep. 674; Bliss v. Johnson, 76 Cal. 597, 16 Pac. Rep. 542, 18 Pac. Rep. 785.

6 San Joaquin etc. Co. v. Fresno etc. Co., 158 Cal. 626, 112 Pac. Rep. 182, 35 L. R. A., N. S., 832.

waters of this State are of the utmost importance to its development and well-being. The problems presented never came within the purview of the common law. They have been of necessity, therefore, and must continue to be solved by this Court as cases of first impression, and, as in the past, so in the future, if a rule of decision at common law shall be found unfitted to the radically changed conditions existing in this State, so that its application will work wrong and hardship rather than betterment and good, this Court will refuse to approve and follow the doctrine."[7]

It appears to the writer from the above rulings, taken in connection with the Act of the Legislature of 1911 in amending section 1410, Civil Code,[8] to the effect that, "all water or the use of water within the State of California is the property of the people of the State of California," that the State of California, although somewhat late, is about to adopt a new policy as to the government and control of the waters within its boundaries.[9]

§ 593. **The question as to what law governs waters within the respective States is left entirely to the States to decide.**—The control as sovereign,[1] of the waters within the boundaries of a State is left entirely to the State itself. Each State has the power either by legislative enactment, or by court decision, to adopt such a rule governing the waters flowing or standing therein, as it sees fit. A State may adopt the common law of riparian rights only,[2] as has been done in the Eastern States. And, in this connection it may limit and define the rights of riparian owners in and to the waters

7 See, also, Modoc v. Booth, 102 Cal. 151, 30 Pac. Rep. 431; Miller v. Bay Cities Water Co., 157 Cal. 256, 107 Pac. Rep. 115, 27 L. R. A., N. S., 772; Fifield v. 9 See, also, Sec. 1340; also see Part XIV, California.

1 See United States as a riparian proprietor, Sec. 480.

2 For riparian rights only, see Secs. 450-551.

of such streams and to the soil lying under the same.[3] A State may also adopt a modified form of riparian rights allowing a more extensive use of the waters of streams, especially for irrigation, than was allowed under the strict rule of the common law. This has been done in California, and some of the other Western common law States.[4]

Again, a State may entirely abrogate the common law of riparian rights, and adopt in lieu thereof the Arid Region Doctrine of Appropriation, as defined in this chapter,[5] and as enforced, as set forth in the following chapters of this part.[6]

And, still again, a State may retain the common law of riparian rights, and at the same time adopt the Arid Region Doctrine of Appropriation, and thus have the dual systems of laws governing waters, within its jurisdiction.[7]

As far as the United States Government is concerned by those various Acts of Congress, fully discussed in future portions of this work, it has waived its rights as sovereign in and to the government and control of the waters flowing or standing within the

[3] For the ownership of beds of fresh water, navigable rivers, see Secs. 328-331.

For the ownership of beds of fresh water, non-navigable rivers, see Secs. 535-542.

That the riparian rights of patentees from the United States are determined according to the law of the State in which the lands lie, see Shively v. Bowlby, 152 U. S. 1, 45, 38 L. Ed. 331, 14 Sup. Ct. Rep. 548; Lowndes v. Huntington, 153 U. S. 1, 38 L. Ed. 615, 14 Sup. Ct. Rep. 758; Grand Rapids & I. R. Co. v. Butler, 159 U. S. 87, 40 L. Ed. 85, 15 Sup. Ct. Ed. 736, 30 Sup. Ct. Rep. 452; Schodde v. Twin Falls etc. Co., decided by the Supreme Court of the United States, April 1, 1912, advance sheets L. Ed. May 15, 1912, p. 470; affirming 161 Fed. Rep. 43, 88 C. C. A. 207.

[4] See for an enlargement of the common law, Secs. 508-513.

[5] See Secs. 586-590.

[6] See Chaps. 32-40, Secs. 595-756.

[7] As for the effect of dual systems, see the next section, No. 594.

boundaries of any State, and has conferred the jurisdiction of such waters upon such State.

For example, by the Act of 1866,[8] the rights to the use of waters where "the same are recognized and acknowledged by the local customs, laws, and the decisions of the courts, the possessors and owners of such vested rights shall be maintained and protected in the same; and the right of way for the construction of ditches and canals for the purposes herein specified is acknowledged and confirmed."[9] Also by the Act of February 26, 1897,[10] the regulation of rates and charges for the use of waters was left entirely to the States and Territories, and that, too, where the waters were taken from reservoirs on rights of way granted by the Government under the provisions of March 3, 1891.[11] And, again, by the National Reclamation Act,[12] it was provided that "nothing in this Act shall be construed as affecting or intended to affect or to in any way interfere with the laws of any State or Territory relating to the control, appropriation, use, or distribution of water used in irrigation, or any vested right acquired thereunder, and the Secretary of the Interior, in carrying out the provisions of this Act, shall proceed in conformity with such laws."

It has also become the settled rule of law of the Federal courts that such courts will adhere to the rule that each State has the right to adopt such law or laws as it sees fit governing and controlling the waters and the use thereof within its boundaries, and that the Federal courts will follow in their decisions the rule or rules so adopted by such jurisdiction. This is true whether that rule of law is adopted by such State by statutory enactment or by decision of its highest court. In other words, such State may decide for itself, as to the applicability or inapplicability of the common law rule as applied to the physical conditions of such State; and, if such rule is determined to be inapplicable, the State, in lieu thereof, may adopt such other rule as it sees fit governing the entire subject of waters and their use within its boundaries. As was said

[8] 7 Fed. Stat. Ann. 1905, p. 1090; 2 U. S. Comp. Stats. 1901, p. 1437; 14 Stat. L. 253.

[12] See Chap. 65, Secs. 1235-1286; 7 Fed. Stat. Ann. 1905, p. 1098, Sec. 8; 32 Stat. L. 388.

by Judge Hawley, in the case of the Union Mill & Mining Company v. Dangberg:[13] "Riparian rights are founded upon the ancient doctrine of the common law. If the law is a progressive science, courts should keep pace with the progress and advancement of the age, and constantly bear in mind the wants and necessities of the people and the peculiar conditions and surroundings of the country in which they live."

The State may entirely abrogate the common law rule of riparian rights and adopt the Arid Region Doctrine of Appropriation, and in connection therewith also adopt a system of State control, providing for the appropriation, administration, distribution, and use of its waters under State regulations, and under the supervision of State officials.[14] In other words, this whole question is left entirely to the respective States to decide. As was said by Mr. Justice Brewer, in the opinion of the Supreme Court of the United States, in the case of Kansas v. Colorado:[15] "It is enough for the purposes of this case that each State has full jurisdiction over the lands within its borders, including the beds of streams and other waters." . . . "It may determine for itself whether the common law rule in respect to riparian rights or that doctrine which obtains in the arid regions of the West of the appropriation of waters for the purposes of irrigation shall control. Congress can not enforce either rule upon any State."[16] Also the Supreme Court of the United States in affirming the judgment of the Supreme Court of the Territory of Arizona, which held that owing to the peculiar

conditions of that Territory the common law of riparian rights has never there been in force. And, in the case of Boquillas Land & Cattle Co. v. Curtis,[17] in construing the Arizona code upon the subject, said: "But we agree with the Territorial Court that, construed with the rest of the Code, it is far from meaning that patentees of a ranch on the San Pedro are to have the same rights as owners of an estate on the Thames."

In fact, the Federal courts, including the Supreme Court of the United States, in many cases have approved and indicated their satisfaction with the laws of the State Legislatures and the decisions of the State courts, which hold that the common law doctrine has been abolished and has said that each State, without interference from the Federal courts, may for itself, as between rival individual claimants, determine which doctrine shall be therein enforced.

**§ 594. The doctrine of appropriation as against riparian rights —Practical workings of the two systems as to irrigation.**—A great deal has been said relative to the practical workings of the two systems of laws; namely, the Arid Region Doctrine of Appropriation and the common law of riparian rights, especially as far as their practical workings for the irrigation of lands are concerned. From our personal observations, we are very much in favor of the doctrine of appropriation and that, too, to the entire abrogation of the common law of riparian rights as to the use of the water, and especially as the doctrine of appropriation has been developed under the more modern codes of State control.[1] At the present time the principal industry in all of the Western States in the arid and semi-arid regions is that of agriculture, and in many sections of these States that of irrigated agriculture. The population of the Western States is rapidly increasing and in two of the States has more than doubled during the last decade. This rapidly increasing population, in turn, requires more of the agricultural products to sustain it. Therefore, the time is rapidly drawing near when the available water supply will have to be used to its utmost capacity to support the population of these States, much less to raise products for exportation.

[17] 213 U. S. 339, 53 L. Ed. 822, 29 Sup. Ct. Rep. 493; affirming *Id.*, 11 Ariz. 128, 89 Pac. Rep. 504.

[1] For the laws of State control, see Chap. 68, Secs. 1337-1367.

Now the question arises as to which of these two systems is the best adapted for the fullest development of irrigated agriculture in this Western country. There are arguments for and against each system. Under our chapter upon the subject of irrigation as a riparian right,[2] we have set forth all of the rights of the riparian owner to the use of the water for the irrigation of his lands. As we have there seen, these rights are confined to riparian owners and to riparian lands and that the right of any particular owner was only to the extent of a reasonable use of the water of the stream, after taking into consideration the rights of all the other riparian proprietors upon the same stream. We have also seen that the rights of the riparian proprietors were so limited and hemmed in by the rules and restrictions of the common law that they greatly interfered with the use of the water to its fullest capacity and therefore interfered with the development of the country. As was said by the Chief Justice of Montana in an early case:[3] "The water for irrigation in this country as naturally belongs to the lands through which the stream passes, in certain proportions, as in other countries it belongs to the land to supply the necessities of life." We contend that it is the main objection to the common law of riparian rights that under that law the water is limited to riparian lands only. What if there should be more water flowing in the streams than is actually needed by the small fringe of riparian lands along the same? It is certain that without the aid of the law of appropriation in such cases it would be impossible to develop a country along agricultural lines to its fullest capacity. The Montana opinion referred to above again states: "Is it not the true policy of this Territory to enact such a system of laws here as shall distribute our short supply of water to the best advantage to all our people? The common law applied to this country is ample and sufficient to secure this much desired end." And the Chief Justice, after setting forth the principles of the doctrine of appropriation, further says as against that doctrine: "And all the consequences so disastrous in any view are to be visited upon Montana that a few individuals may have what does not now, and never did, belong to them." Again, Professor Pomeroy in his work upon riparian rights, in which he argues only from the standpoint of the common

2 See Chap. 26, Secs. 498-525.

3 Thorp v. Freed, 1 Mont. 651.

law, said:[4] "After Colorado and these Territories become fully settled, especially by an agricultural population, this system of water regulation will inevitably give rise to an enormous amount of trouble, controversy, and litigation. It is impossible to conceive of legislation tending more than this to create strifes, conflicts, and breaches of the peace. The right of the prior appropriation on the public streams was a most fruitful cause of litigation in California, as shown by the great number of reported cases; but this is a feeble illustration of the litigation and controversy which must arise from the statutes of Colorado and of the various Territories when they come into full operation upon an increasing population." In another place Professor Pomeroy says:[5] "The doctrine of prior appropriation is completely at war with a system which recognizes, harmonizes, and protects the rights of all parties in the State."[6]

Upon the other hand, one of the best arguments against maintaining riparian rights in an arid country where irrigation is a necessity for the production of crops is the fact that in all of the British Colonies riparian rights have been either abrogated or restricted so that they are practically abrogated and that, too, although in the mother country of England the strict rule of common law of riparian rights prevails. This is true in Egypt,[7] in India,[8] in Australia,[9] in South Africa,[10] and in the British Colonies of Canada.[11] Upon the other hand, in certain Western States of this country, which originally adopted the common law as the system of jurisprudence of those particular States, by a servile adherence to precedent, the courts have held, by a long series of cases, that the common law principles as to riparian rights were adopted

in those jurisdictions regardless of the fact whether or not they were applicable to the physical conditions of those States. As was said by Mr. Justice Holmes, speaking for the Supreme Court of the United States, in a recent case relative to the general clause adopting the common law in the Territory of Arizona:[12] "In the first place, this is merely the adoption of a general system as against another general system (the Spanish-Mexican) that had been in force and that was repealed. . . . If there was nothing more in the code, it would be going a great way to say that such a broad phrase forbade the Courts to hold that the common law was adaptable and established the English rule of riparian rights only for the English conditions. . . . The right to use water is not confined to riparian proprietors.[13] Such a limitation would substitute accident for a rule based upon economic considerations, and an effort, adequate or not, to get the greatest use from all available land."[14] Without citing many cases we will say in all of the States where the common law of riparian rights has been abrogated, relative to the flow of the streams and the use of the water, there are positive assertions by the Supreme Courts as to the cause of this abrogation of the common law and as to why the Arid Region Doctrine of Appropriation was held to be the only doctrine which was applicable to the physical conditions of such particular States and Territories. In the Nevada case of Twaddle v. Winters,[15] it is said: "As time passes it becomes more and more apparent that the law of ownership of water by prior appropriation for a beneficial purpose is essential under our climatic conditions to the general welfare, and that the common law regarding the flow of streams, which may be unobjectionable to such localities as the British Isles and the coast of Oregon, Washington, and Northern California, where rains are frequent and fogs and winds laden with mist from the ocean prevail and moisten the soil, is unsuitable under our sunny skies, where the lands are so arid that irrigation is required

for the support and prosperity of the people. Irrigation is the life of our important and increasing agricultural interests, which would be strangled by the enforcement of the riparian principle." And, it is further stated by the Court that the California decisions cited by the appellants upon the question of riparian rights "may no longer be considered good law even in the State in which they were rendered." [16]

In all the Western States, which still adhere to the common law of riparian rights, it may be said that they do not adhere to these rights only. In every one of these States, as an adjunct, it may be said, to the common law, is also found the doctrine of appropriation of waters for beneficial uses. And in every one of these States which has these dual systems of laws governing and controlling the waters within its boundaries, it may be said that its Supreme Court has also upheld the doctrine of appropriation. It has, therefore, been held, in effect at least, that in all of these States which have these two systems of laws, they may exist together in the same jurisdiction; and in some of the States it has been positively held that the doctrine of prior appropriation may exist and be enforced in the same State with the common law doctrine of riparian rights, and that, too, in spite of their contrary fundamental principles.[17]

Again, it may be said that in certain of the Western States the common law as to the use of waters of natural streams has been entirely abrogated and the Arid Region Doctrine of appropriation stands alone in these States. It will be noticed that the States wherein this condition is found are those which are more arid, and water is more scarce, while those States which adhere to the dual systems of laws governing water are those that are less arid, have

St. Rep. 647; Benton v. Johncox, 17 Wash. 277, 49 Pac. Rep. 495, 39 L. R. A. 107, 61 Am. St. Rep. 912; Hough v. Porter, 51 Ore. 318, 95 Pac. Rep. 332, 98 Pac. Rep. 1083, 102 Pac. Rep. 728.

larger streams, and, as a general thing, water is much more plentiful. As was said by the Nebraska Court:[18] "In all States which, like our own, are but partially arid the common law is in force. The States holding to the contrary rule are wholly within the arid regions."

The State of California has been heretofore the most strenuous in adhering to the common law doctrine of riparian rights as is indicated by a long line of decisions of its Supreme Court, especially those after the case of Lux v. Haggin,[19] but that State has also adopted the doctrine of appropriation and has, therefore, the dual systems of laws governing the waters within its boundaries. In California, under the system of riparian rights, it seems that certain riparian owners by virtue of the situation of their lands upon the streams have prevented the fullest development and use of those waters. It is said by Mr. Wiel:[20] "A few big riparian proprietors holding extensive ranches under Mexican grants have barred extension in some places." But, it is said that the doctrine of appropriation leads to litigation, "antagonism, strife, and dissension."[21] It may also be said, with truth, if we are to judge from the reported cases of the California Courts, that the dual systems of laws, continually clashing with each other and themselves, lead to a far greater amount of litigation than does the doctrine of appropriation, where it stands alone. As a comparison we may cite the State of Wyoming where the doctrine of appropriation has been adopted alone, and, under its system of State control and administrative laws, is enforced. In that State there have been very few cases decided by the Supreme Court as compared to those which have been decided by the California Court. It, therefore, may be said, in contradistinction to what was said by Professor Pomeroy, that the system of riparian rights adopted in a country which is totally inapplicable to its existence does not harmonize or protect the rights of all the parties of the State.

In the third edition of Mr. Wiel will be found a note,[22] which

was condensed from Section 339 of the first edition of this work, and is as follows: "The State of California, constituting a large and important part of the field where the art of irrigation is practiced, is also the great model for the rest of the region regarding the practical development of its water supply, and in the use of water as applied to the purpose of irrigation. California is not only ahead in the development of her water supply and the number, size, and boldness of design of her irrigation works, but that State is also superior to all other States and Territories of the arid West in her method of applying and utilizing the water. It is safe to say that California owes the larger portion of the prominence which it occupies today to the results of irrigation."

To the above we can only add that the State of California, owing to its rich soil, salubrious climate, energetic citizens, and comparatively ample supply of water, has continued to prosper from the time that that section was written by us to the present time. But it may be said that this is so *in spite of* its systems of laws which attempt to govern and regulate the use of the water, but which have bred more litigation upon this important subject than have nearly all of the other Western States combined. For which statement we refer simply to the number of reported cases of its Supreme Court.

The Supreme Court of the United States, in one of its latest decisions,[23] recognized the inconsistency of attempting to adhere to both the common law of riparian rights and to the Arid Region Doctrine of appropriation. Mr. Chief Justice White, in rendering the opinion of the Court, said: "The misapprehension upon which the contention rests is the assumption that because a certain character of riparian rights may exist in Idaho, therefore such rights as are absolutely incompatible with the rule of prior appropriation for beneficial use may coexist with that system."

In closing this section, we will reiterate that, in our opinion, the Arid Region Doctrine of appropriation alone, as the same is in force in those States which have also adopted the law of state control,[24] regulating and controlling the appropriation and use of waters

[23] Schodde v. Twin Falls etc. Co., decided April 1, 1912, 124 U. S. 107, 56 L. Ed. —, 32 Sup. Ct. Rep. 470, affirming *Id.*, 161 Fed. Rep. 43, 88 C. C. A. 207.

within their boundaries for beneficial purposes, and also administering to the division of those waters as between the respective claimants, and where the common law of riparian rights is either entirely abrogated or is limited and restricted in certain ways to certain specific uses, is the doctrine best applicable not only to the States that are entirely arid, but also to the semi-arid States as well.

## CHAPTER 32.

### HISTORY OF DOCTRINE OF APPROPRIATION.

§ 595. Scope of chapter.
§ 596. The discovery of gold in California.
§ 597. The character of the immigrants to California.
§ 598. Mining rules and regulations.
§ 599. Introduction of element of priority.
§ 600. California Act of 1851—Proof of custom.
§ 601. Early Court decisions against doctrine.
§ 602. Early Court decisions in favor of doctrine—In general.
§ 603. Early Court decisions in favor of doctrine—Irwin v. Phillips.
§ 604. Possessors both of lands and waters at this time mere trespassers.
§ 605. The settled rule before any Act of Congress—Spread of California doctrine.
§ 606. Attempted preference first given to mining.
§ 607. All beneficial uses finally given equal footing.
§ 608. Decisions of Court judicial legislation.
§ 609. Character of title of claimants.
§ 610. California decisions based upon presumption of grant.
§ 611. Act of Congress of July 26, 1866.
§ 612. How the Act of July 26, 1866, was passed.
§ 613. Decision of the Supreme Court of the United States as to the cause of the passage of the Act of 1866—Jennison v. Kirk.
§ 614. Other decisions as to the cause of the passage of the Act of 1866.
§ 615. Act of July 9, 1870, making all patents subject to vested rights.
§ 616. Construction of Acts of 1866 and 1870—Effect of Acts on appropriations against patentees of the Government prior to 1866.
§ 617. Construction of Acts of 1866 and 1870—No new system adopted by Acts.
§ 618. Construction of Acts of 1866 and 1870—Effect of Acts as to the time the rights to water vested.
§ 619. Effect of Acts upon title of appropriators—Equivalent to a grant.
§ 620. State regulation as the result of the Acts of 1866 and 1870.
§ 621. States adopting Arid Region Doctrine of appropriation.
§ 622. Desert Land Acts of March 3, 1877, and March 3, 1891, also strengthened and confirmed doctrine of appropriation.
§ 623. Desert Land Acts—Construction of Acts confirms the right of appropriation.
§ 624. Later Acts of Congress confirming doctrine of appropriation.
§ 625. The Acts of Congress must not be construed as an absolute dedication of all the waters for appropriation.
§ 626. The result of the doctrine of appropriation.

§ 595. **Scope of chapter.**—In this chapter we will describe how the doctrine of appropriation came to be adopted in the States and then Territories of the arid and semi-arid portions of this country. We will also note the particular features of the doctrine, especially as to that subject relative to rights based upon priority, a feature that prior to that time was new in the history of water laws.

§ 596. **The discovery of gold in California.**—In 1848 gold was discovered in California, and since the voyage of the Argonauts there has been no such search for a golden fleece as this which now commanded the attention of the world. By sailing vessels and steamships over the ocean, by prairie schooners and all sorts of vehicles drawn by horses, oxen, and other draft animals, by riding and on foot, the motley throng from all parts of the earth rushed to the "diggins." Of nationalities the flow from Europe alone equaled in variety that of the medieval crusades, with notable prominence to the leading types, among which could be seen the self-complacent Briton, the methodic and reflective German, and the versatile Gaul. But all parts of the world contributed to swell the list. Africa was represented by the orthodox negro, by the swarthy Moors, and the straight featured Abyssinians. Asia and Australasia provided their share in Mongolians, lithe and diminutive Malays, the dark-skinned Hindoos, and the well formed Maoris, the Kanakas and the stately turbaned Ottoman. The ubiquitous Hebrews, ever to be found in the wake of movements offering trade profits, the Hispano-Americans, and the half naked aborigines, all were there, laboring side by side with their American brothers, the sturdy Yankees, who thronged in vast numbers from the Eastern States. The population of California, which in 1848 numbered only from five to six thousand, in 1849 numbered nearly one hundred and ten thousand souls. Scattered over a territory that belonged almost entirely to the public domain of the United States, that motley throng of people started in the West the mining industry of this country, which became and still is, in many of the Pacific States, of paramount importance, and destined, from the physical features of the country, always to remain so.

§ 597. **The character of the immigrants to California.**—Coming as these immigrants did from all countries of the world, differing

in their habits, customs, and religious ideas, restrained by no law save that of superior physical force, and not even agreeing whence the laws by which they would consent to be governed should emanate, these multitudes of men settled in every direction throughout the mining districts of the Sierra Nevada and Coast Range Mountains. The immigrants who came by sea, speaking broadly and with all due regard to exceptions, were pioneers not particularly beneficial to the settlement of an entirely new country. Belonging, as a great many did, to the criminal classes of Europe and the Eastern States, they embraced much of the abnormal and a great deal of the criminal and vicious in early California life. The better classes might build cities and organize society, but there were those among them who for a time made the cities hotbeds of vice and corruption, and converted the social fabric into a body nondescript, at the sight of which the rest of the world stood wrapped in apprehension.[1] But, fortunately for the future of California and the country at large, there was a class of people in this mad rush to the Pacific Coast to whom, even when their visions of suddenly acquired wealth had been dispelled, sober second thought and strength came; and who readily adapted themselves to the several other fields of labor from which they might wrest more surely though slowly the fortune withheld by fickle chance in the gold fields. And here the overland immigrants as a mass had the advantage in numbers and in many other respects. Coming, as the most of them did, from the small towns and villages and the farms of the interior, or from the young settlements on the Western frontier, and accustomed to a rugged and simple life, they craved less excitement. And being honest, industrious, thrifty, and self-reliant, they could readily fall back upon familiar toil and find a potent ally in the cultivation of the soil and in mechanical industries. A large proportion of this class of settlers indeed had come to California to cast their lot for all time in a Western home. And, fortunately for California and also for the great West, this latter class, living nearer to the gold fields, not only arrived upon the scene among the first but also in greater numbers than all other

1 "Swarms of foreigners were pouring in from Mexico, South America, the Islands of the Pacific, the penal colonies of Great Britain, from Europe, and working in the mining districts." Yale, Mining Claims and Water Rights, 1867, p. 31.

classes put together, and at the close of the year 1849 nearly sixty thousand American citizens were upon the ground and actively engaged in building up the future State of California.

§ 598. **Mining rules and regulations.**—The American element preponderated, and the Yankee fancied himself over all with his political and commercial supremacy, the more so because he was within the confines of territory owned by his own country, which at all hazards had to be maintained and protected, to the exclusion of the laws and customs of all other nationalities. This element being full of great projects and happy devices for surmounting obstacles, even to the achieving of the seemingly impossible, and fitted no less by indomitable energy, shrewdness, and adaptability than by political and numerical rights, assumed the mastery wherever it went, and carried with it that love of order and system and of fair dealing, which is the prominent characteristic of the American people.[1] In every locality where the mines were being worked, or there was prospecting for mineral, the miners held improvised meetings and framed certain rules and regulations, based upon general custom, for their own government, for the government of all those who came into that locality, for the government of their mining claims, and also for the appropriation and use of the waters of the natural streams to work the claims. These organizations, covering as they did specific tracts of territory, are known as "mining districts," and the rules and regulations adopted are known as the "mining rules" or "mining regulations" of the respective districts.[2] These miners' rules and regulations in the different districts have a marked similarity to each other, only varying in the several districts according to the extent and character of the mines, and the amount of water flowing in the streams and its accessibility. They were very simple; and, as far as property rights were concerned, related to the acquisition, working, and retention of their mining claims, and to the appropriation and diversion of

1 Jennison v. Kirk, 98 U. S. 455, 25 L. Ed. 240; Snyder on Mines, Sec. 77.

2 "And it matters not what name is applied to them, whether it be customs, miners' rules and regulations, or the by-laws of the district, they come to us not only in the humble garb of custom, but as an authoritative enunciation of the mining common law of the vicinage." King v. Edwards, 1 Mont. 235; Gleeson v. Martin White M. Co., 13 Nev. 442; Snyder on Mines, Sec. 118.

the water to be used in working them. They prescribed in brief detail the acts necessary to constitute such an appropriation of mineral land or water of a stream as would give a claimant a right as against all others, the amount of work which would entitle him to the continued possession and enjoyment of the claim, and what would constitute an abandonment of these rights and others of like character. There was one principle embodied in them all, and on which rests the "Arid Region Doctrine" of the ownership and use of waters, and that was the recognition of discovery, followed by prior appropriation, as the inception of the possessor's title, and development by working the claim as the condition of its retention.

The lands all being upon the public domain of the United States the first appropriator was held to have, within certain well-defined limits, a better right than others to the claim he had taken up; and in all controversies and disputes, except as against the Government, he was regarded as the original and (unless he had abandoned his claim) absolute owner from whom title was to be traced. But the mines could not be worked without water. Without water the gold would forever remain buried in the earth or rock. Therefore it became oftentimes, when the mining claims were not on the banks of a stream or lake, an important and necessary business to carry the water to the mines in order that they might be worked. The waters of rivers and lakes were carried great distances by means of ditches and flumes, constructed with great labor and enormous expenditure of money, along the sides of mountains and through canyons and ravines, to supply communities engaged in mining as well as for agricultural and ordinary domestic consumption. But here also the first appropriator of water to be conveyed to such localities, for mining or other beneficial purposes, was recognized as having to the extent of actual use the better right. The doctrine of the common law respecting the rights of riparian owners was not considered applicable, or only in a very limited degree, to the condition of the miners in the mountains. Numerous regulations were adopted, or from their obvious justness assumed to exist, by the mining communities for the protection of these water rights and for the security of the ditches and flumes conducting the water, not only between the different appropriators, but also between them

and the holders of mining claims and the owners of lands adjoining the rivers and streams.[3]

It was not until 1851 that there was any legislation upon the subject of acquiring title to either mining claims or water rights, at which time, although both the mining claims and the waters were upon the public domain of the United States, the State legislature of California passed an Act relating thereto.[4] In 1866, Congress passed the first Act relating to the sale of mineral lands on the public domain, the ninth section of which had reference to the waters appropriated, as related in this and the previous sections.[5] So it happened, that for a period of eighteen years, from 1848 to 1866, proprietors in the mining claims and water rights to the value of many millions rested their title to the same upon only the regulations and customs of miners, which, sanctioned by the legislature and State courts of California, constituted all the law governing the property in mines and in the waters, both located upon the public domain of the United States.[6]

The Nebraska case of Meng v. Coffey,[7] commenting upon the origin of the doctrine, said: "It arose in California at a time when government and law were not yet established, when there was no agricultural population and no riparian owners, and when streams could be put to no use except mining. From the necessities of the case, there being no law applicable, the miners held meetings in each district or locality, and adopted regulations by which they

agreed to be governed. As at that time streams could be put to no use except for mining, and as the use of large quantities of water was essential to mining operations, it became settled as one of the mining customs or regulations that the right to a definite quantity of water, and to divert it from streams or lakes, could be acquired by prior appropriation. . . . It was a crude attempt to preserve order and the general peace, and to settle customary rights among a body of men subject to no law, under which so many and so valuable rights arose that when the law stepped in it was obliged to recognize them. In this way the rule of appropriation became established in the Pacific States, in opposition to the common law, with reference to streams or bodies of water which wholly ran through or were situated upon the public lands of the United States."

§ 599. **Introduction of element of priority.**—It was at this period of the early history of California, and in the manner described in the preceding sections, that an entirely new element was introduced as an essential requisite in the acquisition of title to water rights—the element of priority. It was based upon the maxim of equity, *Qui prior est in tempore, potior est in jure.*[1]

[1] In a historical statement of the case of Titcomb v. Kirk, 51 Cal. 289, 5 Morr. Min. Rep. 10, is to be found the following: "The gold fields on the Pacific Coast, and on the Eastern slopes of the Rocky Mountains, were situated on the public lands of the United States. These fields were also in mountainous districts through which flowed numerous rivers and small streams of water. This water was necessary to separate the gold from the earth. It had to be turned, by means of ditches, from the beds of the rivers, canyons, and ravines, where it flowed, upon the sides and summits of the hills and mountains, where the deposits of gold-bearing earth were found. These ditches or canals, many of them, extended for twenty, thirty, and forty miles, and cost hundreds of thousands of dollars each, and were built by capitalists for the purpose of conveying and selling water to the owners of mining claims. Others were shorter, and were dug by claim owners for the purpose of conveying smaller quantities of water to particular claims. The water was at first used by conducting a few inches from the ditches into sluice boxes with riffles on the bottom, and then shoveling the earth into the boxes, where it was dissolved by the water, and, being carried down by the current, left the gold on the bottom. This method of work could only be used where the earth above the bedrock was shallow—say, from six inches to six feet in depth. Claims of this character were soon exhausted. To work the more extensive and deep de-

This was something entirely new as far as all systems of laws of the world governing waters were concerned, as far as I have been able to ascertain. It was not included in the civil law as handed down to us from the Roman Emperors, by means of the Spaniards and Mexicans. Under that law, as we have seen, the waters of the natural streams were considered the property of the public; and, in order to secure an exclusive private right it had to be acquired by means of a concession of the Government, or through the ownership of land.[2] Again, it was not recognized under the common law of England, either as strictly construed under the laws of that country or those of the Eastern States of this country, or even under the Western American doctrine of riparian rights as the same is adjudicated at the present time.[3] And so the element of priority, an element so essential in the acquisition of a title to water rights, under the Arid Region doctrine of appropriation, had its very inception in the rules, regulations, and customs of the

posits, where the earth and gravel are from ten to three hundred feet in depth, the 'hydraulic process,' as it is called, was adopted. To work by this process, the ditch must have considerable altitude above the mining claim. The water is turned into an iron pipe, and is ejected from a nozzle at the lower end of the pipe under a pressure of from one to three or four hundred feet against the bank of gold-bearing earth.

"Conflicts soon began to take place between the owners of mining claims, the owners of ditches, and the owners of mining claims and ditches. These were settled (before the organization of Courts) by miners' meetings, and in a short time customs were in force regulating, not only the size of mining claims, but the conflicting rights of miners and ditch owners. *The rule established was that of priority—first in time, first in right.* The legislature then provided that, in actions concerning mining claims, proof should be admitted of the customs in force at the diggings, and that such customs should be the law when not in conflict with the laws and constitution of the State. The Courts also adopted the same rule of decision. By this rule, the constructor of a ditch could not excavate it across a mining claim which had been located before the location of the ditch, without the consent of the miner. The location of a ditch consisted in placing written notices at or near its head, and marking out its general route. When this was done, the ditch acquired a right of way, provided its projectors immediately proceeded in good faith to excavate the same and appropriate the water. By the United States statutes in force, both miners and ditch owners were trespassers on the public lands, and could have been removed by the military."

3 For Western American doctrine of riparian rights, see Secs. 507-512.

miners at the time of the great rush for gold to what is now the State of California. It was based upon the prevailing spirit for fair play, which is always the rule wherever Americans assemble. Originally starting by the rule adopted for the inception of title to a mining claim, that the man who first made a discovery and set his stakes had a better right to the claim than those who came later, the rule was extended so as to include the water of any natural stream which had been appropriated for the purpose of working the claim, and that, too, whether the claim bordered on the stream or not. Again, the rule was extended so that the prior appropriation of the waters of the natural streams could be made for the purpose of any beneficial use; mining, irrigation, power purposes, and uses by municipalities were all included among the uses for which water could be appropriated by one having the prior right thereto. And as between all claims to the water which would otherwise be equal, these miners in their rough and ready methods enforced the right which was first in time to the extent of the appropriation, even if it took all of the water of the stream. However, if there was an amount in the stream exceeding the valid claim of the first appropriation, then the other claimants came in for their share in the exact order of their priorities to the extent of each appropriation. It must also be remembered that at this period there was no law upon the subject, which was being enforced in this section of the country, and that technically this new rule was a violation of the common law of riparian rights, which was the law of the land after the Treaty of Guadalupe Hidalgo in 1848. But the law of necessity was the only law recognized by the miners. As was said by the Supreme Court of Nebraska:[4] "The doctrine of prior appropriation arose in California at a time when government and law were not yet established, when there were no agricultural population and no riparian owners, and when the streams could be put to no use except for mining. From the necessities of the case, there being no law applicable, the miners held meetings in each district or locality, and adopted regulations by which they agreed to be governed."[5]

[5] See, also, cases cited in last preceding sections, also in those following.

See, also, Titcomb v. Kirk, 51 Cal. 289: "By the United States stat-

Having sufficiently discussed how the doctrine of prior appropriation originated, we will now follow its history and see how the rules, regulations, and customs of the miners were crystallized into law.[6]

§ 600. **California Act of 1851—Proof of custom.**—California was admitted to the Union in 1850, and the State government organized and Courts formed. In 1851 a general statute was adopted, providing that the common law was the rule of decision in the State. In the same year there was also enacted by the legislature an Act which sanctioned the mining rules, regulations, and customs, discussed in the previous sections,[1] which rules also provided for the acquisition of the title to water rights.[2] The California Act of 1851 was as follows: "In actions respecting mining claims proof shall be admitted of the customs, usages, or regulations established, or in force, at the bar or diggings embracing such claims, and such customs, usages, or regulations, when not in conflict with the constitution and laws of this State, shall govern the decision of the action." This Act, slightly amended in phraseology, is still in full force.[3] The substance of this statute

utes in force, both miners and ditch owners were trespassers on the public lands, and could have been removed by the military. The Government, however, did not interfere, nor did Congress pass any Act upon the subject until 1866." Phillips, 5 Cal. 140, 63 Am. Dec. 113, 15 Morr. Min. Rep. 178; Eddy v. Simpson, 3 Cal. 249, 58 Am. Dec. 408; Hicks v. Bell, 3 Cal. 219; Ortman v. Dixon, 13 Cal. 33.

6 See Secs. 600-625.

1 See Secs. 598, 599.

2 See Sec. 599.

3 See Sec. 748 California Code of Civil Procedure; 3 Kerr's Cyc. Codes 1273, which reads as follows: "In actions respecting mining claims, proof must be admitted of the customs, usages, or regulations established and in force at the bar or diggings, embracing such claim, and such customs, usages, or regulations, when not in conflict with the laws of this State, must govern the decision of the action."

For construction of the above, see Lux v. Haggin, 69 Cal. 255, 4 Pac. Rep. 919, 10 Pac. Rep. 674; McClintock v. Bryden, 5 Cal. 97, 63 Am. Dec. 87; St. John v. Kidd, 26 Cal. 264, 4 Morr. Min. Rep. 454; Morton v. Solambo etc. Co., 26 Cal. 533, 4 Morr. Min. Rep. 463; Table Mountain etc. Co. v. Stranahan, 31 Cal. 387.

was afterward adopted by the statutes of nearly every Western State.[4]

Thus it devolved upon the legislature of the new State of California to pass the first Act declaring these "mining customs" to be the law which should control and govern not only the acquisition and retention of mining claims, but also the acquisition and retention of water rights necessary for working the same. This enactment was based upon an entirely new principle governing the rights of water in the United States, the law of priority of appropriation, or the first in time being the first in right. But it will be noticed that the rights acquired in and to the waters of the natural streams under the rules of the miners, and sanctioned by the Act above quoted, were in direct conflict with the principles of the common law upon the subject of riparian rights, adopted by the same legislature. Hence, as there were many active lawyers upon the ground, as there always are when some great attraction draws the people to any particular locality of our country, the trouble began at once; and the "irrepressible conflict" between the common law of riparian rights and the Arid Region Doctrine of appropriation was on. That conflict has now been fought for about sixty years, and is not yet finished. However, it is undoubtedly decided that the Arid Region Doctrine of appropriation, which had its foundation in the customs of the miners, has come to stay, and in seven of the States of the West it has superseded the common law upon the subject of waters, and in all of the other Western States it is recognized as one of the systems under which rights to waters may be acquired.[5]

§ 601. **Early court decisions against doctrine.**—The rules and regulations of the miners, having been strengthened by the Act of the California legislature, discussed in the previous section, were in a few years approved to the fullest extent by the Courts of that State, although in some of its first decisions the Supreme

4 Mallett v. Uncle Sam Mining Co., 1 Nev. 188, 90 Am. Dec. 484, 1 Morr. Min. Rep. 17; Riborado v. Quang Pang etc. Co., 2 Idaho 136, 6 Pac. Rep. 125.

5 For the seven States which have the Arid Region Doctrine of appropriation only, see Sec. 621.

For the seventeen States which permit appropriation under the doctrine, see Sec. 621.

For the ten States which have both systems, see Sec. 621.

Court was loth to adopt the new doctrine, relative to the acquisition of water rights, and in others it refused to do so. In the case of Eddy v. Simpson, decided in 1853, the District Court charged the jury on the trial below, as follows:[1] "As a general principle, the party who first uses the water of the stream is by virtue of priority of occupation entitled to hold the same. If a company or association of miners construct a ditch to convey water from a running stream for mining or other purposes, and they are the first to use the water, locate, and construct the ditch, they are legally entitled to the same as their property, to the extent of the capacity of the ditch to hold and convey the water. For, if it appears that there is more water running in the stream than the ditch of the first party can hold and convey, then any other party may rightfully take and use the surplus, and it does not matter whether the excess of water be taken from a point above or below the dam of the first party." Justice Wells, in delivering the opinion of the Supreme Court reversing the judgment below, said: "The rule laid down by the Court below, while it is a departure from all rules governing this description of property, would be impracticable in its application, and we think that it is much safer to adhere to known principles and well settled law, so far as they can be made applicable to the novel questions growing out of the peculiar enterprises in which many of the people of this State are embarked."

There are also other early cases where there was the same ruling as in the case of Eddy v. Simpson.[2]

In the case of Hill v. Newman[3] Mr. Justice Bryan, in delivering the opinion of the Court, said: "The right to running water is defined to be a corporeal right, or hereditament, which follows or is embraced by the ownership of the soil over which it naturally passes."[4]

1 Eddy v. Simpson, 3 Cal. 249, 58 Am. Dec. 408.

2 *Supra.*

3 5 Cal. 445, 63 Am. Dec. 140, 4 Morr. Min. Rep. 513.

4 Citing Sackett v. Wheaton, 17 Pick. 103; 1 Cruise Digest 39; Angell & Ames on Water Courses, p. 3.

It must be noted that the Justice was in error in his statement of the common law, that the right is embraced by the ownership of the soil *over* which the water passes, and also in the statement that it is a corporeal hereditament. The correct rule is that the right follows the ownership of the land touching upon the water laterally. For which, see Secs. 451, 458.

**§ 602. Early court decisions in favor of doctrine—In general.**—But in other cases the Supreme Court of California adopted the new doctrine, in some cases almost without discussion, as though the rule had been the settled law for ages; however, in other cases all phases of the question were most carefully considered and elaborate opinions given.[1]

The grounds upon which these decisions were based are stated by Mr. Justice Heydenfeldt, speaking for the Supreme Court of

California in the case of Irwin v. Phillips,[2] and quoted in the following section,[3] and also in the opinion rendered by Mr. Justice Field, then of the Supreme Court of the United States, in the case of Jennison v. Kirk,[4] and discussed in a following section.[5]

§ 603. **Early court decisions in favor of doctrine—Irwin v. Phillips.**—One of the first decisions of the Supreme Court of California, wherein the subject was thoroughly discussed, and in fact, the leading case of this period, was that of Irwin v. Phillips,[1] in which Mr. Justice Heydenfeldt, in speaking for the Court, said:

"It is insisted by the appellants that in this case the common law doctrine must be invoked, which prescribes that a water course must be allowed to flow in its natural channel. But upon an examination of the authorities which support that doctrine, it will be found to rest upon the fact of the individual rights of landed proprietors upon the stream, the principle being both at the civil and common law that the owner of lands on the banks of a water course owns to the middle of the stream, and has the right in virtue of his proprietorship to the use of the water in its pure and natural condition. In this case the lands are the property either of the State or of the United States, and it is not necessary to decide to which they belong for the purposes of this case. It is certain that at the common law the diversion of water courses could only be complained of by riparian owners who were deprived of the use, or those claiming directly under them. Can the appellants assert their present claim as tenants at will? To solve this question it must be kept in mind that their tenancy is of their own creation, their tenements of their own selection, and subsequent, in point of time, to the diversion of the stream. They had the right to mine where they pleased throughout an extensive region, and they selected the bank of a stream from which the water had been already turned for the purpose of supplying the mines at another point.

See, also, Meng v. Coffey, discussing the history of the doctrine, 67 Neb. 500, 93 N. W. Rep. 713, 60 L. R. A. 910, 108 Am. St. Rep. 697.

"Courts are bound to take notice of the political and social condition of the country which they judicially rule. In this State the larger part of the territory consists of mineral lands, nearly the whole of which are the property of the public. No right or intent of disposition of these lands has been shown either by the United States or the State governments, and, with the exception of certain State regulations, very limited in their character, a system has been permitted to grow up by the voluntary action and assent of the population, whose free and unrestrained occupation of the mineral region has been tacitly assented to by the one Government, and heartily encouraged by the expressed legislative policy of the other. If there are, as must be admitted, many things connected with this system which are crude and undigested and subject to fluctuation and dispute, there are still some which a universal sense of necessity and propriety have so firmly fixed that they have come to be looked upon as having the force and effect *res judicata*. Among these the most important are the rights of miners to be protected in the possession of their selected localities, and the rights of those who, by prior appropriation, have taken the waters from their natural bed and by costly artificial works have conducted them for miles over mountains and ravines, to supply the necessities of gold diggers, and without which the most important interests of the mineral region would remain without development. So fully recognized have become these rights that, without any specific legislation conferring or confirming them, they are alluded to and spoken of in the various Acts of the legislature in the same manner as if they were rights which had been vested by the most distinct expression of the will of the lawmakers; as, for instance, in the Revenue Act, 'canals and water races' are declared to be property subject to taxation, and this when there was none other in the State than such as were devoted to the use of mining. Section 2 of Article 9 of the same Act, providing for the assessment of companies and associations, among others mentions 'dam or dams, canal or canals, or other works for mining purposes.' This simply goes to prove what is the purpose of the argument, that however much the policy of the State, as indicated by her legislation, has conferred the privilege to work mines, it has equally conferred the right to divert streams from their natural channel; and as these two rights stand upon an equal

footing, when they conflict they must be decided by the fact of priority, upon the maxim of equity, *qui prior est in tempore, potior est in jure.* The miner who selects a piece of ground to work must take it as he finds it, subject to prior rights, which have an equal equity on account of an equal recognition from the sovereign power. If it is upon a stream, the waters of which have not been taken from their bed, they can not be taken to his prejudice; but if they have been already diverted, and for as high and as legitimate purpose as the one he seeks to accomplish, he has no right to complain, no right to interfere with the prior occupation of his neighbor, and must abide the disadvantages of his own selection."

§ 604. **Possessors both of lands and waters at this time mere trespassers.**—It must be remembered that at this period of the history of the doctrine, appropriations, both of the mining claims and of the waters for use thereon, were made upon the lands belonging to the United States, and Congress had not at this time made any provisions whereby the title to either the land or the water could be acquired. It must also be remembered that, at this period, those who were occupying the mineral lands of the United States and appropriated the waters upon the public domain were in fact trespassers upon such land and without any title thereto; and, at that time, they had no means of ascertaining that they ever would acquire title either to the lands or to the waters. Yet the Courts of the State of California, without any law or authority upon which to base their action, except upon "the manifest equities of the case," went ahead and rendered their decisions upholding and sustaining, *at least,* the possessory title to both the lands and the waters. These decisions were also in the face of another decision by the same Court where the opinion was rendered by Mr. Justice Field, to the effect that all the lands of the public domain and everything connected with the soil, including the waters thereon, belonged to the United States.[1]

It is by the merest stroke of good fortune, or rather, through the

[1] "Digging for minerals on the public domain of the United States was a trespass entitling the Government to damages in the action at law, and such waste as would be restrained by an injunction from the Court of Chancery, pending the action at law. These rights belong to the Government as a proprietor of the land in common with an individual owner of

sense of fairness and justice of the American people through their Congress, that these mere possessory titles were afterward by the Act of Congress of 1866 ratified and confirmed, and thereby an absolute title vested in such possessors.[2]

§ 605. **The settled rule before any Act of Congress—Spread of California doctrine.**—As we have seen in the previous sections, by a long line of decisions, it became the settled rule in California that at least a good possessory title could be acquired to a water right by the prior appropriation of the waters of the natural streams and lakes, and their application to the working of mining claims, which had also been appropriated, or "located"; and that, too, when both these lands and waters were upon the public domain of the United States, and before Congress had made any provisions authorizing or recognizing in any manner these appropriations.[1] This doctrine soon spread to all of the States and Territories of the arid and semi-arid West, where the same necessities arose for the use of water. As was said by the Supreme Court of Nevada in a case decided in 1865:[2] "So far, then, as the anomalous rights and character of the miner located upon the public land for the purpose of mining are defined and established by the Courts of California, we feel it our duty to recognize them whenever their decisions may be applicable to our condition. Nearly the entire mining interest of this State has grown up under the fostering protection of the law as it was administered and recognized by the Courts of that State. To repudiate the theory and principles upon which they have acted would be to overturn the foundation upon which half of our rights rest."[3]

And so it soon became the settled doctrine throughout all the

the land in the absence of protective legislation." Yale on Mining Claims and Water Rights, p. 331.

By the United States Statutes in force both mines and ditch owners were trespassers on the public lands and could be removed by the military. Titcomb v. Kirk, 51 Cal. 288, 5 Morr. Min. Rep. 10.

3 See, also, Sieber v. Frink, 7 Colo. 148, 2 Pac. Rep. 901; Thorp v. Freed, 1 Mont. 651; Murray v. Tingley, 20 Mont. 260, 50 Pac. Rep. 724, 19 Morr. Min. Rep. 137; Union M. & M. Co. v. Dangberg, 81 Fed. Rep. 73.

West that a permanent right of property in the waters of the natural streams and lakes, which ran wholly through or were situated upon the public domain of the United States, might be acquired for mining or other beneficial purposes[4] by the mere appropriation thereof and use for those purposes; that the prior appropriator might thus acquire the right to divert, use, and consume all of the water of the stream, if the same should be necessary for his purposes, as against all others claiming later rights. As the public domain, both the land and water, belonged to the United States, and at that time there being no authorization of Congress for these acts, it can be readily seen that these acts upon the part of the miners and others were technically trespasses against the property and rights of the United States. However, in the continuation of our history of the doctrine, it will be seen how Congress legalized these acts.[5]

§ 606. **Attempted preference first given to mining.**—During the first years of the settlement of the arid West mining was practically the only industry. And as we have seen, the Arid Region Doctrine of appropriation originated with the miners' customs,[1] it was, therefore, strenuously urged at first that water could only be appropriated for that use in mining occupations. In fact, the agricultural possibilities were at that early period of the history of the country an entirely unknown quantity, and the use of water for irrigation, where the greater portion of it was consumed, was looked upon by some of the Courts and the legislature of California as a waste of the water, especially where this use conflicted with the rights claimed by the miners. The early legislatures of the State of California, therefore, attempted to favor the miners above all others classes in the use of water.

The Act of the legislature of 1851, quoted in a previous section,[2] permitted the admission of proof of the "customs, usages, and regulations" in force at the bar or diggings embracing the claims involving any controversy. Again, the Act of 1852, known as the "Possessory Act," permitted those in possession of mining claims

4 For other purposes than that of mining, see Secs. 606, 607.

2 See Sec. 600.

on the mining lands to sue in the State Courts for interference with their possessions, with a proviso excepting the possessors of land for agriculture or grazing from protection against the miners if the land contained mines or minerals.[3] And it was held that the rule rested upon its necessity for the preservation of peace and quiet in the country.[4]

Again, the Act of 1855, known as the "Indemnity Act," required the miner who entered upon the land of an agriculturist to give a bond for whatever damages might be done to the *improvements only* of the agriculturist.[5] This Act requiring the indemnity referred to was intended to guard against the injuries resulting from the unrestricted license given by the Act of 1852, known as the "Possessory Act," and discussed above.[6] The possession of a farmer on the public land was held evidence of title in him as to everybody but a miner;[7] and, where a party entered on mineral land for the purpose of mining, he could not be presumed to be a trespasser, although the land was in the actual possession of an agriculturist,[8] the theory being that the possession of the agriculturist was subject to the right previously vested in the miner, where he claimed the possession for mining operations.[9]

Rep. 334, criticizing this case, and where the Court said: "But in early mining times the paramount right of the miner strenuously insisted upon by the miners and in the mining sections often exercised with

§ 607. **All beneficial uses finally given equal footing.**—From an examination of the California cases of this period it will be seen that they are at considerable variance with each other upon this phase of the subject.[1] There are cases which tended to restrict the claims of the miner and to place all pursuits, especially where the use of water was required, upon an equal footing. In fact, it may be said that the Supreme Court of the State limited and restricted as far as possible the Acts of the legislature especially favoring the miners, discussed in the previous section,[2] and tended to place all uses of water upon an equal footing.[3] So that the prior possessory right of the agriculturist was finally protected, and his water was protected even as against the miners, always provided, of course, that his appropriation was prior.[4] And the rule was adopted, even before there was any legislation by Congress upon the subject, that a valid appropriation could be made of a water right independent of the purpose for which it was appropriated, provided that the appropriation was a prior one, and that the water was used for some useful or legitimate purpose, regardless of the fact whether that purpose was for mining, agriculture, or any other beneficial use for which water is used.[5]

a high hand, as it was by the defendants."

See, also, the case of Thorp v. Freed, 1 Mont. 651, where it was urged that the right to appropriate waters applied only where it was used for mining operations. But by a divided Court the question was left undecided.

In the case of Atchison v. Peterson, 1 Mont. 561; *Id.*, 87 U. S. 20 Wall. 507, 22 L. Ed. 414, 1 Morr. Min. Rep. 583, the Supreme Court of the United States upheld the right as applied to mining, but was silent as to the right for other uses.

But in the case of Basey v. Gallagher, 87 U. S. 20 Wall. 670, 22 L. Ed. 452, 1 Morr. Min. Rep. 683, the same Court held that the right also applied to irrigation.

It is the general rule today in all the States of the arid and semi-arid West, where there is no statute giving preference uses, that all uses of water are treated impartially, as far as the right of the appropriation of the same is concerned. As was said by Mr. Justice Field, in rendering the opinion of Basey v. Gallagher:[6] "Ever since that decision it has been held generally throughout the Pacific States and Territories that the right to water by prior appropriation for any beneficial purpose is entitled to protection. Water is diverted to propel machinery in flourmills and sawmills, and to irrigate land for cultivation, as well as to enable miners to work their mining claims; and in all such cases the right of the first appropriator, exercised within reasonable limits, is respected and enforced."[7]

§ 608. **Decisions of court judicial legislation.**—In the study of the early history of the doctrine, the question will often arise in the mind of the student, as to whether the Courts did not exceed their province in their decisions in promulgating an entirely new doctrine upon the question of the use of waters, and the acquisition of rights therein, and that, too, contrary to the common law adopted by the State of California as its rule of jurisprudence. There is no question but that the Courts in many instances did exceed their powers upon the subject. It is within the province of the Courts to construe the laws as they exist and not make new ones, or to repeal old, existing laws. This duty comes within the legislative branch of our Government. But this usurpation of legislative functions by the Courts can be excused upon many grounds. It must be borne in mind that the judiciary of the new State of California had thrown upon it responsibilities not then or since incurred by any other State of the Union. In addition to those perplexing questions that arose in the nature of things, and especially putting into practical operation a new constitution and a new code of statutes, there was a large class of cases unknown to the jurisprudence of the other States. The mining interests

For the laws of the various States, see Part XIV.

of the State had grown up under the force of new and extraordinary circumstances; an unusual and entirely new method had been adopted through the miners' customs for the acquisition of title to a water right, and all in the absence of any specific and certain legislation to guide the Courts. There being no known system existing at the beginning, parties were left without any certain guide, and for that reason placed themselves in such conflicting positions that it was impossible to render any decision that would not produce great injury, not only to the losing parties immediately connected with the suit, but to great numbers of others who, though not formal parties to the record, must be deeply affected by the decision. No class of cases could have arisen more difficult of a just decision than that class of cases involving the rights to the use of water, especially where the Courts endeavored to reconcile the use as acquired under the new Arid Region Doctrine of appropriation under the miners' customs with the common law theories of riparian rights, adopted as the rule of decision in that State. Is it any wonder that the early Courts of California were compelled to adopt some new rules, which may be termed judicial legislation, for the government of these interests? Left without any direct precedent, as well as without any specific legislation, either by Congress or by the legislature of the State, the Courts were compelled to apply to this anomalous state of things the more expanded principles of equitable justice.[1] And, as we shall see in following the history of the doctrine further, the possessory rights in the mining land, and the appropriation

1 See Bear River etc. W. Co. v. New York M. Co., 8 Cal. 327, 68 Am. Dec. 325, 4 Morr. Min. Rep. 526; Conger v. Weaver, 6 Cal. 548, 65 Am. Dec. 528, 1 Morr. Min. Rep. 594; Yale on Mining Claims and Water Rights, p. 139, where the author says: "There is no State legislation upon the subject of water rights for mining purposes. The complaint of the Supreme Court was, in the opinion of some of its members, that they were compelled to take the place of the legislature in framing rules in regard to water rights. This was undoubtedly the case; the only rule adopted by the legislature touching the subject was the adoption of the common law as the rule of decision, by the Act of April, 1850. It was therefore, as the Chief Justice said, left to the Courts, and this can be admitted without injustice to the members in the days of its early organization. Whether the duty was properly performed or not under the law, their rules are now adopted by Congress, and that ought to be satisfactory to all concerned."

of the waters of the natural streams, were afterward confirmed by Congressional legislation.[2]

§ 609. **Character of title of claimants.**—It must be admitted at this late day that the mere possessory claimants to the mineral lands and waters, prior to the Act of 1866, had no title against the Government, which was the owner of both the lands and waters flowing thereon. Even this proposition was admitted by some of the earlier California cases, which so strenuously upheld these possessory rights. In the case of Kidd v. Laird [1] the Court, after holding that the Government was the riparian proprietor upon all of the waters flowing upon the public domain, said: "Upon this subject it is only necessary to consider that none of the rights involved in this controversy are founded upon a legal title, and that the safety and security of the parties require that the rights of each, as fixed by the priority and extent of their respective appropriations, should be regarded as perfect and absolute as if they had been acquired by prescription, or were held under an express grant from the riparian owner." [2]

Upon this proposition, in the case of Biddle Boggs v. Merced Mining Company,[3] the Court, by Chief Justice Field, said: "That there was an implied license from the Government to mine for the precious metals upon the public land, by reason of its indulgence, if not by direct encouragement, extended to the mining population, as claimed by every miner, has been expressly denied by judicial authority." [4]

Upon the other hand, these claimants to possessory rights had no title, as against the Government of the United States, who was the owner of all the lands and waters as between each other. The first appropriator had a good title to his right of possession against all subsequent comers. These two propositions were summed up by Mr. Justice Field in his opinion in the case of Jennison v.

2 See, for Acts of Congress confirming these rights, Secs. 611-618.

2 See, also, Lindley on Mines, 2d Ed., Sec. 642; Hughes v. Devlin, 23 Cal. 501, 12 Morr. Min. Rep. 241; Buchner v. Malloy, 155 Cal. 253, 100 Pac. Rep. 687; Miller v. Imperial Water Co., 156 Cal. 27, 103 Pac. Rep. 227, 24 L. R. A., N. S., 372.

3 14 Cal. 279, 70 U. S. 3 Wall. 304, 18 L. Ed. 245.

4 See, also, Yale on Mining Claims and Water Rights, pp. 332, 333.

Kirk,[5] in which he said: "The first appropriator was everywhere held to have, within certain well-defined limitations, a better right than others to the claims taken up, and in all controversies, *except as against the Government*, he was regarded as the original owner, and from whom title was to be traced."

§ 610. **California decisions based upon presumption of grant.**—In view of the fact that previous to the year 1866, the date of the first Act of Congress upon the subject, this new doctrine of prior appropriation could be based upon no grant, statute, or express permission from the Federal Government directly authorizing the right of exclusive appropriation of water upon the public domain, and from the fact that the legislature of the State of California passed the following Act, "The common law of England so far as it is not repugnant to or inconsistent with the Constitution of the United States or the constitution or the laws of the State of California shall be the rule of the decisions of all the courts of this State," it seems strange that the early California decisions respecting water rights, which are directly opposed to the common law rules respecting the same, as universally understood and expounded by the Courts of England and of the United States, should be based upon "one favorite and much indulged doctrine" of the common law itself—the doctrine of presumption. Yet, in spite of the seeming inconsistency, such is the fact. Pomeroy, in his work on "Riparian Rights," seems to give the true explanation, that it was "in order to protect the vast interests which had grown up under the mining systems, and to give legal sanction to the rights thus acquired."[1]

The case of Conger v. Weaver[2] is the leading case upon this theory of presumption. The case was decided in 1856, and the question was discussed with great ability by the learned Judge, Mr. Justice Heydenfeldt, who, in delivering the opinion of the Court, said: "Every Judge is bound to know the history and the leading traits which enter into the history of the country where he presides. This we have held before, and it is also an admitted doctrine of the common law. We must, therefore, know that this State has

[5] 98 U. S. 453, 25 L. Ed. 240, 4 Morr. Min. Rep. 240.

[1] Pomeroy on Riparian Rights, Sec. 22.

[2] 6 Cal. 548, 65 Am. Dec. 528, 1 Morr. Min. Rep. 594.

a large territory; that upon its acquisition by the United States, from the sparseness of its population, but a small comparative proportion of its land had been granted to private individuals; that the great bulk of it was land of the Government; that but little, as yet, had been acquired by individuals by purchase; that our citizens have gone upon the public lands continuously, from a period anterior to the organization of the State Government to the present time; upon these lands they have dug for gold; excavated mineral rock; constructed ditches, flumes, and canals for conducting water; built mills for sawing lumber and grinding corn; established farms for cultivating the earth; made settlements for the grazing of cattle; laid off towns and villages; felled trees, diverted water courses; and, indeed, have done, in various enterprises of life, all that is usual and necessary in a high condition of civilized development. All of these are open and notorious facts, charging with notice of them not only the Courts who have to apply the law in reference to them, but also the Government of the United States, which claims to be the proprietor of these lands; and the Government of the State, within whose sovereign jurisdiction they exist. In the face of these notorious facts, the Government of the United States has not attempted to assert any right of ownership to any of the large body of land within the mineral region of the State. The State Government has not only looked on quiescently upon this universal appropriation of the public domain for all of these purposes, but has studiously encouraged them in some instances, and recognized them in all. Now, can it be said with any propriety of reason or common sense, that the parties to these acts have acquired no rights? If they have acquired rights, these rights rest upon the *doctrine of presumption of a grant of right*, arising either from the tacit assent of the sovereign, or from the expressions of her will in the course of her general legislation, and, indeed, from both. Possession gives title only by presumption; then, when the possession is shown to be of public land, why may not any one oust the possessor? Why can the latter protect his possession? *Only upon the doctrine of presumption*, for a license to occupy from the owner will be presumed."

Referring to the opinion in the above case in the case of Lux v. Haggin,[3] decided over 30 years after, the Court said: "The law

[3] 69 Cal. 255, 10 Pac. Rep. 674.

of California, with reference to priority of possession on the public lands, has been so long established that we are apt to forget that the whole system was built upon a presumption entertained by the Courts of a permission from the United States."[4]

"Presumptions of a fact are inferences as to the existence of some fact drawn from the existence of some other fact."[5]

So the existence of the open and notorious fact that certain waters of streams and lakes located upon the public domain of the United States had been appropriated by private parties for mining, agriculture, and various other purposes; and that enormous expenditures of money had been made in building up vast interests in conducting the water to places where it was needed; also that in the face of these open and notorious facts the Government of the United States, the proprietor of these lands and waters, had not attempted to assert any right of ownership in them, and that the State Government of California had not only looked approvingly upon this universal appropriation of said lands and waters, but had in some instances encouraged them, it was therefore held that these rights rested upon the doctrine of presumption of a grant of right, arising from the tacit assent of the Government, the owner, to the appropriation of both the lands included in the mining claims located upon the public domain, and also the appropriation of the waters of the natural streams for beneficial purposes.[6]

[4] See, also, Hicks v. Bell, 3 Cal. 219; Irwin v. Phillips, 5 Cal. 140, 63 Am. Dec. 113, 15 Morr. Min. Rep. 178; Broder v. Natoma Water Co., 101 U. S. 274, 25 L. Ed. 790; affirming 50 Cal. 621.

[6] As to the conflicting rights between the settlers and appropriators, see Secs. 810-823.

See Lux v. Haggin, 69 Cal. 255, 4 Pac. Rep. 919, 10 Pac. Rep. 674; Conger v. Weaver, 6 Cal. 548, 65 Am. Dec. 528, 1 Morr. Min. Rep. 594; Fitzgerald v. Urton, 5 Cal. 308.

But see the case of Boggs v. Merced Mining Co., 14 Cal. 279, 70 U. S. 3 Wall. 304, 18 L. Ed. 245, where Mr. Chief Justice Field said in rendering the opinion of the State Court: "Assuming, then, in the first place, for the purpose of this case, that the mineral belongs to the United States—has the defendant any effectual license to

Technically speaking, of course, the presumed grant or license consisted simply in the forbearance of the Government from interfering with or prohibiting these appropriations of the waters flowing upon the public domain, there never being any grant or license in fact from the Government until the Act of Congress of July 26, 1866.[7] But whatever it may be called, a presumptive grant, license, or forbearance of the Government, the rights of persons who had constructed canals and ditches to be used in mining operations, and for the purpose of irrigation, or for any other beneficial use or purpose, in the region where such artificial use of the water was an absolute necessity, were rights which the Government had, by its conduct, recognized and encouraged and was bound to protect before the passage of the Act of 1866; and the very cause of the passage of that Act was for the purpose of protecting those rights, as will be seen when we come to the

enter upon the premises of the plaintiff and remove it? It is sometimes said, in speaking of the public lands, that there is a general license from the United States to work the mines which these lands contain. But this language, though it has found its way into some judicial decisions, is inaccurate as applied to the action, or, rather want of action, of the Government. There is no license in the legal meaning of the term. A license to work the mines implies a permission to extract and remove the mineral. Such license from an individual owner can be created only by writing, and from the General Government only by Act of Congress. It carries an interest in land, and arises only from grant. The mineral, whether a distinct possession or otherwise, constitutes part of the realty, as much so as growing timber, and no interest in it can pass except in the ordinary modes for the disposition of land. It is under the exclusive control of Congress equally with any other interest which the Government possesses in land. But Congress has adopted no specific action on the subject, and has left the matter to be controlled by its previous general legislation respecting the public domain. And it is from its want of specific action, from its passiveness, that the inference is drawn of a general license. The most which can be said is that the Government has forborne to exercise its rights, but this forbearance confers no positive right upon the miner which would avail as a protection against the assertion of its claims to the mineral. The supposed license from the General Government, then, to work the mines in the public lands, consists in its simple forbearance. Any other license rests in mere assertion, and is untrue in fact and unwarranted in law."

[7] For copy of this Act, and construction, see Secs. 611-619.

But in Ortman v. Dixon, 13 Cal. 33, it was said: "We hold the absolute property in such cases to pass by appropriation as it would by grant."

history of its passage.[8] It was said in an Oregon case:[9] "The right of mining for the precious metals is a franchise, and the attendant circumstances raise the presumption of a general grant from the sovereign of the privilege."

**§ 611. Act of Congress of July 26, 1866.**—It is our purpose at this point to discuss the Acts of Congress of 1866, and that of July 9, 1870, only so far as they relate to the history of the doctrine of appropriation, leaving the more thorough discussion of the Acts, their construction and effects, to other portions of this work.[1] As we have seen, the Government had by its conduct recognized the rights of persons who had appropriated the water of the streams and lakes on the public domain, and who had constructed canals and ditches to facilitate its use in mining operations and for the purpose of agriculture in the region where such artificial use of the water was a necessity. It is further true that before any Act of Congress was passed sanctioning those claims of the miners, this doctrine of prior appropriation, which at first applied only to the operations of mining, was extended to all other beneficial purposes for which water was essential—to irrigation, in promoting agriculture and horticulture, to milling, manufacturing, and municipal purposes—which uses were also recognized and encouraged by the Government as being equal.[2]

On the 26th day of July, 1866, there was approved an Act of Congress which confirmed the position taken by the Supreme Court

8 For history of the passage of the Act of 1866, see Secs. 612, 613.

of California, and ratified all possessory rights, both in lands and waters, which were recognized and acknowledged by the local customs, laws, and decisions of the Courts, and which had vested and accrued *prior* to the passage of the Act.[3] The ninth section of that Act reads as follows:

*"Whenever, by priority of possession, rights to the use of water for mining, agricultural, manufacturing, or other purposes, have vested and accrued, and the same are recognized and acknowledged by the local customs, laws, and decisions of Courts, the possessors and owners of such vested rights shall be maintained and protected in the same; and the right of way for the construction of ditches and canals for the purposes herein specified is acknowledged and confirmed; but whenever any person, in the construction of any ditch or canal, injures or damages the possession of any settler on the public domain, the party committing such injury shall be liable to the party injured for such injury or damage."*[4]

The Act of 1866 related principally to mining lands, Section 1 of which provided as follows: "Be it enacted that the mineral lands of the public domain, both surveyed and unsurveyed, are hereby declared to be *free and open* to exploration and occupation by all citizens of the United States, and those who have declared their intention to become citizens, subject to such regulations as may be prescribed by law, and subject also to the local customs or rules of miners in the several mining districts, so far as the same may not be in conflict with the laws of the United States."

It was thus, after eighteen years of constant struggle, that Congress finally acknowledged the general wisdom of the customs and regulations of the miners, which sprang from the necessities of

[3] That the Act was rather a voluntary recognition of a pre-existing right of possession, constituting a valid claim to its continued use rather than the establishment of a new right, see discussion and cases cited in Secs. 612-614.

the case leading up to them, and confirmed what was the inception of the Arid Region Doctrine of appropriation of the waters of the natural streams for beneficial uses or purposes. And, as in the course of time the State of California, and in fact, all of the Western portions of our country were becoming rapidly settled up, this Act prevented the destruction and confiscation of these rights, which would have been the case had the land been granted by the Government to the settlers without their recognition, and the common law rules of riparian rights strictly adhered to. But, after the passage of the Act, all subsequent patentees acquiring lands from the United States take those lands *subject* to all "vested and accrued" rights in and to the waters of the public domain appropriated by other parties prior to its enactment.

In the next section we will take up the immediate cause for the passage of the Act.[5]

§ 612. **How the Act of July 26, 1866, was passed.**—Our history of the doctrine of appropriation would not be complete if we did not give a short sketch as to how the Act of 1866 was passed. It must be remembered that at this time the Civil War had been ended but a short time and this Government emerged from the same with an enormous debt, and the country was in the throes of the "Reconstruction Period." A great many schemes had been proposed to pay off the war debt, and it was suggested by some members of Congress that the sale of the mines and the rights of the miners, which had been held up to this time by a possessory right only, should be made for this purpose. This, as can be readily seen, would have amounted to a confiscation of all of these possessory rights of the miners and others who had acquired the rights to the use of the waters of the natural streams on the public domain under the miners' customs. It was to prevent this, and not of their own initiative, that the majority of the Western members of Congress, headed by Senator William M. Stewart of Nevada,[1] endeavored, by counter measures to the bills introduced in Con-

5 See Sec. 612.

For the right of appropriators as against rights of settlers, see Secs. 810-823.

1 Senator Stewart, one of the greatest public characters in the history of the Western country, died about one month before this article was written.

gress which provided in effect for this confiscation, to checkmate this proposed action, and which resulted, to the great surprise of all, in a more equitable rule for all concerned.[2] At this point we will abstract the history of the contest as given by that eminent writer upon the subject, Mr. Gregory Yale, who wrote his work upon the subject of "Mining Claims and Water Rights" in 1867, the year following the passage of the Act of Congress, and who was in California at the time. He says:[3]

"The miners of California and the States and Territories adjacent thereto have but a very inadequate idea of the imminent peril in which the pursuit in which they are engaged was placed at the commencement of the 39th Congress. Two years ago there was a strong disposition in Congress and the East generally to make such a disposition of the mines as would pay the National debt. The idea of relieving the Nation of the payment of the enormous taxes which the war had saddled upon us by the sale of the mines in the far distant Pacific Slope, about which few people here have any knowledge whatever, was the most popular that was perhaps ever started. Compelling other people to liquidate your obligations has been in all ages and in all nations a highly comfortable and popular proceeding. . . . The first bill on the subject was introduced in the Senate by Mr. Sherman of Ohio, and in the House by Mr. Julian of Indiana. Both of these measures contained most odious features. Sherman's bill went to the Committee on Public Lands, of which Mr. Stewart was a member. After much consideration it was understood that the committee would report adversely. Julian's bill received a much more favorable consideration in the House. In fact, the House went so far as to pass a resolution indorsing legislation substantially of the character contemplated in Julian's bill. After much canvassing, Mr. Conness and Mr. Stewart came to the conclusion that it was no longer safe to act on the defensive, and that it was necessary to determine what legislation would be acceptable, and to make a bold move to obtain it. The Secretary of the Treasury was then one of the strongest advocates of the sale of the mines, and appeared to be under the impression that it would yield a large

2 A complete history of this contest will be found in the Congressional Globe, 1st Session of the 39th Congress, Part IV.

3 Page 10.

revenue. The movement thus far had been encouraged by him, and it was thought that a partial success of his views would be more satisfactory to him than entire defeat. Mr. Conness accordingly suggested to him to have a bill prepared in his department which would avoid the odious provisions of the other two propositions, and get some Senator to introduce it, assuring him that a liberal measure would receive the favorable consideration of the Pacific delegation. The result was that the Secretary had prepared the second bill, introduced by Mr. Sherman, which was a great gain on the first bill. This bill went to the Committee on Mines, of which Mr. Conness was chairman and Mr. Stewart a member. After much discussion these two Senators were appointed a committee to draft a substitute, which, after several weeks of close study, resulted in the reporting of a bill substantially the same as the one which is now law."

Then, after stating the position of some of the members of the Senate upon the proposition and that it was opposed by some of the Western Senators, the author proceeds: "After being amended slightly by Mr. Stewart the bill passed the Senate. When it was first introduced the bill had no friends in the House, but after it passed the Senate some of the Pacific delegation began to regard it favorably. It should have gone in the House to the Committee on Mines, of which Mr. Higby was chairman; but Mr. Julian, who is an old member and chairman of the Committee on Public Lands, seized on the bill at once and had it transferred to his committee. Then the struggle came to get it out of that committee. Mr. Stewart addressed himself to the members of it, and got every one of them except Julian, but he was intractable. He wanted his bill to go first, and would not let this supersede it. The House, too, was canvassed, and was found to be favorably disposed, but there was no way of getting at the bill. In the meantime, Higby had passed a bill from the Committee on Mines in regard to ditches. It contained only three provisions, and bore no resemblance to the bill in question, but it related to the same subject. When this bill came to the Senate the mining bill was tacked on as a substitute, and was passed. It was then sent back to the House and went on the Speaker's table. In that condition it required a majority to refer it. To get that majority Julian exerted all his strength, but failed. The bill was passed in the

House without amendment, and became a law. This accounts for its being entitled 'An Act granting the right of way to ditch and canal owners through the public lands, and for other purposes.' . . . The result of the whole fight is the grant of all the mines to the miners, with some wholesome regulations as to the manner of holding and working them, which are not in conflict with existing mining laws, but simply give uniformity and consistency to the whole system. The escape from entire confiscation was much narrower than the good people of California ever supposed. If either of the bills originally introduced had been passed the Pacific States and Territories would have received a blow from which they would never have recovered. The Government could only have receded after the most irreparable and widespread damage had been done."[4]

In reference to the question of confiscation, we will only add that had the original bill passed, it would not only have confiscated the mines, but also the water rights used in working the mines and for other uses, and taken from the streams flowing upon the public domain. As we have seen, in previous sections of this work, these rights to water were based wholly upon the miners' customs in appropriating the waters from the streams. With the miners' rights to the mines would also have gone the rights to the water based upon the miners' customs.

**§ 613. Decision of the Supreme Court of the United States as to the cause of the passage of the Act of 1866—Jennison v. Kirk.**—In commenting upon the facts as to why and how the Act of 1866 was passed, Mr. Justice Field of the Supreme Court of the United States, in rendering the opinion of that Court in the case of Jennison v. Kirk,[1] said:

"The object of the section was to give the sanction of the United

4 It will be noticed that the greater portion of the Act of July 26, 1866, related to mines and mining; only the ninth section, quoted in a previous section, related to water and water rights, and rights of way for the same. See Sec. 611.

1 98 U. S. 453, 25 L. Ed. 240, 4 Morr. Min. Rep. 504.

Mr. Justice Stephen J. Field was also a historical character in the early history of California. He was a Judge of the District Court, Chief Justice of the Supreme Court of the State, and finally Associate Justice of the Supreme Court of the United States. He died in 1897.

States, the proprietor of the lands, to possessory rights, which had previously rested solely upon the local customs, laws, and decisions of the Courts, and to prevent such rights from being lost on a sale of the lands. The section is to be read in connection with other provisions of the Act of which it is a part, and in the light of matters of public history relating to the mineral lands of the United States. The discovery of gold in California was followed, as is well known, by an immense immigration into the State, which increased its population within three or four years from a few thousand to several hundred thousand. The lands in which the precious metals were found belonged to the United States, and were unsurveyed, and not open by law to occupation and settlement. Little was known of them further than that they were situated in the Sierra Nevada Mountains. Into these mountains the emigrants in vast numbers penetrated, occupying the ravines, gulches, and canyons, and probing the earth in all directions for the precious metals. Wherever they went, they carried with them that love of order and system and of fair dealing which are the prominent characteristics of our people. In every district which they occupied they framed certain rules for their government, by which the extent of ground they could severally hold for mining was designated, their possessory right to such ground secured and enforced, and contests between them either avoided or determined. These rules bore a marked similarity, varying in the several districts only according to the extent and character of the mines; distinct provisions being made for different kinds of mining, such as placer mining, quartz mining, and mining in drifts or tunnels. They all recognized discovery, followed by appropriation, as the foundation of the possessor's title, and development by working as the condition of its retention. And they were so framed as to secure to all comers, within practicable limits, absolute equality of right and privilege in working the mines. Nothing but such equality would have been tolerated by the miners, who were emphatically the lawmakers, as respects mining, upon the public lands in the State. The first appropriator was everywhere held to have, within certain well-defined limits, a better right than others to the claims taken up; and in all controversies, except as against the Government, he was regarded as the original owner, from whom title was to be traced. But the mines could not be

worked without water. Without water the gold would remain forever buried in the earth or rock. To carry water to mining localities, when they were not on the banks of a stream or lake, became, therefore, an important and necessary business in carrying on mining. Here, also, the first appropriator of water to be conveyed to such localities for mining or other beneficial purposes, was recognized as having, to the extent of actual use, the better right.

"The doctrines of the common law respecting the rights of riparian owners were not considered as applicable, or only in a very limited degree, to the condition of the miners in the mountains. The waters of rivers and lakes were consequently carried great distances in ditches and flumes, constructed with vast labor and enormous expenditure of money, along the sides of mountains and through canyons and ravines, to supply communities engaged in mining, as well as for agriculturists and ordinary consumption. Numerous regulations were adopted, or assumed to exist, from their obvious justice, for the security of these ditches and flumes and the protection of rights to water, not only between appropriators, but between them and the holders of mining claims. These regulations and customs were appealed to in controversies in the State Courts, and received their sanction; and properties to the value of many millions rested upon them. For eighteen years, from 1848 to 1866, the regulations and customs of miners as enforced and moulded by the Courts and sanctioned by the legislation of the State, constituted law governing property in mines and in water on the public mineral lands. Until 1866, no legislation was had looking to the sale of the mineral land. The policy of the country had previously been, as shown by the legislation of Congress, to exempt such land from sale. In that year the Act, the ninth section of which we have quoted, was passed. In the first section it was declared that the mineral lands of the United States were free and open to exploration and occupation by the citizens of the United States, and those who had declared their intention of becoming citizens, subject to such regulations as might be prescribed by law and the local customs or rules of miners in the several mining districts, so far as the same were not in conflict with the laws of the United States. . . . In no provision of the Act was any intention manifested to interfere with the pos-

sessory rights previously acquired, or which might be afterward acquired; the intention expressed was to secure them by a patent from the Government. The Senator of Nevada, Hon. William M. Stewart, the author of the Act, in advocating its passage in the Senate, spoke in high praise of the regulations and customs of miners, and portrayed in glowing language the wonderful results that had followed the system of free mining which had prevailed with the tacit consent of the Government. The legislature of California, he said, had wisely declared the rules and regulations of miners should be received in evidence in all controversies respecting mining claims, and, when not in conflict with the Constitution or laws of the State or of the United States, should govern their determination; and a series of wise judicial decisions had moulded these regulations and customs into 'a comprehensive system of common law, embracing not only mining law, properly speaking, but also regulating the use of water for mining purposes.' 'The miner's law,' he added, 'was a part of the miner's nature. He had made it, and he trusted it and obeyed it. He had given the honest toil of his life to discover wealth, which, when found, was protected by no higher law than that enacted by himself, under the implied sanction of a just and generous Government. And the Act proposed continued the system of free mining, holding the mineral lands open to exploration and occupation, subject to legislation by Congress and to local rules. It merely recognized the obligation of the Government to respect private rights which had grown up under its tacit consent and approval. It proposed no new system, but sanctioned, regulated, and confirmed a system already established, to which the people were already attached.' These statements of the author of the Act, in advocating its adoption can not, of course, control its construction, where there is doubt as to its meaning; but they show the condition of the mining property on the public lands of the United States, and the tenure by which it was held by miners in the absence of legislation on the subject; and thus serve to indicate the probable intention of Congress in the passage of the Act. . . . It was for the purpose of securing rights to water, and rights of way over the public lands to convey it, which were thus recognized, that the ninth section was adopted, and not to grant rights of way where

they were not previously recognized by the customary law of miners."[2]

**§ 614. Other decisions as to the cause of the passage of the Act of 1866.**—There are also a number of other decisions rendered by various Supreme Courts, including those by the Supreme Court of the United States, which set forth the cause of the passage of the Act of July 26, 1866.[1] The Washington Court, in the case of Benton v. Johncox,[2] relative to the cause of the passage of the Act, said: "It was for the purpose of protecting the rights of appropriators of water for beneficial uses on the public lands which had vested and accrued, by virtue of local customs, laws, and decisions of the Courts, that the ninth section of the Act of Congress of July 26, 1866, the substance of which is included in Section 2339 of the Revised Statutes, was enacted. It was apparent to Congress, and, indeed, to every one, that neither local customs nor State laws nor decisions of State Courts could vest the title to public land or water in private individuals without the sanction of the owner, viz., the United States. The Government being the sole proprietor, had the right to permit the water to be taken and diverted from its riparian lands; but, when it disposed of land without reserving the water, the latter passed to its grantee free from interference thereafter by the grantor."

Again, the Nebraska Court, referring to the Act of 1866, in the case of Meng v. Coffey,[3] said: "But it was only the same rule as that by which possession of mining claims was recognized. It was a custom intended to prevent disorder and forcible dispossession of those who had located mines."[4]

Again, the Supreme Court of the United States in the case of Ivanhoe Mining Company v. Keystone Consolidated Mining Company,[5] said: "Very soon after the conquest of California and its cession to the United States by Mexico, it was found to be rich in

the precious metals, and such was the rapid influx of immigrants from the Eastern States that the California population at the time it was organized as a State, in 1850, was largely composed of mining camps and settlements engaged in mining these metals. As nearly all those mines were discovered on land the title of which was vested, by the treaty, in the Government of the United States, it became important to determine what course the Government would take with regard to this new source of untold wealth. The Spanish Government, to which this territory and much other, rich in the precious metals, had once belonged, had instituted a system of laws concerning her mines by which private enterprise was invited to develop them, and a revenue secured at the same time to the Crown, which made Spain for a time the richest of the civilized governments of the world. This system Mexico had inherited and perpetuated, and there were many American statesmen who believed that, with the Territory, we had acquired the laws, which governed the production of gold from the earth. Others believed that, whether this were so or not, it would be a wise policy for the Government to secure to itself a fair proportion of the metal produced from its own ground. But while Congress delayed and hesitated to act, a swarm of enterprising and industrious citizens filled the country, and before a State could be organized had become its dominating element, with wealth and numbers and claims which demanded consideration.

"Matters remained in this condition, with slight exception, until the year 1866, when Congress passed a law by which title to mineral land might be acquired from the Government at nominal prices, and by which the idea of a royalty on the product of the mines was forever relinquished." [6]

§ 615. **Act of July 9, 1870, making all patents subject to vested rights.**—Thus, as we have seen, in following the history of the doctrine, the prior appropriation of the water of a stream or lake upon the public domain, from the very first, after the discovery of gold in California in 1848, secured a title to the water appropriated, which was then considered good as against all the world except the United States Government. And furthermore, the Government,

6 See, also, Chambers v. Harrington, 111 U. S. 350, 28 L. Ed. 452, 4 Sup. Ct. Rep. 428.

instead of denying this right and treating it as non-existing, not only recognized it as having accrued and vested (by its forbearance from interfering and prohibiting these open and notorious acts of appropriation of water), but also, by the Statute of 1866,[1] formally acknowledged the doctrine of appropriation and made the Government title to the waters and to the lands used for rights of way for ditches and canals subject to the claims and uses of the appropriators, whose rights had vested and accrued prior to the vesting of other rights of the grantees of the Government either in the water or in the land. And so the Government having disposed of the waters on its lands, where the same had been actually appropriated, and also having given certain easement in the land for the rights of way for the ditches and canals in order to conduct the water to the place of use, it could only give to its patentees, after the passage of the Act of 1866, a title to the lands subject to any vested and accrued rights and rights of way for the construction of the ditches and canals.[2] This was a consequence which naturally followed from the well settled law of conveyancing. And although there was no reservation clause in the Government patents, prior to those issued after the Act of 1870, wherever the title of the United States to any portion of the public domain was thus burdened the same burden would on general principles accompany the title, if transferred to any subsequent or private owner; whoever succeeded to the title of the United States, through any mode of acquisition or conveyance, would acquire and hold it, subject to the same servitude which before existed in favor of the prior appropriator.[3]

But it has not been left as a matter of inference. By an Act of July 9, 1870, Congress in supplementing the Statute of 1866 provided:

"*All patents granted, or pre-emptions or homesteads allowed, shall be subject to any vested and accrued water rights, or rights*

*to ditches and reservoirs used in connection with such water rights, as may have been acquired under or recognized by the preceding section."* [4]

**§ 616. Construction of Acts of 1866 and 1870—Effect of Acts on appropriations against patentees of the Government prior to 1866.**—The United States being the owner of the public domain, and, of course, as incident thereto the waters flowing thereon, an appropriator of those waters, prior to the year 1866, did not acquire any legal title to the same as against the Federal Government or its grantee, who obtained his patent prior to 1866, the date of the first Act of Congress confirming the claims made by appropriation.[1] But it was held that in cases where the rights by appropriation had vested and accrued prior to the Act of Congress of 1866, and also prior to the rights of the grantees of the Government, that these were rights which "the Government had, by its conduct, recognized and encouraged and was bound to protect before the passage of the Act of 1866." [2] It has never been held by the Supreme Court of the United States, or by the Supreme Court of California, that an appropriation of water on the public lands of the United States after the act of Congress of July 26, 1866, or the amendatory and declaratory Act of 1870, gave to the appropriator the right to the water appropriated as against the grantee of riparian lands upon the same stream under a grant made or issued *prior* to the Act of 1866, except in a case where the water, so subsequently appropriated, was reserved by the special terms of such grant. And it has been held by the Supreme Courts of California and Nevada that one who acquired a title to riparian lands from the United States prior to the Act of Congress of July 26, 1866, could not, in the absence of special reservation in his grant, be deprived of his common law rights to

4 7 Fed. Stat. Ann. 1905, p. 1096; 2 U. S. Comp. Stat. 1901, p. 1437; U. S. Rev. Stat. 1878, Sec. 2340; Act of July 9, 1870, 16 Stat. L. 218.

For appropriation as against riparian owners, see Secs. 810-823.

the natural flow of the stream as it was wont by Nature by one who had appropriated its waters after the passage of that Act.[3]

In the case of Lux v. Haggin, decided by the Supreme Court of California,[4] Mr. Justice McKinstry, in giving the opinion of the Court relative to the principle that a patent issued prior to the Act of Congress of July 26, 1866, for riparian lands upon a stream was not subject to an appropriation of the waters of the same stream made prior to the issuance of the patent, referred approvingly to the rule as laid down by the Supreme Court of Nevada in the case of Vansickle v. Haines, and said: "In Vansickle v. Haines, the plaintiff had diverted one-fourth of the water of Daggett Creek in the year 1857. He made the diversion on a point then on the public land, but which in 1864 was patented by the United States to the defendant Haines. In 1865 Vansickle obtained a patent for his own land where he used the water. In 1867 Haines constructed a wood flume on his land and turned into it all of the waters of the stream, thereby depriving the plaintiff of that part of it which he had been using. The Supreme Court of Nevada held that the plaintiff by his appropriation of water *prior* to the date of the defendant's patent acquired no right which could affect that grant, and that while the Act of Congress of July, 1866, protected those who at that time were diverting water from its natural channels on the public lands, and while all patents issued or titles acquired from the United States since that date are obtained subject to the rights of water by appropriation existing at that time, yet with respect to patents for riparian lands issued *before the Act of Congress* the patentee had already acquired the right to the flow of the water, with which Congress could not interfere."[5] In other words the decision held that any one claiming the water of a stream which was upon the public domain simply by the appropriation of the same, no matter how beneficial or necessary the use to which it

[3] Osgood v. El Dorado Water Co., 56 Cal. 571, 5 Morr. Min. Rep. 37; Lux v. Haggin, 69 Cal. 255, 4 Pac. Rep. 919, 10 Pac. Rep. 674; Vansickle v. Haines, 7 Nev. 249, 15 Morr. Min. Rep. 201; afterwards overruled in Jones v. Adams, 19 Nev. 78, 6 Pac. Rep. 442, 3 Am. St. Rep. 788.

[4] 69 Cal. 255, 10 Pac. Rep. 674.

[5] Vansickle v. Haines, 7 Nev. 249, 15 Morr. Min. Rep. 201; afterwards overruled, upon the theory that the common law of riparian rights was inapplicable in that State. Jones v. Adams, 19 Nev. 78, 6 Pac. Rep. 442, 3 Am. St. Rep. 788.

See, also, Reno Smelting etc. Works v. Stevenson, 20 Nev. 269, 21 Pac. Rep. 317, 4 L. R. A. 60, 19 Am. St. Rep. 364.

was applied, acquired no vested right as against the Government or its grantees, unless he still continued to appropriate the water to his own use until after the Act of Congress of 1866 without the water being claimed by some riparian owner who had received his patent to the land *prior* to said Act. But in reference to other appropriators and grantees of the Government who received their patents after the said Act of Congress of 1866, the first appropriator's title to the water was good. And it was further held that those who had appropriated the waters on the public lands prior to the Act of 1866 were not treated by the Government as trespassers, but as thereby licensed; but that they had acquired no title which could be asserted against the United States or its grantees.[6] This construction of the effect of these Acts, as can be readily seen, rendered it very uncertain as to the title to the water where it was appropriated prior to the passage of the Acts. At this period the common law of riparian rights was in force in all States and Territories and it was not abolished in certain jurisdictions until afterwards.[7] The correct construction of these Acts as regards this phase of the subject undoubtedly is that the Acts could not be construed to be retroactive in effect, so as to affect the rights of those who had acquired their patents to the land prior to the time of the passage of the Acts, where the patents were granted without any reservations, even where the appropriation was made prior to the inception of the rights of the settlers or others so acquiring the absolute title to the land. A grant of the land without any reservations, in these cases, also granted all of the incidents thereto.[8] However, the question of the rights of appropriation as against the rights of patentees to the land, where the patents were obtained prior to the passage of the Act of 1866, has now become obsolete from the fact that all such claims have long since been adjusted; and,

8 Union M. & M. Co. v. Ferris, 2 Sawy. 176, Fed. Cas. No. 14,371, 8 Morr. Min. Rep. 90; *Id.* v. Dangberg, 2 Sawy. 450, Fed. Cas. No. 14,370, 8 Morr. Min. Rep. 113; *Id.*, 81 Fed. Rep. 73; Thorp v. Freed, 1 Mont. 651.

therefore, no extended discussion is necessary here regarding them. We will now take up the construction of the Acts in question as to the rights granted under them for appropriation of water, both prior and subsequent to the time of the passage of the Acts, and against which the subject of the rights of those receiving patents prior to the Acts is not involved.[9]

§ 617. **Construction of Acts of 1866 and 1870—No new system adopted by Acts.**—The Acts of Congress of 1866 and 1870 were not intended to, and did not adopt any new system governing the right to the use of waters, by its appropriation from the natural stream or other bodies flowing over the public domain, or for the acquisition of rights of way over the public lands for ditches and canals for the purpose of conducting the water to the place of use, than had been in actual practice by the miners and settlers in the Western part of this country for at least 18 years prior to 1866, the date of the passage of the first Act.[1] Neither was there any change of policy adopted by the General Government in enacting these laws, from what had been its policy during the years before their enactment, by its acquiescence in, and the encouragement of the doctrine of appropriation. Such an acquiescence in, and recognition and encouragement of, all vested rights that the Supreme Court of the United States held they were not under the necessity of relying on the statute for their protection, but which the Government had, by its conduct, recognized and encouraged and was bound to protect even before the passage of the Act of 1866.[2] The Acts themselves were very brief and contained but two short sections, and instead of adopting any new rule, they simply recognized, sanctioned, acknowledged, and confirmed the general system already recognized and acknowledged and established by the local customs, laws, the decisions of the Courts, and by statutory enactment, and provided for the continuation of that system in the future.[3] As stated by the Supreme Court of the United States: "The effect of this statute was to recognize, so far as the United States are concerned,

3 That the Acts were prospective in effect, see Secs. 618, 619.

the validity of the local customs, laws, and decisions of Courts in respect to the appropriations of water."[4]

As was said by Mr. Justice Miller in delivering the opinion of the Court in Broder v. Natoma Water & Mining Co.:[5] "We are of the opinion that it is the established doctrine of this Court that rights of miners, who had taken possession of mines and worked and developed them, and the rights of persons who had constructed canals and ditches to be used in mining operations and for purposes of agricultural irrigation, in the region where such artificial use of the water was an absolute necessity, are rights which the Government had, by its conduct, recognized and encouraged and was bound to protect before the passage of the Act of 1866, and that section of the Act which we have quoted was rather a voluntary *recognition of a pre-existing right of possession,* constituting a valid claim to its continued use, than the establishment of a new one. This subject has so recently received our attention, and the grounds on which this construction rests are so well set forth in the following cases, that they will be relied on without further argument."[6]

And, as stated by the Supreme Court of Nevada: "We are of the opinion that the ninth section of the Act of Congress confirmed to the owners of water rights on the public lands of the United States the same rights which they held under the local customs,

laws, and decisions of the Courts prior to its enactment; that the Act of Congress did not introduce, and was not intended to introduce, any new system, or to evince any new or different policy upon the part of the General Government; that it recognized, sanctioned, protected, and confirmed the system already established by the customs, laws, and decisions of Courts, and provided for its continuance.[7]

But the Acts did not grant any right not "recognized and acknowledged by the local customs, laws, and decisions of the courts."[8] However, the purpose of Congress was to recognize the legislation of a Territory as well as of a State.[9]

**§ 618. Construction of Acts of 1866 and 1870—Effect of Acts as to the time the rights to water vested.**—The claims relative to the use of water by appropriation which were affected by the

Rep. 775, where the Court said: "The Act of Congress of July 26, 1866, authorizing the diversion of water flowing through the public domain, was the acknowledgment of a previous right instead of the creation of a new one."

"It was only the same rule as that by which possession of mining claims was recognized." Meng v. Coffey, 67 Neb. 500, 93 N. W. Rep. 713, 60 L. R. A. 910, 108 Am. St. Rep. 697.

"The customs alluded to in the Act of 1866 are the customs alluded to in the history of the doctrine of appropriation already given." Clark v. Allaman, 71 Kan. 206, 80 Pac. Rep. 571, 70 L. R. A. 971; Osgood v. El Dorado etc. Co., 56 Cal. 571, 5 Morr. Min. Rep. 37; Jacob v. Day, 111 Cal. 578, 44 Pac. Rep. 243; Pomeroy on Riparian Rights, Secs. 17, 28.

[8] Titcomb v. Kirk, 51 Cal. 288, 5 Morr. Min. Rep. 10; Osgood v. El Dorado W. Co., 56 Cal. 571, 5 Morr. Min. Rep. 37.

[9] Gutierres v. Albuquerque etc. Co., 188 U. S. 553, 47 L. Ed. 588, 23 Sup. Ct. Rep. 338; affirming 10 N. M. 177, 61 Pac. Rep. 357.

Acts of 1866 and 1870 may be divided into two classes: First, those claims which by priority of possession had vested and accrued prior to the time of the passage of the Act of 1866, and against which the rights of patentees who had received their patents prior to the Act were not involved;[1] and, second, those claims which by priority of possession vested and accrued subsequent to the passage of the Act; and, of course, where the claims under each class were recognized and acknowledged by the local customs, laws, and decisions of the Courts. As to the rights under the first class, the statute provides that their possessors and owners "shall be maintained and protected in the same." The Act of 1866 therefore ratified, validated, and confirmed all the water rights then existing at the time of its passage, whenever the same were held by a priority of possession and were recognized and acknowledged by the local customs, laws, and decisions of the Courts.[2]

The greatest effect which the Acts had was in regard to the second class of claims mentioned above, or those claims to the right to the use of the water which vested and accrued subsequent to the passage of the Act of 1866. Although both the original Act of 1866 and that of 1870, amending and supplementing the first Act,[3] had in view chiefly the protection of existing appropriations rather than future ones,[4] it was but very shortly after their passage that they were construed by the Courts to apply as well to all appropriations in the future, which were also prior in time and were also recognized and acknowledged by the local customs, laws, and de-

1 For effect of Acts as against patentees of the Government prior to 1866, see Sec. 615.

2 For rights of way granted under the Acts, see Rights of Way, Secs. 931-934.

See the cases cited in the previous section.

"In other words, the United States, by the section, said that whenever rights to the use of water by priority of possession had become vested and were recognized by the local customs, laws, and decisions of the courts, the owners and possessors should be protected in them." Jefferson v. Kirk, 98 U. S. 453, 25 L. Ed. 240, 4 Morr. Min. Rep. 504; Broder v. Natoma W. Co., 101 U. S. 274, 25 L. Ed. 790, 5 Morr. Min. Rep. 33, affirming 50 Cal. 621; Atchison v. Peterson, 87 U. S. 20 Wall. 507, 22 L. Ed. 414, 1 Morr. Min. Rep. 583; Basey v. Gallagher, 87 U. S. 20 Wall. 670, 22 L. Ed. 452.

One of the objects of the Act of 1866 was the confirmation of all existing water rights. Hobart v. Ford, 6 Nev. 77.

See, also, Jacob v. Lorenz, 98 Cal. 332, 33 Pac. Rep. 119.

3 For these Acts, see Secs. 611, 615.

4 "The protection of existing rights against national spoliation was the primary object." Wiel on Water Rights, 2d Ed., 1908, p. 26.

cisions of the Courts. In other words, the Court construed the Act of Congress of 1866 to be prospective in its operation, and to apply to all appropriations made in the future. This was decided by the Federal Court as early as 1872,[5] and since that date it has been construed many times to the same effect by the Courts. And, thus it happened that under this liberal construction of these Acts, they not only recognized and protected existing claims, the rights to which had vested prior to the passage of the Act of 1866, but they also now recognize and protect all such claims which have vested under the same rules since the date of the passage of the Act down to the present time. In other words, the Act not only recognized the individual claims then existing, but it also recognized the *system* under which the right to these claims was acquired, which we have designated as the Arid Region Doctrine of appropriation, and declared that system to be a valid method under which existing rights to water, and rights of way for the purpose of conducting the water to the place of use, had been acquired, and under which others might be acquired in the future. As said by Mr. Justice Brewer, in rendering the opinion of the Supreme Court of the United States, in a case decided in 1899, "The effect of this statute was to recognize, so far as the United States are concerned, the validity of the local customs, laws, and decisions of Courts in respect to the appropriation of water."[6] Again,

[5] The Act of Congress of July 26, 1866, 14 Stat. L. 253, is prospective in its operation. Union M. & M. Co. v. Ferris, 2 Sawy. (U. S.) 176, 24 Fed. Cas. No. 14,371, 8 Morr. Min. Rep. 90.

See, also, Beaver Brook Res. Co. v. St. Vrain Res. Co., 6 Colo. App. 130, 40 Pac. Rep. 1066.

The Act applies to water rights accrued since as well as before its passage. Jacob v. Lorenz, 98 Cal. 332, 33 Pac. Rep. 119.

We may be excused in remarking, in passing, that this construction of the courts probably did more toward the material building up of this Western country than any other construction of any law by any court.

[6] U. S. v. Rio Grande etc. Co., 174 U. S. 690, 43 L. Ed. 1136, 19 Sup. Ct. Rep. 770.

"It recognized, sanctioned, protected, and confirmed the system already established by the customs, laws, and decisions of courts, and provided for its continuance." Chief Justice Hawley, in Jones v. Adams, 19 Nev. 78, 6 Pac. Rep. 442, 3 Am. St. Rep. 788.

See, also, Gutierres v. Albuquerque etc. Co., 188 U. S. 545, 47 L. Ed. 588, 23 Sup. Ct. Rep. 338, affirming Id., 10 N. M. 177, 61 Pac. Rep. 357; Union M. & M. Co. v. Ferris, 2 Sawy. (U. S.) 176, 24 Fed. Cas. No. 14,371, 8 Morr. Min. Rep. 90; Beaver Brook Res. Co. v. St. Vrain Res. Co., 6 Colo. App. 130, 40 Pac. Rep. 1066; Jacob v. Lorenz, 98 Cal. 332, 33 Pac. Rep. 119;

as said by Mr. Justice Peckham in another case: "The Government enacts that any one *may* go upon its public lands for the purpose of procuring water, digging ditches for canals, etc., and when rights have become vested and accrued which are recognized and acknowledged by the local customs, laws, and decisions of Courts, such rights are acknowledged and confirmed."[7] And again, as said by Mr. Justice Brown in still another case: "But in order to establish any rights under the statute it was incumbent upon the defendants to prove their priority of possession, or at least to disprove priority on the part of the plaintiff. The question, Who had acquired this priority of possession? was not a Federal question, but a pure question of fact, upon which the decision of the State Court was conclusive."[8] The Court thus recognized the validity of the laws of the State of Utah under which the rights were claimed and also held that the decision of its Supreme Court was conclusive under those laws as to the respective rights of the parties. It is to be noted that the rights claimed in all of these cases vested and accrued long subsequent to the Act of 1866. And, although the language in the Broder case, one of the early cases

Brosnan v. Harris, 39 Ore. 148, 65 Pac. Rep. 867, 54 L. R. A. 628, 87 Am. St. Rep. 649.

"It has, as we interpret this law, authorized any person wishing to construct a canal or ditch for mining or agricultural purposes to construct it over any public land." Hobart v. Ford, 6 Nev. 77, 15 Morr. Min. Rep. 236.

As was said in the case of Gold Hill etc. Co. v. Ish, 5 Ore. 104, 11 Morr. Min. Rep. 635, by the Oregon Court: "By this Act the mineral lands of the public domain, both surveyed and unsurveyed, are declared to be free and open to exploration and occupation to all citizens of the United States, and those who have declared their intentions to become citizens, subject to such regulations as may be prescribed by law. . . . Whatever difference of opinion may exist as to the tenure by which mining claims were held prior to the passage of this Act of Congress, it is clear that, by the Act, the general Government extended to all in possession of mining claims, and to all subsequently locating and denouncing mines containing precious metals, a guarantee of protection in their occupancy so long as the mines are operated and worked."

[7] Bear Lake etc. Co. v. Garland, 164 U. S. 1, 41 L. Ed. 327, 17 Sup. Ct. Rep. 7, affirming *Id.*, 9 Utah 350, 34 Pac. Rep. 368.

[8] Telluride etc. Co. v. Rio Grande W. R. Co., 175 U. S. 639, 44 L. Ed. 305, 20 Sup. Ct. Rep. 245, dis. writ 16 Utah 125, 51 Pac. Rep. 146. The same language was adopted by Mr. Justice McKenna in a second appeal of the same case. See 187 U. S. 569, 47 L. Ed. 307, 23 Sup. Ct. Rep. 178, dis. writ 23 Utah 22, 63 Pac. Rep. 995.

before the Supreme Court of the United States, seems to limit the effect of the Act to claims existing at the time of the passage of the Act, by stating "the section of the Act which we have quoted was rather a voluntary recognition of a pre-existing right of possession, constituting a valid claim to its continued use, than the establishment of a new one,"[9] the question as to the rights of parties which had vested subsequent to the passage of the Act was not raised in the case. The rights in that case had vested in 1853, and the Court simply confined its opinion to the facts in that particular case, which comes under the first class of claims discussed in the first part of this section. However, in the case of Jennison v. Kirk, where the ditch in controversy was constructed in 1873, its validity was not questioned.[10]

In the face of the later decisions of the Supreme Court of the United States from which we quoted, as well as the universal construction of the Acts of 1866 and 1870, holding to the effect that all claims which have vested subsequent to the passage of the Acts, where the other conditions were in accordance with the law, were valid, it is not stating it too strongly to slightly change the language used by the Court in the Border case and quoted above, that the Act of 1866 was rather a voluntary recognition of a pre-existing *system* of appropriation, constituting a valid right to its continued operation, than the establishment of a new one. And it has thus become a part of the law of the land, of which every citizen is entitled to avail himself, and of which every purchaser from the United States is bound to take notice. The Arid Region Doctrine of appropriation thus established was not a temporary thing, to pass out of existence as soon as the rights of appropriation, which had vested prior to the Act of 1866, had been adjusted. But, as we have said, it was born out of the necessities of our conditions in the Arid West.[11] It was the growth of years, and permanent in its character. And the Acts of 1866 and 1870 fixed the status of water rights acquired by appropriation with respect to the public lands of the United States, both where those rights had vested and accrued prior to the passage of the Acts, and also subsequent thereto

[10] Jennison v. Kirk, 98 U. S. 453, 25 L. Ed. 240. See, also, Jacob v. Lorenz, 98 Cal. 332, 33 Pac. Rep. 119.

[11] For physical conditions causing passage of Acts, see Secs. 588, 589.

even down to the present time, for these Acts are still in our statutes and in full force and effect.

**§ 619. Effect of Acts upon title of appropriators—Equivalent to a grant.**—The effect of the Acts of Congress of 1866 and 1870 upon the rights claimed by possessors was that of a direct grant by the United States to the claimant where the claimant was complying with the local laws, customs, and statutes of the State within which the claim was made. As was said by the Supreme Court of the United States in construing the Act of 1870 in the case of Broder v. Natoma Mining Co.:[1] "As to the canal of the defendant, so far as it ran through the land of the United States, at the date of this Act it was an *unequivocal grant* of the right of way, if it was no more."[2] It is to be noted that under the same Act, it provided that possessors of mining claims might upon complying with the terms of the Act, acquire a patent to such claims. But, upon the other hand, no provisions were made in the Act for acquiring a patent to water rights, although it is held to be the universal rule that where a claimant has complied with local customs, rules, and regulations, and statutory laws of the State wherein the claim is made, that he receives a title to such right to the use of water or to the right of way over the public land of the United States which is in effect the same as though he had received a patent therefor.

**§ 620. State regulation as the result of the Acts of 1866 and 1870.**—One of the results of the Acts of Congress of 1866[1] and 1870[2] in all of the States and Territories of the Western portion of the country where water was being appropriated and used under the Arid Region Doctrine, laws were enacted by the legislatures

1 101 U. S. 274, 25 L. Ed. 790, affirming 50 Cal. 621, 5 Morr. Min. Rep. 33.

2 See, also, Smith v. Hawkins, 110 Cal. 122, 42 Pac. Rep. 453, 19 Morr. Min. Rep. 243; Smith v. Denniff, 24 Mont. 20, 60 Pac. Rep. 398, 50 L. R. A. 737, 81 Am. St. Rep. 408; Wood v. Etiwanda Water Co., 122 Cal. 152, 54 Pac. Rep. 726; Welch v. Garrett, 5 Ida. 639, 51 Pac. Rep. 405, 19 Morr. Min. Rep. 193; Woodruff v. North Bloomfield etc. M. Co., 18 Fed. Rep. 753, 9 Sawy. 441; Union Mill & Mining Co. v. Ferris, 2 Sawy. 176, Fed. Cas. No. 14,372, 8 Morr. Min. Rep. 90; Farley v. Spring Valley etc. Co., 58 Cal. 142; Cottonwood Ditch Co. v. Thom, 39 Mont. 115, 121, 101 Pac. Rep. 825, 104 Pac. Rep. 281.

2 For copy of Act, see Sec. 615.

providing how the water might be appropriated,[3] for what purposes it might be used,[4] what changes might be made in the appropriation or use,[5] and how these rights might be maintained or lost,[6] and other provisions which seemed necessary in the respective jurisdictions to the enforcement of the doctrine.[7]

In general it may be said that these early laws were simple and usually merely adopted the main principles of appropriation as evolved by the early miners of California and sustained by the Supreme Court of that State, and afterwards ratified by the Acts of Congress of 1866 and 1870. Some of these original Acts are still in existence at the present time; others have been superseded by later and more elaborate codes upon the subjects of water and water rights. And, in fact, in most of the States, it can be said that during the last decade elaborate codes governing the whole subject of the acquisition of the right and use of water for irrigation and other purposes have been enacted. All of these laws as they exist today will be discussed in later portions of this work.[8] The California law upon the subject was adopted in 1872, and contained but 13 sections, the majority of which are still in existence and in full force and effect.[9] The statutes enacted in the other States and Territories were usually enacted after the adoption of the California statutory provisions relative to the acquisition of water rights. In the then Territory of Wyoming, however, and prior to the adoption of the California statute, the legislature passed an Act based upon the early California decisions upon the subject and providing for the appropriation and use of the waters within that Territory.[10] The Constitution of Colorado, adopted in 1876, declares the water of every natural stream not theretofore appropriated, within the State of Colorado, to be the property of the public.[11] Its code of irrigation laws afterwards followed. The

constitutional provisions of Colorado were largely followed in the constitutions of Wyoming and Idaho.[12] And so it continued until all of the Western States and Territories had adopted some legislation authorizing the appropriation of the waters of the natural streams within their respective jurisdictions for beneficial purposes.[13]

**§ 621. States adopting Arid Region Doctrine of appropriation.**—In every Western State there are in force laws which adopted the Arid Region Doctrine of appropriation, at least as one of the systems of laws within their respective jurisdictions, governing and controlling waters, the acquisition of water rights, and the use of the water. We have classified these States in a previous section of this work,[1] and to recapitulate here, we will state that there are 18 States which are formed out of the arid and semi-arid regions of the United States, which have adopted the Arid Region Doctrine of appropriation of waters for beneficial uses. These are, including the District of Alaska: Alaska, Arizona, California, Colorado, Idaho, Kansas, Montana, Nebraska, Nevada, New Mexico, North Dakota, Oklahoma, Oregon, South Dakota, Texas, Utah, Washington, and Wyoming.

In seven of these States, which are located within the very heart of the arid region, the common law of riparian rights, as to the flow of natural streams, and the use of the waters thereof, has been absolutely abrogated by statute or Court decision. These are Arizona, Colorado, Idaho, New Mexico, Nevada, Utah, and Wyoming.

In 11 of these States, counting Alaska, they have both systems, the Arid Region Doctrine of appropriation, and the common law of riparian rights. These are: Alaska, California, Kansas, Montana, Nebraska, North Dakota, Oklahoma, Oregon, South Dakota, Texas, and Washington.[2]

As we have seen in previous sections of this work, each State had the power to adopt either system or both systems governing the laws of the waters flowing within its boundaries. The Federal Gov-

ernment has left this subject entirely to each State to decide and, as stated by Mr. Justice Brewer in the case of Kansas v. Colorado, each State "may determine for itself whether the common law rule in respect to riparian rights or that doctrine which obtains in the arid regions of the West of the appropriation of waters for the purposes of irrigation, shall control. Congress can not enforce either rule upon any State."[3]

§ 622. **Desert Land Acts of March 3, 1877, and March 3, 1891, also strengthened and confirmed doctrine of appropriation.**—Congress did not let the subject of the Arid Region Doctrine of appropriation rest with the Acts of 1866 and 1870, which we have discussed in the previous sections.[1] By the Act of March 3, 1877, which was afterwards amended by the Act of March 3, 1891, Congress still further confirmed and strengthened the doctrine. Throughout all portions of the Arid West there were vast tracts of vacant and so-called "desert land," which still remained unsettled.[2] The lands along the streams and upon which the water could be easily conveyed were becoming rapidly taken up, but the desert land, as a general thing, lay further back from the stream upon the benches and mesas and upon which it was harder to conduct the water. These lands, although designated in the Act as desert, were in fact far from being such. Because they were covered with the wild growth of that part of the country is no indication of their desert character, but just the opposite. They were in fact no more desert from this fact than the lands of Ohio or Indiana, which were also covered with wild growth of trees and other vegetation. The soil of these lands was as rich as that of any lands to be found in any part of the country, regardless of their peculiar growth of sage brush and grease wood. It is the land which has no wild growth at all which must be considered desert. And these very lands have since, with the application of water for irrigation, become some of the most productive in the whole country. But the idea prevailed in Congress that these lands were desert and barren and practically worthless; but that there was a bare possibility that something might be done with them which, in a way, would make

[3] Kansas v. Colorado, 206 U. S. 46, 51 L. Ed. 956, 27 Sup. St. Rep. 655. See, also, Sec. 593.

[2] For the distinction between arid and desert land, see Sec. 5.

them produce something. And so, as an extra inducement, the "Act to provide for the sale of desert lands in certain States and Territories" was first passed in 1877. This Act was afterwards amended in 1891 in some particulars, and as so amended is now the law upon the subject.[3]

It is not our intention to discuss in all of their details the Desert Land Acts in this portion of our work, but we will leave this to another chapter.[4] The particular features of the Acts to which we wish here to call special attention are the provisions which are confirmatory to and strengthen the Arid Region Doctrine of appropriation, first sanctioned and ratified by Congress by the Acts of 1866 and 1870, and discussed in the previous sections.[5] The Act, after providing for the filing of the declaration by an applicant for a tract of desert land,[6] stating therein that he intends to reclaim the tract of land by conducting water upon the same within a period of three years thereafter, further provides: "That the right to the use of the water by the person so conducting the same on or to any tract of desert land (specified) shall depend upon *bona fide prior appropriation;* and that such right shall not exceed the amount of water *actually appropriated,* and necessarily used for the purpose of irrigation and reclamation." At this point the Act leaves the rights of the particular claimant, and provides generally for the rights of all appropriators of water for useful purposes in the following language: "And all surplus water over and above such actual appropriation and use, together with the water of all lakes, rivers, and other sources of water supply upon the public lands and not navigable, shall remain and *be held free for the appropriation* and use of the public for irrigation, mining, and manufacturing purposes subject to existing rights." Thus by this Act

[6] For the essentials for acquiring a tract of desert land, see Secs. 1296-1308.

all surplus water, or water to which vested rights had not theretofore attached, was absolutely dedicated by the United States, as proprietor, to the public or to individuals of the public, for the use for all beneficial purposes, the title to which might be acquired by appropriation.[7]

§ 623. **Desert Land Act—Construction of Act confirms the right of appropriation.**—The Desert Land Act [1] in no way repealed the previous Acts of Congress of 1866 and 1870 granting the right of appropriation of the waters flowing over the public domain, and discussed in our previous sections.[2] Neither did it add anything new to the previous Acts, as to the method of acquiring water rights by appropriation, or the extent of those rights, and it may be considered as simply confirmatory of the earlier statutes of Congress in this respect.[3] There was one thing, however, which the Act did, and that was to still further declare the policy of the United States, through its Congress, that all waters flowing over the public domain, where rights to the same had not previously vested, as far as the United States were concerned as the proprietor thereof, were subject to the right of appropriation for beneficial uses. The portion of the proviso inserted in the first section of the Act that "All surplus water over and above such actual appropriation and use, together with the water of all lakes, rivers, and other sources of water supply upon the public lands and not navigable, shall remain and be held free for appropriation and use of the public," for the purposes named, was not necessary, or in fact pertinent to the filing of the declaration of an applicant for a desert land entry, to which the rest of the section relates. And this part of the proviso is a direct expression of the will of Congress that all the public waters then remaining might be so taken and used for beneficial purposes, but subject always to existing rights.[4] Hence the only possible construction of this portion of

7 For the United States as political sovereign, see Sec. 448.

4 That the water might be appropriated through the intermediary of a corporation, see Gutierres v. Albuquerque etc. Co., 188 U. S. 545, 47 L.

the Act of 1877 is that it was an additional confirmation and consent to the Arid Region Doctrine of appropriation. As was said by the Court in a Wyoming case: "If any consent of the General Government was primarily requisite to the inception of the rule of prior appropriation, that consent is to be found in the several Acts of Congress, beginning with the Act of July 26, 1866, and including the Desert Land Act of March 3, 1877."[5] We do not think that this Act went to the extent, as seems to be held in a recent Oregon case,[6] to repeal the common law of riparian rights in those Western States which also adhere to that rule; neither could it go to that extent. The United States, as the owner and proprietor of all of the unappropriated waters flowing over its public lands, simply released its claim to these waters, where it did not interfere with navigation or with its own uses,[7] and left the sovereign jurisdiction to the laws of the States and Territories through which they flow. And each State may determine for itself as to the rule of law which shall govern the waters within its boundaries, whether it shall be the common law of riparian rights or the Arid Region Doctrine of appropriation, or both rules. Congress can not abrogate the law of riparian rights where a State law provides for the same. Neither can Congress "enforce either rule upon any State."[8]

It is, however, as we have discussed in a previous section, within the power of the Supreme Court of Oregon to reject the common

law theory on riparian rights upon the ground that it is inapplicable to the conditions within the State of Oregon. In the decision rendered by the Supreme Court of the United States in Boquillas Land & Cattle Co. v. Curtis,[9] Mr. Justice Holmes, in delivering the opinion of the Court, while deeming it unnecessary to decide whether lands in the arid regions patented after the Act of March 3, 1877, are not excepted, subject to the rule that priority of appropriation gives priority of right by virtue of that Act construed with the Act of 1866, said: "The Supreme Court of Arizona has rendered the decision to the effect on plausible grounds."[10]

**§ 624. Later Acts of Congress confirming doctrine of appropriation.**—There are a number of other Acts of Congress which still further confirm and sanction the doctrine of appropriation of the waters upon the public lands of the United States for beneficial purposes. These Acts will all be discussed in another portion of this work,[1] but we will make a hasty review of them here.

Among these Acts may be found the Act of March 3, 1891, granting rights of way through the public lands and reservations to canal or ditch companies for irrigation.[2] In construing the effect of this Act in connection with the Desert Land Act of 1877, discussed in our previous sections,[3] Mr. Justice Brewer, in speaking for the Supreme Court of the United States, said: "Obviously by these Acts, so far as they extended, Congress recognized and assented to the appropriation of water in contravention to the common law rule as to continuous flow."[4] The last part of section 18

of the Act of March 3, 1891, provides: "And the privilege herein granted shall not be construed to interfere with the control of water for irrigation and other purposes under the authority of the respective States and Territories." By this clause in the Act the right of appropriation was directly recognized, as under the laws of all of the States and Territories affected by the Act the right of appropriation was provided for at the time.

The next important Act was the Act of August 18, 1894, commonly called the Carey Act,[5] which Act also contained provisions for the reclamation of the desert lands, by the appropriation of water for the irrigation of the same. This Act will be fully discussed in a subsequent chapter. The only point which we wish to call attention to here is that this Act was in conformity with the general policy of the Government, that as far as it was concerned the waters flowing upon the public domain might be appropriated for irrigation as one of the beneficial uses; and, as a special inducement for the reclamation of lands by this means by a State accepting the provisions of the Act, the Government agreed to grant to the State from time to time as the work of reclamation proceeded as in the Act provided, "free of cost of survey or price of such desert lands, not exceeding 1,000,000 acres in each State."[6]

The last important Act of Congress, still further confirming the right of appropriation, was the National Reclamation Act, or the Act of June 17, 1902,[7] by which Congress confers the power upon the General Government to make appropriations itself, and also to acquire other rights to water already appropriated, and to sell the right to the use thereof for irrigation to settlers of tracts of land not exceeding 160 acres.[8] And the direct recognition and further confirmation of the general right of appropriation and of

[8] Sec. 5 . . . "No right to the use of water for land in private ownership shall be sold for a tract not exceeding one hundred and sixty acres to any one land owner."

the laws of the various States and Territories under which these appropriations have been made, and are now being made, is to be found in section 8 of the Act. This section provides: "That nothing in this Act shall be construed as affecting or intended to affect or in any way interfere with the laws of any State or Territory relating to the control, appropriation, use, or distribution of water used in irrigation, or any vested rights acquired thereunder, and the Secretary of the Interior, in carrying out the provisions of this Act, shall proceed in conformity with such laws."

Other Acts of Congress have also been passed from time to time which are unnecessary in this discussion, but which tend to show that the Arid Region Doctrine of appropriation is now one of the settled policies of the United States which has been embodied in the laws of Congress. This doctrine, which, as we have seen, originated with the customs and regulations of the early miners of California,[9] has now become one of the settled laws of Congress as well as in all of the States and Territories of the arid and semi-arid West. From the first Act in 1866 to the National Reclamation Act in 1902, in fact all of the Acts of Congress relating to the subject have been a series of ratifications and confirmations of this doctrine.

§ 625. **The Acts of Congress must not be construed as an absolute dedication of all the waters for appropriation.**—The various Acts of Congress discussed in the preceding sections [1] must not be construed as an absolute dedication of all of the waters flowing over the public lands of the United States for appropriation for beneficial uses. Upon the other hand, by the more recent rulings of the United States Supreme Court, it is held that, although the power of changing the common law rule as to streams within its boundaries belongs to each State, yet two limitations must be recognized: First, that in the absence of specific legislation of Congress a State can not, by its legislation, destroy the right of the United States, as the owner of lands bordering on a stream, to the continued flow of its waters; so far, *at least*, as may be necessary for the beneficial uses of the Government property. Second, that it is limited to the superior power of the General Government to secure the uninterrupted navigability of all the navi-

[9] For the history of the doctrine, see Secs. 595-624.

[1] See Secs. 611, 615, 622-624.

gable streams within the limits of the United States. In other words, the Court holds that the jurisdiction of the United States over the natural water courses is superior and paramount to the jurisdiction of any State; and that all needed measures may be taken by the Government to preserve the water courses of the country, for *"at least"* the two purposes named above, *"even against the action of any State,"* in authorizing, under its laws, appropriations to be made.[2] The Court, especially in the Kansas-Colorado and the Rio Grande cases, clearly intimates, to say the least, that the Government might also make other claims to the water than for its use for navigation, or as a riparian owner. Whether it will do so, time alone can tell.

§ 626. **The result of the doctrine of appropriation.**—Our history of the doctrine of appropriation would not be complete were we to pass unnoticed the vast number of claims for the use of water flowing over the public domain which have had their inception and have been perfected under the local laws of the respective Western States and Territories since the Acts of Congress of 1866 and 1870. The fact is well known that in every Western State both in the arid and semi-arid regions, the inception of thousands of these claims originated long subsequent to the passage of the Acts in question. In every locality, where there are arable land and water in near proximity to each other, throughout this whole Western country water has been diverted from the natural streams and lands cultivated by the means of irrigation. In fact the acts of appropriation and the amount of water diverted and used under the Arid Region Doctrine are many times more after the Acts of Congress of 1866 and 1870 than there were before. It was principally through this means that the country has become habitable; and, as the result of its condition, has become settled, first by the early pioneers, and now by all classes

2 Kansas v. Colorado, 206 U. S. 46, 51 L. Ed. 956, 27 Sup. Ct. Rep. 655; United States v. Rio Grande Dam & Irr. Co., 174 U. S. 690, 43 L. Ed. 1136, 19 Sup. Ct. Rep. 770; Winters v. United States, 207 U. S. 564, 52 L. Ed. 340, 28 Sup. Ct. Rep. 207; United States v. Winans, 198 U. S. 371, 49 L. Ed. 1089, 25 Sup. Ct. Rep. 662.

Impairment of the navigability of stream by the diversion of water for irrigation, Secs. 353-356.

of people that can be found in the Eastern States. Great cities have grown up and all kinds of business and manufacturing enterprises are being carried on. In the country districts great irrigation projects have been carried to complete success, in some cases including hundreds of thousands of acres of land. The inception of the rights to the waters for the irrigation of many of these lands originated since the Acts of Congress in question. These acts of appropriation are still going on in every Western State. There are still waters from the larger rivers which, by means of large investments of capital, may be diverted and applied to the irrigation of large tracts of now vacant lands. But the waters from the smaller sources of supply are nearly all appropriated, so that any extension in that direction, except by more economical use and the storage of the waters which run off during the non-irrigating period, is impossible. But the work of reclamation is bound to go on until the maximum limit is reached. The National Government, through the Reclamation Act, will be of great assistance toward this end, while, at the same time, it does not seem to be a rival to or hinder private enterprises. In fact, private enterprises seem to have prospered more since the Act was passed. The two work in harmony together and toward the common end, the settlement of the Western country and the development of its vast resources.

Chapter 30. THE CIVIL LAW IN THE UNITED STATES..... 570-584

## PART VIII.

### THE APPROPRIATION OF WATER FOR BENEFICIAL USES.

Chapter 31. ARID REGION DOCTRINE OF APPROPRIATION.. 585-594
Chapter 32. HISTORY OF DOCTRINE OF APPROPRIATION.... 595-626

Volume I contains Secs. 1-626; Volume II, Secs. 627-1211; Volume III, Secs. 1212-1704; Volume IV, Secs. 1705-2129.

## VOLUME TWO.

SECTIONS

Chapter 33. TWO THEORIES AS TO LEGAL RIGHT..... 627-640
Chapter 34. WHAT WATERS MAY BE APPROPRIATED..... 641-669
Chapter 35. ON WHAT LANDS DIVERSION MAY BE MADE.. 670-677
Chapter 36. WHO MAY APPROPRIATE WATER..... 678-689
Chapter 37. THE PURPOSE OF THE APPROPRIATION..... 690-705
Chapter 38. METHODS OF APPROPRIATION WITHOUT CODE 706-732
Chapter 39. REASONABLE DILIGENCE..... 733-741
Chapter 40. THE DOCTRINE OF RELATION..... 742-756

## PART IX.

### THE NATURE, EXTENT, AND CHARACTER OF RIGHTS ACQUIRED TO WATER BY APPROPRIATION, RIGHTS OF WAY, AND THE POLLUTION OF WATERS.

Chapter 41. THE NATURE AND CHARACTER OF A WATER RIGHT ..... 757- 774
Chapter 42. RIGHTS TO WATER AS BETWEEN APPROPRIATORS ..... 775- 803
Chapter 43. APPROPRIATION AS AGAINST CONGRESSIONAL GRANTS ..... 804- 809
Chapter 44. APPROPRIATION AS AGAINST RIPARIAN RIGHTS ..... 810- 823
Chapter 45. MEANS OF THE USE AND CHARACTER OF THE WORKS ..... 824- 836
Chapter 46. RESERVOIR AND STORAGE RIGHTS..... 837- 846
Chapter 47. MILL AND POWER RIGHTS..... 847- 855
Chapter 48. CHANGES WHICH MAY BE MADE..... 856- 873
Chapter 49. ECONOMICAL USE AND THE SUPPRESSION OF WASTE ..... 874- 916
Chapter 50. CONTRACTS RELATING TO WATER RIGHTS.... 917- 926
Chapter 51. RIGHTS OF WAY OVER PUBLIC DOMAIN..... 927- 971
Chapter 52. RIGHTS OF WAY OVER PRIVATE LANDS..... 972- 993
Chapter 53. SALE AND ALIENATION OF WATER RIGHTS AND RIGHTS OF WAY..... 994-1032
Chapter 54. RIGHTS ACQUIRED BY PRESCRIPTION..... 1033-1058
Chapter 55. RIGHTS ACQUIRED BY EMINENT DOMAIN.... 1059-1098
Chapter 56. ABANDONMENT AND FORFEITURE..... 1099-1120
Chapter 57. THE DOCTRINE OF ESTOPPEL..... 1121-1128
Chapter 58. THE POLLUTION OF WATERS..... 1129-1147

Volume I contains Secs. 1-626; Volume II, Secs. 627-1211; Volume III, Secs. 1212-1704; Volume IV, Secs. 1705-2129.

## PART X.

### SUBTERRANEAN WATERS AND RIGHTS ACQUIRED THERETO.

SECTIONS

Chapter 59. SUBTERRANEAN WATERS IN GENERAL—CLASSIFICATION ..... 1148-1152
Chapter 60. SUBTERRANEAN WATER COURSES..... 1153-1165
Chapter 61. ARTESIAN WATERS..... 1166-1184
Chapter 62. PERCOLATING WATERS..... 1185-1211

---

# VOLUME THREE.

## PART XI.

### INTERNATIONAL, INTERSTATE, FEDERAL, STATE, DISTRICT, AND MUNICIPAL CONTROL.

Chapter 63. INTERNATIONAL CONTROL..... 1212-1220
Chapter 64. INTERSTATE CONTROL..... 1221-1234
Chapter 65. THE NATIONAL RECLAMATION ACT..... 1235-1286
Chapter 66. THE DESERT LAND ACTS..... 1287-1311
Chapter 67. THE CAREY LAW..... 1312-1336
Chapter 68. THE LAWS OF STATE CONTROL..... 1337-1367
Chapter 69. STATE CONTROL OF WATER RATES..... 1368-1385
Chapter 70. STATE IRRIGATION DISTRICT LAWS..... 1386-1432
Chapter 71. CONTROL BY MUNICIPAL CORPORATIONS..... 1433-1448

## PART XII.

### CONTROL BY PRIVATE WATER COMPANIES.

Chapter 72. SUBJECT IN GENERAL AND CLASSIFICATION OF PRIVATE WATER COMPANIES..... 1449-1452
Chapter 73. UNINCORPORATED COMPANIES..... 1453-1463
Chapter 74. ORGANIZATION AND POWERS OF CORPORATIONS ..... 1464-1478
Chapter 75. MUTUAL WATER CORPORATIONS..... 1479-1489
Chapter 76. CORPORATION FOR PROFIT..... 1490-1508
Chapter 77. CONTRACTS WITH COMPANIES..... 1509-1529

Volume I contains Secs. 1-626; Volume II, Secs. 627-1211; Volume III, Secs. 1212-1704; Volume IV, Secs. 1705-2129.

## PART XIII.

### ADJUDICATION AND PROTECTION OF RIGHTS—INJURIES TO RIGHTS AND REMEDIES THEREFOR.

SECTIONS

Chapter 78. THE ADJUDICATION OF WATER RIGHTS IN EQUITY ..... 1530-1566
Chapter 79. STATUTORY ADJUDICATION OF WATER RIGHTS 1567-1584
Chapter 80. DETERMINATION OF WATER RIGHTS BY BOARDS ..... 1585-1595
Chapter 81. PROTECTION OF RIGHTS BY INJUNCTION..... 1596-1647
Chapter 82. PROTECTION BY MISCELLANEOUS ACTIONS.. 1648-1659
Chapter 83. ACTIONS FOR DAMAGES..... 1660-1704

---

# VOLUME FOUR.

## PART XIV.

### SPECIAL FEATURES AND STATUTORY LAWS OF THE ARID AND SEMI-ARID STATES.

Chapter 84. ALASKA ..... 1705-1710
Chapter 85. ARIZONA ..... 1711-1723
Chapter 86. CALIFORNIA ..... 1724-1768
Chapter 87. COLORADO ..... 1769-1804
Chapter 88. HAWAII ..... 1805-1816
Chapter 89. IDAHO ..... 1817-1843
Chapter 90. KANSAS ..... 1844-1861
Chapter 91. MONTANA ..... 1862-1880
Chapter 92. NEBRASKA ..... 1881-1899
Chapter 93. NEVADA ..... 1900-1923
Chapter 94. NEW MEXICO..... 1924-1941
Chapter 95. NORTH DAKOTA..... 1942-1957
Chapter 96. OKLAHOMA ..... 1958-1972
Chapter 97. OREGON ..... 1973-1997
Chapter 98. PHILIPPINE ISLANDS..... 1998-2009
Chapter 99. PORTO RICO..... 2010-2023
Chapter 100. SOUTH DAKOTA..... 2024-2039
Chapter 101. TEXAS ..... 2040-2053
Chapter 102. UTAH ..... 2054-2075
Chapter 103. WASHINGTON ..... 2076-2096
Chapter 104. WYOMING ..... 2097-2129

# TABLE OF CONTENTS.

## VOLUME TWO.

## COMPLETE TABLE OF CONTENTS OF VOLUME TWO BY SECTIONS AND PAGES.

### CHAPTER 33.

### TWO THEORIES AS TO LEGAL RIGHT.

SECTIONS PAGES

627. Classification—Scope of chapter..... 1098
628. California and Colorado theories distinguished..... 1099
629. California theory—Rights by appropriation—Title based on grant from the Government..... 1100
630. California theory—Rights by appropriation based on grant—Authorities discussed ..... 1100
631. California theory—Riparian rights—Title also based on grant from the Government..... 1103
632. Colorado theory of State ownership..... 1105
633. The Colorado theory of State ownership—Other States following Colorado rule..... 1106
634. Colorado theory of State ownership—Authorities discussed..... 1109
635. Dedication by a State of its waters to the State or public..... 1111
636. Conclusions as to the two theories—Original ownership of the United States ..... 1112
637. Conclusions as to the two theories—Title claimed by United States by Acts of Congress..... 1113
638. Conclusions as to the two theories—Acts of Congress ratifying constitution containing dedication provisions..... 1116
639. Conclusions as to the two theories—Continuous assertion of title in the United States by the courts..... 1118
640. Conclusions as to the two theories..... 1123

*The index references are to pages.*

## CHAPTER 34.

## WHAT WATERS MAY BE APPROPRIATED.

SECTIONS PAGES

641. In general—Scope of chapter..... 1125
642. The waters of streams or water courses..... 1126
643. The present area of unappropriated and unreserved public lands—Also the present area of National Forests..... 1127
644. Waters flowing over the public lands of the United States—Presumption ..... 1127
645. Waters flowing partly over the public and partly over private lands 1130
646. Waters flowing entirely upon private lands..... 1130
647. Waters flowing over the public lands of a State..... 1133
648. The waters of springs..... 1134
649. Surface tributaries to water courses or other bodies of waters..... 1137
650. Lakes and ponds..... 1139
651. Water from canyons, gorges, and ravines..... 1142
652. Sloughs ..... 1142
653. Flood or storm waters..... 1142
654. Surface waters—As such can not be appropriated..... 1145
655. Subterranean or underground waters..... 1147
656. Seepage water..... 1147
657. Artesian waters..... 1148
658. Developed water may be appropriated..... 1148
659. Surplus waters ..... 1149
660. Excess waters..... 1149
661. Waste water..... 1150
662. Appropriation from artificial channels..... 1153
663. Navigable waters..... 1154
664. Interstate waters..... 1156
665. International waters..... 1157
666. The current of a stream can not be appropriated as an appurtenant to the water right..... 1158
667. Waters reserved for Government use can not be appropriated by others ..... 1159
668. Waters reserved by Government for use on Indian reservations can not be appropriated by others..... 1161
669. Waters upon the National Forests may be appropriated..... 1163

## CHAPTER 35.

## ON WHAT LANDS DIVERSIONS MAY BE MADE.

670. Scope of chapter..... 1165
671. The present situation..... 1165
672. Authorities holding that a diversion can not be made on private lands ..... 1166

*The index references are to pages.*

SECTIONS PAGES

673. Authorities holding that a diversion can be made on private lands —Arid States ..... 1168
674. Authorities holding that a diversion can be made on private lands —Common law States ..... 1170
675. California authorities ..... 1171
676. California authorities—Cave v. Tyler ..... 1173
677. Point of diversion may be made on private lands—Our conclusions .. 1175

## CHAPTER 36.

## WHO MAY APPROPRIATE WATER.

678. Scope of chapter ..... 1179
679. In general ..... 1179
680. Right of Indians ..... 1181
681. Riparian owners may also be appropriators ..... 1182
682. Tenants in common ..... 1182
683. Several persons may make appropriations in severalty through the same ditch ..... 1184
684. Corporations—In general ..... 1185
685. Appropriations by aliens ..... 1186
686. Title to the soil in appropriators unnecessary ..... 1187
687. Squatters' rights ..... 1189
688. Rights of trespassers ..... 1190
689. Rights of lessees ..... 1191

## CHAPTER 37.

## THE PURPOSE OF THE APPROPRIATION.

690. Scope of chapter—What is a beneficial use ..... 1193
691. In general ..... 1194
692. Domestic purposes—Definition and limitations ..... 1195
693. For irrigation ..... 1196
694. For all mining purposes ..... 1198
695. For the furnishing of power—Light—Heat ..... 1199
696. For all municipal purposes ..... 1200
697. Appropriations for the purpose of health, recreation, and beauty, lawns and parks ..... 1201
698. For use by railroads ..... 1204
699. For making ice ..... 1204
700. For the propagation of fish ..... 1205
701. Water can not be appropriated for drainage ..... 1206
702. Temporary appropriation to preserve works—Flushing ditch ..... 1207
703. Appropriation may be made for the sale of water ..... 1208
704. Appropriation for storage ..... 1209
705. An appropriation can not be made for mere speculation and monopoly 1210

*The index references are to pages.*

## CHAPTER 38.

## METHODS OF APPROPRIATION WITHOUT CODE.

SECTIONS PAGES
706. Scope of chapter..... 1212
707. Appropriation of water—Definition..... 1213
708. Intent to apply to some beneficial use or purpose..... 1216
709. Intent to apply—Evidences of..... 1219
710. Notice of intent to appropriate water..... 1222
711. Notice—Form of—Before statute..... 1223
712. Notice—Form of—Under statutes..... 1224
713. Notice—Posting and recording..... 1226
714. Notice—Effect of..... 1228
715. Notice—Limits the extent of the water right claimed..... 1229
716. Notice—Alone not sufficient..... 1230
717. Physical acts necessary other than notice..... 1233
718. The works necessary must be constructed..... 1234
719. The works—Kind necessary..... 1236
720. The works—Kind necessary—Continued ..... 1239
721. The works—Completed when..... 1241
722. Diversion of the water—There must be an actual..... 1242
723. Diversion—What constitutes a diversion..... 1245
724. Diversion—Unreasonable methods interfering with rights of others—Schodde v. Twin Falls Land and Water Co..... 1246
725. Consummating act—There must be an actual use of the water appropriated ..... 1250
726. Consummating act—Under statute..... 1254
727. Consummating act—All of the water claimed must be used..... 1256
728. Consummating act—Concluding remarks as to when appropriation is complete ..... 1258
729. Modification of above rules by local law..... 1259
730. Notice—Appropriation without—Appropriation by diversion and use 1260
731. There can be no appropriation by prescription..... 1263
732. Summary of chapter..... 1264

## CHAPTER 39.

## REASONABLE DILIGENCE.

733. Scope of chapter..... 1266
734. Reasonable diligence in construction of works..... 1266
735. What efforts are necessary to constitute..... 1269
736. Reasonable diligence—How determined..... 1269
737. Works must be completed within what time..... 1271
738. Time within which water must be applied—Specific cases..... 1272
739. Illness—Pecuniary ability or inability affecting reasonable diligence 1276
740. Reasonable diligence for future needs..... 1278
741. Effect of reasonable diligence, or the lack of..... 1281

*The index references are to pages.*

## CHAPTER 40.

## THE DOCTRINE OF RELATION.

SECTIONS PAGES
742. Scope of chapter ..... 1284
743. Doctrine of relation—What it is ..... 1284
744. History of doctrine as applied to appropriations of water ..... 1286
745. Rule stated as applied to appropriation ..... 1288
746. In appropriation of water—From what act it relates ..... 1290
747. In appropriation of water—To what act it relates ..... 1291
748. Reason of doctrine as between appropriators ..... 1294
749. Effect of doctrine upon prior appropriators ..... 1295
750. Effect of doctrine upon subsequent appropriations ..... 1297
751. Effect of doctrine upon appropriators who do not comply with the statute ..... 1298
752. As between appropriators and Congressional grantees ..... 1299
753. As between appropriators and Congressional grantees—Railway companies—Grants in aid of construction ..... 1301
754. As between conflicting grantees ..... 1303
755. As applied to the rights of settlers ..... 1304
756. Effect of doctrine as between appropriators and settlers or purchasers of land ..... 1307

# PART IX.

## THE NATURE, EXTENT, AND CHARACTER OF RIGHTS ACQUIRED TO WATER BY APPROPRIATION, RIGHTS OF WAY, AND THE POLLUTION OF WATERS.

## CHAPTER 41.

## THE NATURE AND CHARACTER OF A WATER RIGHT.

757. Scope of this part of the work—Scope of chapter ..... 1311
758. What is a water right—Court decisions ..... 1312
759. Our definition of a water right ..... 1313
760. A water right is an exclusive right ..... 1314
761. The water must be appropriated according to law ..... 1316
762. It is but a conditional possessory right ..... 1317
763. The right is conditional upon continuous use ..... 1319
764. The right exists independent of the right to the ditch or other works 1320
765. The right exists independent of any property in the channel of the stream ..... 1322
766. Title or possession of land on stream unnecessary ..... 1323
767. Title or possession to any land unnecessary ..... 1324
768. A water right is property ..... 1326
769. A water right is real property ..... 1328

*The index references are to pages.*

SECTIONS PAGES
770. A water right is not an easement..... 1333
771. A water right is an incorporeal hereditament..... 1333
772. Title to the water before diversion..... 1337
773. Title to the water after diversion..... 1340
774. Water after diversion—Nature of property in..... 1342

## CHAPTER 42.

## RIGHTS OF WATER AS BETWEEN APPROPRIATORS.

775. Scope of chapter..... 1344
776. Priority of right..... 1345
777. The rights of the prior appropriator..... 1346
778. The date fixing the priority..... 1352
779. Priority—Circumstances under which question arises..... 1353
780. Prior appropriator's right to take all the water of a stream—Origin of rule..... 1355
781. Prior appropriator's right to take all the water of a stream—Authorities ..... 1357
782. Enjoyment of the right of priority..... 1361
783. The rights of subsequent or junior appropriators—In general..... 1363
784. The rights of subsequent as against those of prior appropriators.. 1366
785. In any event any appropriator is limited to the quantity of water actually needed and applied to a beneficial purpose..... 1369
786. Subsequent periodical appropriations..... 1369
787. Tacking rights..... 1373
788. Intermediate or temporary appropriations..... 1374
789. Enjoyment of subsequent appropriations..... 1376
790. Rotation or the use of accumulated flow of water..... 1379
791. Priority as between different uses..... 1380
792. Priority—As affected by constitutional or statutory preference rights 1381
793. Domestic purposes—Preference right for..... 1383
794. Theory of granting preference rights..... 1385
795. Classification of rights..... 1387
796. Prorating statutes..... 1388
797. Distribution of increase in volume of stream..... 1388
798. Mingled waters ..... 1390
799. Mingled waters—Intent to recapture..... 1391
800. Mingled waters—Must be no injury to other vested rights—Extent of right to recapture..... 1395
801. Right to flow of water to point of prior appropriator's use..... 1397
802. Right to natural flow of stream where it sinks below the surface before reaching appropriator's ditch..... 1400
803. Right to flow of water to point of subsequent appropriator's use.. 1403

*The index references are to pages.*

## CHAPTER 43.

## APPROPRIATION AS AGAINST CONGRESSIONAL GRANTS.

SECTIONS PAGES
804. Scope of chapter..... 1405
805. Review of subject..... 1405
806. Rights of prior grantees of Government to waters flowing over land 1408
807. Priority gives the better rights as between appropriators and grantees—In general..... 1409
808. Rights of prior appropriators as against rights of grantees..... 1411
809. Grants to States as affecting water rights..... 1414

## CHAPTER 44.

## APPROPRIATION AS AGAINST RIPARIAN RIGHTS.

810. Scope of chapter..... 1416
811. The two doctrines of water rights may exist in the same State..... 1417
812. Priority also gives the better right as between appropriators and riparian owners..... 1419
813. Appropriations made prior to riparian rights gave the better right even before statute..... 1420
814. Appropriations made prior to riparian rights give the better title after statute..... 1424
815. Riparian rights vested prior to appropriations give the better title.. 1428
816. Vested riparian rights in those States which afterward abrogated the common law rule..... 1431
817. Appropriations and riparian rights—Effect of Desert Land Act of 1877 ..... 1432
818. Mixed rights on the same stream—Some inconsistencies..... 1435
819. Mixed rights—Appropriations prior to vesting of riparian rights... 1437
820. Mixed rights—Appropriations subsequent to vested riparian rights—Rule in California..... 1437
821. Mixed rights—Appropriations subsequent to vested riparian rights—Rule in other States..... 1441
822. Mixed rights—Appropriations subsequent to vested riparian rights—Effect of Kansas-Colorado case..... 1444
823. Mixed rights on the same stream—Our conclusions..... 1446

## CHAPTER 45.

## MEANS OF THE USE AND CHARACTER OF THE WORKS.

824. Scope of chapter..... 1448
825. Means of the use of the water appropriated..... 1448
826. Right to construct dams..... 1449
827. Reservoir dams—Diverting dams..... 1452
828. Means of conducting the water to the place of use..... 1454

*The index references are to pages.*

SECTIONS PAGES
829. The right to construct ditches on the public lands..... 1455
830. The right to construct ditches on private lands..... 1455
831. The ditches of others may be used..... 1456
832. The natural channel of stream may be used for the ditch..... 1457
833. Ditches, canals, etc., are not in themselves easements..... 1460
834. Character of property in ditches, canals, and reservoirs..... 1462
835. Reservoirs and storage rights..... 1464
836. Character of construction of works—In general..... 1465

## CHAPTER 46.

## RESERVOIR AND STORAGE RIGHTS.

837. Scope of chapter..... 1469
838. Storage reservoirs..... 1469
839. Right to construct reservoirs on Government land..... 1471
840. Right to construct reservoirs on State and private lands..... 1472
841. Jurisdiction over the construction of reservoirs..... 1473
842. The right to store water..... 1474
843. The right of storage as against the rights of appropriators for immediate use..... 1477
844. "Direct irrigation," "immediate use," and "storage" distinguished 1479
845. The right of storage as against other reservoir rights..... 1484
846. The right to the use of stored water..... 1484

## CHAPTER 47.

## MILL AND POWER RIGHTS.

847. Scope of chapter..... 1486
848. The use of water for power purposes..... 1486
849. Importance of subject..... 1487
850. Who is to own and control the water power of the country?..... 1488
851. Recent action by States relative to power rights..... 1490
852. The development and transmission of power for general distribution a public use..... 1491
853. Right of a riparian owner at common law to make a reasonable use of the water for power purposes..... 1493
854. Under common law—Non-riparian transmission of power..... 1495
855. Use of water by appropriators for power purposes..... 1497

## CHAPTER 48.

## CHANGES WHICH MAY BE MADE.

856. Scope of chapter—Changes in general..... 1499
857. Point of diversion may be changed..... 1501
858. Point of diversion—Effect of change—Others must not be injured.. 1505
859. Changes in dams—Flooding lands..... 1508

*The index references are to pages.*

SECTIONS PAGES

860. Changes in location of ditch or canal..... 1510
861. Changes in the character of the works for conveying the water—As against the rights of the land owner..... 1513
862. Changes in the character of works for conveying the water—As against the rights of the ditch owner..... 1516
863. Changes in the mode of collecting the water..... 1517
864. Changing the channel of a stream—Changing back..... 1518
865. Changes in time of diversion..... 1520
866. Change of water from one watershed to another..... 1521
867. Changes in place of use—May be made where no injury is done the rights of others..... 1522
868. Changes in place of use—Can not be made where injury is done to the right of others..... 1527
869. The change in the use of the water appropriated..... 1527
870. Change in the use of water—What changes may be made..... 1530
871. Changes in the use and the place of use—Statutes authorizing and restricting ..... 1534
872. Changes on sale—Rights of the purchasers..... 1536
873. The nature and extent of injuries to others which will prevent changes ..... 1538

## CHAPTER 49.

## ECONOMICAL USE AND SUPPRESSION OF WASTE.

874. Scope of chapter..... 1541
875. At an early day settlers had little knowledge as to economical use of the water..... 1541
876. At an early day the courts had little knowledge as to economical use 1543
877. Quantity of water limited to amount needed and economically used 1546
878. Quantity of water limited by claim ..... 1551
879. Quantity of water limited by special purpose for which appropriation is made..... 1554
880. Capacity of ditch or canal..... 1555
881. Early rule as to the capacity of ditch as related to the quantity of water appropriated..... 1556
882. Modern rule as to the capacity of ditch as related to quantity of water appropriated..... 1558
883. Quantity of water limited by size of ditch..... 1561
884. Capacity of ditch or canal—Rule in adjudicating priorities..... 1562
885. Quantity of water limited to that economically used..... 1564
886. Quantity of water—Appropriations for future use for irrigation... 1567
887. Appropriator not always limited to first amount used..... 1571
888. Measurement of water ..... 1572
889. Measurement of water—Early standard the miner's inch..... 1573
890. Measurement of water—The miner's inch as prescribed by the statutes ..... 1575

*The index references are to pages.*

SECTIONS PAGES

891. Measurement of water—Miner's inch not a safe or accurate standard 1577
892. Measurement of water—The second foot—Of what it consists.... 1580
893. Measurement of water—The second foot—Its use as a unit of flow 1580
894. Measurement of water—The acre foot—Of what it consists, and its adoption as a unit of quantity.... 1582
895. Measuring water—Devices for—The weir.... 1582
896. Devices for measuring water—Different kinds of weirs used—The Cippoletti weir.... 1584
897. Devices for measuring water—The flume.... 1586
898. Other devices for measuring water.... 1587
899. The velocity of approach—Formulas for computing.... 1587
900. Evidence of the measurement of water before the courts.... 1589
901. Scientific investigations tending toward economical use.... 1591
902. Duty of water—Definition.... 1592
903. Duty of water—Too high, should not be required at expense of success.... 1593
904. Duty of water—How essential duty is determined.... 1594
905. Duty of water—Power of court to fix.... 1595
906. Duty of water—Minimum duty as fixed by statute.... 1598
907. Duty of water—Relation to, of natural losses in transit.... 1601
908. Duty of water—Point where water must be measured.... 1603
909. Rotation as a matter of economy.... 1605
910. Rotation as a matter of economy—The law as applied to the subject.... 1608
911. Wasting water—The need of suppression of.... 1612
912. Wasting water—What act constitutes—Excessive diversion.... 1614
913. Wasting water—Defective appliances for conducting.... 1616
914. Wasting water—By application to land of extravagant amounts of water.... 1617
915. Wasting water—Influence of statutes upon the waste of water.... 1620
916. Wasting water—Duty of the courts to suppress.... 1622

## CHAPTER 50.

## CONTRACTS RELATING TO WATER RIGHTS.

917. Scope of chapter.... 1625
918. Contracts—In general.... 1625
919. Construction of contracts.... 1627
920. Void and voidable contracts—Duress.... 1630
921. The performance—Breach—Enforcement and liabilities under.... 1631
922. Contracts settling disputes between appropriators.... 1631
923. Contracts for the use of water as between appropriators—Rotation.. 1632
924. Contracts settling disputes between riparian owners.... 1633
925. Contracts for the use of ditches and canals of others.... 1634
926. Contracts for the development of water.... 1636

*The index references are to pages.*

## CHAPTER 51.

## RIGHTS OF WAY OVER PUBLIC DOMAIN.

SECTIONS PAGES

927. Scope of chapter..... 1638
928. Distinction as to property rights..... 1639
929. Necessity for rights of way..... 1639
930. No title to early rights of way..... 1641
931. Act of Congress of 1866 the first Act granting rights of way..... 1642
932. Act of 1870 amending Act of 1866..... 1644
933. Construction of Acts of 1866 and 1870—Priority governs..... 1646
934. Construction of Acts of 1866 and 1870—Effect of Acts..... 1648
935. Lands once entered and afterward forfeited..... 1652
936. Reservations in patents of rights of way for ditches and canals constructed by the Government—Act of August 30, 1890..... 1653
937. Right of way through public lands and reservations to canal or ditch companies for irrigation—Act of March 3, 1891..... 1655
938. Construction of Act of March 3, 1891..... 1657
939. Effect of Act of 1891 upon Acts of 1866 and 1870..... 1660
940. Construction of Act of March 3, 1891—Purpose originally to aid irrigation only ..... 1662
941. Text of Acts of January 21, 1895, May 14, 1896, and May 11, 1898, amendatory to the Act of March 3, 1891..... 1664
942. Construction of Acts of January 21, 1895, May 14, 1896, and May 11, 1898, amendatory to the Act of March 3, 1891..... 1666
943. Text of amendatory Act of May 11, 1898, amending the Acts of March 3, 1891, and January 21, 1895..... 1668
944. Construction of Acts of March 3, 1891, and January 21, 1895, as amended by Act of May 11, 1898—Scope of amendment..... 1668
945. Procedure under Act of March 3, 1891, for acquisition of rights.. 1671
946. Act of March 3, 1891—Procedure where jurisdiction comes under two departments ..... 1675
947. Official acts under Act of March 3, 1891—Approval of application.. 1675
948. Nature of title granted under Act of March 3, 1891, and amendments thereto ..... 1676
949. Effect of approval of application under Act of March 3, 1891..... 1677
950. Secretary has no jurisdiction over water rights under Act of March 3, 1891 ..... 1679
951. Segregated reservoir sites—Text of Act of October 2, 1888, and amendatory Acts of March 2, 1889, August 30, 1890, and Section 17 of the Act of March 3, 1891, and the Act of February 26, 1897 1680
952. Segregated reservoir sites—Construction of Act of October 2, 1888, and amendatory Acts of March 2, 1889, August 30, 1890, and Section 17 of the Act of March 3, 1891..... 1683
953. Segregated reservoir sites—Act of February 26, 1897, opening same up for use by private parties or States—Cause of its passage and construction ..... 1686

*The index references are to pages.*

SECTIONS PAGES

954. Rights of way over National Forests—Relations and procedure under Act of March 3, 1891 ..... 1687
955. Rights of way over National Forests—Act of February 1, 1905 .... 1689
956. Rights of way over National Forests—Construction of Act of February 1, 1905 ..... 1690
957. Rights of way over National Forests—Regulations and procedure under Act of February 1, 1905 ..... 1691
958. Rights of way over National Forests—Effect of Acts of March 3, 1891, and February 1, 1905, upon the Acts of 1866 and 1870 ..... 1693
959. Over forest reserves and reservoir sites—Act of March 3, 1899—Construction of Act ..... 1694
960. Rights of way over National Forests—Applicants may take Department of Agriculture permits under both Acts of March 3, 1891, and February 1, 1905 ..... 1694
961. Rights of way over National Forests—Revocable permits issued by the Secretary of Agriculture ..... 1695
962. Rights of way over National Forests—Water power regulations .... 1698
963. Permissive use of rights of way over reservations and public parks—Text of Act of February 15, 1901 ..... 1701
964. Permissive use of rights of way over reservations and public parks—Construction of Act of February 15, 1901 ..... 1703
965. Grants for fifty years upon public lands, National Forests and reserves—Act of March 4, 1911, for the transmission and distribution of electrical power ..... 1706
966. Reservoirs for watering stock—Act of January 13, 1897 ..... 1707
967. Over National Forests—Divided jurisdiction between Secretaries of the Interior and Agriculture ..... 1709
968. General jurisdiction of the respective departments ..... 1711
969. Proceedings to forfeit right on account of non-performance of conditions—Under Act of March 3, 1891, and February 1, 1905 ..... 1713
970. Rights to construct dams over navigable streams ..... 1715
971. Over State lands ..... 1716

## CHAPTER 52.

## RIGHTS OF WAY OVER PRIVATE LANDS.

972. Scope of chapter ..... 1719
973. Right of way defined—Nature of right of way ..... 1720
974. Early cases upon the subject—Yunker v. Nichols ..... 1720
975. Right of land owner to protection from trespass ..... 1721
976. Contracts not limited ..... 1725
977. When the granting of right of way by an entryman before patent is not in violation of the Federal statutes ..... 1726
978. Rights of way acquired by contract—Deeds—Statute of frauds .... 1728
979. The terms of contracts relative to ditches and canals constructed .... 1731
980. Rights acquired by parol executed contract for a consideration .... 1732

*The index references are to pages.*

SECTIONS PAGES
981. Rights acquired by parol contract—Licenses—In general..... 1735
982. Rights acquired by parol contract—Permissive right a revocable license ..... 1736
983. Parol licenses—Irrevocable licenses..... 1738
984. The doctrine of estoppel as applied to parol contracts and licenses.. 1742
985. Rights acquired by parol contract—A prescriptive right can not be based on permission ..... 1743
986. Rights of way acquired by prescription..... 1745
987. Rights of way may be acquired under the power of eminent domain 1745
988. Public canals—Right to the use of..... 1745
989. Private canals—Right to use may be acquired by contract..... 1747
990. Ditches and canals—Right to enjoy easement—Construction of works 1750
991. Easement for the flow of water in natural streams over private lands—Right to enjoy..... 1751
992. Ditches and canals—Right to enjoy easement—Right to make repairs 1753
993. Ditches and canals—Duty to keep works in repair..... 1756

## CHAPTER 53.

## SALE AND ALIENATION OF WATER RIGHTS AND RIGHTS OF WAY.

994. Scope of chapter ..... 1761
995. Sale or conveyance of water rights..... 1762
996. Formalities necessary for the transfer of a water right—Must be by deed ..... 1767
997. Parol sale of water rights..... 1770
998. Sale of a water right by parol executed contract for a consideration 1773
999. Parol sale—Grantee takes as an appropriation by diversion..... 1775
1000. Parol sale of water right with other improvements of settler upon relinquishment of claim..... 1777
1001. Sale of water rights by transfer of stock in corporation—Pledge of stock ..... 1779
1002. Sale of land reserving the water rights..... 1780
1003. Sale of ditches of other works, and easements for the same..... 1782
1004. Sale of the land subject to the easement for ditches and canals, where the purchaser had notice..... 1785
1005. Water rights—Appurtenances—In general..... 1786
1006. Appurtenances—Sale of water rights with land when specifically mentioned ..... 1789
1007. Water rights—Appurtenances—Intent of the parties as affecting sale of—Terms of deed..... 1790
1008. Water rights—Appurtenances—Intent of the parties as affecting the sale of—When the deed is silent..... 1793
1009. Appurtenances—Sale of water rights when included in the word "appurtenances" ..... 1796
1010. Appurtenances—Sale of water rights when not described or included in word "appurtenances"..... 1798

*The index references are to pages.*

SECTIONS PAGES

1011. Water rights—When in fact appurtenances to land—Where water is used for irrigation ..... 1803
1012. Water rights—When in fact appurtenances—Water used for mining ..... 1808
1013. Water rights—When in fact appurtenances—Water used by mills 1809
1014. Appurtenances—Rule where the land is subdivided ..... 1811
1015. A water right is not an inseparable appurtenance to land ..... 1811
1016. A water right should not be an inseparable appurtenance to land ... 1817
1017. Appurtenances—Ditches and canals when appurtenant to land ..... 1820
1018. Appurtenances—Water right appurtenant to ditch, or ditch to water right ..... 1822
1019. Mortgages—The alienation of water rights, ditches, and other works by means of ..... 1822
1020. Mortgages—After acquired water rights affected by ..... 1823
1021. Mechanics' liens—To what property they attach ..... 1826
1022. Precedence of mechanics' lien over mortgages ..... 1828
1023. Vendors' liens—Liens for furnishing water supply ..... 1830
1024. Executions—Sale of water rights, ditches, and other works by means of ..... 1831
1025. Leasing water rights with land ..... 1832
1026. Leasing or renting water rights without land by consumers ..... 1834
1027. Sale of part of right—Surplus water can not be sold ..... 1836
1028. Licensing or loaning the use of water without land by consumers—"Doubling up"—Rotation ..... 1838
1029. Sale and transfer of riparian rights—As between the parties to the grant ..... 1840
1030. Sale of riparian rights—When grantee may transfer use to non-riparian lands ..... 1842
1031. Changes which the purchaser may make, where the right is by appropriation ..... 1845
1032. Sale of water after diversion ..... 1846

## CHAPTER 54.

## RIGHTS ACQUIRED BY PRESCRIPTION.

1033. Scope of chapter ..... 1848
1034. Prescription—In general ..... 1849
1035. Prescription in the arid West—Statute of limitations ..... 1850
1036. Water rights by prescription ..... 1851
1037. Distinction between acquisition of rights by prescription and by appropriation—Can be no prescription against United States ... 1853
1038. Water rights—Prescription as against rights of appropriators .... 1855
1039. Water rights—Prescription as against riparian rights ..... 1858
1040. Water rights—Special rights acquired by one proprietor as against the others ..... 1861
1041. Riparian rights—Right to receive the flow of the stream ..... 1862

*The index references are to pages.*

SECTIONS PAGES

1042. Rights acquired by prescription may be lost by prescription—Extinguishment of rights ..... 1866
1043. Water rights—Prescription as against any other right ..... 1867
1044. Easements—Rights acquired to, by prescription ..... 1870
1045. Rights of way for ditches and canals ..... 1870
1046. Prescriptive rights as between landlord and tenant ..... 1873
1047. Prescriptive rights as between tenants in common ..... 1875
1048. Elements essential to adverse user amounting to prescription ..... 1875
1049. Elements necessary—The possession must be actual, open, notorious and exclusive ..... 1877
1050. Elements necessary—The use must be hostile to the owner and there must be an invasion of his rights ..... 1880
1051. Elements necessary—The use must be under a claim of right or color of title ..... 1885
1052. Elements necessary—The adverse user must be continuous for the full prescriptive period ..... 1887
1053. Elements necessary—The adverse user must be continuous—Interruption of user ..... 1891
1054. Elements necessary—The taxes must be paid by adverse claimant ..... 1893
1055. Pleading and proof to establish a claim by prescription ..... 1894
1056. Extent of right acquired where prescriptive right is complete ..... 1895
1057. Effect of adverse user amounting to prescription ..... 1897
1058. The question of priority ..... 1898

## CHAPTER 55.

## RIGHTS ACQUIRED BY EMINENT DOMAIN.

1059. Scope of chapter ..... 1901
1060. Power of the United States to exercise the right of eminent domain 1901
1061. Power of the States to exercise the right of eminent domain ..... 1903
1062. Protection under State constitutions ..... 1904
1063. Rights of way—Public use—Effect of State statutes defining a use to be public ..... 1905
1064. Private property can not be taken for strictly private use ..... 1908
1065. What is a public use—Classification by authorities ..... 1909
1066. What is a public use—Influence of locality ..... 1910
1067. Public use—Authorities holding that the use must be for the entire public ..... 1911
1068. Public use—Authorities holding that the use need not be for the entire public ..... 1914
1069. Public use—Exercise of right for irrigation by private parties, when a public use ..... 1916
1070. Public use—Exercise of right for mining by private parties, when a public use ..... 1921
1071. Public use—Exercise of right for manufacturing by private parties, when a public use ..... 1923

*The index references are to pages.*

SECTIONS PAGES

1072. Public use—Exercise of rights for development of electrical energy by private parties, when a public use ..... 1924
1073. Public use—Exercise of right for other industries by private parties, when a public use ..... 1927
1074. Public use—The necessity for the taking must exist in order to acquire the right ..... 1929
1075. Rights of way—Necessity for the taking—The existence of a water right ..... 1932
1076. Due process of law—In general ..... 1934
1077. Due process of law—Rights of way can not be acquired without.. 1935
1078. Due process of law—Statutory provisions ..... 1937
1079. Compensation and damages—Right to ..... 1938
1080. Compensation and damages—By what body may be assessed ..... 1940
1081. Just compensation—Measure of ..... 1941
1082. Damages to other lands—Measure of ..... 1942
1083. Compensation and damages to land offset by benefits ..... 1943
1084. Multiplicity of ditches—Limitations to the right of condemnation. 1944
1085. Acquisition of right of way through existing ditches ..... 1946
1086. Acquisition of rights over lands of municipalities or public service corporations ..... 1949
1087. Water rights—Power to acquire ..... 1950
1088. Water rights—The condemnation of riparian rights ..... 1954
1089. Riparian rights—Parties defendant—Difficulties encountered in condemnation suits ..... 1956
1090. Riparian rights—Modern tendencies—Due process of law and just compensation in other than condemnation suits ..... 1959
1091. Riparian rights—Just compensation—Measure of damages ..... 1963
1092. Actions for condemnation—General procedure and practice ..... 1965
1093. Actions for condemnation—Parties ..... 1966
1094. Actions for condemnation—Pleadings ..... 1969
1095. Actions for condemnation—The hearing ..... 1971
1096. Actions for condemnation—Verdict—Judgment ..... 1973
1097. Actions for condemnation—Appeal and review of the judgment... 1974
1098. Nature of title acquired ..... 1975

## CHAPTER 56.

## ABANDONMENT AND FORFEITURE.

1099. Scope of chapter ..... 1977
1100. Abandonment—Doctrine of—In general ..... 1978
1101. Abandonment defined—Intent ..... 1979
1102. Abandonment of rights—Inchoate rights ..... 1983
1103. Abandonment of rights—Express abandonment ..... 1985
1104. Abandonment of rights—When an abandonment will be implied... 1988
1105. Abandonment of rights—Implied abandonment—For non-user.... 1990

*The index references are to pages.*

SECTIONS PAGES

1106. Abandonment of rights—Implied abandonment—For non-user by tenants in common ..... 1993
1107. Abandonment of rights—Effect of changes by the owner..... 1994
1108. Abandonment of rights—Ditches, canals, and other works and easements for the same..... 1995
1109. Abandonment of rights—By parol sale or defective deed..... 1999
1110. Abandonment of rights—By lease ..... 2001
1111. Abandonment of rights—By wasting water..... 2002
1112. Abandonment of rights—By the acquiescence in the adverse user of another ..... 2004
1113. The abandonment of water—Distinctions to be drawn..... 2005
1114. Abandonment of water—Water discharged into a natural stream.. 2006
1115. Abandonment of water—Discharged waste ..... 2009
1116. Proof of abandonment..... 2012
1117. The effect of abandonment..... 2016
1118. Forfeiture defined—Distinguished from abandonment..... 2020
1119. Forfeiture by failure to comply with statute..... 2022
1120. Construction of statutes providing for the forfeiture of rights.... 2026

## CHAPTER 57.

## THE DOCTRINE OF ESTOPPEL.

1121. Scope of chapter ..... 2028
1122. Estoppel defined ..... 2028
1123. Estoppel by deed ..... 2029
1124. Estoppel by matter of record ..... 2030
1125. Estoppel by matter in pais—Definition and essentials..... 2032
1126. Estoppel by matter in pais as applied to water rights..... 2034
1127. Estoppel by matter in pais—Silence not amounting to consent will not work as estoppel ..... 2037
1128. Estoppel by matter in pais—Riparian owners estopped when..... 2041

## CHAPTER 58.

## THE POLLUTION OF WATERS.

1129. Scope of chapter—Pollution of waters defined..... 2043
1130. Pollution—In general ..... 2044
1131. Pollution of water used for irrigation ..... 2045
1132. Pollution of water used for various purposes ..... 2047
1133. Pollution from sewage ..... 2048
1134. Pollution from sewage—Missouri v. Illinois..... 2051
1135. Pollution from the discharge of waste from factories and mills.. 2052
1136. Pollution from debris from mines and reduction mills..... 2054
1137. Pollution by miscellaneous means ..... 2059
1138. The pollution of underground waters..... 2062

*The index references are to pages.*

SECTIONS PAGES

1139. The acquisition of the right of pollution by contract and prescription ..... 2063
1140. Pollution as against the rights of riparian owners ..... 2065
1141. Pollution as against the rights of appropriators—Priority ..... 2069
1142. Remedies for injuries from pollution ..... 2073
1143. Remedies—Injunction ..... 2075
1144. Remedies—Actions for damages—Measure of damages ..... 2080
1145. Remedies—Criminal prosecution ..... 2083
1146. Remedies—Defenses ..... 2084
1147. Remedies—Evidence—Burden of proof ..... 2086

## PART X.

## SUBTERRANEAN WATERS AND RIGHTS ACQUIRED THERETO.

### CHAPTER 59.

### SUBTERRANEAN WATERS IN GENERAL—CLASSIFICATION.

1148. Scope of part—Scope of chapter ..... 2089
1149. Subterranean waters—In general ..... 2090
1150. Underground waters—How derived and distributed ..... 2091
1151. Subterranean waters—Cause of utilization ..... 2093
1152. Subterranean waters defined and classified ..... 2095

### CHAPTER 60.

### SUBTERRANEAN WATER COURSES.

1153. Scope of chapter ..... 2097
1154. Subterranean or underground water courses—In general ..... 2097
1155. The classification of "defined and known" or "undefined and unknown" made both at common law and under the Arid Region Doctrine ..... 2098
1156. Known independent subterranean water courses ..... 2100
1157. Known independent subterranean water courses—Rights which may be acquired therein ..... 2101
1158. Known independent subterranean water courses—Riparian rights thereto ..... 2102
1159. Known independent subterranean water courses—Rights by appropriation ..... 2103
1160. Known independent subterranean water courses—Both riparian rights and those by appropriation ..... 2105
1161. Known dependent subterranean water courses—The underground flow of surface streams ..... 2106
1162. The underflow dependent on surface streams—Rights which may be acquired therein—At common law ..... 2111

*The index references are to pages.*

SECTIONS PAGES

1163. The underflow dependent on surface streams—Rights under the law of appropriation ..... 2113
1164. Undefined and unknown water courses ..... 2115
1165. Existence, how proven and thereby become known—Burden of proof 2115

## CHAPTER 61.

## ARTESIAN WATERS.

1166. Scope of chapter ..... 2119
1167. Artesian waters—In general ..... 2119
1168. Artesian belts or basins ..... 2120
1169. Artesian wells—Origin and definitions ..... 2123
1170. The use and value of artesian waters ..... 2125
1171. The conservation of artesian waters ..... 2126
1172. Power of the legislature to regulate the use of the water from artesian wells ..... 2128
1173. Correlative rights to the waters of artesian basins—Origin and cause of the doctrine ..... 2132
1174. Correlative rights to the waters of artesian basins—Definitions—Limitations to use ..... 2133
1175. Correlative rights not the rule in all jurisdictions ..... 2135
1176. No riparian rights to artesian basins ..... 2138
1177. The appropriation of waters from artesian basins under public lands 2139
1178. Correlative rights—Doctrine of appropriation ..... 2141
1179. Rights to, may be acquired how—Grants ..... 2144
1180. The acquisition of rights by grant ..... 2144
1181. Rights to artesian waters and wells may be lost by abandonment .. 2146
1182. Rights acquired and lost by prescription ..... 2146
1183. Rights acquired and lost by estoppel ..... 2146
1184. Contracts to sink artesian wells ..... 2147

## CHAPTER 62.

## PERCOLATING WATERS.

1185. Scope of chapter ..... 2149
1186. Percolating waters—Defined and described ..... 2150

SECOND EDITION—VOLUME TWO.

# CHAPTER 33.

## TWO THEORIES AS TO LEGAL RIGHT.

§ 627. Classification—Scope of chapter.
§ 628. California and Colorado theories distinguished.
§ 629. California theory—Rights by appropriation—Title based on grant from the Government.
§ 630. California theory—Rights by appropriation based on grant—Authorities discussed.
§ 631. California theory—Riparian rights—Title also based on grant from the Government.
§ 632. Colorado theory of State ownership.
§ 633. The Colorado theory of State ownership—Other States following Colorado rule.
§ 634. Colorado theory of State ownership—Authorities discussed.
§ 635. Dedication by a State of its waters to the State or public.
§ 636. Conclusions as to the two theories—Original ownership of the United States.
§ 637. Conclusions as to the two theories—Title claimed by United States by Acts of Congress.
§ 638. Conclusions as to the two theories—Acts of Congress ratifying constitutions containing dedication provisions.
§ 639. Conclusions as to the two theories—Continuous assertion of title in the United States by the Courts.
§ 640. Conclusions as to the two theories.

**§ 627. Classification—Scope of chapter.**—While the Arid Region Doctrine of appropriation was in the formative period in the State of California, as we have related in the previous sections,[1] the appropriation of the waters of the natural streams for the same purposes and by the same system was being made in other States and Territories in the arid West. And, strange as it may seem, although the appropriation of the water and the uses to which it was put were the same in the different localities, two distinct theories are enunciated by the Courts as to the legal rights upon which the doctrine of appropriation was based. As the States of California and Colorado were the leaders in advancing the arguments in support of these two theories, respectively, we will designate them as the California theory and the Colorado theory.

It will be noticed that some of the authorities call these the "Cali-

1 See Secs. 595-624.

fornia Doctrine" and the "Colorado Doctrine,"[2] others the "California System" and "Colorado System."[3] We have chosen to adhere to our original classification of the Arid Region Doctrine of appropriation, and the "California Theory" and the "Colorado Theory," as the two theories respecting the source of title under the Arid Region Doctrine of appropriation. In this chapter we will discuss the two theories as to the source of title to the use of water in the Western States of this country. It must be noticed that a distinction must be made between the ownership or title of the waters and the right of a State to govern and control the waters flowing within its boundaries, and the use thereof. This latter subject, as to State control, will be discussed in another chapter, when we come to the discussion of the subject of State administration of waters or the laws of State control.[4]

§ 628. **California and Colorado theories distinguished.**—In brief the two theories maintained in the respective States as to the source of title to the use of water acquired by appropriators may be stated as follows: Under the California theory the right acquired by prior appropriation on the public domain is held to be founded in a grant from the United States Government as the original sole owner of the land and water. Under the Colorado theory the ownership and control of all the waters of the natural streams within the boundaries of a State were surrendered by the General Government to that State upon its admission to the Union; that this included even the title to the use of the water. And, therefore, the appropriator, instead of acquiring his title to the use of the waters from the United States, as the owner thereof, acquires it from the State wherein the appropriation is made. And, as great property rights have accumulated in all of the Western States, based wholly upon the Arid Region Doctrine of appropriation, it is necessary to determine which of these two theories is the correct one. In this connection it may be said that a distinction must be made between the question of ownership and the question of the mere control of and sovereignty over the water. The Government may surrender its sovereignty over the water and still retain its title thereto.

[2] See Wiel on Water Rights in the Western States, 3 Ed., Secs. 151, 167.

[3] See Mill Irrigation Manual, 1907, pp. 26-43; Long on Irrigation, Sec. 6.

[4] See Chap. 68, Secs. 1337-1367. See, also, for the dedication by a State of its waters to the State or to the public, Chap. 18, Secs. 372-389.

We will also add that the substantive law of the Arid Region Doctrine of appropriation is the same under both theories and, aside from their difference as to the legal right, there is very little difference as to their practical workings. We will now take up these two theories and discuss them at some length.[1]

**§ 629. California theory—Rights by appropriation—Title based on grant from the Government.**—As stated in our previous section,[1] under the California theory the right of appropriation of the waters of the natural streams flowing over the public domain is based upon a grant from the Government direct to the appropriator. This grant was originally implied or presumed in the silent acquiescence of the United States during the early years of the formative period of the Arid Region Doctrine of appropriation,[2] and later as resting on the Acts of Congress of 1866 and 1870.[3] In our view of the question this is the only correct position. After the Treaty of Guadalupe Hidalgo in 1848 the United States became the sole owner of all the lands covered by the vast tract of country ceded to this country by Mexico, with the exception of a few tracts of land previously granted to individuals by the Mexican Government before the treaty.[4]

**§ 630. California theory—Rights by appropriation based on grant—Authorities discussed.**—Under the California theory, therefore, a water right can be acquired only by a grant expressed or implied from the owner of the land to the appropriator. And, therefore, the United States, being the sole owner of the lands and

waters of the public domain, the right acquired by appropriation and user of the water flowing over the public lands is founded in a grant from the United States, and that such grant was first presumed or implied from the silent acquiescence of the Government,[1] and now rests upon the Act of Congress of 1866 and confirmatory Acts subsequent thereto, discussed in previous sections.[2] Under

Rep. 453, 19 Morr. Min. Rep. 243, *Id.*, 120 Cal. 86, 52 Pac. Rep. 139, where the Court said: "An appropriator of water under these circumstances, and while the land which he subjects to his necessary uses continues to be a part of the public domain, is a licensee of the general Government; but, when such part of the public domain passes into private ownership, it is burdened by the easement granted by the United States to the appropriator, who holds his rights against this land *under an express grant.*"

Osgood v. Eldorado Water Co., 56 Cal. 571, 5 Morr. Min. Rep. 37; Ortman v. Dixon, 13 Cal. 33; Barkley v. Tieleke, 2 Mont. 59, 4 Morr. Min. Rep. 666; The Hot Springs Cases, 92 U. S. 698, 23 L. Ed. 690, 11 Ct. Cl. 238; Van Lear v. Eisele, 126 Fed. Rep.

the California theory, as to the source of title to a water right by appropriation, the title comes from the owner of the land. So, when a stream is situated on the public lands of the United States, a person may, under the customs and laws of the State and the legislation by Congress, acquire by prior appropriation the right to use the waters thereof for any beneficial use or purpose, and to construct and maintain ditches and canals over and upon the public land to convey the water to the place of use, and such right being good as against all other private persons, and by statute good as against the United States and its subsequent grantees. But, upon the other hand, when a grantee of the United States obtains title to a tract of riparian land, the waters of which have not been theretofore appropriated, his riparian rights in and to the waters of the stream follow the title to the land as one of the incidents thereof, and are not subject to any appropriations made after the inception of his title by another party without his consent.[3] This theory being that the appropriator, not acquiring his title from the State, but from the United States as owner of both the lands and waters, the legislative power of the State is limited to the enactment of such laws as come within the police powers of the States regulating water, and the procedure in the State Courts subject always to constitutional limitations.[4]

Although the right of an appropriator is founded on a grant from the Government, no actual documentary patents have ever been issued by the United States for such water rights as is in the case of mining claims. But the theory of the law is that where an appropriator complies with the local rules, regulations, and laws of the State wherein the claim is made, that his title to the water is of equal force as though an actual patent had been granted to the same. The Act of 1866 was in fact a grant of the right to the use of waters to those who had complied with the laws, rules, and regulations required thereunder. And a grant by Congress is one of the highest possible muniments of title. As was said in the case of

823; Woodruff v. North Bloomfield etc. Co., 9 Sawy. 441, 18 Fed. Cas. 753; Caviness v. La Grande Irr. Co., —— Ore ——, 119 Pac. Rep. 731.

See, also, for the power of Congress to dispose of its lands and waters, Secs. 409, 411.

For conflicts between riparian owners and appropriators, see Secs. 810-823.

[4] Lux v. Haggin, 69 Cal. 255, 4 Pac. Rep. 919, 10 Pac. Rep. 674.

Broder v. Natoma Water Co.,[5] in referring to the Act, "It was an unequivocal grant." [6]

§ 631. **California theory—Riparian rights—Title also based upon grant from the Government.**—We have discussed in previous sections how the Government became the sole owner of the lands included within the public domain of the United States.[1] With this land the United States also became the sole owner of all incidents connected with the land, including the right to all of the waters flowing over the same. These lands were at that time wholly unoccupied, with the exceptions of certain Mexican grants and a few scattered mining and agricultural claims. The claims for the water were also very few and small. So at this period the United States, being the sole owner of this vast tract of vacant land, was also the sole owner, as far as the Government could own them, of all the waters flowing over them, as one of the incidents to the soil, and a part and parcel of such lands. At this period the Government had the sole power to deal with these waters as it saw fit. It could have protected these rights and adhered to the strict rule of the common law and claimed the water as the sole riparian proprietor as long as the title to the land bordering upon the streams remained in the Government. And, after the disposition to settlers, the Government could have granted its rights in the streams to them, and then these settlers would have held the rights in the streams as riparian owners, as successors in interest of the United States. In the meantime the Government had the legal title to also treat all appropriators of these waters as trespassers, as well as those persons occupying the mineral lands upon the Government public domain. Again, the Government might have adhered to the laws of Mexico, from whence title to this land came, and treated all of the waters of natural streams as *publici juris*, and

[5] 101 U. S. 274, 25 L. Ed. 790, affirming 50 Cal. 621.

[6] See, also, Cottonwood Ditch Co. v. Thom, 39 Mont. 115, 121, 101 Pac. Rep. 825, 104 Pac. Rep. 281, where it is said: "In other words, that the Congress plainly acknowledges a right of way for the ditch or canal as fast as the work progresses and before water is turned in and such acknowledgment, from so supreme authority, amounts to a grant of the right of way to those who, in good faith, prosecute the work of construction, over unoccupied public lands, with reasonable diligence to completion, for the purpose of applying the completed ditch or canal to a beneficial use."

[1] See Secs. 390-406.

by a system of concessions have given to certain individuals the exclusive use of the water under certain restrictions by the Government, as is the case of concessions under the Mexican laws.[2] And, again, the Government had the power to do exactly as it did do in permitting these lands to be occupied by its own citizens and the waters to be appropriated from the natural streams for their use for all beneficial purposes, long before Congress passed any Acts for disposing of any of these lands, until vast property interests had grown up involving millions of dollars of expenditure, and all based on possessory rights alone. And then, as these possessory rights had been accumulating for 18 years, the Government had the power to do as it did do in 1866 and 1870, to acknowledge and confirm all of the possessory rights which had vested and accrued prior to the passage of the Acts. As we have discussed in previous sections, these Acts of the Government constituted as much of a grant as though a documentary patent had been given by the Government to the appropriator and user of the water. The Government also had the power and authority to relinquish its administrative control over the waters flowing upon the public domain and leave that matter entirely to the State wherein the same were situated, and, as we have seen, that State could adopt either the Arid Region Doctrine of appropriation and abrogate the common law of riparian right, or it could adopt both these systems governing and controlling the waters within its boundaries.

Under the California theory, then, the Government still retains its riparian rights in and to all of the waters flowing over its lands to which a possessory right has not vested and accrued in accordance with the Acts of 1866 and 1870. And as afterwards the Government disposed of its lands to individuals,[3] these riparian rights were transferred to the individuals acquiring the same, subject to the rights of those who had previously acquired the use of the waters flowing thereon.[4] It is thus that in all of the States which adhere to the California theory, we find the dual systems of water rights side by side—the law of appropriation for beneficial uses, and the common law of riparian rights.[5] So, in general, if the waters are actually appropriated prior to the inception of the title

[2] For the water laws of Mexico, see Secs. 577-583.

[3] As to how the Government disposes of its lands, see Secs. 408-449.

[4] For rights as between appropriators and settlers, see Secs. 810-823.

[5] For a list of the States having these dual systems, see Secs. 507, 621.

to a tract of land patented to a settler, the grant is made subject to this right, but otherwise the right to the water passes as a riparian right with the land granted.[6]

§ 632. **Colorado theory of State ownership.**—Under the Colorado theory or the theory of State ownership, as it is sometimes called, as to the legal right to the appropriation of waters flowing on the public domain, the grant principle under the California theory is not recognized. The United States is not recognized as the grantor to the appropriator; neither are the riparian rights of the Government recognized in the streams flowing over the public domain; and hence the grantees of the Government have no riparian rights in those streams. Also all riparian rights are abrogated or abolished, either by statutory enactment or Court decision. The reason upon which this theory is based is that the waters of streams flowing on the public domain were never claimed by the United States, but were left or surrendered to the respective States and Territories wherein they flowed, both as to their ownership and as to the jurisdiction and control of the same. Those States and Territories had it within their power to abolish all of the common law theories of riparian rights relative to the use or the flow of natural streams,[1] and that "imperative necessity, unknown to the countries which gave it birth, compels the recognition of another doctrine in conflict therewith."[2] This necessity was due to the fact that the climate was dry, the soil arid and largely unproductive in the absence of irrigation, but when water is applied by that means it becomes capable of successful cultivation. Therefore the State having all this power, and having the ownership of the use of the water, had the right to declare, as it did do, that the water was the property of the State or public,[3] and that

Also, see the laws of the various States, Part XIV.

But see Welch v. Garrett, 5 Idaho 639, 51 Pac. Rep. 405. Idaho is one of the States which has abolished riparian rights, and has the doctrine of appropriation only.

6 For right of appropriation as against settlers' rights, see Secs. 810-823.

Lux v. Haggin, 69 Cal. 255, 4 Pac. Rep. 919, 10 Pac. Rep. 674.

1 For riparian rights, see Secs. 450-551.

For irrigation as a riparian right, see Secs. 498-525.

2 Coffin v. Left Hand Ditch Co., 6 Colo. 443.

3 For the dedication of the waters within a State to the State, see Secs. 372-389.

the appropriator acquires his right to use the water for beneficial purposes from the State and not from the United States. And that his only title to the use of the water is his legal prior appropriation under the laws of the State, and his continuous application to some beneficial purpose. It will be noticed that under this theory any present rights of the General Government are entirely disregarded and ignored. It will be also noticed that whichever theory is the correct one, the California or the Colorado, they both lead ultimately to the same result and to the same doctrine—the appropriation of the water for some beneficial use or purpose, and the continuation of the title in the appropriator only so long as all of the water so appropriated is used for such a purpose, all under the Arid Region Doctrine of appropriation.

§ 633. **The Colorado theory of State ownership—Other States following Colorado rule**—Other States and Territories, especially those situated in the extreme portions of the arid region, were quick to follow the Colorado theory of State control upon the same grounds, until it is to be found in Colorado, Arizona, Idaho, New Mexico, Nevada, Utah, and Wyoming, or in those States and Territories which have been named as abolishing riparian rights.[1] The State of Nevada at first held with the California theory,[2] but afterwards overruled its decision in that respect and held with the Colorado theory of State ownership.[3]

1 See Secs. 507, 621.

For the dedication by a State of its waters to the State or public, see Secs. 372-389, 638.

2 Vansickle v. Haines, 7 Nev. 249, 15 Morr. Min. Rep. 201; Lake v. Tolles, 8 Nev. 285; Barnes v. Sabron, 10 Nev. 217, 4 Morr. Min. Rep. 673; Smith v. Logan, 18 Nev. 149, 1 Pac. Rep. 678.

3 Jones v. Adams, 19 Nev. 78, 6 Pac. Rep. 442, 3 Am. St. Rep. 788; Reno S. M. & R. Works v. Stevenson, 20 Nev. 269, 21 Pac. Rep. 317, 19 Am. St. Rep. 364; Walsh v. Walace, 26 Nev. 299, 67 Pac. Rep. 914, 99 Am. St. Rep. 692; Ronnow v. Delmue, 23 Nev. 29, 41 Pac. Rep. 1074. And in Twaddle v. Winters, 29 Nev. 88, 85 Pac. Rep. 280, 89 Pac. Rep. 289, the Court said: "The California decisions cited for appellants may no longer be considered good law even in the State in which they were rendered. In the recent case of Kansas v. Colorado (206 U. S. 46, 51 L. Ed. 956, 27 Sup. Ct. Rep. 655) Congressman Needham testified that irrigation had doubled and trebled the value of property in Fresno and Kings Counties, California; that they had to depart from the doctrine of riparian rights, and under that doctrine it would be difficult to make any future development; that there had been a departure from the principles laid

Also the United States Circuit Court for the District of Nevada held with the Colorado theory.[4] The rest of the States and Territories which abrogated the common law theory of riparian rights [5] from the very first followed the Colorado theory. In a recent case in Arizona Territory it was in effect held that the ownership of the Government was surrendered by the United States in Arizona and New Mexico and the Territories might confer common law rights upon the riparian owners or they might establish the right of prior appropriation and grant this right to others than riparian owners.[6] In Idaho the theory was adopted in the case of Drake v. Earhart,[7] in which the Court said: "Whether or not it is a beneficent rule, it is the lineal descendant of the law of necessity."[8] And in a recent Federal case in Idaho it was held that the United States,

down in Lux v. Haggin, 69 Cal. 255, 10 Pac. Rep. 674, because at that time the value of water was not realized; that the decision had been practically reversed by the same Court on subsequent occasions, and that the doctrine of prior appropriation and the application of water to a beneficial use is in effect in force now in that State."

NOTE.—The statements made by Congressman Needham are all true, with the exception of the abrogation of the common law in California as laid down in the case of Lux. v. Haggin. I can find no authority for the statement that that case has been overruled. Upon the contrary, it is adhered to in that State as the law upon the subject. What the Courts have done in California is to hold that water may be diverted from the streams and used for irrigation as a riparian right. It is true that the law of appropriation does exist in California. However, it is but one of the two systems upon the subject of waters which they have in that State—appropriation under the Arid Region Doctrine, and the common law of riparian rights. Probably the Congressman had resided in the humid portion of the United States so long that he had forgotten the laws of his own State relative to the subject.

Upon this subject, see irrigation as a riparian right, Secs. 498-525.

Modification and extension of the common law, Secs. 508-513.

As to the statements of Congressman Needham, see, also, Wiel on Water Rights, 1908, pp. 40, 83, notes.

8 See, also, Krall v. U. S. (Idaho), 79 Fed. Rep. 241, 24 C. C. A. 543, 48 U. S. App. 351; Hutchinson v. Watson D. Co., 16 Idaho 484, 101 Pac. Rep. 1059, 133 Am. St. Rep. 125.

in order to appropriate water and to condemn lands for rights of way, must proceed under the general State laws.[9]

The Supreme Court of Utah, when Utah was still a Territory,[10] adopted the Colorado theory as decided by the Supreme Court of that State in its early history in the case of Yunker v. Nichols.[11] Also, the Supreme Court of Utah, in a recent case,[12] said: "To initiate and acquire a right in and to the use of unappropriated public water whether in the public domain or within a reservation or elsewhere, is dependent upon the laws or customs of the State in which such water is found."

The Supreme Court of Wyoming, in comparing the two theories as to the legal right,[13] after setting forth the California theory, said: "Upon that theory the right acquired by prior appropriation on the public domain is held to be founded in grant from the United States Government as owner of the land and water, under the Acts of Congress of 1866 and 1870.[14] . . . In this State, on the other hand, . . . this Court has declared that the rule never obtained in this jurisdiction. . . . 'A different principle, better adapted to the material condition of this region, has been recognized. That principle, briefly stated, is that the right to the use of water for beneficial purposes depends upon a prior appropriation. . . . It is the natural outgrowth of the conditions existing in this region of the country.'"[15] Thus, in all of the extremely arid States, it is the well settled rule of local law, that the right of an appropriator to the use of the water appropriated is based, not upon the theory of a grant from the United States, as is held under the California theory,[16] but "by operation of law" owing to the condition of the country and the necessities of the case; that the United States has no jurisdiction over these waters either as land owner

or law maker, but that the entire subject was left by the General Government to the respective States and Territories both as to ownership and control to adopt such rules relative thereto as they thought best.[17]

§ 634. **Colorado theory of State ownership—Authorities discussed.**—The authorities sustaining the Colorado theory, as set forth in our preceding section,[1] are numerous. As early as 1872, the Territorial Supreme Court of Colorado had the question before it in the case of Yunker v. Nichols.[2] And Mr. Chief Justice Hallett,[3] in rendering one of the opinions of the Court, mentioned the fact that when the lands of that Territory were derived from the General Government, they were subject to the law of Nature, which held them barren until awakened to fertility by the nourishing streams of water, and that the purchasers of them could have no benefit from their grant from the Government without the right to irrigate them, and said: "It may be said, that all lands are held in subordination to the dominant rights of others, who must necessarily pass over them to obtain a supply of water to irrigate their own lands, and this servitude arises, *not by grant*, but by operation of law." This opinion was concurred in by the remaining two judges, and it practically formed the basis for the Colorado theory as to the legal rights of the appropriator, and decided that the common law doctrine of riparian rights was inapplicable to Colorado, long before there was any contest in that jurisdiction between the rights of the appropriator and a riparian owner. This contest arose in the case of Coffin v. Left Hand Ditch Co.,[4] ten years later, in 1882. In that case the Court held, that the common law doctrine giving the riparian owner a right to the flow of water in its natural channel upon and over his lands is inapplicable to Colorado, and that: "Imperative necessity, unknown to the countries which gave it birth, compels the recognition of another doctrine in conflict therewith"; that the first appropriator of water from a natural stream has a prior right thereto, to the extent of

17 For Colorado theory, see Sec. 632.

4 6 Colo. 443.

such appropriation; that the appropriator was entitled to protection as well after patent to a third party of the land over which the natural stream flows, as when such land is a part of the public domain; and that the right itself, and the obligation to protect it, existed prior to legislation on the subject of irrigation.[5]

It will be noticed that the California theory that the right of appropriation was based upon a grant from the Government is repudiated in the Colorado theory. As was said in the case of Yunker v. Nichols,[6] it arose "not by grant but by operation of law." Riparian rights being entirely abolished in Colorado, as neither being in the Government nor in a grantee of the Government, it must follow as a matter of course that under the Colorado theory no rights of the Government are recognized in or to the waters within the boundaries of the State; but that the sole jurisdiction, control, and even the title to the use of the water were all left by the United States to the State. And that thereafter the State, by its constitutional provisions, appropriated, as it were, all of the unclaimed waters within its boundaries as the property of the State or public; and that the individual obtains his title to the use of the water not from the United States, but by the appropriation and use of the water under the laws of the State. The element of grant, the basis of the California theory, is not recognized under the Colorado theory.[7] Mr. Justice Hallett, then Judge of the Circuit Court for the District of Colorado, in two recent cases held to this effect.[8] This theory has been followed in the Colorado

But see the opinion of Judge Hallett in Schwab v. Beam, 86 Fed. 41, 10 Morr. Min. Rep. 279, wherein water of a stream was claimed by virtue of the location of placer mining claims upon its banks. Judge Hallett said: "The waters were *appropriated* when the claims were located, and the owner of the claims is entitled to have them *ut currere solebat*, without diminution,

courts, in many cases, until it has become the settled rule in that State beyond question. In recent cases it was held that a patent from the Government to certain tracts of land through which water flows does not give color of title to the water.[9]

§ 635. **Dedication by a State of its waters to the State or public.**—All of the States which have abrogated the common law doctrine of riparian rights have either by constitutional provision or by statutory enactment dedicated the waters flowing within their respective boundaries to the State or to the public. Also, some of the States have made such dedication which still adhere to the common law as to certain features. These States are Montana, North Dakota, South Dakota, Texas. And even California, by the Act of the legislature of 1911,[1] provides: "All water or the use of water within the State of California is the property of the people of the State of California," etc. In Montana and North Dakota the Supreme Courts hold that a declaration of State ownership is not antagonistic to, nor does it prevent the existence of riparian rights within the same jurisdiction.[2] The subject of the dedication of the waters of a State, however, has been discussed in a previous chapter of this work and no further discussion is necessary here.[3]

subject to the reasonable use of other riparian owners high up on the course of the stream."

NOTE.—This position is clearly untenable under either the common law rules or the Arid Region Doctrine of appropriation. Under the common law there is no "appropriation" of the waters of a stream by mere ownership of riparian lands. By virtue of this ownership the owner is entitled to a reasonable use of the waters of the stream, as an incident to his land. (See Secs. 483-497.) Upon the other hand, under the Arid Region Doctrine of appropriation, the mere location of mining claims or the purchase of land upon the bank of a stream is not *ipso facto* an appropriation of the waters thereof. Some act of actual appropriation of the water is required. (For the requisites of an appropriation, see Secs. 706-732.)

§ 636. **Conclusions as to the two theories—Original ownership of the United States.**—Regardless of these two theories as to whether the appropriator deraigns his title to the use of the water from the United States or from the State, the Arid Region Doctrine of the appropriation of the waters of the natural streams for beneficial uses is here to stay. It has become a part of the law of the land, and is as well recognized as any other part of our substantive law. But, as stated before,[1] we hold that the California theory is the only correct one as to the origin and basis of that right.[2] And, as we shall endeavor to show, the authorities bear us out in that statement. In the first place, the United States, after the Louisiana Purchase, the Treaty of Guadalupe Hidalgo, and the Gadsden Purchase, became the owner not only of the lands included in these various transactions respectively, but also of the streams and other bodies of water included therein, and also of the waters flowing therein, as near as it is possible for ownership in running waters to be acquired, with the exception of those few claims of private owners, which had vested prior to the acquisition of any of the particular territories.[3]

To say the least, the United States had, at the time of any particular purchase or treaty, an absolute title to the use of these waters. At this period the United States had also the absolute sovereignty over both the land and waters. That the United States at this time had the absolute ownership and sovereignty of and over the waters will have to be conceded by all. There was no other Government than that of the United States; there was no other sovereign as not even the Territorial Governments had been formed. It was not until some time later that these tracts were cut up into Territories which afterwards became States. Taking for our hypothesis that the United States was the absolute owner of the waters upon the public domain at this time, and could dispose of them as it saw fit, it is necessary in this argument in attempting to trace the source of the legal right, to again refer to the facts as to how the Government did dispose of them. Did it dispose of these rights one by one as these appropriations were made to the

individuals, and still retain its ownership in the remainder unappropriated, or did the United States, upon a Territory becoming a State, surrender all of its rights in and to the waters within its boundaries, both as sovereign and owner to the State, as it were in bulk, and thus leave the entire title and jurisdiction to the State? This is the Colorado theory of the question, and, in our opinion, the principal defect of that theory is that it denies that the United States has any property rights in the waters flowing over its public domain within the boundaries of a State. That this assertion is incorrect, is proven by the fact that there has never been any general Act of Congress formally surrendering these rights to the State. Upon the other hand, the very Acts of Congress which have been passed granting certain rights to the waters are some of the strongest arguments that no such thing was intended and never was done, but that what rights were granted were given to individuals and not to the States. Instead of a surrender of all Federal ownership in the waters they are an assertion of that ownership.

§ 637. **Conclusions as to the two theories—Title claimed by United States by Acts of Congress.**—In every Act of Congress passed relative to the use of waters in the Western States there has been an assertion of ownership of all the waters flowing over the public domain, which had not theretofore vested and accrued in some individual. For instance, take the Acts of Congress of 1866 and 1870, and the grants therein contained run to the "possessors and owners" of the rights which had "vested and accrued" prior to the time that the Acts in question went into effect. There was no general relinquishment to the States, but there is a relinquishment to the individual appropriators, but only to the extent of the rights which have vested and accrued by virtue of their compliance with the local laws of the State. And, the Acts in question, as construed by the courts, provide for the acquisition of title to the use of water in the future by means of appropriations by individuals, subsequent to the date of the passage of the Acts. And, these Acts have been further construed to be "a voluntary recognition of a pre-existing right of possession, constituting a valid claim to its continued use, rather than the establishment of a new one." [1]

[1] Broder v. Natoma W. & M. Co., 101 U. S. 272, 25 L. Ed. 790, affirming 50 Cal. 621; Forbes v. Gracey, 94 U. S. 762, 24 L. Ed. 313; Jenni-

In 1877, an Act was passed by Congress for the sale of desert lands, which contained in its first section a proviso [2] that the right to the use of water by the person so conducting the same on or to "any tract of desert land" shall depend upon *bona fide* prior appropriation, and all surplus water over and above such actual appropriation and use, together with the water of all lakes, rivers, and other sources of water supply upon the public lands and not navigable, shall remain and be held free for the appropriation and use of the public. Clearly this Act shows by its very terms that Congress still laid claim to the waters of the public domain, else why the grant contained in the Act? This Act as amended by the Act of March 3, 1891,[3] and the Act of August 4, 1894,[4] applied to all the public land States, including Colorado and all those States which hold that the United States surrendered to those States the ownership of all the waters within their respective jurisdictions upon their admission to statehood.

By the Act of March 3, 1891,[5] Congress simply granted rights of way through the public lands and reservations of the United States to ditch and canal companies, and nothing in the Act should be construed to interfere with the "control of water for irrigation and other purposes under the authority of the respective States and

See, also, Secs. 938-950.

Territories." There is nothing in this Act which can be construed as a grant to the States of the title to the waters within their respective jurisdictions. The grant runs "to any canal or ditch company."

And, finally, as far as any Act of Congress is concerned, we have the Act of June 17, 1902,[6] popularly called the National Reclamation Act, which also confirms our contention that Congress has always insisted that the proprietary rights to the waters on the public domain emanates from the United States to the individual appropriator, and not from the State. This Act, in brief, provides that all moneys received from the sale of the public lands in the sixteen Western States and Territories, and where irrigation is mostly practiced, shall be reserved, set aside, and appropriated as a special fund to be known as the "reclamation fund." The Secretary of the Interior is authorized, with this money, to locate and construct irrigation works for the storage, diversion, and the development of waters, and before the said construction the lands susceptible of irrigation under any project may be withdrawn from entry, except as to homestead entries. Where in carrying out the provisions of the Act it becomes necessary to acquire any rights or property, the same may be acquired *for the United States,* by purchase or by condemnation. And in this connection we will say that, relative to water rights, this can only apply to those water rights the titles to which have vested and accrued in individuals prior to the need of the same for the Government project, the Government claiming the title to the unappropriated water, as proprietor, but not as sovereign, for in Section 8 it is provided that in carrying out the provisions of the Act the Secretary shall proceed in conformity with the laws of the State or Territory wherein the project is located. Section 4 provides that "No right to the use of water for land in private ownership shall be *sold* for a tract exceeding 160 acres to any one land owner, and no such *sale* shall be made to any land owner unless he be an actual and *bona fide* resident on such land." Sold by whom? Clearly by the United States to the land owner. There can be no question but that under this Act the United States asserts its proprietorship

[6] 6 Fed. Stat. Ann., 1905, p. 1098; Supp. U. S. Comp. Stat., 1905, p. 349; 32 Stat. L. 388. For copy of Act, see Sec. 937. See, also, Secs. 937-950.

to all the waters upon the public domain, the rights to which have not vested and accrued in private individuals; and that, too, regardless of the fact as to whether those waters are in California or those States which follow the California theory as the legal right under the Arid Region Doctrine of appropriation, or are in the State of Colorado or those States which follow its theory as to the legal right.[7]

In the Act of Congress providing for the Forest Service, created for the management and control of National forests or forest reserves of the United States, it is also provided: "All waters on such reservations may be used for domestic, mining, milling, or irrigation purposes, under the laws of the State wherein such forest reservations are situated, or under the laws of the United States and the rules and regulations established thereunder."[8] The Government has not seen fit to take advantage of the above provision, but there is no question but that under the Act it has the power to do so, as the right of the Government is unlimited.[9] As was said by the Circuit Court of Appeals: "That the United States may, where the circumstances and conditions require it, reserve the waters of a river flowing through its public lands for a particular, beneficial purpose, was held by this Court."[10]

**§ 638. Conclusions as to the two theories—Acts of Congress ratifying constitutions containing dedication provisions.**—We have discussed in another portion of this work the effect of the dedication in a State constitution of the waters within a State to the State or public.[1] We there held that this dedication could not affect the ownership of the general Government of the riparian

10 Burley v. United States, 179 Fed. Rep. 1, 102 C. C. A. 429, 172 Fed. Rep. 615, citing Winters v. United States, 143 Fed. Rep. 740, 74 C. C. A. 666, *Id.*, 148 Fed. Rep. 684, 78 C. C. A. 546. For the same case affirmed by the Supreme Court of the United States, see 207 U. S. 564, 52 L. Ed. 340, 28 Sup. Ct. Rep. 207; United States v. Rio Grande Dam & Irrigation Co., 174 U. S. 690, 43 L. Ed. 1136, 19 Sup. Ct. Rep. 770; United States v. Winans, 198 U. S. 371, 49 L. Ed. 1089, 25 Sup. Ct. Rep. 662; Conrad Investment Co. v. United States, 161 Fed. Rep. 829, 88 C. C. A. 647, *Id.*, 156 Fed. Rep. 130.

1 See Secs. 387, 388.

rights in the waters which flow through the public lands and reservations owned by it.[2] We now reiterate that statement as to the effect of such a dedication as far as the United States is concerned, even in such States as Colorado and Wyoming, where the waters within the State are declared to be either the property of the State or public, and the constitutions containing this provision were ratified by the acceptance of the constitution by the Government. Hence it follows that such a declaration contained in a constitution declaring the waters within a State to be the *property* of a State is meaningless and of no force and effect as against the United States. A State no more than an individual can acquire property by a mere assertion of ownership. The United States, as the primary owner of the soil of the public domain within the States having these constitutional provisions, is also primarily the owner of the waters of the streams flowing across these lands, and is still the owner of these waters the title to which has not vested in some individual or company. In the case of Farm Inv. Co. v. Carpenter[3] the above proposition is disputed, and the Court says: "So far as any proprietary rights of the United States are concerned, the question would seem to be settled in favor of the effectiveness of the declaration by the Act of admission, which embraces the following provision: 'And the constitution which the people of Wyoming have formed for themselves be, and the same is hereby accepted, ratified, and confirmed.'" Citing McCormick v. Western U. Teleg. Co.,[4] where the Court held that: "The Act of Congress which admitted Utah as a State accepted and ratified its constitution, and invested all its provisions with all the authority conferred by any Act of Congress." A study of this case will reveal the fact that the holding of the Wyoming case is not borne out by the McCormick case as to the *property* rights of the United States. The question in that case was simply as to the power of Congress to give the constitutional convention the right to provide for the transfer of actions pending in the Territorial Courts to the State or Federal Courts, and did not at all involve the *property* rights of the United States.[5]

2 See Sec. 388.

5 See, also, for effect of a dedication by a State, Sec. 388.

Winters v. U. S., 207 U. S. 564,

What was granted to these States upon their admission to the Union was the *jurisdiction*, or sovereignty, over the lands and waters within their borders, and not the title or ownership.[6] As well might a State have laid claim to the title to all the public lands within its borders, not allowed in the enabling Act of admission, as to lay claim to the title to the waters flowing within its boundaries. The title has always remained and now remains in the United States, except as to those rights which have vested and accrued in individuals or companies under the various Acts of Congress, and the forbearance of "a just and generous Government."[7] And in these cases the title to the use of the water has emanated from the United States and not from any State. Then, again, in the enabling Acts for the admission of all the States it is provided to the effect that the State relinquishes and disclaims all right to the unappropriated and ungranted public lands lying within the boundaries thereof; and that the State will never interfere with the primary disposal of the public lands within its limits. In these provisions the waters flowing within the boundaries of the State must be included as a part and parcel of the public lands.

In the following section we will show that the great majority of the courts of the country have continually asserted that the title to these waters is in the United States.[8]

**§ 639. Conclusions as to the two theories—Continuous assertion of title in the United States by the Courts.**—Not only has Congress by the several Acts discussed in the previous sections[1] made repeated assertions of the ownership of the title of the waters flowing over the public domain, but the Federal Courts, including

1 See Secs. 635-638.

the Supreme Court of the United States, has, in a number of cases, made the same assertion. Take, for instance, the construction of the Courts of the effect of the Acts of 1866 and 1870,[2] that these Acts were "a voluntary recognition of a pre-existing right of possession, constituting a valid claim to its continued use, rather than the establishment of a new one,"[3] and that these rights were only confirmed by the Acts where the same had "vested and accrued" under the local customs and laws prior to the passage of the Acts. As was held by Mr. Justice Field in Jennison v. Kirk,[4] it was for the purpose of securing rights to water and rights of way over the public lands to convey it, which were thus recognized, that the ninth section was adopted, and not to grant rights where they were not recognized by the customary law of miners. These are all to the effect that the United States had the title to the unappropriated waters of the public domain, and that the appropriator acquired his title from the United States.

In the case of Sturr v. Beck[5] the question was as to the rights of a riparian proprietor as against an appropriator of the water, the Court, adopting the ruling in a former case,[6] that the Government was the sole proprietor of the public lands, whether bordering on the streams or otherwise, in effect also held that the Government was the owner of all the waters flowing over those lands. In the opinion the Court said: "When, however, the Government ceases to be the sole proprietor the right of the riparian owner attaches, and can not be invaded. As the riparian owner has the right to have the water flow *ut currere solebat,* undiminished except by reasonable consumption of the upper proprietors, and no subsequent attempt to take the water only can override the prior appropriation of both the *land and water,* it would seem reasonable that lawful riparian occupancy with intent to

appropriate the land should have the same effect." Thereby the Court held that the right of the appropriator must be deraigned from the United States, regardless of the local laws of a State or Territory. See to the same effect, Benton v. Johncox,[7] in which the Court said: "The Government, being the sole proprietor, had the right to permit the water to be taken and diverted from its riparian lands; but, when it disposed of its riparian lands without *reserving* the water, the latter passed to its grantee free from interference thereafter by the grantor."

In the cases of Howell v. Johnson,[8] and Morris v. Bean,[9] the United States Circuit Court for the District of Montana in a case involving the question of interstate waters between the States of Montana and Wyoming, held that the waters in question were a part of an innavigable stream, the title to which was never acquired by either State, but remained in the Federal Government.[10]

In Anderson v. Bassman,[11] the United States Circuit Court for the Northern District of California, in commenting upon the Howell and Morris cases, *supra*, said: "It was further urged that, as the complainant had obtained his rights from the State of Wyoming by appropriating the water in accordance with its laws, his rights depended upon such laws, and were governed thereby. But the Court very clearly explained that the rights of the complainant did not rest upon the laws of Wyoming, but upon the laws of Congress; that the legislative enactment of Wyoming was only a condition which brought the laws of Congress into force." It must be noted in this connection that Wyoming is one of the States which has so strenuously declared that the title to the water emanated from the State, under the Colorado theory.[12]

In the case of Bear Lake & R. etc. Co. v. Garland,[13] the Court

said: "The Government enacts that any one may go upon its public lands for the purpose of procuring water, digging ditches for canals, etc., and when rights have become vested and accrued which are recognized or acknowledged by the local customs, laws, and decisions of the Courts, such rights are acknowledged and confirmed." Acknowledged and confirmed by whom or by what Government? Clearly by the Government of the United States. But the question is answered by the Court itself in the next sentence, which is as follows: "Under this statute,[14] no right or title to the land, or to a right of way over or through it, or to the use of water from a well thereafter to be dug, vests, *as against the Government,* in the party entering upon possession unaccompanied by the performance of any labor thereon." This clearly claims that the title to the water is in the Government. However, the question as to the validity of an appropriation is a matter for the jurisdiction of the State courts, and not a Federal question.[15]

The later Federal cases are also to the same effect, that the United States claims title to the waters flowing upon the public domain. In the case of the United States v. Rio Grande Dam & Irrigation Co.,[16] the Court held that, in the absence of specific authority from Congress, a State can not by its legislation destroy the rights of the United States, as owner of the lands bordering upon the streams, to the continued flow of the waters; and, after reviewing the Acts of Congress, the Court held that no such right had been granted.[17] This was placed upon two grounds—the right of the United States as riparian owner, and the right of the United States to maintain the navigable capacity of its rivers and streams, even to the extent of prohibiting the appropriations of waters from the tributaries of those streams where the same were in accordance with the local laws of any State or Territory.

14 The Acts of 1866 and 1870, for which see Secs. 611, 615.

15 Telluride Power Transm. Co. v. Rio Grande W. R. Co., 175 U. S. 639, 44 L. Ed. 305, 20 Sup. Ct. Rep. 245, where the Court said: "Even if priority of possession had been shown, it would still have been necessary to prove that defendants' right to the use of the water was recognized and acknowledged by the local customs, laws, and decisions, all of which were questions of State law." See, also, same case, 187 U. S. 569, 47 L. Ed. 307, 23 Sup. Ct. Rep. 178.

16 174 U. S. 690, 43 L. Ed. 1136, 19 Sup. Ct. Rep. 770.

17 For the United States as a riparian owner, see Sec. 480.

For the right of the United States to maintain the navigable capacity of its streams, see Secs. 349-356.

The case of Gutierres v. Albuquerque Land & Irr. Co.,[18] reiterated and adopted the language in the Rio Grande case, and again asserts the proprietary rights of the United States, at least so far as Government reservations are concerned.[19] In the case of Kansas v. Colorado,[20] Mr. Justice Brewer, in rendering the decision of the Court, quoted the language used in the Rio Grande case [21] upon this point and adopted it as the law upon the subject, especially as to the question of preserving the navigability of the streams. Thus in adopting this language the Court again held that the United States was the proprietor of the water flowing upon the public domain; and, "that in the absence of specific authority from Congress a State can not, by its legislation, destroy the right of the United States, as the owner of lands bordering on a stream, to the continued flow of its waters; so far, at least, as may be necessary for the beneficial uses of the Government property." Second, . . . "The jurisdiction of the general Government over interstate commerce and its natural highways vests in that Government the right to take all needed measures to preserve the navigability of the navigable water courses, *even as against any State action.*" And yet, in the face of this language, an eminent author says, in referring to this case: "No reference whatever was made to Federal rights on the ground of proprietorship, thereby ignoring the theory on which the California doctrine rests." [22] As we view the question there was the most direct and positive assertion of Government ownership. But upon the question of sovereignty and jurisdiction the Court decided that it rested entirely with the respective States.[23]

The last decisions of the United States Supreme Court also assert the proprietorship of the United States of the waters flowing upon

18 188 U. S. 545, 47 L. Ed. 588, 23 Sup. Ct. Rep. 338; affirming *Id.*, 10 N. Mex. 177, 61 Pac. Rep. 357.

23 The case of Clark v. Nash, 198 U. S. 361, 49 L. Ed. 1085, 25 Sup. Ct. Rep. 676, 4 Am. & Eng. Ann. Cas. 1171; affirming *Id.*, 27 Utah 158, 75 Pac. Rep. 371, 1 L. R. A., N. S., 208, 101 Am. St. Rep. 953, holds to the same effect as to jurisdiction, but is silent upon the question of ownership.

the public domain. In the case of Winters v. United States,[24] decided January 6, 1908, the question was as to the right of the United States to reserve waters flowing over the public lands for use by Indians upon an Indian reservation. And Mr. Justice McKenna, in rendering the opinion of the Court, said: "The power of the Government to reserve the waters and exempt them from appropriation under the State laws is not denied, *and could not be.*"[25] The Winters case was also followed in a case decided by the Circuit Court of Appeals for the Ninth Circuit on May 25, 1908, where also the question of the right of the Government to reserve the waters for the use of Indians was involved.[26] In view of these decisions there can be no question but that the United States by its highest Courts has always asserted and now asserts that the Government is the proprietor of all the waters flowing in the natural streams and other bodies of water upon the public domain, with the exception of those waters the titles to which have legally vested in private parties; and that the title to these waters is deraigned from the United States, and not from the respective States.

§ 640. **Conclusions as to the two theories.**—Our conclusions upon this subject are, that the United States, as the original owner of all of the land on the public domain, was also the owner of all the waters of the natural streams and other bodies flowing thereon. By various Acts of Congress the United States has disposed of some of these waters under the Arid Region Doctrine of appropriation; and that the United States is still the owner of these waters, which have not been disposed of, regardless of the action of the State or Territory wherein they are located. The right to the use of other of its waters has also vested in the individuals who have from time to time acquired tracts of land from the Government bordering upon the streams, as a riparian right, in those States where those rights are permitted. It was left to the various States, as a matter of sovereignty or jurisdiction, to prescribe how

the title to the use of the waters might be acquired by individuals, in accordance with its local customs, laws, and decisions of the Courts. When the local customs, laws, and decisions of the Courts had been fully complied with by an individual seeking to acquire a water right the title to the same vested in the individual direct from the United States, and not from any State. Also, in this connection, a State, as a matter of sovereignty or jurisdiction, has the power to declare, through its legislature or by its Court decisions, just what its laws governing waters shall be; that is to say, whether the common law of riparian rights shall be exclusively adhered to, or whether the Arid Region Doctrine of appropriation shall be the exclusive law upon the subject; or again, whether there shall be dual systems composed of both the Arid Region Doctrine of appropriation and a modified or extended rule of the common law, especially as to the use of the waters. "Congress can not enforce either rule upon any State."[1] The title to the use of the water in any case is deraigned from the United States to the individual, and the Colorado theory that it comes from a State is erroneous. The rights of the appropriator, however, are always subject to the rights of the United States to preserve unimpaired the navigable capacity of the navigable rivers and streams of the United States, even to the extent of prohibiting the appropriation of waters from the tributaries of such streams; and also subject to the right of the United States, as the owner of the public lands bordering on a stream, to the continued flow of its waters, so far, at least, as may be necessary for the beneficial uses of the Government property, which, as we have seen, include the use by the Indians on the Indian reservations.[2]

# CHAPTER 34.

## WHAT WATERS MAY BE APPROPRIATED.

§ 641. In general—Scope of chapter.
§ 642. The waters of streams or water courses.
§ 643. The present area of unappropriated and unreserved public lands—Also the present area of National Forests.
§ 644. Waters flowing over the public lands of the United States—Presumption.
§ 645. Waters flowing partly over public and partly over private lands.
§ 646. Waters flowing entirely upon private lands.
§ 647. Waters flowing over the public lands of a State.
§ 648. The waters of springs.
§ 649. Surface tributaries to water courses or other bodies of waters.
§ 650. Lakes and ponds.
§ 651. Water from canyons, gorges, and ravines.
§ 652. Sloughs.
§ 653. Flood or storm waters.
§ 654. Surface waters—As such can not be appropriated.
§ 655. Subterranean or underground waters.
§ 656. Seepage water.
§ 657. Artesian waters.
§ 658. Developed water may be appropriated.
§ 659. Surplus waters.
§ 660. Excess waters.
§ 661. Waste water.
§ 662. Appropriation from artificial channels.
§ 663. Navigable waters.
§ 664. Interstate waters.
§ 665. International waters.
§ 666. The current of a stream can not be appropriated as an appurtenant to the water right.
§ 667. Waters reserved for Government use can not be appropriated by others.
§ 668. Waters reserved by Government for use on Indian reservations can not be appropriated by others.
§ 669. Waters upon the National Forests may be appropriated.

**§ 641. In general—Scope of chapter.**—We have seen in a previous portion of this work how the Arid Region Doctrine of appropriation of water for beneficial uses originated.[1] We have also seen how, throughout the entire West, especially in those sections

[1] For Arid Region Doctrine of appropriation, see Secs. 585-594.

of our country where irrigation of the soil is necessary in order to produce agricultural crops, that that doctrine is the prevailing one governing the use of waters, although in some States there are dual systems governing its use—the Arid Region Doctrine of appropriation and the common law of riparian rights.[2] The questions now presenting themselves for discussion in this part of our work are, What waters may be appropriated, by whom they may be appropriated,[3] how appropriation may be effected,[4] and the nature and extent of the rights acquired by an appropriation, as between appropriators only,[5] and between appropriators and those claiming the right to the use of the water as riparian proprietors.[6]

As to what waters may be appropriated, we will say, in general, that all waters upon the public lands theretofore unappropriated, in those States where the Arid Region Doctrine of appropriation is in force, with certain limitations which will be discussed hereafter, are open to an appropriation for some beneficial use; and that, too, whether those waters are found in natural water courses or streams, lakes, or ponds and other natural surface bodies of water, or are merely surface or flood waters, or are found underneath the surface of the earth and known as subterranean waters.[7] We will now discuss in detail just what waters may be appropriated.

§ 642. **The waters of streams or water courses.**—The waters of natural surface water courses, including all rivers and streams, may be appropriated. In fact, this is the most common type of appropriation, and the right is recognized in all jurisdictions where the Arid Region Doctrine of appropriation is in force. As to what constitutes a natural water course has been sufficiently discussed in another portion of this work.[1] The constitutions of all of the States of the Western portion of this country, where there are provisions relative to the appropriation of water, recognize the right to appropriate the waters of natural rivers and streams. Also the statutes of the various States recognize this right.[2] This phase of the

4 See Secs. 706-732.
5 See Secs. 775-803.
6 See Secs. 810-823.
7 For subterranean waters, see separate chapters, Secs. 1148-1211.

1 As to what constitutes a water course, see Secs. 301-316.
2 For the constitutions and statutes of the various States upon this subject, see Part XIV.

subject is so thoroughly discussed in many portions of this work that there is no need of citing authorities here.

**§ 643. The present area of unappropriated and unreserved public lands—Also the present area of National Forests.**—The following tables show the area of unappropriated, unreserved public lands as the same existed on June 30, 1911, according to the report of the Commission of the General Land Office to the Secretary of the Interior:

| States and Territories. | Surveyed. | Unsurveyed. | Total. |
|---|---|---|---|
| Alaska | ..... | 368,011,291 | 368,011,291 |
| Arizona | 12,040,428 | 28,982,455 | 41,022,883 |
| California | 18,012,903 | 5,350,061 | 23,362,964 |
| Colorado | 19,069,624 | 1,529,476 | 20,599,100 |
| Idaho | 6,180,332 | 17,942,705 | 24,123,037 |
| Kansas | 108,402 | ..... | 108,402 |
| Montana | 15,283,718 | 16,746,928 | 32,030,646 |
| Nebraska | 1,366,499 | ..... | 1,366,499 |
| Nevada | 28,924,771 | 26,058,377 | 54,983,148 |
| New Mexico | 23,093,519 | 10,677,848 | 33,771,367 |
| North Dakota | 1,300,333 | ..... | 1,300,333 |
| Oklahoma | 42,919 | ..... | 42,919 |
| Oregon | 13,257,246 | 3,995,929 | 17,253,175 |
| South Dakota | 3,550,573 | 122,720 | 3,673,293 |
| Utah | 11,587,569 | 23,447,035 | 35,034,604 |
| Washington | 1,196,231 | 781,560 | 1,977,791 |
| Wyoming | 30,965,363 | 2,664,242 | 33,629,605 |

Also the following table shows the estimated area of existing National Forests on June 30, 1911, according to States:

| | | | |
|---|---|---|---|
| Alaska | 26,748,850 | Nevada | 5,650,247 |
| Arizona | 14,898,000 | New Mexico | 11,111,300 |
| Arkansas | 2,225,890 | North Dakota | 13,920 |
| California | 27,735,455 | Oklahoma | 61,640 |
| Colorado | 14,761,900 | Oregon | 16,148,900 |
| Florida | 674,970 | Porto Rico | 65,950 |
| Idaho | 19,643,355 | South Dakota | 1,287,700 |
| Kansas | 303,937 | Utah | 7,667,585 |
| Michigan | 163,771 | Washington | 11,684,680 |
| Minnesota | 1,204,750 | Wyoming | 8,693,543 |
| Montana | 19,305,100 | | |
| Nebraska | 556,700 | | 190,608,243 |

In addition to the above, there are many other public reservations which are unnecessary to mention in this connection.

**§ 644. Waters flowing over the public lands of the United States—Presumption.**—One-half century ago, when the Arid Region Doctrine of appropriation was in the process of formation, practically all of the lands which go to make up the Western States and

were on the public domain of the United States.[1] All of the waters flowing over these lands were practically owned by the United States, as incident to the soil.[2] At this time, while the waters were flowing over lands owned by the United States, the doctrine of appropriation was adopted to apply to this condition of things; that is to say, that waters flowing over the *public* lands of the United States might be appropriated for any beneficial use or purpose. And, that the majority of these lands were public, the Supreme Court of California, in 1859, held that the presumption was that all lands in that State were public lands, until the legal title was shown to have passed from the Government to private parties, and that the burden of proof was upon the party asserting private ownership.[3] In the case of Lytle Creek Water Co. v. Perdew,[4] it was said: "There is nothing in the pleadings or findings to indicate that when all the waters of Lytle Creek were appropriated, any of the lands by or through which the creek flows had passed into private ownership. It must be presumed, therefore, that such lands were public lands of the United States, and the rights to the waters of Lytle Creek acquired by prior appropriation were confirmed by the Act of Congress of 1866."[5] But today no such presumption exists. This is due to the changed conditions in the Western States. Ever since the adoption of the Arid Region Doctrine of appropriation, and largely due to the results obtainable under that doctrine, the Western States of this country have become in some localities, and in others are rapidly becoming, settled up. This is especially true along the streams and other bodies of water, until on many of them the title to lands over which they flow, from their sources to their mouths, is all in private ownership. This is true to such an extent that the presumption as to the ownership of lands in these localities is changed from the old holding that it was the presumption that the title to land was in the Government, to the rule as now held by the same Court, that it devolves upon the

5 Citing 14 U. S. St. 218.

party claiming a right to the use of water by appropriation to assert and prove that at least some of the lands through which the stream runs are public lands.

In Santa Cruz v. Enright,[6] the Court said: "It does not appear whether the lands through which the stream ran at the time when the defendant claims to have acquired his right of appropriation were private or public property. If they were public lands of the United States at that time, we think it devolved upon the defendant to show that fact." In Cave v. Tyler,[7] the Court held that the burden of showing that the diversion was made on the public domain was upon the party claiming the right.[8]

So, at first, the Arid Region Doctrine of appropriation, as it originated with the early miners of California, applied only to the waters flowing over the public domain of the United States. Also all Acts of Congress relative thereto can apply only to the waters owned by the United States, for the reason that where the title to the waters has passed into private ownership, the Government has nothing to grant.[9] No question is any longer raised as to the right to appropriate water flowing over the public lands of the United States, especially after the passage of the Desert Land Act, wherein it was provided that, "All surplus water, . . . together with the water of all lakes, rivers, and other sources of water supply upon the public lands and not navigable, shall remain and be held free for the appropriation and use of the public for irrigation, mining, and manufacturing purposes, subject to existing rights."[10]

See, also, Hough v. Porter, 51 Ore. 318, 95 Pac. Rep. 732, 98 Pac. Rep. 1083, 102 Pac. Rep. 728.

Right to reserve waters for reservations, see Secs. 480, 668.

See, also, U. S. v. Rio Grande Dam & Irr. Co., 174 U. S. 690, 43 L. Ed. 1136, 19 Sup. Ct. Rep. 770.

Kansas v. Colorado, 206 U. S. 46, 51 L. Ed. 956, 27 Sup. Ct. Rep. 655.

See, also, for National Reclamation Act, Chap. 65, Secs. 1235-1286.

For right to appropriate water where point of diversion is on private land, see Secs. 673-675.

For right to appropriate water flowing entirely on private lands, see Sec. 646.

In the case of a dedication by a State all waters are subject to appropriation, and no distinction is made regarding the waters flowing over the public lands of the United States and those flowing over the lands of the State.

§ 645. **Waters flowing partly over public and partly over private lands.**—The decisions also hold to the effect that if the waters flow partly over public and partly over private lands there may be an appropriation, even in those Western States which adhere to the common law of riparian rights. This is upon the theory that there are some rights left which may be granted either by the Government or the State, or both, depending upon the ownership of the public lands.[1]

§ 646. **Waters flowing entirely upon private lands.**—In all the States of the arid and semi-arid West which have abrogated the common law of riparian rights the surplus water flowing in the natural streams may be appropriated, where they have their sources upon and flow for their entire lengths upon private lands. The right extends to all of the unappropriated water of all the natural streams or other bodies within the State, whether the lands over which they flow are public, and owned by the State or the United States, or are entirely private, or are part public and part private.[1] As was said by the Idaho Court: "By the adoption of our State constitution all of the unappropriated waters at that time were declared to be public waters, *and it matters not through or over whose land they flow.*"[2] The same rule is in force in Colorado, the decisions in which State hold to the effect that any unused or unappropriated water of the State is subject to appropriation, provided, of course, that lawful access to the stream may be acquired.[3]

1 Santa Cruz v. Enright, 95 Cal. 105, 30 Pac. Rep. 197. There is no reservation protecting riparian rights in public lands remaining unsold. Wood v. Etiwanda W. Co., 122 Cal. 152, 54 Pac. Rep. 726.

See, also, next section, No. 646.

For on what lands diversion may be made, see Chap. 35, Secs. 670-677.

1 See Secs. 644, 645.

2 Idaho Power etc. Co. v. Stephenson, 16 Idaho 418, 101 Pac. Rep. 821.

3 Sternberger v. Seaton Mountain etc. Co., 45 Colo. 401, 102 Pac. Rep. 168.

See, also, the chapter as to the two theories as to the source of title, Chap. 33, Secs. 627-640.

Upon the other hand, as we have seen in a previous portion of this work, it was left by the general Government to the various States to determine what rule shall govern, within their respective jurisdictions, the acquisition and use of the waters flowing therein.[4] They may determine for themselves whether the common law of riparian rights shall alone prevail, or whether that law shall be abrogated and the Arid Region Doctrine of appropriation shall be the only law upon the subject. Again, the State may determine to maintain both the common law of riparian rights and also the doctrine of appropriation. The United States can not enforce either rule upon a State.[5] There is no need of discussing the situation in those States which maintain only the common law of riparian rights, as water can not be appropriated under what is known as the Arid Region Doctrine of appropriation. The rights of the use of the water are confined within the limits of the uses permitted under the common law.[6]

In those States which maintain both the common law of riparian rights and the doctrine of appropriation, waters flowing entirely over private lands present a similar situation to those States which maintain only the common law of riparian rights. These waters can not be appropriated, for the reason that the use of the water belongs to the riparian owners as incident to the soil through which or adjoining which it runs; and, that being in private ownership, the title to the soil carries with it everything which is incident to that soil. This includes all of the water of a stream *after* all the lands through or adjoining which it flows have been acquired by private owners.[7] As the proposition was forcibly stated by the

A. 484; Lux v. Haggin, 69 Cal. 255, 4 Pac. Rep. 919, 10 Pac. Rep. 674; City of Santa Cruz v. Enright, 95 Cal. 105, 30 Pac. Rep. 197; Cave v. Tyler, 133 Cal. 566, 65 Pac. Rep. 1089; Meng v. Coffey, 67 Neb. 500, 93 N. W. 713, 60 L. R. A. 910, 108 Am. St. Rep. 697; Winters v. U. S., 143 Fed. Rep. 740, 74 C. C. A.

Nebraska Court, where, after stating the history of the Arid Region Doctrine of appropriation, the Court said: "In this way the rule of appropriation became established in the Pacific States, in opposition to the common law, with reference to streams and bodies of water which wholly ran through or were situated upon the public lands of the United States."[8] In fact, in these States the right of appropriation can not be exercised, as against the vested rights of riparian proprietors, whether the lands through which the stream flows is entirely on private lands or not.[9] It has also been held in a State which has abrogated the common law of riparian rights, that an appropriation can be made only of the waters flowing or situated upon the lands over which the sovereignty has dominion, and not to streams or springs or other waters arising through percolation upon land, after it has been segregated from the public domain, and the title thereto has passed into private ownership.[10]

And it is even held by some of the cases that in order to make a valid appropriation, the point of diversion from the natural stream can not be taken out on private lands.[11] However, this subject will be more thoroughly discussed in a subsequent chapter.[12]

But in one of the later California cases is to be found a statement by the Court that is hard to reconcile with the previous holdings of that Court. The Court said:[13] "The right to appropriate water, under the provisions of the Civil Code, is not

confined to streams running over public lands of the United States. *It exists wherever the appropriator can find water of a stream which has not been appropriated, and in which no other person has or claims superior rights and interests.*" We believe this should be the rule in all jurisdictions, regardless of any theory as to the source of title to water rights, and also regardless of the fact whether the State has adopted the Arid Region Doctrine of appropriation alone, or whether it has both this and the common law of riparian rights.

§ 647. **Waters flowing over the public lands of a State.**—Also as the law of appropriation is permitted under the statutes of all of the States of the arid and semi-arid West, there is no question as to the right to appropriate the waters flowing over the lands owned by the States within these regions,[1] and especially is this true in those States which by constitutional provisions or by statutory enactment have dedicated the waters flowing within the State to the public or to the people.[2] And, for the purpose of the appropriation of waters, within these States, the waters flowing over the lands owned by the various States are as much public waters as those which flow over the lands owned by the United States.[3]

In Carson v. Gentner,[4] the Court held that a prior appropriator of the waters from a natural stream flowing through State lands has such a vested right to the use of the water and to the ditch in which it flows, also constructed on said lands, as will defeat the claim of one who, with notice of such diversion and existence of the ditch, obtains from the State a deed to the premises,

without any reservation of any water right.[5] But, as we have seen, both the right to appropriate the waters from the public lands of the United States and from those of a State are subject to the rights of the United States to make reservations to maintain the navigable capacity of the navigable streams of the United States, and for its own use on its reservations.[6]

§ 648. **The waters of springs.**—The waters of a flowing stream may be appropriated at its source in a spring, as well as the waters of the stream itself.[1] It was held in the case of Brosnan v. Harris [2] that the right to appropriate the water of a spring which has no natural stream flowing therefrom exists under a statute providing that all ditches constructed for the purpose of utilizing the spring waters of the State shall be governed by the same laws as ditches constructed for the purpose of utilizing the waters of running streams.[3] But after the waters of a spring have passed into a stream to which the rights of prior appropriators have attached,

the water can not be taken from the spring to their injury by a later appropriator;[4] and it is immaterial whether the water reaches the stream by percolation or seepage.[5]

And again, rights can not be acquired to the waters of springs situated along the channel of a stream and naturally flowing into it, and which constitute its direct source of supply, by entering upon, cleaning out, and thereby increasing the water supply, as against prior appropriators of all of the waters of the stream.[6] But where the spring is not a source of supply of a stream there is no question as to the right to appropriate the waters thereof.[7] So, also, one who first appropriates the waters of a spring on the public lands may continue to use such water, as against one who subsequently acquires title to the land on which the spring is situated.[8]

But upon the other hand, the waters from springs arising upon lands, after they have been segregated from the public domain, and the title thereto has passed into private ownership, can not be appropriated by a person other than the owner of the land,[9]

The water can not be maliciously diverted by excavations on adjoining land. Stillwater Co. v. Farmer, 89 Minn. 58, 93 N. W. Rep. 907, 60 L. R. A. 875, 99 Am. St. Rep. 541.

For the question of tenants in common in springs and that of ouster by one tenant, see Church v. State, —— Wash. ——, 117 Pac. Rep. 711.

For pollution of springs, see Sec. 1138.

For the question of subterranean waters as affecting springs, see Chap 62, Secs. 1195, 1196.

**§ 649. Surface tributaries to water courses or other bodies of water.**—The waters of tributaries to water courses or other bodies of water may be appropriated by independent appropriations, provided they do not interfere with the prior rights of those who have appropriated the waters of the main stream or other body.[1] All the streams of water within a single watershed, under the doctrine of appropriation, are considered as a composite body and include not only the main water course, but also all the branches and tributaries to the same. Hence it follows that prior appropriations of the water of the main stream include the right to the waters of the tributaries, above the points of diversion, to the full extent of those prior appropriations.[2]

That an appropriation can not be made originating in trespass, see Marshall v. Niagara Springs Orchard Co. (Idaho), decided June 8, 1912.

1 As to what constitutes tributaries, see Sec. 311.

As long as the prior appropriator receives the water to the extent of his appropriation, he can not interfere with the right to appropriate from a tributary. Faulkner v. Rondoni, 104 Cal. 140, 37 Pac. Rep. 883.

See, also, Creighton v. Kaweah C. & Irr. Co., 67 Cal. 221, 7 Pac. Rep. 658; Salina Cr. Irr. Co. v. Salina S. Co., 7 Utah 456, 27 Pac. Rep. 578.

Since all the streams from which a person is entitled to take water for his lands unite before leaving his lands, it is immaterial to the lower appropriators from which of the streams the water is diverted. Wong Leong v. Irwin, 10 Hawn. 265.

For the appropriation from the tributaries of navigable rivers where it impairs navigation, see Sec. 355.

2 For the appropriation of subterranean tributaries, see Secs. 1193-1198.

See, also, Strickler v. Colo. Springs, 16 Colo. 61, 26 Pac. Rep. 313, 25 Am. St. Rep. 245; Priest v. Union etc. Co., 6 Cal. 170; Farmers' Ind. D. Co. v. Agricultural D. Co., 22 Colo. 513, 45 Pac. Rep. 444, 55 Am. St. Rep. 149, reversing *Id.*, 3 Colo. App. 255, 32 Pac. Rep. 722; Malad etc. Co. v. Campbell, 2 Idaho 278, 411, 18 Pac. Rep. 52; Bruening v. Dorr, 23 Colo. 195, 47 Pac. Rep. 290, 35 L. R. A. 640; Platte Valley Irr. Co. v. Buckers Irr. M. & Imp. Co., 25 Colo. 77, 53 Pac. Rep. 334; Tonkin v. Winzell, 27 Nev. 88, 73 Pac. Rep. 593; Low v. Rizor, 25 Ore. 551, 37 Pac. Rep. 82; Water Supply & Storage Co. v. Larrimer & Weld Res. Co., 25 Colo. 87, 53 Pac. Rep. 386, *Id.*, 7 Colo. App. 225, 42 Pac. Rep. 1020; Boyce v. Cupper, 37 Ore. 256, 61 Pac. 642; Strait v. Brown, 16 Nev. 317, 40 Am. Rep. 497; Low v. Schaffer, 24 Ore. 239, 33 Pac. Rep. 678; Salina etc. Co. v. Salina etc. Co., 7 Utah 456, 27 Pac. Rep. 578; Verdugo W. Co. v. Verdugo, 152 Cal. 655, 93 Pac. Rep. 1021; Oglivy Irr. Co. v. Insinger, 19 Colo. App. 380, 75 Pac. Rep. 598.

Also prior appropriations of the waters of the main stream include the right to the waters of springs which flow into tributaries of the main stream. Beaverhead etc. Co. v. Dillon etc. Co., 34 Mont. 135, 85 Pac. Rep. 880.

It is held that it is presumed that the waters of a tributary stream less the evaporation, if not interfered with, will reach the main stream either by surface or subterranean flow, and that the burden of the proof is upon the one attacking this presumption, to show that the waters of the tributary would not reach the main stream.[3]

A prior appropriator of the waters of a stream has a right to the waters of all its tributaries above his point of diversion, of all its sources, of whatsoever nature, to the full extent of his appropriation. Under the recent decisions he even has a right to all of the subterranean tributaries, a subject which we will discuss in a separate chapter.[4] The source of supply may also be springs,[5] surface water,[6] lakes, or ponds,[7] whether formed from percolations or surface water.[8]

Where certain lakes formed a part of the source of supply of a creek, and, with the exception of one of the lakes, formed a part of the natural channel of one of the tributaries thereof, prior appropriators of the waters of the creek were entitled to the same usufructuary rights to the waters naturally flowing and collecting in the lakes, which eventually flowed into the main channel of the creek.[9]

3 Peterson v. Payne, 43 Colo. 184, 95 Pac. Rep. 301; Josslyn v. Daly, 15 Idaho 137, 96 Pac. Rep. 568; Wilson v. Collin, 45 Colo. 412, 102 Pac. Rep. 20.

4 See Secs. 776-782.

In the case of Miller v. Wheeler, 54 Wash. 429, 103 Pac. Rep. 641, 23 L. R. A., N. S., 1065, it was held that a stream, the waters of which have been appropriated, and a tributary gulch may be used to conduct waters not naturally tributary to the stream, and belonging to others, to the place of use.

5 See Appropriation from Springs, Sec. 648.

6 Sec. 654.

7 Sec. 650.

See, also, appropriation from lakes and ponds, Sec. 650.

For relative rights of prior and subsequent appropriators, see Secs. 776-803.

The appropriator of the waters of a stream also has an interest in the waters of the tributaries of the stream which flow in below his point of diversion, to this extent: Where there are appropriators prior to him below his point of diversion on the stream, and there are also appropriators subsequent to him of the waters of the tributaries, which naturally flow in the stream below his point of diversion and above those of his prior appropriators, and he is called upon to supply the water to which those below him are entitled. In cases of this kind, he is entitled to the flow of the lower tributaries, as against his junior appropriators thereof, when it is necessary to protect the rights of the lower appropriators prior in time to him from the main stream.[10]

In cases involving the right to use the waters of the main stream and the tributaries thereto, the principal questions to be decided are, the priority of the appropriations; and, if the one taking from the main stream is found to be prior in time, then the question arises as to his actual injury resulting from the appropriations from the tributary. If the appropriator on the main stream is prior in time and his right is injured by the appropriation from the tributary, then he has his right of action both at law and in equity.[11]

§ 650. **Lakes and ponds.**—The waters of lakes and ponds may be appropriated, under certain conditions and limitations.[1] In most of the States where the doctrine of appropriation is in force there are statutes permitting the appropriation of the waters of such bodies.[2] Also in the State of California, whose statute does not include, in terms, the right to appropriate the waters from lakes, the Supreme Court of that State has held that such an ap-

2 See Statutes of Various States, Part XIV.

propriation could be made, especially in cases where streams flow through or terminate in lakes, upon the theory that the lakes are then a portion of the water courses, and what may be appropriated from one may be appropriated from the other.[3] However, in those States which adhere to the common law of riparian rights,[4] other considerations must enter into a case of this kind. As against the rights of the riparian owners, the appropriation operations must not cause the water to rise higher than the high-water mark or to fall lower than the low-water mark. In other words, the right of the riparian proprietors to have the lake remain at its natural level must not be interfered with. And where it is made to appear that the level of the lake is lowered by the operations,[5] or raised above the ordinary high-water line, and to the injury of the property of the riparian owners, the court will furnish relief.[6] However, the appropriation of the waters of a lake will

3 In Duckworth v. Watsonville etc. Co., 150 Cal. 520, 89 Pac. Rep. 338, *Id.*, 158 Cal. 206, 110 Pac. Rep. 927, it was said: "There is some evidence that Pinto Lake, with its tributaries and outlet, during the rainy season constituted a running stream of water. It is clear that during the dry seasons there was no water flowing out of the lake, but there is evidence that during that period there was a slight flow from a tributary into the lake. We can not agree with the appellant in his contention that the finding that the lake, or its tributaries, constituted a running stream is not sustained by the evidence. We think the better doctrine, in respect to the character of a stream from which the statute provides for appropriations, is that it is not necessary that the stream should continue to flow to the sea, or to a junction with some other stream. It is sufficient if there is a flowing stream; and the fact that it ends either in a swamp, in a sandy wash in which the water disappears, or in a lake in which it is accumulated upon the surface of the ground, will not defeat the right to make the statutory appropriation therefrom, and we can see no reason why the appropriation, in such a case, may not be made from the lake in which the stream terminates, and which therefore constitutes a part of it, as well as from any other part of the water course."

not be permitted where it lowers the level of the waters so that the rights of those who have made prior appropriations from the stream forming the outlet of the lake are injured. In some of these cases the lake may form the tributary and the entire source of supply of the stream, and as such has been treated in another section.[7]

In a recent Utah case[8] it was said: "Counsel for respondents, however, insist that the prior appropriator acquires no right in his means of diversion, but obtains a prior right only to use the quantity of water appropriated and applied to a beneficial use by him. We can not yield assent to this view. We think the original taker or appropriator from a stream or body of water also acquires the right to continue to use his method or means of diverting which he has installed. . . . If it be held, therefore, that a subsequent appropriator of the water need have no regard for the diverting means or methods of the prior appropriator, but may, in fact or effect, make prior appropriations of water unavailable with impunity, then there is in fact no such a right as a prior right, but all rights may, at any time, be invaded or destroyed by a subsequent appropriator by simply making the diverting means used by the prior appropriator useless. To permit such an invasion of a prior right would, in effect, amount to an indirect taking of a prior appropriator's water. This neither the legislative nor the judicial power can allow without permitting confiscation of property rights."[9]

**§ 651. Water from canyons, gorges, and ravines.**—A valid appropriation of water may be made from a canyon, gorge, or ravine, notwithstanding it is not a running stream, and the greater portion of the year it is entirely dry, there being running water only in time of rainfall and melting snow in the surrounding hills.[1] In a recent Oregon case it was held that a gulch through which water flows, beginning usually about the latter part of February and continuing generally until some time in the early part of June, about which time the positive flow ceases, constitutes a water course, the waters of which may be appropriated.[2]

In many of the States it is provided by statute that the waters of ravines and canyons may be appropriated.[3]

**§ 652. Sloughs.**—A slough is defined as an arm of a river apart from the main channel.[1] As to whether water may be appropriated from sloughs depends entirely as to whether or not all of the waters of the stream upon which they are dependent have been appropriated before an attempted appropriation from the slough, as the waters in this kind of a slough are in reality the waters of the stream.[2] But, as we have seen,[3] some sloughs may have independent water; these take the nature of water courses, and appropriations may be made from them to the extent of such independent water.[4]

**§ 653. Flood or storm waters.**—As we have seen, the decisions are in conflict as to whether flood or storm waters are to be treated

as surface waters or a part of the water courses which they overflow. The weight of better authority holds that flood or storm waters are a constituent part of the streams, unless they wander away from them to places where, upon the lowering of the water of the streams, they can not return to them, in which case they become mere surface water.[1]

Flood or storm waters may be appropriated for beneficial uses, under the Arid Region Doctrine of appropriation. In fact, throughout the arid West, there are many irrigation projects which rely almost entirely upon these waters for their source of supply. This is especially true in the case of reservoir projects. In many portions of the arid West the greater portion of the precipitation occurs in the spring or rainy seasons. This, augmented with the melting snow, causes the rivers and streams to overflow their banks and submerge the adjoining lands, and it is not only a matter of safety to these lands, but also of profit to the projectors, that these waters be stored and let down to irrigate lands in the dry seasons, when they are needed. Otherwise these waters would cause much damage, and finally run off to the sea without any beneficial use.

We have said that flood or storm waters may be appropriated. But whether as such they may be appropriated as an independent appropriation is another question. These waters are a part of the waters of the streams, and the original appropriators are entitled to all of the waters of the streams to the full extent of

1 For definition of flood or storm waters, see Sec. 319.

For appropriation of surface water, see Sec. 654.

For definition of surface water, see Sec. 318.

That the flood water of a river, which forms a continuous body with the water flowing in the ordinary channel, or which departs from the channel but returns when the water in the channel lowers, must be regarded as a part of the stream, see Fordham v. Northern Pac. R. Co., 30 Mont. 421, 76 Pac. Rep. 1049, 66 L. R. A. 556, 104 Am. St. Rep. 729.

See, also, Rait v. Furrow, 74 Kan. 101, 85 Pac. Rep. 934, 6 L. R. A., N. S. 157; Palmer v. Waddell, 22 Kan. 352; Town of Jefferson v. Hicks, 23 Okla. 684, 102 Pac. Rep. 79, 24 L. R. A., N. S., 214; Miller v. Madera etc. Co., 155 Cal. 59, 99 Pac. Rep. 502, 22 L. R. A., N. S., 391; Brinegar v. Copass, 77 Neb. 241, 109 N. W. Rep. 173; Cook v. Seaboard etc. Co., 107 Va. 32, 57 S. E. Rep. 564, 10 L. R. A., N. S., 966, 122 Am. St. Rep. 825; Broadbent v. Ramsbotham, 11 Exch. 602, 25 L. J. Exch. N. S. 115, 4 Week. Rep. 290, 34 Eng. L. & Eq. 553.

their appropriations, which include their waters at their natural flow; and, if that is insufficient to give them the full amount in the order of their appropriations, then they are entitled to the flood waters until the full extent of all of their appropriations is satisfied.[2] The same rules of appropriation apply to flood waters as apply to the waters of the ordinary flow of the stream. They must all be applied to a beneficial use or purpose within a reasonable time.[3] But, upon the other hand, if the flood water does not form part of the amounts included in the prior appropriators' rights, it is subject to appropriation by independent appropriations.[4] But in all cases regarding the rights of the prior appropriators the flood waters must be treated as surplus waters of the streams.[5]

Regarding the rights of riparian owners in those jurisdictions where such rights are allowed, the authorities hold that the flood or storm waters may be all appropriated by independent appropriations. The riparian owners are entitled to only either the ordinary and natural flow of the streams or, at least, to such flood waters as might reasonably be expected. And hence, they can not lawfully claim, as against appropriators, the flow of the extraordinary flood waters of the streams.[6] As was held in a recent case in California, the impounding and distribution of flood and storm waters is encouraged by law where it does not sub-

stantially damage the existing rights of riparian proprietors, and that an injunction will not be granted for the diversion of such waters for use upon behalf of a riparian proprietor unless he can show actual, material, and substantial damage.[7]

**§ 654. Surface waters as such can not be appropriated.**—Surface water, or diffused surface water as it is sometimes called, we have defined as water on the surface of the ground, the source of which is so temporary or limited as not to be able to maintain for any considerable time a stream or body of water having a well-defined and substantial existence.[1] No permanent right to the appropriation of this water can be maintained from the fact that its movements are too erratic and capricious. Formed as it is from the rainfall or the melting snow upon the ground, or from the natural drainage from the lands above, no absolute right, by means of an appropriation as that term is understood in the arid region, can attach while it still remains surface water.[2] The question which usually arises in regard to surface water is how to get rid of it, and not how to appropriate it. Under the civil law rule the owner of the upper land has an easement over the lower adjacent land to discharge surface water as it is accustomed naturally to flow, and the lower land owner has no right to interrupt such natural flow to the injury of the upper land owner.[3] Under the common law, however, no such easement is recognized, and either the upper or lower owner may get rid of it the best he can. But there must be no artificial accumulation of the water and the subsequent discharge of the same upon the lands of another, under either rule.[4] Some of the States have adopted one rule and some

4 McDaniel v. Cummings, 83 Cal. 515, 23 Pac. Rep. 795, 8 L. R. A. 575; Wood v. City of Tacoma, —— Wash. ——, 119 Pac. Rep. 859; City of Paola v. Garman, 80 Kan. 702, 102 Pac. Rep. 83; Johnson v. Hyre, 83 Kan. 38, 109 Pac. Rep. 1075; Chicago etc. R. Co. v. Groves, 20 Okla. 101, 93 Pac. Rep. 755, 22 L. R. A., N. S., 802; Gray v. McWilliams, 98

the other. But this runs us into the subject of drainage, which will be discussed to some extent in another chapter of this work.[5] However, in the arid region, this drainage from the upper to the lower land may be of great value to the lower land. Hence the lower owner has the right to insist that it continue. As was said in the case of Boynton v. Longley, arising in Nevada,[6] "It is seldom that any land owner in this State has occasion to complain of too much water. The cry is, usually, not for less, but for more." But the moment that surface water finds its way into a water course or other body of water it is no longer surface water, and a permanent right to the use thereof may be acquired by appropriation under the laws regulating such water courses or bodies of water.

Surface water, however, may be captured and impounded in any method available by a land owner over whose lands such waters have flowed, and, when so captured, it becomes the absolute property of such land owner and is not subject to appropriation by others. As was said in a very recent Idaho case:[7] "If a man collect and impound surface and flood waters from his own land before they reach any natural stream or channel and holds the same on his land and premises, the fact that he may not use it for irrigation or any other commercial purpose does not render it any less his property or authorize any one else to invade his property or appropriate and divert the same. A permit from the State engineer can not give any sanction to such a procedure. The State engineer has no right to grant permits to one man to use another man's property."[8]

**§ 655. Subterranean or underground waters.**—In order to have the subject of subterranean or underground waters together, we will discuss them in chapters by themselves.[1] But in general we will say here, that these waters are subject to appropriation. A few years ago it was considered by the authorities that only the waters of known subterranean water courses might be appropriated. But owing to recent scientific investigations the underground flow of these waters has been practically ascertained, and the legal authorities have kept pace with the scientists, and today practically all of these waters are subject to appropriation, with the exception of what are known as diffused percolations. At least, rights may be secured in and to these waters which can not be interfered with by others.[2]

**§ 656. Seepage water.**—Seepage waters, as the term is understood by Western irrigators, are those waters which seep from irrigation canals and irrigated fields to the lower lands, and there usually come to the surface and can not be appropriated.[1] In many cases seepage waters find their way back into the stream from which they were originally taken, and from there they may be reappropriated and diverted upon other fields and there again used. In this way the water of streams may be appropriated, diverted, and used a number of times. The seepage waters mingling with the waters of the stream are usually appropriated below as a part of the waters of the stream, and under a special statute a person claiming a right to water as seepage water, has the burden of proving that the water claimed is seepage water, and the quantity thereof.[2] As a general proposition, seepage water coming into a natural stream belongs to the appropriators thereon, and can not be appropriated sepa-

rately.[3] Seepage waters properly belong to subterranean waters and will be discussed under that subject.[4]

§ 657. **Artesian waters.**—Artesian waters are also subject to appropriation for irrigation and other beneficial purposes.[1] These waters also come under our classification of subterranean waters, and will be more thoroughly discussed under that subject.[2] In general we will say here that the water flowing from artesian wells on the public domain is subject to appropriation, although there may not be any State statute directly permitting the same, and also where the wells were sunk for another purpose and by other parties than the appropriator and abandoned by them.[3]

§ 658. **Developed water may be appropriated.**—Developed water is that water which by artificial works has been discovered and developed by man. This water belongs properly to subterranean waters, and will be treated of more fully in another portion of this work.[1] But in general we will say here that developed water belongs to the person by whom it is developed and appropriated to some beneficial use, so long as he does not interfere with the rights of others. But it must be proved by the party claiming the water that it was not taken from a source of supply to a natural water course, either surface or subterranean, the waters of which were all appropriated prior to the development of the water in question.[2] In those jurisdictions where riparian

2 Paige v. Rocky Ford Canal & Irr. Co., 83 Cal. 64, 21 Pac. Rep. 1102, 23 Pac. Rep. 875; Platte Val. Irr. Co. v. Buckers Irr., Mill & Imp. Co., 25 Colo. 77, 53 Pac. Rep. 334; Cardelli v. Comstock Tun. Co., 26 Nev. 284, 66 Pac. Rep. 950; Evans v. Prosser Falls Land & Power Co., 62 Wash. 178, 113 Pac. Rep. 271.

In the case of Ripley v. Park Center etc. Co., 40 Colo. 129, 90 Pac. Rep. 75, it was held that the right as first appropriator of one who conducted water from mines into a natural stream with the intent there to recapture the water and to appropriate it for irrigation purposes, and who

rights are upheld the owners along a stream, the waters of which have been increased by development, can not claim any of the increment over and above the natural flow of the stream.[3] But in case the increase in flow results merely from the clearing out of obstacles from the channel of the stream, each riparian owner is entitled to the benefit of the increment. The same principle also applies to those cases where all of the waters of the stream have, prior to the cleaning out of the stream, been appropriated.[4]

§ 659. **Surplus waters.**—All surplus or excess waters of the natural streams or other bodies may be appropriated. As we shall see, the right of the prior appropriator is limited to the amount of water which is actually applied to some beneficial use or purpose within the limit and extent of his claim. Hence it follows that those who come after him may appropriate, in the order of their priorities, all of the surplus waters of the stream.[1] This subject, however, will be more thoroughly discussed when we come to that of the nature and extent of rights as between appropriators and others.[2]

§ 660. **Excess waters.**—The terms "surplus" and "excess" waters are sometimes used interchangeably. But excess water has a still more technical meaning. Whenever an appropriator diverts and lays claim to more water than is actually needed for the purposes for which it was appropriated, or fails to use a portion of the water so appropriated for some beneficial use or purpose, his

actually made the first appropriation of the water, relates back to the time when he sought to utilize the water.

Rep. 422, *Id.*, 48 Colo. 89, 109 Pac. Rep. 425, 30 L. R. A., N. S., 615; Anderson Land etc. Co. v. McConnell, 133 Fed. Rep. 581.

2 See Secs. 775, *et seq.*

claim is deemed excessive, and the unused portion of the water is deemed excess water. This excess water may be appropriated by others, not by an independent appropriation and by this means cutting in ahead of other appropriators, but by the subsequent appropriators in the order of their priorities on the stream.[1] This subject will also be further discussed under other heads in this work.[2]

§ 661. **Waste water.**—Under the Arid Region Doctrine of appropriation, it is the duty of each appropriator to use all of the water appropriated for some beneficial use or purpose.[1] When he has so used the water, it is also his duty to return the surplus to the natural stream from which it was taken, for the use of the subsequent appropriators.[2] And it was recently held by the Federal Court that such unused water was not waste water, but excess water which might be appropriated.[3] Or, if the appropriators owning lands below him are second or subsequent to him in the regular order, it is permitted that he pass the water along to them in order that they may use it. In fact, many ditches and canals are constructed with this end in view, sufficient water being taken out of the stream for the use of all the appropriators on the ditch.

Waste water may be defined to be such water as escapes from the works or appliances of appropriators without being used; or, such water as escapes from an appropriator's land after he has made all

3 Anderson etc. Co. v. McConnell, 133 Fed. Rep. 581.

the beneficial use thereof that is possible and which can not be returned into the natural stream from which it was originally taken. And as to such water it was recently held by the Colorado Court:[4] "Plaintiff's rights were limited and only attached to the water discharged from the Tegeler lateral, whatever that happened to be, after the defendants and cross-complainants had supplied their own wants and necessities. This does not vest her with any control over the ditches or laterals of appellants, or the water flowing therein, nor does it obligate appellants to continue or maintain conditions so as to supply plaintiff's appropriation of waste water at any time or in any quantity, when acting in good faith."[5]

It often happens that the prior appropriator, in irrigating the lower portion of his land, is compelled by the lay of the land to let the water run off from his property to the lands of others, in places where it is impossible to return the water to the natural stream. And it often happens that the water flows upon lands of those who are either not appropriators from the stream, or are appropriators much later than others, who in point of time are entitled to the use of the water. This water is deemed by the courts to be waste water. And the question now arises, can the owners of the lands on which it runs secure a permanent right therein to its continuous use? The authorities hold that while the water, so denominated as waste water, may be used after it escapes, no permanent right can be acquired to have the discharge kept up, either by appropriation, or a right by prescription,[6] estoppel,[7] or acquiescence in its use while it is escaping, and that, too, even though expensive ditches or works were constructed for the purpose of utilizing such waste water, unless some other element enters into the condition of affairs, other than the mere use of the water. In other words, the original appropriators have the right, and in fact it is their duty to prevent, as far as possible, all waste of the water which they have appropriated, in order that the others who are entitled thereto may receive the benefit thereof.[8]

8 Burkart v. Meiburg, 37 Colo. 187, 86 Pac. Rep. 98, 6 L. R. A., N. S., 1104, 19 Am. St. Rep. 279; Mabee v. Platte Land Co., 17 Colo. App. 476,

When such water escapes and returns to the stream or its tributaries, it becomes a part of the water of the stream and subject to reappropriation as though it had never been diverted, and inures to the benefit of the other appropriators on the stream in the order of their appropriations.[9]

In a recent case decided by the Supreme Court of Oregon,[10] it was held that where water is claimed as the "waste" waters from the farm of an adjacent water user, all the water in excess of that caused by seepage is but the quantity diverted by such appropriator in excess of his needs, and accordingly in excess of the quantity to which he may be entitled; and the person receiving and applying the excess to a beneficial use acquires a *vested* right therein, as would an appropriator of any other surplus water, the inception of which right, like that of any other appropriator, dates from the first steps taken to provide for its use. The first part of the holding is correct, as we shall see when we come to the question of beneficial use of the water appropriated. A person is not permitted under the law to appropriate more water than he can use.[11] The last

See, also, for rights of subsequent appropriators, Secs. 783-786.

Waste water from irrigation ditches which is again returned to the stream or its tributaries becomes a part of the waters of the stream as though never diverted, and inures to the benefit of the appropriators in the order of their appropriations. Water Supply & Storage Co. v. Larimer & W. Res. Co., 25 Colo. 87, 53 Pac. Rep. 386, reversing 7 Colo. App. 225, 42 Pac. Rep. 1020.

10 Hough v. Porter, 51 Ore. 318, 95 Pac. Rep. 732, 98 Pac. Rep. 1083, 102 Pac. Rep. 728.

11 For beneficial use, see Secs. 607, 725-728.

part of the holding, that the person receiving and applying the same to a beneficial use acquires a vested right therein, is contrary to the great weight of authority. First, the waste water should go to the other appropriators on the stream from which the water was originally taken, and no vested right to its use should be permitted on lands where it happens to run; second, to permit this would be permitting the appropriation from the artificial works of another, to the injury of the other prior appropriators from the stream itself; and, third, this would open up the greatest opportunity for collusion between the appropriator and his neighbors below, in fraud of the rights of the rightful appropriators of the waters from the stream, whereby the first appropriator could appropriate more water than he could use, and then let a portion flow down to his neighbors as "waste water" to be used by them.

The better authorities hold that a claimant to waste water acquires a temporary right only to whatever water escapes from the works or lands of others, and which can not find its way back to the natural stream from which it was taken; that such a use of the water does not carry with it the right to any specific quantity of water, nor the right to interfere with the water flowing in the ditches or works of others lawfully appropriating it, and the appropriators are under no obligation, nor have they the right to permit any specific quantity of water to be discharged as "waste water" for his benefit.[12]

§ 662. **Appropriation from artificial channels.**—After water has been appropriated and diverted from a natural stream into ditches, canals, or other artificial works, it becomes personal property and can not be appropriated from such works.[1] This subject will also be discussed in other portions of this work.[2] That water after it

12 It has been held that one who acquires a privilege of using the waste water of a prior appropriator can be deprived of the same at any time, unless the water has been returned to the stream without any intention of recapture. Woolman v. Garringer, 1 Mont. 535.

See, also, Sharp v. Hoffman, 79 Cal. 404, 21 Pac. Rep. 846; Cache La Poudre Res. Co. v. Water Supply & Storage Co., 25 Colo. 161, 53 Pac. Rep. 331, 46 L. R. A. 175, 71 Am. St. Rep. 131; Ball v. Kehl, 95 Cal. 606, 30 Pac. Rep. 780.

is lawfully diverted can not be appropriated by another is upon the theory that it is personal property and as such belongs to the appropriator from the natural stream.[3]

§ 663. **Navigable waters.**—The waters of navigable streams and other bodies may be appropriated, as well as the waters of those not navigable; provided, always, that the navigable capacity of the navigable waters of the United States is not impaired.[1] Owing to the topography of the country the navigable streams in the arid region are comparatively few and small. But nearly all of the streams of this portion of the country, except those which run into the great basin of which Great Salt Lake forms the bottom, are tributaries to some of the navigable waters of the United States. Up to the present time the courts of this country have been called upon to pass upon very few cases which involve the appropriation from navigable waters. But shortly in the future, as more and more water is being appropriated, spread upon the soil for irrigation, and of course a great per cent of the water lost to the navigable portion of the stream, the courts, and perhaps Congress will be called upon to determine which shall be paramount, the right to use the water for navigation or the right to use the water for irrigation. And, in this connection, as far as the cases have gone at the present time, the courts have decided the right of navigation to be the paramount right;[2] and, in the Rio Grande case, the Supreme Court of the United States[3] went so far as to

For statutes in the various States permitting the appropriation of waste water, see Part XIV.

2 See Secs. 341-357.

3 U. S. v. Rio Grande Dam & Irr. Co., 174 U. S. 690, 43 L. Ed. 1136, 19 Sup. Ct. Rep. 770, reversing 9 N. M. 303, 51 Pac. Rep. 674, where it was held that where there is a conflict between the interests of navigation and agriculture in relation to the use of a stream, the lower part of which is navigable for a short dis-

hold that an injunction would be granted in a suit by the United States, not only against the diversion of the water from the upper reaches of a navigable river of the United States, but also against the diversion of the waters from the tributaries of the river where it was proven that the navigable capacity of the navigable portion of the river was impaired. This doctrine was also affirmed in the case of Kansas v. Colorado.[4] Now then, as nearly all of the tributaries of the navigable streams of the United States in the Western portion of this country take their sources in the mountains above the irrigable lands of the arid and semi-arid regions, and, further, almost without exception, the waters of these tributaries are being each year more and more appropriated for irrigation, which in time must impair the navigable capacity of the river below, the question is bound to arise, as to what extent is the doctrine in the Rio Grande case to be enforced in the future. Congress has control over navigable streams and waters thereof. No claim based upon the appropriation of such waters for irrigation made without the sanction of Congress should be recognized by the Department of the Interior as valid.[5]

As far as the navigable waters of a State, or those waters which have no connection with the navigable waters of the United States, it is a matter entirely within the jurisdiction of the State to decide as to which right shall be paramount.[6] But where the navigable

tance, the latter should prevail, where the land over which it flows is an arid region, devoted to agriculture, and depending solely for water upon irrigation, and where navigation would be of comparatively little value.

[4] 206 U. S. 46, 51 L. Ed. 956, 27 Sup. Ct. Rep. 655.

See, also, Secs. 341-357.

[5] Opinion of Atty. Gen. February 6, 1905, 33 Land Dec. 391, in the case of California Development Co., and involving the appropriation of the waters of the Colorado River.

See, also, upon the same subject relative to international waters, Sec. 655.

Where an Act of Congress, giving an irrigation company the right to divert the waters of a navigable river, provided that, if the canal or ditch should not be completed within five years, the rights granted should be forfeited, a forfeiture was properly declared where more than five years elapsed after the dissolution of an injunction originally granted restraining the company from proceeding to construct its system, where the work was still incomplete. U. S. v. Rio Grande Dam & Irr. Co., 13 N. M. 386, 85 Pac. Rep. 393.

See upon the general subject Bulletin No. 100, p. 68, U. S. Dept. of Agriculture.

[6] The State has a right to confer irrigation rights in the waters of a navigable lake, where the irrigation

capacity of a navigable river is not impaired, there is no doubt but that its waters may be appropriated.[7]

The question is always one of fact, whether such appropriation substantially interferes with the navigable capacity within the limits where navigation is a recognized fact.[8] However, there must be a right on the part of the public of access to the waters, otherwise they may be diverted and drained.[9]

§ 664. **Interstate waters.**—Interstate waters are those waters which flow through or bound two or more States.[1] And here, under this branch of the subject as to what waters may be appropriated, we will say that the waters of interstate streams or other bodies may be appropriated under the Arid Region Doctrine of appropriation. This right, as is the case of appropriations from other streams, depends upon the priority of the appropriation, made in accordance with the laws of the State where the appropriation is made; not in the order of the States where the appropriation is made, but in the order of the appropriations made by individuals. In other words, there is no new rule governing these appropriations, and they depend upon their priority to the extent of each individual appropriation, regardless of State lines. Hence it follows that the rights of prior appropriations made in one State will be protected against diversions by subsequent appropriators in the adjoining State.[2]

operations do not cause the water to rise higher than high-water mark or to fall lower than low-water mark. Kalez v. Spokane Val. L. & W. Co., 42 Wash. 43, 84 Pac. Rep. 395.

A. 14, in the opinion of which Judge Hallett said: "Water is essential to human life in the same degree as light and air, and no bounds can be set to its use for supplying the natural wants of men other than the mighty barriers

The validity of an appropriation from an interstate stream depends upon its validity under the laws of the States where the appropriation is made.[3] And, where an appropriation is valid under the laws of the State where the same is made, it is recognized as valid in all other States.[4] As was held in a very late case, decided by the Supreme Court of the United States,[5] the Federal Supreme Court will assume, in the absence of Montana legislation to the contrary, that prior appropriators of the waters of an interstate stream at a point in Wyoming could acquire rights as against junior appropriators of the waters of the same stream in Montana, which rights would be enforceable in the latter State.

The subject of interstate waters, however, will be more fully discussed in a later chapter of this work.[6]

**§ 665. International waters.**—International waters are those which flow through or bound two or more countries. The appropriation of the waters of an international stream involves other questions than are involved in the appropriation from interstate streams.[1] The rights of the other country must be considered, as

which the Creator has made on the face of the earth."

1 For interstate streams, see Secs. 664, 1221-1234.

well as the rights of the United States and its citizens. This subject will also be more thoroughly discussed in our chapter on international waters.[2] The rights of the citizens of the two countries depend upon the treaty relations between them. It is apparent without treaty stipulations to that effect that this country or its citizens can not take any action on any rivers forming the boundary between this and another country which would impede or interrupt navigation in whole or in part.[3] And for the citizens of one country to subjugate all of the waters of a river to the purposes of irrigation in their country would be contrary to international law, and also contrary to the treaties between this and adjoining countries.[4]

**§ 666. The current of a stream can not be appropriated as an appurtenant to the water right.**—By the law of appropriation, only the water of a stream can be taken, which includes the right to have the same flow in the natural channel to the intake of the appropriator's ditch or canal.[1] The current of a stream can not be appropriated as an appurtenant to the water right. This is true in all jurisdictions as far as the law of appropriation goes. Hence it follows that an appropriator of a certain amount of water from a stream can not at the same time appropriate, as an appurtenant to his water right, the current of the stream as a means of operating water wheels or other devices to divert the water from the stream, where their use interferes with the rights of other appropriators, even subsequent in time to the one using the device. Where such means of diversion, however, does not interfere with the rights of other appropriators, the current of the stream may be used to lift and divert the water of the stream, but this means of diversion must give way to those coming subsequently and who wish to appropriate and use the water.[2] This is upon the theory that all the waters of the natural streams and other bodies are open to appropriation and use by all who may legally appropriate and use them; and this

See, also, for diversion of water by wheels, Secs. 723, 724.

appropriation and use by others can not be prevented by the mere means of diversion of some individual. Mr. Wiel seems to hold otherwise and says:[3] "Simply putting a large current water wheel in the stream itself would doubtless be an appropriation of enough water to run it." We take issue with the gentleman in this statement. In such an act there are none of the elements of an appropriation.[4] There are no diversion of the water of the stream and the taking of the necessary possession of the same, required in the making of a legal appropriation,[5] but the water remains in the stream itself. The only theory upon which such a statement can be reconciled with the law upon the subject is that in those States which adhere to the common law of riparian rights and also have the doctrine of appropriation, an individual might appropriate a certain quantity of the water of the stream for some beneficial use under the law of appropriation, and claim as a riparian owner the right to the current of the stream for the purpose of running his wheels to divert the water appropriated. We have seen that a person can be both a riparian owner and claim the right to the use of the water flowing by his land, and at the same time be an appropriator of another quantity of the water. But even under both laws upon the subject, it would be a doubtful policy to permit one man to prevent other appropriations of the water simply through his means of diversion of a small quantity of the water of a stream for his own use.

**§ 667. Waters reserved for Government use can not be appropriated by others.**—In another portion of this work we have discussed the power of the general Government, as owner of both the land and waters of the public domain, to reserve certain waters for its own use and for the use of its wards—the Indians—on Indian, also on military, and other reservations.[1] We also hold that the Government, as such owner, has the power to reserve waters on the public domain to supply its irrigation projects, constructed under the National Reclamation Act, which waters it may afterwards *sell* to the settlers as provided by the terms of the Act.[2] As was said in

a recent opinion by the United States Circuit Court of Appeals: "That the United States may, where circumstances and conditions require it, reserve the waters of a river flowing through its public lands for a particular, beneficial purpose, was held by this Court."[3]

This subject, however, will be more thoroughly discussed under the National Reclamation Act.[4]

In our chapter on the Arid Region Doctrine of appropriation we discussed the two theories of the right of appropriation designated by the authorities as the California and the Colorado theories.[5] Holding with the California theory that the right of appropriation was based upon a grant from the United States, or upon a presumption of a grant, it can be readily seen that these reservations of water by the Government can not be in the nature of an appropriation, for the reason that the Government can not make a grant to itself, and especially of what it already owns. But that the United States has the full power to reserve such waters as it may need for use on its reservations there can be no doubt; and that, too, whether the water is in actual use on the reservation or not.[6] The situation was first recognized in the United States Circuit Court of Appeals in 1897, in the case of Krall v. United States,[7] and, although the case was decided against the right of the Government to reserve the waters running through a military reservation in the face of an appropriation of the same by private parties, Judge Gilbert, in dissenting from the decision of the majority of the Court, held that the Government had that right, and that the reservation to its own use by the United States of public land which is traversed by a running stream, before any rights have accrued to divert the water from its natural channel, includes the reservation

7 79 Fed. Rep. 241, 24 C. C. A. 543, 48 U. S. App. 351.

of the water, and the right to have it flow as it was accustomed to flow, and that an appropriation by a private party can not affect the right of the Government to demand the unrestricted flow of the water through the reservation, as it flowed at the time when the land was set aside for a military post.[8] That Judge Gilbert was correct as to his view of the law may be seen from the fact that the same Court and the Supreme Court of the United States afterwards held to the same view.[9] In a very late case decided by the latter Court, Mr. Justice McKenna, in delivering the opinion of the Court, said: "The power of the Government to reserve the waters and exempt them from appropriation under the State laws is not denied, and could not be."[10]

**§ 668. Waters reserved by Government for use on Indian reservations can not be appropriated by others.**—Although the same principles of law are involved relative to the reservation by the Government of the waters flowing over the public domain for the use by the Indians, or by the Government itself, on Indian reservations, as apply to the reservations of water for use on other lands reserved by the Government for special purposes, discussed in our previous section,[1] there are some features of this right which should be discussed in this place. The Indian tribes located upon the many reservations set apart for their use are wards of the Government. After taking a greater portion of the lands of this country away from the Indians, and confining them ever upon smaller and smaller areas, the duty devolved upon this Government to educate the Indians and to teach them the ways of civilization, until they have reached that condition whereby they can take care of themselves.

8 For the Government as a riparian owner, see Sec. 480.

See, also, for reservations for Indian reservations, Secs. 338, 411, 481, 668.

1 See Secs. 338, 411, 481.

In the meantime it is also the duty of the Government to protect them in their rights from the wiles of unscrupulous white men, and also from those who, perhaps unconsciously, would trespass upon those rights.[2] It was early found that, owing to the natural habits of the Indians of an outdoor life, that the industry of agriculture was the surest and quickest method by which this civilization could be accomplished. But, to follow agriculture, the Indians must have land, and not only that, but good land; and, as most of the Indian reservations are located in the Western States where the land is arid, in order to cultivate the land with success, there must be ample water for irrigation. Hence it has been the policy of the general Government, amply sustained by the courts, that in the establishment of an Indian reservation, to reserve sufficient water flowing over the lands for the use of the Indians, in order that they might leave off their nomadic habits and turn "to agriculture and the arts of civilization."[3] Much has been accomplished in the past, but much remains to be accomplished. In a previous portion of this work we have set forth something that has been accomplished in the way of educating the Indians in the ways of agriculture.[4]

We find that there are all grades, from the original aborigines, termed "blanket Indians," and wholly dependent upon the Government rations for their support, to those who have become wholly civilized and are not only entirely self supporting but are acquiring fortunes. The policy of the Government in making Indian allotments in severalty has done much toward the end desired.[5] When an Indian is made to understand that his future depends upon his own industry, and not upon his tribal relations, he is quicker to follow the ways of his white neighbors, and he will work for himself when he will not work for the tribe. The ultimate end of the Government in its policy with the Indians is full citizenship. This has been attained by many, and many more are on the way toward that condition. But until the Indians are fully able to care for themselves and have the education and training to stand up in competition with the white man, this Government asserts and protects their rights.

2 For the Indian right of occupancy, see Secs. 404, 405, 415.

3 Winters v. U. S., 207 U. S. 564, 52 L. Ed. 340, 28 Sup. Ct. Rep. 208, affirming *Id.*, 148 Fed. Rep. 684, 78 C. C. A. 546, *Id.*, 143 Fed. Rep. 740, 74 C. C. A. 666.

4 See Secs. 271-285.

5 For Indian allotments, see Secs. 273, 285.

So, while the Indians are still living upon reservations set apart for their use, there is a reservation of the waters flowing through such lands sufficient to supply the reasonable uses of the Indians for irrigation, which the courts will protect, and that, too, whether the water is being actually used for such purpose or not.[6] And, while the Indians are still occupying such lands, the waters can not be appropriated by private individuals, unless there should be a surplus over and above the reasonable needs of the Indians; this, of course, is subject to appropriation. But when the Government abandons an Indian reservation and the Indians give up their right of occupancy, the water of the streams running through the same are open to appropriation under the laws of the State through which they flow and under which the appropriation is sought to be made, and a grantee of the Government of a tract of land included in the former reservation does not take the water right as an appurtenant, unless it is conveyed in clear and explicit language.[7]

**§ 669. Waters upon the National Forests may be appropriated.**—It is provided by the Act of Congress of June 4, 1897:[1] "All waters on such reservations may be used for domestic, mining, milling, or irrigation purposes, under the laws of the State wherein such forest reservations are situated, or under the laws of the United States and the rules and regulations established thereunder."

The last clause of the Act of Congress quoted above, "or under the laws of the United States and the rules and regulations established thereunder," reserves in the United States rights to the use of waters flowing over forest reserves or National Forests. The National Government, however, has not seen fit to take advantage of this provision and has left the appropriation of all waters flowing over such reserves to the laws of the respective States wherein such lands lie. The principal question, however, relative to appro-

priation of waters flowing over such reserves is that of securing the necessary rights of way over such lands. These rights of way have to be secured in accordance with the rules and regulations of the department in charge of such reserves and will be hereinafter more fully discussed when we come to the subject of rights of way over public lands.[2]

The various States, in applying their own laws to the appropriation of waters flowing over forest reserves, make the additional requirement that before such waters can be appropriated the license must be secured from the Government in accordance with the rules and regulations thereof, and time is also granted by the statutes of such State, after the inception of a right to appropriate such waters, in which to secure such license from the Government.[3]

# CHAPTER 35.

## ON WHAT LANDS DIVERSION MAY BE MADE.

§ 670. Scope of chapter.
§ 671. The present situation.
§ 672. Authorities holding that a diversion can not be made on private lands.
§ 673. Authorities holding that a diversion can be made on private lands—Arid States.
§ 674. Authorities holding that a diversion can be made on private lands—Common law States.
§ 675. California authorities.
§ 676. California authorities—Cave v. Tyler.
§ 677. Point of diversion may be made on private lands—Our conclusions.

§ 670. **Scope of chapter.**—Since writing the first edition of this work prior to 1893, a new question has arisen relative to whether or not a valid appropriation of water may be made where the point of diversion is made upon lands after the title to the same has been acquired by private owners. We must not confuse this question with the one involving the appropriation of water which has its source and entire natural course upon private lands. This subject has been discussed in another portion of this work.[1] But the simple question is as to whether or not from a natural stream conceded to flow over public lands for at least a portion of its way, and hence its waters being subject to appropriation, a valid appropriation may be made, where the point of diversion is made upon lands in private ownership at the time of the attempted appropriation. The courts, especially those of California, seem to have had considerable trouble over this question, and we will therefore endeavor to discuss the question fully in the following sections.

§ 671. **The present situation.**—There is no question but that an appropriation otherwise valid may be made where the point of diversion is situated either upon the public lands of the United States or the lands owned by a State, within those States where the Arid Region Doctrine of appropriation is in force. The right granted by the Acts of Congress for an appropriation also granted

1 For the appropriation of waters flowing over private lands, see Sec. 646.

a right of way over the lands owned by the United States for the ditch or canal from the stream; and the lands afterwards patented to private owners are subject to both the water rights and the rights of way for conducting the water to the place where it is used.[1] The States also followed this position taken by Congress as to the waters flowing over lands granted by the general Government to the States.[2]

But, as has been stated in a previous section, as time went on the lands along the streams and other bodies of water have become rapidly settled up, until many of the streams which formerly flowed entirely upon the public domain now flow over or adjoin lands the title to which is now entirely in private ownership.[3] This is especially true as to available points along the streams where diversions may be made of the waters by the appropriators by means of dams, ditches, and canals, or other works. And the question has arisen as to whether or not a valid appropriation of the waters of a stream may be made where the point of diversion is made upon private lands, even if the right of way for that purpose is granted by the owner of the lands, or acquired under condemnation proceedings by virtue of the right of eminent domain.[4] Or, in other words, must the diversion be made upon public lands either of the United States or of the State wherein the appropriation is sought to be made in order to have the appropriation a valid one?

**§ 672. Authorities holding that a diversion can not be made on private lands.**—Mr. Farnham, in his work on Water and Water Rights, in his strenuous but vain effort to uphold the common law of riparian rights, as against the Arid Region Doctrine of appropriation for beneficial uses,[1] holds to the effect that a valid appropriation can not be made where the point of diversion is upon private land. He says:[2] "A party diverting water on land not belonging to the public domain does not thereby acquire the right to enjoin from using the water from the stream a riparian owner, whose lands are farther up the stream, even if the appropriation

1 For which see his argument in Vol. 3, Secs. 649-661.

2 P. 2050.

of water by the former was earlier."[3] Again: "The owner of a mining claim whose flume discharges the refuse water into a ravine on his land may extend his flume so as to prevent the appropriation of the water by a third person who has attempted to construct a ditch over his land to the mouth of the flume to take the abandoned water."[4] And again: "An appropriator's rights begin at the head of his ditch, and he can not enter upon the land of a riparian proprietor to tap streams to increase his supply. It is only when the riparian proprietor prevents the water from flowing to the head of his ditch by an interference with the course of Nature that the appropriator can complain."[5]

Mr. Long, in his work on Irrigation, assumes the same position as Mr. Farnham. At least he makes no distinction between the conditions as to where the waters flow entirely upon private lands, in the common law States, and where part of the waters flow upon public lands, but where the point of diversion contended for is on private lands. He says:[6] "The right to water for irrigation can not be acquired by prior appropriation, where the land has been reduced to private ownership."

Besides the text books referred to above, there is one California case which holds flatly that a valid appropriation can not be made where the diversion of the water is upon private land, and a number of other cases which, without deciding the express point, would seem to the casual reader to hold, by the expressions used, that such an appropriation could not be made. The California case referred to is that of Cave v. Tyler.[7] In that case, in an opinion written by Mr. Justice McFarland, the Court held that the Acts of Congress of 1866 and 1870[8] apply only to diversions made on the public domain of the United States; and one claiming the right to divert water under such Acts must show that his rights vested while the *land on which the diversion occurs was a part of such domain.* We shall contend that this decision is not only contrary to the great weight of authority in the States which recognize the Arid Region Doctrine of appropriation, but also contrary to the decisions of the

State of California, both before and since; and not only this, but it is contrary to all reason in the premises.[9]

Relative to the other cases referred to above, we will only add that there are numerous cases where similar expressions may be found to that used by the Supreme Court of Washington, in the case of Benton v. Johncox,[10] where the Court said: "Moreover, the doctrine of appropriation applies only to public lands, and when such lands cease to be public, and become private property, it is no longer applicable." It will be found upon a close examination of this case and the other cases where similar expressions are found that the Court in no way held that a valid appropriation could not be made where the diversion was on private lands. The only contention in the case was the right of an appropriator as against the rights of the riparian owners on the same stream in a jurisdiction where both the common law of riparian rights and the doctrine of appropriation were maintained. In fact the same Court, in a later case, held that a valid appropriation could be made where the diversion was made on private land.[11]

**§ 673. Authorities holding that a diversion can be made on private lands—Arid States.**—The great weight of the court decisions in the Western States and Territories hold to the effect that a valid appropriation may be made from any public waters,[1] where the point of diversion is upon private lands; provided, of course, that a lawful right is acquired over the private lands for the purpose of making the diversion and conducting the water therefrom.[2] The decisions upon this subject are quite numerous and to the direct point in question, and include both those of the States which have the dual systems of water laws, and those which have abrogated the common law of riparian rights, and have only the law of appropriation.[3]

3 For the lists of States having one system or both, see Secs. 507, 621.

See, also the laws of the various States in Part XIV.

One of the strongest cases upon the subject and of pre-eminent authority was the case of Clark v. Nash, decided by the Supreme Court of the United States in 1905.[4] In this case the plaintiff sought to make an appropriation of the waters of a certain stream in the State of Utah. He also sought, by the right of eminent domain, not only to acquire a right of diversion upon the lands of the defendants touching upon the stream, but he also sought to make his diversion through the defendants' ditch, already constructed upon their land, by widening the same, "which said ditch is begun on the defendants' land" and "runs" over their lands to a point of about one hundred feet from the plaintiff's land. The Supreme Court of the United States, in affirming the decision of the Utah Supreme Court, held that such an appropriation might be made, and that the right of way to the stream through the ditch of the defendants might be acquired by eminent domain.[5]

The Colorado decisions have always held that such an appropriation could be made, from the case of Yunker v. Nichols,[6] decided in 1872, where the Court held that the private lands in that Territory were held in subordination to the dominant rights of others, who must necessarily pass over them to obtain a supply of water to irrigate their own lands; and that, too, without a grant from, and even against the will of, the land owner, and without condemnation proceedings.[7] However, the later Colorado cases do not go to the extent of the case of Yunker v. Nichols,[8] and, while they hold that such an appropriation is valid, the right to go upon another's land must be either obtained by grant, license, or by condemnation proceedings brought by virtue of the right of eminent domain.[9] But

Rep. 766; *Id.*, 26 Colo. 74, 56 Pac. Rep. 577; Stewart v. Stevens, 10 Colo. 440, 15 Pac. Rep. 786; Baldridge v. Leon Lake Ditch & Res. Co., 20 Colo. App. 518, 80 Pac. Rep. 477.

see the recent case decided in April, 1909,[10] where the fact was that the defendant entered the land of the plaintiff and made its diversion, and the Court held that not only was the appropriation valid but that if the defendant had wrongfully taken plaintiff's lands for a right of way, they may obtain appropriate relief therefor in another action. The land in this case was riparian, and the plaintiffs claimed that their rights as riparian owners were trespassed upon.[11] In Utah we have the same rule that such an appropriation is legal, but the right must be acquired from the owner of the land in some legal manner.[12] In Wyoming we also have the same rule.[13] And so the law may be regarded as settled in all of those States which have abrogated the law of riparian rights as to the use of water,[14] and have only the Arid Region Doctrine of appropriation, that a valid appropriation may be made where the point of diversion is on private land. In fact the statutes of the most of these jurisdictions expressly provide for special condemnation proceedings to secure a right of access to and from the streams for this purpose. And that such a statute is constitutional in these arid States, the Supreme Court of the United States has so held, even where the right is sought to be acquired by one individual.[15]

§ 674. **Authorities holding that a diversion can be made on private lands—Common law States.**—In those States which have both the law of appropriation and the common law of riparian rights as to the use of the waters of natural streams, the majority of the cases also hold that a valid appropriation can be made, where the point of diversion is on private land, provided that lawful access to the stream can be had by the appropriator over the private land.

10 Sternberger v. Seaton Mountain El. L. H. & P. Co., 45 Colo. 401, 102 Pac. Rep. 168.

11 In this case the Court also reiterates the abrogation of riparian rights. See, also, for Colorado laws, Part XIV.

12 See Clark v. Nash, *supra*.

13 Sterritt v. Young, 14 Wyo. 146, 82 Pac. Rep. 946, 4 L. R. A., N. S. 169, 116 Am. St. Rep. 994, where, however, the Court held that condemnation proceedings must be based upon a statute providing for notice to the person whose land is to be taken; but that one who has accepted compensation awarded for a right of way over his property is estopped from questioning the validity of the proceedings.

14 For these, see Sec. 621.

15 See Clark v. Nash, *supra*.

For rights of way, see, also, Secs. 927-993.

The Supreme Court of Oregon, in a case decided in 1909, held that rights to the use of water may be initiated through a ditch tapping the source of supply upon the land of another, and none but the owner of the premises across which the ditch is constructed are in a position to complain.[1] This, of course, assumes that there is sufficient water in the stream to supply the needs of the prior appropriators and that the rights of the riparian owners to the reasonable use of the water is not materially impaired.[2] In Montana we find the same rule,[3] and, again, in Washington.[4] In all of these States, however, it is held that the right of access to the stream must be acquired by either a grant, license, or by proceedings in condemnation.

§ 675. **California authorities.**—From the earliest of its decisions down to the time when the case of Cave v. Tyler was decided in 1901,[1] the Supreme Court of California has either held that a valid appropriation could be made where the point of diversion was made on land after the title to the same had been acquired by private parties or has assumed without question that that right existed, provided that lawful access could be obtained over the private land for that purpose.[2] However, we will say in this connection that,

prior to the decision in the case of Clark v. Nash by the Supreme Court of the United States,[3] the Supreme Court of California was not as liberal in granting rights of way for this purpose as were some of the other courts, by virtue of the right of eminent domain.[4] The question of a public use was more narrowly construed. And, while it was held that a right to appropriate water on the lands of another for a public use, such as for a municipal corporation, might be acquired through condemnation proceedings,[5] it could not be acquired by private individuals.[6]

the diversion and the use of the water diverted, and not by the mere fact of diversion. In this case the diversion was made upon riparian lands in private ownership.

See, also, Senior v. Anderson, 2d appeal of above case, 130 Cal. 290, 62 Pac. Rep. 563; see, also, 3d appeal, *Id.*, 138 Cal. 716, 72 Pac. Rep. 349.

See, also, Alhambra Addition W. Co. v. Mayberry, 88 Cal. 68, 25 Pac. Rep. 1101, where the Court said: "For so far as it appears, they were at that time the sole occupants of the lands bordering on the stream, and the lands through which it flowed after leaving the lands of Kewen belonged to the United States. Such being the case, they had the right to appropriate the entire stream for any beneficial purpose. . . . There was nothing unlawful or improper in such an . . . appropriation and diversion of the water, as between themselves, or as against the United States."

See, also, eminent domain under the California laws, Part XIV.

**§ 676. California authorities—Cave v. Tyler.**—We now come to the case of Cave v. Tyler,[1] and this case, as we have stated before, was decided contrary to all precedents of the California, as well as all other jurisdictions which adhere to the same theory as to the right of appropriation as does the California authorities.[2] It has been held many times by the California courts that a riparian owner could also become an appropriator.[3]

Under the decision of the Cave case it is held, in effect, that a riparian owner, in order to become an appropriator from the same stream which runs through or by his lands, can not divert the water from the stream as an appropriator, but must go off his land to a point where there is some spot of public land, and there he may make a lawful diversion as an appropriator. Upon the other hand as a riparian owner the same individual is entitled to a reasonable use of the water of the stream for irrigation, and this water he must take from the stream on his own lands. Again, under the decision of this case, it is held that a diversion on private lands militates against the validity of the appropriation. In other words, by the Act of Congress of 1866, in granting a right to the appropriation of the water flowing over the public lands, and also granting a right of way over the public lands for the appropriation, that in order to have a valid appropriation there must be a union of the use of both rights. Hence, under the decision, a person can not make a valid appropriation where the point of diversion is made upon his own lands, provided he has the title thereto. Again, he can not make a valid appropriation on the private lands of others, even where he obtains a right so to do from the owners by grant, lease, or license. Again, upon this theory, a right acquired under the right of eminent domain will avail him nothing, as the point of diversion will still be upon private lands. For as the Court says: "There is no finding that the diversion was made on the public domain of the United States. There are some things in the record which seem to indicate that the diversion was on private land acquired under a Mexican grant in which the Government never had any estate or interest; but there is no finding on this subject. The burden of showing that the diversion was made on the public

1 133 Cal. 566, 65 Pac. 1089.

2 For the different theories as to the right of appropriation, see Secs. 627-640.

3 See Secs. 519, 681.

domain was upon the respondents, if that fact was essential to respondents' asserted right under said laws of Congress, as we think it was." The Court then cites, as its only authority upon this proposition, the case of City of Santa Cruz v. Enright.[4] An examination of that case will disclose that the Court made no such ruling as to hold that the point of diversion must be upon private lands. The question decided in that case was to the effect that waters which flowed entirely over private lands could not be appropriated by a valid appropriation. This is entirely another point. This subject we have discussed in another portion of this work.[5]

That the ruling in the case of Cave v. Tyler,[6] in holding that there must be a finding "that the diversion was made on the public domain of the *United States*," is inconsistent with the previous ruling of the same court, see the case of Wood v. Etiwanda Water Co.,[7] where the Court expressly held that a valid appropriation could be made, where the point of diversion was made on lands owned by the State. And, although the ruling in the Cave case has not been expressly overruled by the Court, the later cases in effect overrule it by contrary decisions. In the third appeal of the case of Senior v. Anderson,[8] the point of diversion was made upon the homestead of another, and the Court expressly held that the appropriation was not invalidated thereby. Again, in a case in which the opinion of the Court was concurred in by the same Justice who wrote the opinion in the Cave case, it was held that not only might the diversion be on private lands, but also that the right to appropriate water, under the provisions of the California Civil Code,[9] is not confined to streams running over the public lands of the United States, but that it exists wherever the appropriator can find water of a stream which has not been appropriated, and in which no other person has or claims superior rights and interests.[10]

We can not leave this phase of the question without referring to

4 95 Cal. 105, 30 Pac. Rep. 197.

5 That a valid appropriation of the waters of streams which flow entirely upon private lands can not be made, see Sec. 646.

the expressions of an eminent California text-book writer relative to the ruling in the Cave v. Tyler case. Mr. Wiel,[11] in his work on "Water Rights in the Western States," correctly holds that the argument in the opinion is based on a wrong view of the doctrine of appropriation, as indicated by the expression, "Under what local custom or law, under what 'decisions of the courts,' was there 'a vested and accrued right' of the respondents to all of the water of the stream up or through the public domain to its head, thus depriving a large section of country above of its fertility?" The author then cites California authorities to show that the law of appropriation is based on the right to do that very thing in case of priority.[12] And he concludes the criticism of the case with the following: "While, consequently, Cave v. Tyler is a direct and actual decision that an appropriation can not, in California, be made when the point of diversion is on private land, yet it is contrary to the decisions in the other States, to the weight of authority in California, and is so inconsistent with the remark in a recent case in the same court that, though not since mentioned or expressly overruled, it probably does not represent the law even in California." [13]

**§ 677. Point of diversion may be made on private lands—Our conclusions.**—Where there is unappropriated water flowing upon the public lands of either the United States or of a State, and there is no interference with the rights of the riparian proprietors whose lands border on the stream below, our conclusions upon this subject are that a valid appropriation may be made of those waters, where the point of diversion is made on lands after the title to the same has been acquired by private parties, even in those States which adhere to the common law of riparian rights and also have the law of appropriation under the Arid Region Doctrine; provided, of course, that *lawful access to the stream can be had for that purpose.* Where the point of diversion is

upon the lands of another, lawful access for this purpose may be had in various ways. It may be had by grant or deed, by lease, by license, or by condemnation proceedings by virtue of the right of eminent domain.[1] Our opinion to this effect is not only based upon the authorities discussed in our previous sections [2] but also upon the language of the Act of Congress of 1866,[3] the Desert Land Act of 1877,[4] and upon all reason in the premises. A study of the Act of 1866 will disclose the fact that there were two grants, which were separate and distinct. There was, first, the grant of the right to appropriate the waters flowing over the public domain; and, second, there was the right of way over the public domain for the construction of ditches and canals in order to conduct the water from the streams to the private lands where it was to be used. These two grants are in no way dependent upon each other, the one relating to the water right, and the other relating to the soil. And, so far as the validity of the appropriation of the water is concerned, it might be used in conjunction with the grant of the right of way over the public lands, which also included the point of diversion from the stream, *if it was necessary;* or if it was not necessary, it might be used in connection with ditches and canals which were constructed entirely over private lands, including the point of diversion and their entire length, provided that lawful access might be secured from the owners for this purpose. Hence it follows that, if an appropriator is also a riparian owner on the stream from which his appropriation is to be made, if it is feasible, he may go upon his own lands and make the diversion;[5] or, if it is not, he may go upon the public

5 In Oregon it is held: "The right of prior appropriation is limited to the use of water by the pioneer settler before any adverse claims of riparian proprietors attach upon the stream from which the water is taken, and not to the point of diversion, which may be either within or beyond the boundaries of the tracts selected by such settler." Brown v. Baker, 39 Ore. 66, 65 Pac. Rep. 799, 66 Pac. Rep. 193.

lands of the United States, where a right of way is granted him; or again, he may acquire a right of way from his neighbors for this purpose, either by grant, prescription, license, or by condemnation. As was recently said in an Oregon case:[6] "Concerning the mere diversion and use of water there is no difference between a non-riparian appropriator and a riparian user, provided the former has a lawful right of access for that purpose to the stream from which the diversion is made. The essential condition of appropriation in the first place on public lands was the consent or acquiescence of the then riparian owner, the general Government. The reason of the rule is not changed by the fact that the riparian owner is a private person, provided the appropriator has his consent, or what is equivalent, that the appropriator and the riparian owner are one and the same person. The deduction, then, is that if any one can lawfully gain access for that purpose to a non-navigable stream, and water is there not subject to use by another, such a one may appropriate it for his own use."[7]

This theory of two grants is also emphasized by the language of the Desert Land Act,[8] as follows: "And all surplus water, . . . together with the water of all lakes, rivers, and other sources of water supply upon the public lands and not navigable, shall remain and be held free for the appropriation and use of the public for irrigation, mining, and manufacturing purposes, subject to existing rights." Here was an express grant of the right in the future to appropriate the waters flowing over the public domain, and without anything being said concerning rights of way. In fact, in none of the Acts of Congress, or in any of the decisions of any court, with the exception of the case of Cave v. Tyler,[9] do we find that, in order to make a valid appropriation, the water *must* be taken out from the natural stream in a ditch

See, also, Morgan v. Shaw, 47 Ore. 333, 88 Pac. Rep. 534; Smith v. Denniff, 24 Mont. 20, 60 Pac. Rep. 398, 50 L. R. A. 737, 81 Am. St. Rep. 408; Alhambra etc. Co. v. Mayberry, 88 Cal. 68, 25 Pac. Rep. 1101; Offield v. Ish, 21 Wash. 277, 57 Pac. Rep. 809; Healy v. Woodruff, 97 Cal. 464, 32 Pac. Rep. 528.

7 Citing Brown v. Baker, 39 Ore. 66, 65 Pac. Rep. 799, 66 Pac. Rep. 193; Morgan v. Shaw, 47 Ore. 333, 88 Pac. Rep. 534.

8 *Supra.*

9 133 Cal. 566, 65 Pac. Rep. 1089.

constructed over a right of way granted by Congress. If Congress had intended this, it is reasonable to suppose that in some Act there would be a law to this effect. Then again, Congress granted by other Acts rights of way over its public lands and reservations.[10] These were also separate and distinct grants, and might be taken advantage of if necessary. Again, in our opinion, as far as the precise point involved is concerned, it is entirely immaterial whether or not the appropriation is made in a State which has only the law of appropriation, or in a State where both it and the common law of riparian rights are enforced. The question depends only upon the general right under the State law to make the appropriation, the surplus or unclaimed water in a stream which, for a part of the way at least, flows over public land either of the United States or of a State, from which the appropriation is claimed, and lawful access through the necessary lands for the point of diversion from the stream and for the ditch or canal to conduct the water from the point of diversion to the lands where they are to be used for some beneficial purpose.

10 See 6 Fed. Stat. Ann., 1905, pp. 508-513; 2 U. S. Comp. Stat., 1901, p. 1570. See, also, for rights of way, Secs. 927-971.

# CHAPTER 36.

## WHO MAY APPROPRIATE WATER.

§ 678. Scope of chapter.
§ 679. In general.
§ 680. Right of Indians.
§ 681. Riparian owners may also be appropriators.
§ 682. Tenants in common.
§ 683. Several persons may make appropriations in severalty through the same ditch.
§ 684. Corporations—In general.
§ 685. Appropriations by aliens.
§ 686. Title to the soil in appropriators unnecessary.
§ 687. Squatters' rights.
§ 688. Rights of trespassers.
§ 689. Rights of lessees.

**§ 678. Scope of chapter.**—In this chapter we will discuss the subject as to who are entitled to appropriate water under the Arid Region Doctrine of appropriation. In general we will say that, unlike the doctrine of the common law of riparian rights, the right to the use of the water of the natural streams does not depend upon the ownership of the land adjoining the streams, or, in fact, the ownership of any land, but under this doctrine the waters of natural streams may be appropriated by any one who is prior in time and who will apply such waters to beneficial uses and purposes. In the following chapter we will also discuss the purposes for which water may be appropriated.[1]

**§ 679.—In general.**—Under the laws of Congress there are no restrictions as to the qualifications of individuals who may appropriate water. The tests of such appropriations are priority and the application of the water appropriated to some beneficial use or purpose, regardless of the personal qualifications of the individuals appropriating. Appropriations may, of course, be made by all land owners, by all citizens of the United States, and by nonresidents of the States where the appropriation is made. It

1 See Chap. 37, Secs. 690-705.

may be made by Indians,[1] by married women, and by minors.[2] Appropriations may be made by municipal corporations,[3] by business corporations, organized under the laws of any State or Territory, regardless of the locality where the water is to be appropriated.[4] It may be made by mutual associations or tenants in common.[5] It may be made by irrigation districts, organized upon the lines of the "Wright" Irrigation District law, which districts are in effect municipal or public corporations.[6] It may also be made by corporations working in conjunction with a State, under the provisions of the Carey Act.[7] It may also be made by the United States, under the provisions of the National Reclamation Act. However, the Government may also reserve its water flowing over its public lands for this purpose.[8]

In fact, the only limitation prescribed by any statute as to the qualifications of appropriators is to be found in some of the State statutes limiting such right, where water is appropriated for irrigation, in some instances, to persons who have a title or a possessory right to the land to be irrigated. But in the statutes of most of the States the right is granted absolutely, the statutes being silent as to the personal qualifications of appropriators.[9]

1 See Sec. 680.

For irrigation by Indians, see Secs. 271-285.

For appropriations by speculators, see Sec. 705.

2 "Married women and minors were, in general, not competent to pre-empt land, but we have never heard that they might not make a valid appropriation of water." Santa Paula Waterworks v. Peralta, 113 Cal. 38, 45 Pac. Rep. 168, citing Maeris v. Bicknell, 7 Cal. 261, 68 Am. Dec. 257, 1 Morr. Min. Rep. 601; Davis v. Gale, 32 Cal. 26, 91 Am. Dec. 554, 4 Morr. Min. Rep. 604; De Necochea v. Curtis, 80 Cal. 397, 20 Pac. Rep. 563, 22 Pac. Rep. 198; Hill v. Newman, 5 Cal. 445, 63 Am. Dec. 140, 4 Morr. Min. Rep. 513; Norris v. Hoyt, 18 Cal. 217; Racouillat v. Sansevain, 32 Cal. 376; Lobdell v. Hall, 3 Nev. 507.

3 See Secs. 684, 1433-1448.

4 See Secs. 684, 1490-1508.

5 See Mutual Assns., Part XII, Secs. 1479-1489.

6 For the District Irrigation Laws, see Chap. 70, Secs. 1386, *et seq.*

7 For the Carey Act, see Chap. 67, Secs. 1312-1336.

For acquisition of land under the Carey Act, see Secs. 1330-1334.

8 See Sec. 1266.

For the National Reclamation Act, see Chap. 65, Secs. 1235-1286.

Under the National Reclamation Act, a person can purchase water only where he is either an owner of land, or has taken up land under the Act, and is in lawful possession thereof. See Secs. 1277-1279.

9 See, for the statutes of the various States, Part XIV.

§ 680. **Right of Indians.**—An Indian may lawfully acquire a right to the use of water by an appropriation thereof, and may also maintain an action against a white man for the wrongful diversion of such water.[1] In an Arizona case,[2] "As found by the Court, the right of the Indians to water from the Utah canal arose, not from ownership of shares of stock in the canal, but from the fact that they and their predecessors in interest contributed to the building, enlargement, and maintenance of the canal by their labor, and that ever since the construction of the canal they have been accorded such rights." And the Court held that a judgment apportioning water to Indians for irrigation according to the rights acquired by prescription on condition that they pay their *pro rata* share of the expense of the maintenance of the common ditch, as provided by a contract, was not objectionable. Again, in a New Mexico case,[3] it was said by the Court: "The ditch in question was built by the Indians very many years ago. It has been maintained by and belongs to them, and we are unable to see how their failure to elect a *major domo* and work the acequia, under the laws of the Territory regulating such election and work, would justify the plaintiffs in error in wrongfully appropriating water flowing through it, which the Court below finds does not belong to them. There is no error in the decree complained of, and the same is therefore affirmed."

In many parts of this country, especially during the last twenty-five years, many Indians have abandoned their tribal relations and savage ways, taken their allotment of land in severalty, and following the ways of civilization have become respected citizens of the United States and of the State where they reside. Where such is the case the Indian has all of the rights of the white man. He can acquire title to land and appropriate water to irrigate the same, and has as equal standing in the courts as any of his neighbors. The Indians, being naturally inclined to an outdoor life, in many localities of this country, when their hunting grounds and reservations have been opened up for settlement, have taken their allotments in severalty, appropriated water for the irrigation of the same and have become in many instances

1 Lobdell v. Hall, 3 Nev. 507.

2 Biggs v. Utah Irr. Ditch Co., 7 Ariz. 331, 64 Pac. Rep. 494.

3 De Baca v. Pueblo Santo Domingo, 10 N. M. 38, 60 Pac. Rep. 73.

the best of farmers.[4] The step from good farmers to good citizens is but a short one. And, it may be remarked in passing, that the principal cause of the change has been the allotment of the lands in severalty and their being educated under the fostering care of the Government in the industry of modern agriculture.[5]

The right of an individual Indian, however, to appropriate water must be distinguished from the right of the Government to make reservations of the waters flowing over the public domain, from private appropriation, where such waters are needed for the use of an Indian tribe located upon a Government reservation. This subject has been treated in other sections.[6]

§ 681. **Riparian owners may also be appropriators.**—As discussed in a previous portion of this work, owners of land through which or by which streams flow may make appropriations of the water flowing therein in all the States which recognize both the doctrine of appropriation and the common law of riparian rights.[1] In other words, the general rule is that a person can be both a riparian proprietor upon the stream and by virtue of the same claim certain rights in the water, and he may also be an appropriator and claim additional rights to the use of the water. This subject has been discussed in another chapter of this work and further discussion is unnecessary under this subject.[2]

However, in those States which have abolished the common law of riparian rights, it is held that riparian owners who desire to appropriate the waters of the stream which their lands adjoin must comply with the provisions of the law of the State the same as those who are not riparian owners.[3]

§ 682. **Tenants in common.**—Several persons may join in making an appropriation of water sufficient for the use of all on their separate lands, and when this is done they are usually treated as tenants in common of the water right.[1] The members of vol-

untary associations or unincorporated companies, appropriating waters by means of the same works, may be tenants in common,[2] and, when the appropriation has been made in that manner there is nothing to prevent the organization of the interests of the respective tenants in common into a corporation for the purpose of maintaining the ditch and other works, distributing the water, and for the protection of the rights of the shareholders.[3] In fact, all through the Western States this has been a very common practice.[4]

See, also, for voluntary associations, Part XII, Secs. 1453-1463.

3 For corporations, see Part XII.

Hildreth v. Montecito Cr. W. Co., —— Cal. ——, 70 Pac. Rep. 672.

4 For ditch and canal companies, see Part XII.

For appropriation by corporations, see Secs. 684, 1470.

But the majority who have incorporated have no right to regulate and control the minority, who did not join the corporation.[5] In order, however, to be governed by the rules of law relating to tenants in common, there must be no special or other agreement among the joint users of the waters appropriated through a common ditch as to their proprietary interests, and the right to a unity of possession must extend to the right of user, which is essential to the existence of such a tenancy in a water right.[6]

A distinction must be made between tenants in common in a water right and those in the ditch, canal, or other works by which the water is diverted. The appropriation of the water made by tenants in common may be distinct from the means by which that appropriation is made effective. The water right may also be owned by one set of tenants in common and the ditch and other works may be owned by another set.[7] This subject will be treated in another section of this work.[8]

**§ 683. Several persons may make appropriations in severalty through the same ditch.**—Several persons, who may or may not be tenants in common, may make appropriations at different times and may use the same ditch, dam, and other works for the diversion of the water and for the irrigation of their respective tracts of land without surrendering, joining, or merging their respective priorities. Hence it follows that the same irrigating ditch may have two or more priorities belonging to the same appropriator, or to different appropriators.[1] It is the general custom throughout

5 Bartholomew v. Fayette etc. Co., 31 Utah 1, 86 Pac. Rep. 481, 120 Am. St. Rep. 912, affirmed in 31 Utah 220, 87 Pac. Rep. 707.

6 Telluride v. Davis, 33 Colo. 355, 80 Pac. Rep. 1051, 108 Am. St. Rep. 101; Norman v. Corbley, 32 Mont. 195, 79 Pac. Rep. 1059; Feeney v. Chester, 7 Idaho 324, 63 Pac. Rep. 192; Bullerdick v. Hermsmeyer, 32 Mont. 541, 81 Pac. Rep. 334.

But see Biggs v. Utah Irr. Ditch Co., 7 Ariz. 331, 64 Pac. Rep. 494, where the Court held that tenants in common appropriating water by means of a common ditch are entitled to agree among themselves as to the manner in which they may enjoy their several appropriations.

7 Johnson v. Little Horse Cr. Irr. Co., 13 Wyo. 208, 79 Pac. Rep. 22, 70 L. R. A. 341, 110 Am. St. Rep. 986.

8 For tenants in common in a ditch, see Part XII. Also, Secs. 683, 1454-1458.

For actions by and between tenants in common, see Part XII.

1 Nichols v. McIntosh, 19 Colo. 22, 34 Pac. Rep. 278; Nevada Ditch Co. v. Bennett, 30 Ore. 59, 45 Pac. Rep. 472,

the entire country to permit persons making appropriations to use the same ditch in making the diversion from the natural stream as far as practicable. If this was not the case the whole country would be cut up by individual ditches. In many States it is provided by statute that the later appropriators may use the works and ditches already constructed upon certain conditions. They then may conduct the water as far as possible in the main ditch, and from thence by other ditches to their own lands.[2]

In most jurisdictions one ditch owner will be compelled in proper condemnation proceedings to share his ditch with another seeking a right of way through the same.[3] This subject, however, will be discussed under that of rights of way over private lands.[4]

§ 684. **Corporations—In general.**—The questions involved as to the powers and rights of corporations relative to the acquisition of water rights and the use and disposal of waters, the construction of the necessary works, the acquisition of rights of way over both public and private lands,[1] and other rights, are so many and varied in the Western States that we have thought it best to consider these questions in separate chapters under their

60 Am. St. Rep. 777, where the Court held that the extensions of an irrigating ditch made for the benefit of later appropriators, as well as the appropriations themselves, must be considered individual rights, where the contemplated use of the ditch did not comprehend later appropriations.

For rights of way over private lands, see Chap. 52, Secs. 972-993.

respective heads, and, for the purposes of this work, corporations may be divided into public[2] and private.[3] Public corporations may be divided into what are considered strictly public, and municipal. Private corporations we will divide into two classes: First, corporations which are organized solely for the mutual benefit of their stockholders, or "mutual corporations";[4] and, second, those which are organized for the purpose of furnishing water to others than to their stockholders, and for the express purpose of profit.[5]

In general, we will only say in this place that all of the corporations named above, under certain limitations and restrictions imposed by the constitutions and laws of the States under which they are organized, and of the States where their operations are being carried on, and by their own articles of incorporation or charters, have the right to appropriate the waters of the natural streams and other bodies of water, and to apply them to beneficial uses or purposes, or to furnish such water to individuals who will so apply it. As an individual may appropriate such waters to be used for beneficial purposes, there is no reason why a number of individuals,[6] either associated together as voluntary unincorporated associations, or as copartners, or as formally incorporated under the laws of some State, may not do the same thing.[7] The rights, powers, and duties of all corporations, both public and private, will be discussed in another portion of this work.[8]

§ 685. **Appropriations by aliens.**—An alien may appropriate water and may hold the ditch and water right until he has forfeited the same by a proceeding termed "office found," brought by the State to declare such forfeiture.[1] The alienage of a person

7 Gutierres v. Albuquerque etc. Co., 188 U. S. 545, 47 L. Ed. 588, 23 Sup. Ct. Rep. 338, affirming *Id.*, 10 N. M. 177, 61 Pac. Rep. 357; Hagerman Irr. Co. v. McMurray, —— N. M. ——, 113 Pac. Rep. 823.

8 For private corporations, see Part XII.

1 Quigley v. Birdseye, 11 Mont. 439, 28 Pac. Rep. 741; Santa Paula Waterworks v. Peralta, 113 Cal. 38, 45 Pac. Rep. 168. "The silent acquiescence with which the Government, prior to the Act of Congress of July 26, 1866,

is a matter between him and the Government, and until "office found," private individuals are not at liberty to treat his appropriation as void, or that the water itself is still open to appropriation by another.[2] Hence it must follow that until forfeiture by "office found" an alien may convey a good title of a water right, founded upon an appropriation made by him, to his grantee.[3] So, again, if the original appropriator of water was a citizen of the United States, such water right may be acquired by an alien by a conveyance from the appropriator.[4]

**§ 686. Title to the soil in appropriators unnecessary.**—As we have discussed in a previous chapter, under the common law, riparian rights including the use of water vest in the proprietor by virtue of his actual ownership of the land bordering upon the stream, lake, or other body of water, as an incident to the soil owned by him; and, without this ownership, there can be no riparian rights, either as to the use of the water or other rights, recognized by the common law.[1] In the discussion of the Arid Region Doctrine of appropriation it must be borne in mind that the ownership of water rights, in the Western States, does not depend upon a legal title, or, in fact, any title to lands bordering upon a stream, or upon the title or ownership to any lands elsewhere, but is simply

regarded the appropriation of water on its lands, as well as the express recognition extended by that statute to rights so acquired, did not discriminate between Trojan and Tyrian,—citizens or aliens."

For irrigation as a riparian right, see Secs. 498-525.

a possessory right, acquired by an appropriation and diversion of the waters of a stream and consummated by its application to some beneficial use or purpose, either by the appropriator himself or by some consumer acquiring his right from the appropriator.[2] The appropriator need not be the owner of any land in order to make a valid appropriation. Corporations may be organized for the express purpose of appropriating the waters of some stream and selling the right to use the water to consumers, without the title or ownership of any land, except the bare easement over the lands of others for their ditches and other works.[3]

This subject was discussed in a recent Utah case,[4] in which the Court said: "In order that the appropriator may be entitled to the use of such water, it is not essential that he should have located or taken possession of any tract or parcel of the public domain bordering upon the stream or lake from which the appropriation is made, or that he even have an interest in or to the lands proposed to be irrigated, if such be the beneficial purpose of the appropriation. An appropriation may be made of such water for the irrigation of lands not situated upon or near the stream or lake from which it is taken, and the water may be conducted by means of ditches or channels, or otherwise, across the intervening public lands, to irrigate lands possessed by the appropriator or others, or he may sell and dispose of the water thus conducted to others to use it for a beneficial purpose on claims or lands possessed or owned by them, or in which they have an interest, and upon which the water may be and is applied for a beneficial purpose. These views are discussed and enlarged upon by Mr. Kinney in his work on Irrigation."[5]

Rep. 466, 7 Am. St. Rep. 258; De Necochea v. Curtis, 80 Cal. 397, 20 Pac. Rep. 563, 22 Pac. Rep. 198; Wells v. Mantes, 99 Cal. 583, 34 Pac. Rep. 324.

But see Avery v. Johnson, 59 Wash.

This subject will be more thoroughly discussed in our chapter upon the nature of the right of appropriation.[6]

§ 687. **Squatters' rights.**—The term "squatters" is used in the authorities to designate two classes of persons. First, those who settle upon the unsurveyed lands of the United States, with the intent of filing upon the land when it is surveyed by the Government and opened for settlement; and, second, those who settle temporarily upon the land without any intent of making a permanent settlement, but are here one year and there the next.[1] A squatter or settler upon the unsurveyed lands of the United States has never been regarded as a trespasser, and in many instances the settlement upon the lands has been the inception of his title, a preference right being given him to make his proper filing within a specified time after the lands are opened for settlement. Again, no title to the land being required to obtain the right to make appropriations of water,[2] a squatter may make a valid appropriation of the waters of the natural streams for the purpose of irrigating the public lands occupied by him, or for any other beneficial use or purpose.[3] And, as long as he remains in possession of the lands, he can maintain his right to the use of the waters to

332, 109 Pac. Rep. 1028, where it is said: "If a party seeks to claim water for irrigating agricultural land by expropriation, he must own the land sought to be irrigated, or be an actual, *bona fide* settler having a possessory interest."

For rights of private corporations, see Part XII.

For rights of way, see Chaps. 51, 52, Secs. 927-993.

6 See Chap. 41, Secs. 757-774.

1 For settlement upon unsurveyed lands, see Sec. 445.

2 See Secs. 766, 767.

3 McDonald v. Lannen, 19 Mont. 78, 47 Pac. Rep. 648; Hough v. Porter, 51 Ore. 318, 98 Pac. Rep. 1083; Wood v. Lowney, 20 Mont. 273, 50 Pac. Rep. 794; Hindman v. Rizor, 21 Ore. 112, 27 Pac. Rep. 13; Rowland v. Williams, 23 Ore. 515, 32 Pac. Rep. 402; Seaweard v. Pacific etc. Co., 49 Ore. 157, 88 Pac. Rep. 963.

But see the case of Avery v. Johnson, 59 Wash. 332, 109 Pac. Rep. 1028, where the Court used the word "squatter" for "trespasser" in the case of one illegally occupying land on an Indian reservation, prior to the opening of the same for settlement.

For the rights of trespassers to appropriate water, see Sec. 688.

See the case of Meng v. Coffey, 67 Neb. 500, 93 N. W. Rep. 713, 60 L. R. A. 910, 108 Am. St. Rep. 697, where the Court held that in Nebraska a squatter who has appropriated water for a less period than ten years—the statutory period of prescription—can not maintain an exclusive right as against other settlers upon the same stream; but, if he afterwards receives his patent to the land, he may count

irrigate the same. Some of the courts also hold that, even upon the sale of the possession of his lands or the abandonment of the same, a squatter may sell his water right and the transferee will have the benefit of the priority of the appropriation.[4] This, however, runs us into another question, which will be discussed hereafter.[5] However, the right of an appropriator of water can not be tacked to that of a mere squatter, who has abandoned the land.[6] Where a squatter afterward obtains title to the lands in his possession he takes the same, subject to any vested and accrued water rights, and rights of way for ditches and canals, recognized and acknowledged by the local customs, laws, and decisions, or as provided by law.[7]

§ 688. **Rights of trespassers.**—Even trespassers upon the lands owned by others may make valid appropriations of water, provided that the appropriation has the requisite priority, and the water is used for some beneficial purpose.[1] The water may be used for the irrigation of the lands trespassed upon while the trespasser has possession of the same, and after he has been ejected he may change the place of use to other lands.[2] As was said

the time during which he appropriated the water as a mere squatter in making out the statutory period of prescription.

4 McDonald v. Lannen, and other cases cited *supra*.

5 For the sale and conveyance of water rights, see Secs. 994-1032.

6 Hough v. Porter, 51 Ore. 318, 98 Pac. Rep. 1083; Head v. Hale, 38 Mont. 302, 100 Pac. Rep. 222, where a squatter appropriated water for a placer mining claim and afterwards died, leaving the land vacant, and it was held that the rights of a subsequent appropriator did not relate back to the original rights of the squatter.

For the right of tacking rights, see Sec. 787.

7 Farmers' High Line C. & R. Co. v. Moon, 22 Colo. 560, 45 Pac. Rep. 437.

Rep. 963; Patterson v. Ryan, 37 Utah 410, 108 Pac. Rep. 1118; Hutchinson v. Watson D. Co., 16 Idaho 484, 101 Pac. Rep. 1059, 133 Am. St. Rep. 125; Sternberger v. Seaton Mountain etc. Co., 45 Colo. 401, 102 Pac. Rep. 168.

See, also, Snyder v. Colorado etc. Co., 181 Fed. Rep. 104, C. C. A. 136.

2 For change of place of use, see Secs. 867, 868.

See, also, cases cited, *supra*.

by the Utah Court: "But the authorities are to the effect that even trespassers upon land may acquire the exclusive right to the use of water that is used either to irrigate such land or is used thereon for other purposes, and that such a right, when once acquired, is paramount to the rights of the true owner or claimant, when he is dispossessed of the land, and the water claimant may divert and use the water elsewhere than on the land if he can so divert and use it."[3]

The water right acquired by a trespasser upon the lands of another and used on the lands while the trespasser is in possession of the same do not become appurtenant to them.[4] But the use of water upon land to which it is already appurtenant by one who is a trespasser thereon will not give him such a right in the water that he may thereafter divert it from the land; or, upon being ejected from the land, he may convey to a stranger a legal title in the water or in the use thereof.[5] No rights to the use of the water can be acquired by a trespasser, against the rights of the owner of the land.[6] It is only when a trespasser institutes an independent right to the use of the water and one which is not hostile to the owner of the land that the right can be maintained.

§ 689. **Rights of lessees.**—Lessees may also appropriate water and the right inures to their own benefit, and not to the lessors,

For right of injunction against trespassers, Part XIII.

unless there should be some provision in the lease to the contrary, in which case the contract will govern.[1] While occupying the lands of their lessors, lessees appropriating water may use the same for the irrigation of the lands of their landlord, and unless the contract of lease otherwise provides, upon relinquishing this land they may transfer the use of the water to other lands, or may sell their rights to some one else, and give a good title therefor. In a recent case in Colorado,[2] the Court held that the question as to the title of a water right acquired by a tenant at will could not be raised by the owner of the land, for the reason that, even if the tenant did not own the water right, such fact did not vest the title to the same in the landlord.[3]

# CHAPTER 37.

## THE PURPOSE OF THE APPROPRIATION.

§ 690. Scope of chapter—What is a beneficial use?
§ 691. In general.
§ 692. Domestic purposes—Definition and limitations.
§ 693. For irrigation.
§ 694. For all mining purposes.
§ 695. For the furnishing of power—Light—Heat.
§ 696. For all municipal uses.
§ 697. Appropriations for the purpose of health, recreation, and beauty—Lawns and parks.
§ 698. For use by railroads.
§ 699. For making ice.
§ 700. For the propagation of fish.
§ 701. Water can not be appropriated for drainage.
§ 702. Temporary appropriation to preserve works—Flushing ditch.
§ 703. Appropriation may be made for the sale of water.
§ 704. Appropriation for storage.
§ 705. An appropriation can not be made for mere speculation and monopoly.

**§ 690. Scope of chapter—What is a beneficial use.**—In this chapter we will discuss the various purposes for which water may be appropriated under the Arid Region Doctrine of appropriation.

And, in general, we will say that any purpose which is useful or beneficial may be the object of such appropriations. In some States, however, certain uses are given preference right by statute, but where this is not the case as a general thing any use which is beneficial may claim its right in the order of its priority with the other rights claimed from the same stream. As we stated in the first edition of this work:[1] "The purpose contemplated for the use of the water may be irrigation for agricultural or horticultural purposes, mining, milling, manufacturing, domestic, or any other purpose for which water is needed to supply the natural and artificial wants of man, provided it be for a beneficial use." And, as was said in a recent Federal case:[2] "The courts have not

1 Kinney on Irrigation, 1st Ed., Sec. 150.

2 Cascade Town Co. v. Empire Water & Power Co., 181 Fed. Rep. 1011.

defined, because as yet they are unable to define, the exact boundaries of the territory known as 'beneficial use.'"[3] Therefore, as to what is a beneficial use must depend upon the facts and circumstances surrounding any particular use, until that use has been defined by the courts as beneficial.

§ 691. **In general.**—The purposes for which water may be appropriated are many. And in general it may be said that under the Arid Region Doctrine of appropriation water may be legally appropriated for any beneficial use or purpose. The Act of Congress of 1866[1] names the "use of water for mining, agricultural, manufacturing, or other purposes." The Desert Land Act names the uses of "irrigation, mining, and manufacturing purposes." It will be noticed that the Federal statutes give no preference to any of the uses to which the water may be applied. Also, the Supreme Court of the United States in discussing the subject in one of the early cases,[2] held to the same effect in the language used by Mr. Justice Field, in rendering the opinion of the Court, in which he said: "It has been held generally throughout the Pacific States and Territories that the right to water by prior appropriation for any beneficial purpose is entitled to protection. Water is diverted to propel machinery in flourmills and sawmills, and to irrigate land for cultivation, as well as to enable miners to work their mining claims; and in all such cases the right of the first appropriator, exercised within reasonable limits, is respected and enforced." But, upon the other hand, there can not be a valid appropriation of water unless there is an intent upon the part of the appropriator to apply the same to some useful or beneficial purpose, followed up with the actual application to such purpose, within a reasonable time.[3] Hence, it follows that the courts hold that the mere passive acceptance of water as it flows at times into one's ditch when another appropriator does not wish to use it,

[3] Quoting from the brief of the learned solicitor for the complainant, Mr. E. F. Ware.

[1] See Secs. 611-619.

[2] Basey v. Gallagher, 87 U. S. 20 Wall. 670, 22 L. Ed. 452, 1 Morr. Min. Rep. 683.

[3] For application of water for a beneficial purpose, Secs. 725-728.

For purposes for which water may be appropriated, see sections under this chapter.

without any intent to use it for a beneficial purpose, does not constitute a valid appropriation.[4]

Some of the States, however, have by their constitutions or statutes, given preference rights to certain uses, and usually naming the right to use the water for domestic purposes as the first.[5] In this chapter we will discuss in detail the various uses for which water may or may not be appropriated.

**§ 692. Domestic purposes—Definition and limitations.**—In all the Western States water may be appropriated for domestic purposes. This use may be defined as a use similar to that which a riparian owner has, under the common law, to take water for himself, his family, or his stock, and the like.[1] The right is based, however, upon the same differences, compared to the right under the common law, as are the other rights which may be acquired to the use of water under the common law and under the Arid Region Doctrine of appropriation. The first is based upon the ownership of the soil through which or adjoining which the stream flows, as an incident thereto, while the second is by virtue of an appropriation for that purpose under the doctrine of appropriation, and without regard to ownership on the stream. Even without statutory regulations, the right to appropriate water for domestic purposes is not without its limitations. The water must be used in a reasonable manner and no more can be appropriated for a purpose, even where it is prior, than will reasonably meet the demands. It is such a use as ordinarily involves but little interference with the water of a stream or its flow, and does not contemplate the diversion of large quantities of water in

4 Smith Canal or Ditch Co. v. Colorado Ice & Storage Co., 34 Colo. 485, 82 Pac. Rep. 940, 3 L. R. A., N. S., 1148.

For the appropriation of waste water, see Sec. 661.

5 For preference rights, see Sec. 791.

For right to use water for domestic purposes, under the common law, see Secs. 486-488.

See, also, laws of the States, Part XIV.

1 For rights of riparian owners, see Sec. 488.

Crawford v. Hathaway (Hall), 67 Neb. 325, 93 N. W. Rep. 781, 60 L. R. A. 889, 108 Am. St. Rep. 647; Montrose Canal Co. v. Loutsenheizer D. Co., 23 Colo. 233, 48 Pac. Rep. 532.

For domestic uses under the common law, see Secs. 486-488.

For preference right for domestic use, see Sec. 793.

canals or pipe lines.[2] Hence, it has been held that the appropriation by a company, of a large portion of the waters of a stream, for the purpose of furnishing water to a municipality for general municipal purposes, including sprinkling the streets and furnishing power for a lighting plant, and for flushing sewers, is not for a domestic purpose within the terms of a statute permitting an appropriation for such purposes.[3] However, as we shall see in a future section, water may be appropriated for general municipal purposes, which will include domestic purposes, and that, too, either by the municipality itself,[4] or by a corporation for sale to the municipality or to its inhabitants.[5] But where the appropriation is made for domestic purposes only, it is the better rule to keep within the above definition and use. Where there is no statutory preference given for domestic use, the use may be changed from domestic purposes to some other purpose.[6] And, upon the other hand, where water is appropriated for some other purpose, and is actually used for culinary and domestic purposes, it is of itself sufficient to establish a beneficial use of the water.[7]

§ 693. **For irrigation.**—One of the principal uses for which water has been and may be appropriated, in all of the States where the Arid Region Doctrine of appropriation is in force, is for the irrigation of land. This must be conceded by all, and to cite authorities upon this plain proposition would only be a repetition of what has been cited many times in this work to sustain the various phases of the question.

But there is a decided distinction between the question of right to appropriate water for irrigation and the question as to what

2 See, also, Broadmoor Dairy & Live Stock Co. v. Brookside W. & Imp., 24 Colo. 541, 52 Pac. Rep. 792; Patterson v. Ryan, 37 Utah 410, 108 Pac. Rep. 1118.

3 Crawford v. Hathaway (Hall), *supra*.

But see appropriation for municipal use, Sec. 696.

The business of making electric lights and generating power for the same is a manufacturing purpose, and can not be classed as a domestic use. Schwab v. Beam (Colo.), 86 Fed. Rep. 41, 19 Morr. Min. Rep. 279.

4 Sec. 696.

5 Sec. 696. See, also, Chap. 71.

6 For preference right for domestic purposes, see Sec. 793.

For right to change the use, see Secs. 869-872.

For the preference right to use water for domestic purposes, see Sec. 793.

constitutes an actual appropriation for irrigation. The law permits the appropriation of water only for some beneficial use or purpose. Hence it follows that water can only be appropriated for that purpose when it assists in the raising of some useful crop. This need not necessarily be what is known as a cultivated crop, but the watering of the land to produce hay and grass for the feeding of stock is sufficient to come within the rule.[1] Hence it is held that the careless running of water occasionally over wild, uncleaned and untilled land is not a useful purpose for which a valid appropriation may be made.[2] And again, one who has diverted more water than he needs for the specific purpose for which the appropriation was made, and permits the excess to run over his land, but with no intention of using it to irrigate the land to raise a crop or otherwise apply it to a useful purpose, does not give a valid right to such excess.[3] Again, as we shall see in a subsequent section, that to constitute a valid appropriation there must be an actual diversion of the water from the natural stream.[4] Hence it follows that the mere settling on land on a river bottom and the cutting of the wild grass produced by the natural overflow of the river "coming down and spreading over the land," is not an appropriation of the water for a beneficial purpose within the meaning of the term.[5]

1 Sayre v. Johnson, 33 Mont. 15, 81 Pac. Rep. 389; Pyke v. Burnside, 8 Idaho 487, 69 Pac. Rep. 477, where the Court held that an appropriation of water for the purpose of running it over wild hay land for making hay and using the land for pasture was a valid one.

But see Cascade Town Co. v. Empire W. & P. Co., 181 Fed. Rep. 1011.

§ 694. **For all mining purposes.**—In tracing the history of the Arid Region Doctrine of appropriation we found that it had its origin in the rights claimed by the early miners of California to divert the waters from the natural streams for the purpose of working their mining claims.[1] That right has been continued down to the present time. Water may be legally appropriated for all mining uses whether the same be for common placer, hydraulic, or lode mining claims, or for the reduction of ores in all kinds of mills and smelters.[2] In some States the use for mining, after that for domestic uses, is given a preference right.[3] Great care, however, must be exercised by mining companies not to pollute the water, or to wash debris down to the lands of others entitled to the use of the water of the stream lower down.[4] There must be a regular appropriation of the water in accordance with the laws of the State or Territory wherein the same is flowing, and for the purpose of some use in connection with the working of the mining claim, mill, or smelter, as the case may be. The mere

A squatter on the public lands may make a valid appropriation of water for placer mining. Head v. Hale, 38 Mont. 302, 100 Pac. Rep. 222.

For rights of squatters to appropriate water, see Sec. 687.

See, also Madigan v. Kougarok M. Co., 3 Alaska 63.

3 In Idaho the constitution so provides.

See, also, statutes of the various States, Part XIV.

4 For the pollution of water, see Secs. 1129-1147.

For the washing of debris, see Sec. 1136.

location of a mining claim without the use of the water in connection therewith in no way makes an appropriation of the water. And again, the location of a mining claim for the sole purpose of securing a water right invalidates the location of the mining claim.[5]

§ 695. **For the furnishing of power—Light—Heat.**—A valid appropriation of waters may be made for the furnishing of power, and that, too, regardless of the fact whether the power is furnished direct, by the fall of the water upon the machinery where the power is used, or by the medium of electrical appliances the power created by the fall of the water is transmitted to distant points.[1] The generation of electricity to furnish light, heat, and power to the people of adjoining towns is a beneficial use for which water may be appropriated.[2] It also often happens that a secondary appropriation may be made for power purposes, even in cases where prior thereto the water of a stream is all appropriated by appropriators for some purpose which consumes all of the

5 Wm. A. Cheesman, 2 Land Dec. 774; Robert S. Hale, 3 Land Dec. 536; Robinson v. Imperial etc. Co., 5 Nev. 44, 10 Morr. Min. Rep. 370, where the Court held that the mere appropriation of a millsite was not an appropriation of water.

See, also, Leggat v. Carroll, 30 Mont. 348, 76 Pac. Rep. 805, where it was held that the mere location of a placer mining claim did not constitute an appropriation.

But see Schwab v. Beam, 86 Fed. Rep. 41, 19 Morr. Min. Rep. 279, where Judge Hallet held to the contrary. This decision has been criticised. See Wiel on Water Rights, 1908, p. 187, and note.

1 For direct power to run mills, see Hague v. Nephi Irr. Co., 16 Utah 421, 52 Pac. Rep. 765, 41 L. R. A. 311, 67 Am. St. Rep. 634; Isaacs v. Barber, 10 Wash. 124, 38 Pac. Rep. 871, 30 L. R. A. 665, 45 Am. St. Rep. 772; Basey v. Gallagher, 87 U. S. 20 Wall. 670, 22 L. Ed. 452, 1 Morr. Min. Rep. 685; Ortman v. Dixon, 13 Cal. 33; McKinney v. Smith, 21 Cal. 374, 1 Morr. Min. Rep. 650; Tarter v. Spring Cr. W. & M. Co., 5 Cal. 395, 14 Morr. Min. Rep. 371; Union M. & M. Co. v. Dangberg, 81 Fed. Rep. 73; Speer v. Stephenson, 16 Idaho 707, 102 Pac. Rep. 365; Sternberger v. Seaton Mountain etc. Co., 45 Colo. 401, 102 Pac. Rep. 168; Thompson v. Pennebaker, 173 Fed. Rep. 849, 97 C. C. A. 591; Cascade etc. Co. v. Empire etc. Co. 181 Fed. Rep. 1011.

However, the mere appropriation of a millsite is not an appropriation of the water. Robinson v. Imperial Sil. M. Co., 5 Nev. 44, 10 Morr. Min. Rep. 370.

See, also, the right to appropriate water for mining purposes, Sec. 694.

2 Salt Lake City v. Salt Lake City W. & Ec. Pr. Co., 24 Utah 249, 67 Pac. Rep. 672, and same on rehearing, 25 Utah 456, 71 Pac. Rep. 1069, and both 61 L. R. A. 648, 657.

water of the stream. By going up the stream an appropriation of the same water may often be made for power purposes without interfering with the rights of the prior appropriators. This subject, however, will be treated in another portion of this work.[3]

§ 696. **For all municipal uses.**—Valid appropriations of the waters from the natural streams or other sources of supply may be made for all municipal uses. This may be done either by the municipalities themselves,[1] or by individuals or corporations, for the purpose of furnishing the residents of municipalities with water for drinking, domestic uses, and for all other useful or beneficial purposes; also for all uses required by a municipality itself, such as for sprinkling streets, flushing sewers, furnishing power for a lighting plant, as well as for a supply in case of fires, and other necessary purposes.[2] But in order for a municipality to have the right to the water for all of these uses there must be an appropriation covering them. A corporation or the municipality itself can not, under an appropriation for domestic purposes, allowed by the statute as a preference right, appropriate all of the waters

3 For the rights of power companies, see Secs. 847-855.

For the right of secondary appropriation, see Sec. 783.

For rights of change of use, see Secs. 869-872.

See, also, Salt Lake City v. Salt Lake City W. & Ec. Pr. Co., *supra*.

1 For appropriations by municipal corporations, see Chap. 71.

2 A city may succeed to all the water rights of a Mexican pueblo, and may acquire a right to all the waters of a river where its claim was recognized by all persons owning land along the river, although for a portion of the time it does not use all of the water. Feliz v. Los Angeles, 58 Cal. 73; Elms v. Los Angeles, 58 Cal. 80.

See, also, Platte W. Co. v. Northern Colo. Irr. Co., 12 Colo. 525, 21 Pac. Rep. 711. But a city owning such a water right can not let it remain in abeyance for a long series of years without use.

Lone Tree D. Co. v. Rapid City etc. Co., 16 S. D. 451, 93 N. W. Rep. 650; Kansas City v. Slangstrom, 53 Kan. 431, 36 Pac. Rep. 706; People *ex rel.* Ricks W. Co. v. Elk R. M. & L. Co., 107 Cal. 221, 40 Pac. Rep. 521, 48 Am. St. Rep. 125; Town of Ukiah City v. Ukiah W. & Imp. Co., 142 Cal. 173, 75 Pac. Rep. 773, 100 Am. St. Rep. 107; Pocatello v. Bass, 15 Idaho 1, 96 Pac. Rep. 120.

See, also Chapter 71 as to rights of municipal corporations.

See, also, for eminent domain, Secs. 1059-1098.

Right of corporations to appropriate water and supply same to cities, Sec. 684. See, also, Chaps. 73-77.

of a stream for "domestic purposes" and use the same for general municipal purposes.[3]

The rights and powers of municipal corporations relative to the acquisition and control of water rights will be fully discussed in another chapter.[4]

§ 697. **Appropriations for the purpose of health, recreation, and beauty—Lawns and parks.**—Although the money-making projects are among the, beneficial, and we will say the most usual uses for which water may be appropriated, they are not the only uses for which appropriations may be made. Where the appropriation is made to preserve the public health, it is a beneficial use. Where the appropriation is made to beautify lawns and ornamental shrubbery, and to make homes attractive, it is a beneficial use. Appropriations by municipal corporations for the purpose of flushing sewers and sprinkling streets and maintaining the grass and ornamental shrubbery on, and the filling of lakes and ponds in, its public parks, must be classed with the beneficial uses for which water may be appropriated, from all the standpoints of health and recreation of the public and the added beauty to the surroundings. The cases upon the subject are few, but there is no reason why such uses are not as beneficial, if not more so, than would be the use of the same amount of water for the irrigation of a crop of potatoes or a field of grain. In a recent Federal case of Cascade Town Co. v. The Empire Water & Power Co.[1] the facts were that the complainant owned several hundred acres of land in the mountains of Colorado, which it had improved at great expense for a summer resort. On the lands is Cascade Canyon, through which a small precipitous stream flows. The seepage from the flow of the stream and the mist and spray from its falls produces a luxuriant and exceptionally beautiful growth of vegetation on the floor and sides of the canyon, thus rendering the canyon and the stream with its falls flowing through it rare in beauty and the chief attraction of a summer resort, and they were so advertised by the complainant. The defendant attempted to cut off the stream above the com-

3 Crawford Co. v. Hathaway (Hall), 67 Neb. 325, 93 N. W. Rep. 781, 60 L. R. A. 889, 108 Am. St. Rep. 647.

See, also, appropriation for domestic purposes, Sec. 692.

4 See Chap. 71.

1 181 Fed. Rep. 1011.

plainant's grounds and divert the water for the purpose of generating electricity to be sold to the public as a commodity. The Court held: "That the maintenance of the vegetation in Cascade Canyon, for the purposes to which it has been devoted by the complainant, by the flow and seepage, and mist and spray of the stream, and its falls as it passes through the canyon, is a beneficial use of such waters within the meaning of said Section 6, Article 16 of the Constitution, that the complainant intended to use the waters of Cascade Creek for that purpose, and has so used them for many years and thereby appropriated the same." And, in its opinion, the Court adopted as a part of the same a portion of the brief of the solicitor for the complainant, Mr. E. F. Ware, and we can do no better than to quote here as being specially pertinent to the subject under discussion. It is as follows: "The public health is a beneficial use, and for that purpose, among others, a city may condemn streams of water. The water, when so obtained, may be used and is used in any manner that will promote the public health; it is used for sprinkling the streets, washing the pavements, and flushing the sewers.

"Rest and recreation is a beneficial use, and for that purpose water is used to make beautiful lawns, shady avenues, attractive homes, and public parks with fountains, lakelets, and streams, and artificial scenic beauty.

"Cities condemn water, and use water for the foregoing purposes. No one questions but that public health, rest, and recreation is a domestic use, as well as a beneficial use. No one, we may add, questions the right to these uses.

"The law inside of a city is not different from the law outside of the city. In one sense there is no commercial value to fountains and parks; they do not bring in a revenue, but they are vastly beneficial to the public health, rest, and recreation, and such fact is recognized the world over; and there can be no question but that water applied to their maintenance and creation is a 'beneficial use.'

"We say that the creation of a summer resort is a beneficial use. Is it no benefit to the public to spend money in making a beautiful place in Nature visible and enjoyable? Is it not in line with public health, rest, and recreation? If a person takes a stream and, after putting in waterfalls, ponds, bridges, walls, shrub-

bery and bluegrass sod, works it into a beautiful home, that is a beneficial use. It is a benefit to the weary, ailing, and feeble that they can have the wild beauties of Nature placed at their convenient disposal. Is a piece of canvas valuable only for a tent-fly, but worthless as a painting? Is a block of stone beneficially used when put into the walls of a dam, and not beneficially used when carved into a piece of statuary? Is the test dollars, or has beauty of scenery, rest, recreation, health, enjoyment something to do with it? Is there no beneficial use except that which is purely commercial?

"It would seem that parks and playgrounds and bluegrass are benefits and their uses beneficial, although there is no profit derived from them; if not, then the contention of the defendant corporation must be maintained—that nothing but money-making schemes are beneficial. The world delights in scenic beauty, but must scenic beauty disappear because it has no appraised cash value? If this defendant corporation takes the water out of Cascade Canyon, it can take the water out of the Seven Falls and Cheyenne Canyon, and Glen Eyrie, and the beautiful parks and homes and summer resorts of the State. We feel compelled to say that there are other beneficial uses of the fall of water than the mere production of commodities in competition with others now existing. When the defendant company says the complainants are putting the fall of the water to no beneficial use, it means that the complainants are not ruining the beautiful scenery for cash." [2]

2 Although the Court was eminently correct as to its holding that the use was a beneficial one, our view of the matter is that the Court erred in holding that the acts of the complainant constituted an appropriation. The rights granted are more akin to riparian rights to the use of the water which the decision itself repudiates, by saying: "There are no riparian rights in Colorado as against a valid appropriation of water." The decision of the Court, however, was justified under Sec. 3165, Rev. St. Colo., 3 Colo. Stat. Ann., p. 2098. This section grants to the owners of land bordering upon a stream the *statutory* right to the use of the water "for the purposes of irrigation, and making said claims available to the full extent of the soil, for agricultural purposes."

For the physical acts necessary to constitute an appropriation, see Secs. 706-732.

For the Colorado landowners' Act, see Part XIV, Colorado.

§ 698. **For use by railroads.**—The use made by railroads for supplying its engines, keeping its cars supplied with fresh water, washing its cars, and for other necessities, are useful and beneficial purposes for which water may be appropriated. The appropriation may be made either by the company itself or by some other party and the water right sold to the company.[1]

§ 699. **For making ice.**—The appropriation of water and the diversion of the same into ponds, where it may freeze and make ice, is a useful purpose for which a valid appropriation may be made. This precise point does not seem to have been before the courts of last resort for decision. But to the writer's knowledge it has been before the trial courts in a number of cases, and it has always been held with the right. Even under the common law, a riparian owner has the right in the winter season, to construct a dam to collect and retain the water in ponds to a reasonable extent for the purpose of making ice for his own use or for sale.[1] And, under the Arid Region Doctrine of appropriation, there is nothing in the law or in reason which forbids appropriations made for this express purpose. The appropriations are usually made in the winter time, and therefore at a time when the water is not needed for irrigation, hence a secondary appropriation of the waters of a stream may be made during that period, even if all of the water is appropriated during the summer months by others and for different purposes.[2]

Sale of water rights, Secs. 995-1002.

1 Gehlen v. Knorr, 101 Iowa 700, 70 N. W. Rep. 757, 32 L. R. A. 697, 63 Am. St. Rep. 416; Myer v. Whittaker, 55 How. Pr. 376; Water Comrs. v. Perry, 69 Conn. 461, 37 Atl. Rep. 1059.

For rights of riparian owners to cut ice, see Secs. 493, 550.

See, also, Farr v. Griffith, 9 Utah 416, 35 Pac. Rep. 506, where the Court held that the measure of damages for breach of contract to keep ice ponds full of water during the ice-making season is the value in the icehouse of the ice that might have been put up with reasonable diligence had there been no breach, less the cost of harvesting and storing it.

2 For subsequent appropriations, see Secs. 783-786.

§ 700. **For the propagation of fish.**—It is a well recognized fact that the propagation of fish for the market is rapidly becoming quite an industry in the Western States; in fact, all over this country. Although this is not one of the principal industries, there is no reason why water may not be appropriated for this use, as it certainly is a beneficial purpose.[1] In those States which give preference rights to other industries, such as irrigation or mining, the appropriation of water for the propagation of fish might have to give way to a higher right. In fact, this was the holding of the Supreme Court of Colorado in a recent case, where the next right to that for domestic purposes is the right to the use of the water for irrigation.[2] Again, as this use does not consume the water, at least to any great extent, there is no reason why a secondary appropriation of the water may not be made for this purpose to run through a series of reservoirs above the point where the prior appropriators take out the water. This may be done, so long as the rights of the prior appropriators are not interfered with; but, of course, if this use does interfere with the rights of the prior appropriators, the rules as to secondary appropriations must apply.[3] It was held in a recent Utah case,[4] that where a stream abounding in fish valuable for food flowed across defendant's lands, he was entitled to change the course of the stream over his own premises and construct fish ponds in the old bed if he could do so without injury to public or private interests and where he permitted the water diverted to his fish ponds and hatcheries to run undiminished and unpolluted back into the natural stream.[5]

1 See Smith Canal or Ditch Co. v. Colo. Ice & S. Co., 34 Colo. 485, 82 Pac. Rep. 940, 3 L. R. A., N. S., 1148, where the Court said: "The findings were that whenever Baker wished to use the waters for his own domestic purposes, for irrigating lands, or for filling fish ponds," etc., "he did so under a claim or ownership. We think the trial court was right," etc.

2 Windsor Res. & Canal Co. v. Lake Supply D. Co., 44 Colo. 214, 98 Pac. Rep. 729.

3 For subsequent appropriations, see Secs. 783-786.

For the protection of fish from irrigation ditches, see Secs. 369-371.

For common law right of fishery, see Secs. 358-366.

For statutes of the various States, See Part XIV.

4 State v. Barker, 37 Utah 345, 108 Pac. Rep. 352, 27 L. R. A., N. S., 1138.

5 *Ex parte* Elam, 6 Cal. App. 233, 91 Pac. Rep. 811.

Also, for the right of fishing and hunting, see Chap. 17, Secs. 358-371.

In this connection it might be well to mention an early case in Nevada, where the Supreme Court held that a beneficial use for the appropriation of water might consist of its diversion for the purpose of catching fish, by permitting the water to run over a flat meadow; and, the fish following the water were more easily caught in the meadow than in the stream.[6] We never considered this case good law, not for the reason that the act was performed by Indians, as Indians may make a valid appropriation of water,[7] but because it is a most unusual and destructive method of catching fish and one which is forbidden in most jurisdictions. It takes the small, as well as the large, and the tendency of the laws of the various States is to prevent the destruction of the fish in the natural streams and lakes. Then, again, it is such an appropriation of the water as should not be allowed.

§ 701. **Water can not be appropriated for drainage.**—Where the question is simply one of drainage, water can not be appropriated. Here the question is one as to how to get the water off the land and into the stream or drainage system and get rid of it, and not how to get it from the stream onto the land. There is also the lack of the intent to use the water for some beneficial purpose, followed up by the actual use of the same.[1] Water flowing in a drainage ditch without any intention to recapture it is abandoned.[2] So, also, water draining from mines, without any intention to recapture it upon the part of the mine owner, is abandoned.[3] So, also, where water drains from an abandoned well bored for oil, without the owner of the well making any attempt to appropriate it for some useful purpose, the owner acquired no title to the water

6 Lobdell v. Hale, 3 Nev. 507.

7 For appropriation by Indians, see Sec. 680.

2 Dougherty v. Creary, 30 Cal. 290, 89 Am. Dec. 116.

3 For abandoned water, see Secs. 1113-1115.

See, also, Farmers' Union Ditch Co. v. Rio Grande C. Co., 37 Colo. App. 512, 86 Pac. Rep. 1042.

and his deed to the same passed no title.[4] There may, however, be a dual purpose, consisting of both drainage from one portion of a person's land, and the appropriation of the drainage water for the purpose of irrigating another tract. In a case of this kind a valid appropriation may be made of what would be otherwise strictly drainage water, and that, too, even if the code providing for the notice and the recording of the same is not complied with.[5]

**§ 702. Temporary appropriation to preserve works—Flushing ditch.**—In an early California case[1] it was properly held that parties having the prior right to the waters of a stream and whose works were in the process of construction had the right to use so much of the waters of the stream as was necessary to preserve their works and flume from injury until such works were completed and ready to utilize the entire quantity of water for the purpose for which the appropriation was made.

In the case of Mann v. Parker,[2] the Supreme Court of Oregon rightly held that an injunction should not be granted in favor of the plaintiff where his only claim for the water was for the purpose of keeping open his ditch, at all seasons of the year, in order that it might take up and carry the flush waters of the spring season to his mining grounds, in the face of the fact that the water was claimed by a secondary appropriation for a beneficial purpose. There is nothing reported in the case to show but that a little labor with a shovel upon the part of the plaintiff might not have accomplished the same result. However, the Court evidently took that view of the subject. As well might a prior appropriator claim, in the face of secondary appropriations, all of the waters of a stream for the express purpose of assisting him in cultivating the land, and not for moistening it, and that, too, when by so doing the land was injured by the excessive moisture. A little work with a plow, cultivator, or shovel will often work wonders not only in saving the water, but in adding to the crops and preserving the soil.

1 Weaver v. Conger, 10 Cal. 233, 6 Morr. Min. Rep. 203.

2 48 Ore. 321, 86 Pac. Rep. 598.

**§ 703. Appropriation may be made for the sale of water.**—Water may be appropriated by an individual or company,[1] where the primary purpose of the appropriators is the sale of the water to others. However, the ultimate object of the appropriation must be the use of the water, by some one, for some beneficial use or purpose, and that, too, within a reasonable time after the appropriation is made. The Supreme Court of the United States has held that,[2] a legislature of a Territory might lawfully empower a corporation to make appropriations from the natural streams, to become an intermediary for furnishing water to irrigate the lands of third parties.[3]

Not only is the sale of water permitted, but under certain conditions appropriations of water are encouraged for that express purpose. The time has come, when the water in this Western country which is still unappropriated is each year becoming more and more scarce. There are a very few places left where a farmer, with perhaps the aid of his neighbors, can run a plow furrow to a natural stream and there construct a brush dam, and by that means divert a supply of water sufficient to irrigate his farm. The irrigable lands left, which may be reclaimed by the use of the water, also lie further from the natural streams. The water must be taken out from the larger rivers, or large reservoir and canal systems must be constructed; and all this must be at a large outlay of money. This, the consumers, as a general thing, have not got; and, unless the progress of the country along these lines is to cease, the money for these projects must be obtained from some source. Hence, it has been the policy of the legislation in all of the Western States and Territories in this regard to encourage large

2 Gutierres v. Albuquerque Land & Water Co., 188 U. S. 545, 47 L. Ed. 588, 23 Sup. Ct. Rep. 338; affirming *Id.*, 10 N. M. 177, 61 Pac. Rep. 357.

3 See, also, Manning v. Fife, 17 Utah 232, 54 Pac. Rep. 111; Nevada D. Co. v. Bennett, 30 Ore. 59, 45 Pac. Rep. 472, 60 Am. St. Rep. 777; Irwin v. Phillips, 5 Cal. 140, 63 Am. Dec. 113, 15 Morr. Min. Rep. 178; Wilterding v. Green, 4 Idaho 773, 45 Pac. Rep. 134; Platte W. Co. v. Northern Colo. Irr. Co., 12 Colo. 525, 21 Pac. Rep. 711; Strickler v. Colorado Springs, 16 Colo. 61, 26 Pac. Rep. 313, 25 Am. St. Rep. 245; Lone Tree Ditch Co. v. Rapid City etc. Co., 16 S. D. 451, 93 N. W. Rep. 650; Yuba County v. Cloke, 79 Cal. 239, 21 Pac. Rep. 740; Souther v. San Diego etc., 112 Fed. Rep. 228; affirming 121 Fed. Rep. 347, 57 C. C. A. 561.

companies with great financial backing to appropriate the waters of the natural streams or other bodies, construct the works, and then sell or rent the water, or at least the use thereof, to the farmers or other consumers. This is always upon the condition that all of the water appropriated must, within a reasonable time, be used for some useful or beneficial purpose.[4] There can not, however, be a valid appropriation for mere speculation; neither can water be appropriated for the purpose of creating a monopoly without the same being used for some beneficial purpose. Hence it follows, that an individual, after making a prior appropriation of the waters of a stream and using what he needs for his own purpose, can not sell or dispose of his surplus water to others to the injury of subsequent appropriators of the waters of the stream.[5]

**§ 704. Appropriation for storage.**—Again, not only may a valid appropriation of the water from a natural stream be made for immediate use, but the water may be saved up and stored in times of plenty and thus saved for the ultimate purpose of using the same in times of scarcity for irrigation, or any other useful purpose.[1] As the water stored may be sold to consumers, this question is closely allied to the question of the sale of waters, dis-

A. 767; Cache La Poudre Res. Co. v. Windsor Res. & C. Co., 25 Colo. 53, 52 Pac. Rep. 1104; Larimer County Res. Co. v. People *ex rel.* Luthe, 8 Colo. 614, 9 Pac. Rep. 794; Church v. Stillwell, 12 Colo. App. 43, 54 Pac. Rep. 395; Wheeler v. Northern Colo. Irr. Co., 10 Colo. 528, 17 Pac. Rep. 487, 3 Am. St. Rep. 603; New Loveland & G. Irr. & L. Co. v. Cons. Home Supply D. & Res. Co., 27 Colo. 526, 62 Pac. Rep. 366, 52 L. R. A. 266; Windsor Res. & C. Co. v. Lake Supply D. Co., 44 Colo. 214, 98 Pac. Rep. 729.

cussed in our previous section.[2] But the mere diversion and storage of water and a promise to use it in the future are not sufficient to give a right thereto.[3] The water must be used for irrigation or for some beneficial purpose within a reasonable time. The right of the storage of waters for irrigation and other beneficial uses involves many intricate questions which will be discussed in another portion of this work.[4]

**§ 705. An appropriation can not be made for mere speculation and monopoly.**—One of the fundamental principles of the Arid Region Doctrine of appropriation is that all of the water appropriated must, within a reasonable time, be put to some beneficial use or purpose.[1] And, while all investments for irrigation projects are in a way speculations, the law is well settled that a person can not, even by prior appropriation, obtain exclusive control of the waters of an entire stream, or any part thereof, and hold the same without any beneficial use thereof within a reasonable time, for mere future speculative profit or advantage.[2] So, also, an irrigation company will not be permitted to appropriate water without limit as a matter of speculation and monopoly, and thus prevent the appropriation by others who wish to use the same for some beneficial purpose, or to impose upon consumers unreasonable conditions, or to exact from them exorbitant rates for the use of water.[3] However, a dis-

tinction must be made between those who in good faith appropriate waters with the *bona fide* intent to apply the same to some beneficial use or purpose, and who do within a reasonable time so apply the water, even if there is the expectation of a reasonable return from the investment in the project, and those who appropriate water for the purpose of creating a monopoly of the water, with the expectation of making extortionate charges to the consumers. It is the monopoly for the purpose of extortion which the law condemns.[4] The United States Supreme Court, in the case of Basey v. Gallagher,[5] held to the same effect, and Mr. Justice Field, in rendering the opinion of the Court, after stating that the right of the prior appropriator must be exercised within reasonable limits, said: "We say within reasonable limits, for this right to water, like the right to prior occupancy to mining ground or agricultural land, is not unrestricted. It must be exercised with reference to the general condition of the country and the necessities of the people, and not so as to deprive a whole neighborhood or community of its use and *vest an absolute monopoly in a single individual.*"

§ 729. Modification of above rules by local law.
§ 730. Notice—Appropriation without—Appropriation by diversion and use.
§ 731. There can be no appropriation by prescription.
§ 732. Summary of chapter.

**§ 706. Scope of chapter.**—In this chapter we will discuss the various methods by which a valid appropriation of the waters of the natural streams and other bodies of water may be made under the Arid Region Doctrine of appropriation, as it originated with the early miners of California.[1] But since the first edition of this work was written prior to 1893, the methods of the appropriation

[1] For history of the doctrine, see Chap. 32, Secs. 595-626.

of waters have been modified in a number of the details by the adoption in many of the Western States of what are known as Irrigation Codes, or codes relating to the appropriation and use of water, whatever may be their names. In these codes, however, the principles as laid down by the early rules have not been materially changed. The right to the use of the water depends upon the priority of the appropriation and upon the final application of all the water to some beneficial use or purpose. The only material changes are as to the details of the appropriation, the adjudication of the right, and the forfeiture or loss of the right, in case of failure to comply with some provisions of the code. But as a great many of the rights to the use of the water in all the States and Territories were acquired before the codes were adopted, and now depend as to their validity upon the appropriation in accordance with the old methods, it follows that it is necessary in a work of this nature to discuss those methods. Therefore, in this chapter, we will discuss the methods of appropriation as the same originated in California with the early miners. And in our chapter upon the subject of State control and codes, we will discuss the acquisition of water rights under those systems.[2]

**§ 707. Appropriation of water—Definition.**—As there can be no valid appropriation of water without its application to some beneficial use or purpose, the element of use must necessarily be embodied in the definition of an appropriation.[1] The element of use is the culminating essential of the series of acts leading up to a valid appropriation.[2] And, again, these acts upon the part of the appropriator must be in accordance with the law upon the subject in the respective jurisdictions where the appropriation is made; the method of an appropriation being left entirely to the various States and Territories.[3] And, although the authorities have attempted a number of times to define an appropriation of water, none of the definitions used seem to embody all of the requisite essentials. As said by the Federal Court, " 'Appropriation' is a much abused

2 See Chap. 68, Secs. 1337-1367.

1 For application to some beneficial use, see Secs. 725-728.

For what purposes water may be appropriated, Secs. 690-705.

2 See Secs. 708-728.

3 See Sec. 593.

For laws of the various States, see Part XIV.

word. It is often loosely spoken of as the preliminary step—such as filing a notice, making a claim to the water, or the like—but in its legal significance is embodied not only in the claim to the water, but the consummation of that claim by actual use."[4] The Supreme Court of California, in an early case, defined the term "appropriation of water" as follows: "Appropriation is the intent to take, accompanied by some open physical demonstration of the intent, and for some valuable use."[5] This definition, although followed in a number of decisions, both in California and in the other States,[6] lacks three essential elements—the appropriation must be from a natural stream or other natural source of supply, it must be according to law, and the water diverted must have been actually applied to some beneficial use or purpose before the appropriation is complete.[7] Although some of the early Colorado decisions followed the definition given in the McDonald case,[8] a recent Colorado case comes nearer the mark. It was there said: "It has been repeatedly decided in this jurisdiction that an 'appropriation' consists of an actual diversion of water from a natural stream, followed within a reasonable time thereafter by an application thereof to some beneficial use."[9] In our opinion the only essential lacking here is that the appropriation must be in accordance with the law of the State of Colorado, if made there. Again, the Supreme Court of Washington defines the term: "Appropriation of water consists in the intention accompanied by reasonable diligence to use the water for the purpose originally contemplated at the time of its diversion."[10]

4 Morris v. Bean, 146 Fed. Rep. 432. "The term 'appropriation' is often loosely used by the authorities, and in general it is used with reference to a claim to the use of water of a public stream from the time of the inception of the right, at all the intermediate stages, and down to the time when the last act is accomplished by which the right is finally and completely secured." 9 Windsor Res. & C. Co. v. Lake Supply D. Co., 44 Colo. 214, 98 Pac. Rep. 729.

10 Offield v. Ish, 21 Wash. 277, 57 Pac. Rep. 809.

It is apparent that this definition lacks three essentials and goes too far in prescribing another requisite. The appropriation must be from a natural source of water supply, it must be made according to law, and, before the appropriation is complete, the water diverted must have been actually applied to some beneficial use or purpose; then, again, it is the settled law that the water need not be applied to the identical purpose originally contemplated, but that the original use may be changed to any other use or purpose, so long as the rights of others on the same stream are not interfered with or injured.[11] The Federal Court is more definite, and has held: "An appropriation of water consists in the taking or diversion of it, and its application to some beneficial purpose."[12] There are here but two essentials lacking, the diversion must be in accordance with law, and it must be from some source of natural water supply.[13]

In all of the definitions of the term "appropriation of water," we have failed to discover one which included the element that it

11 See for change of use, Secs. 869-872.

12 Morris v. Bean, 146 Fed. Rep. 432.

13 See, also, for other definitions, Low v. Rizor, 25 Ore. 551, 37 Pac. Rep. 82; Nevada D. Co. v. Bennett, 30 Ore. 59, 45 Pac. Rep. 472, 60 Am. St. Rep. 777; Carter v. Wakeman, 42 Ore. 147, 70 Pac. Rep. 393; Millheiser v. Long, 10 N. M. 99, 61 Pac. Rep. 111; Gutierres v. Albuquerque Land & Irr. Co., 188 U. S. 545, 47 L. Ed. 588, 23 Sup. Ct. Rep. 338; affirming *Id.*, 10 N. M. 177, 61 Pac. Rep. 357.

"Appropriation of water does not mean merely the diverting of it, but includes its use for some beneficial purpose." Hague v. Nephi Irr. Co., 16 Utah 421, 52 Pac. Rep. 765, 41 L. R. A. 311, 67 Am. St. Rep. 634.

"A mere diversion of water from a stream does not constitute an appropriation recognized by the constitution and statutes. To make it such there must be an application of the water to a beneficial use, and in the case of irrigation, it must be applied to the land to make the appropriation complete." Farmers' Ind. D. Co. v. Agricultural D. Co., 22 Colo. 513, 45 Pac Rep. 444, 55 Am. St. Rep. 149.

See, also, Cash v. Thornton, 3 Colo. App. 475, 34 Pac. Rep. 268; Thomas v. Guiraud, 6 Colo. 530.

The Supreme Court of Oregon in Morgan v. Shaw, 47 Ore. 333, 88 Pac. Rep. 534, defined "an appropriation of water" as a grant by the General Government to the settler of the right to its use from a non-navigable stream, to the injury of all public land above the point of diversion, which may be within or beyond the boundaries of the settler's claim. It is evident that the Court used the expression "an appropriation of water" in the sense of a water right, and not in the sense of the act of making an appropriation. For definition of a "water right," see Secs. 758, 759.

must be made in accordance with the law of the jurisdiction where the appropriation is attempted. In every State of this Western country, there is either what is known as an "Irrigation Code" or a water code of some sort, or a line of court decisions of that particular jurisdiction, declaring just how and by what methods an appropriation of water may be made, and what it takes to constitute a valid appropriation. In the definition of the term, this element should not be ignored.[14]

Therefore, we believe that the following definition of the term "appropriation of water" under the Arid Region Doctrine of appropriation comes nearer being correct than any which we have found: The appropriation of water consists in the taking or diversion of it from some natural stream or other source of water supply, in accordance with law, with the intent to apply it to some beneficial use or purpose, and consummated, within a reasonable time, by the actual application of all of the water to the use designed, or to some other useful purpose.

In the following sections of this chapter we will take up the various essential elements as set forth in the above definition in detail.

**§ 708. Intent to apply to some beneficial use or purpose.**—As we have seen under the definition of appropriation of water one of the necessary elements is the intent of the appropriator to apply the water appropriated to some beneficial use or purpose.[1] All of the authorities agree upon this proposition that, in order to make a valid appropriation of waters, under the Arid Region Doctrine, there must be first an intention upon the part of the appropriator to apply the water appropriated by him to some beneficial use or purpose; and, without this intention, it is held that no valid appropriation is made and that the water is subject to appropriation by other parties.[2] As was well said in a recent Montana case:[3] "If

14 For the various codes, see Part XIV.

For appropriation in accordance to a code, see Secs. 1349-1357.

1 For definition of appropriation, see Sec. 707, and cases cited.

2 Maeris v. Bicknell, 7 Cal. 261, 68 Am. Dec. 257, 1 Morr. Min. Rep. 601, 10 Cal. 217, where it was held that merely cutting a ditch for a drain, and using the water for no useful purpose gives no priority.

McKinney v. Smith, 21 Cal. 374, 1 Morr. Min. Rep. 650; Weaver v. Eureka Lake Co., 15 Cal. 271, where it was held that to render valid a

our statute does not by express terms it does by fair implication require that, at the time of taking the initial steps the claimant must have an intention to apply the water to a useful or beneficial purpose.[4] The law will not encourage any one to play the part of the dog in the manger, and therefore the intention must be *bona fide* and not a mere afterthought."[5] The very birth of a prior right to the use of water under this doctrine is the intention to apply the same to some beneficial purpose.[6] The intention of the claimant is, therefore, a most important factor in determining the validity of an appropriation of water.[7] And, furthermore, from the earliest history of the doctrine of appropriation down to the present time, in all jurisdictions, and under all of the irrigation codes and water systems, the intention upon the part of the appropriator to eventually apply the water so taken to some beneficial use or purpose, has always been considered an essential prerequisite.[8] In a recent de-

claim of water by appropriation the claim must be for some useful or beneficial purpose, or in contemplation of a future appropriation for such purpose, for the parties claiming it. A claim for mere speculation will not answer.

That an appropriation can not be made for mere drainage, see Secs. 690, 691.

Rizor, 25 Ore. 551, 37 Pac. Rep. 82; Simmons v. Winters, 21 Ore. 35, 27 Pac. Rep. 7, 28 Am. St. Rep. 727, where the Court said: "There must be some actual beneficial purpose, existing at the time or contemplated in the future, as the object for which the water is utilized."

See, also, Hindman v. Rizor, 21 Ore. 112, 27 Pac. Rep. 13; Smith Canal or Ditch Co. v. Colorado etc Co.,

cision by the Supreme Court of the author's own State, Mr. Justice Stroup, in rendering the opinion of that Court, said: "Says Mr. Kinney in his work on Irrigation: 'There must be, first, some actual beneficial purpose existing at the time, or contemplated in the future, as the object for which the appropriator is to use the water.'"[9] As stated by the Oregon Court, however: "We take it, therefore, that the *bona fide* intention which is required of the appropriator to apply the water to some useful purpose may comprehend a use to be made by or through another person, and upon lands and possessions other than those of the appropriator. Thus, the appropriator is enabled to complete and finally establish his appropriation through the agency of the user."[10]

As we have seen in another chapter, the purpose for which the intention to appropriate the water is made, may be for irrigation, for agricultural or horticultural purposes, mining, milling, power, manufacturing, domestic, or for any other useful or beneficial purpose for which water is needed to supply the natural and artificial wants of man.[11] And, again, a right acquired by an appropriation for any useful or beneficial purpose stands upon an equal footing with the right for any of the other purposes, except in those States where by constitutional or statutory provisions preference rights are given to some particular purpose, and then the preference right is given only in times of extreme scarcity of the water and when it is not sufficient for all who may desire to use it.[12] And, upon the

12 For preference rights, see Secs. 791-794.

other hand, an appropriation for water for one of these useful purposes is not justifiable when it interferes with or injures the rights acquired by valid appropriations made prior thereto by others for that or for any other purpose.[13]

Under the definition of the appropriation of water it is apparent that mere intention upon the part of the appropriator without some physical demonstration of that intention is not sufficient to constitute a right to the use of the water. But the intention must be followed up by a completion of the necessary works for the diversion and by an actual application of the water to a useful purpose within a reasonable time.[14]

**§ 709. Intent to apply—Evidences of.**—The question as to the intent to apply the water, attempted to be appropriated, to a beneficial use or purpose [1] is one of fact, and may be proven by any evidence which tends to show the intent. In the first place, there must be the possibility of the water, after it has been appropriated, being applied to either the purpose covered by the intent or to some other useful purpose. In other words, there must be in existence a beneficial use to which an appropriator may apply the water, either at the time of the attempted appropriation, or such a use

13 For priority of right, see Secs. 776-782.

14 For reasonable diligence in the completion of works, see Secs. 733-741.

For application of the water to a useful purpose, see Secs. 725-728.

McDonald v. Bear River etc. Co., 13 Cal. 220, 15 Cal. 145, 1 Morr. Min. Rep. 626.

A priority of right for the storage of water can not be acquired by the mere intention to construct the necessary works. New Loveland etc. Co. v. Consolidated etc. Co., 27 Colo. 526, 62 Pac. Rep. 366, 52 L. R. A. 266; Larimer Mill. & El. Co. v. Larimer & W. Irr. Co., 26 Colo. 47, 56 Pac. Rep. 185; Ortman v. Dixon, 13 Cal. 33; Nevada W. Co. v. Powell, 34 Cal. 109, 91 Am. Dec. 685, 4 Morr. Min. Rep. 253; Union Mill & M. Co. v. Dangberg, 81 Fed. Rep. 73, where Judge Hawley said: "In the appropriation of water, there can not be any 'dog-in-the-manger' business by either party, to interfere with the rights of others, when no beneficial use of the water is or can be made by the party causing such interference."

See, also, Kelly v. Natoma etc. W. Co., 6 Cal. 105, 1 Morr. Min. Rep. 592; Moyer v. Preston, 6 Wyo. 308, 44 Pac. Rep. 845, 71 Am. St. Rep. 914; Lakeside D. Co. v. Crane, 80 Cal. 181, 22 Pac. Rep. 76; Columbia M. Co. v. Holter, 1 Mont. 296; Offield v. Ish, 21 Wash. 277, 57 Pac. Rep. 809; Carter v. Wakeman, 42 Ore. 147, 70 Pac. Rep. 393.

1 See preceding section.

must, within reason, be expected to exist very shortly after the diversion of the water is made to which the water may be applied or the appropriation can not be consummated.[2] Therefore, if there is no beneficial use or purpose in existence at the time, or one, which with reasonable expectation will exist in the future, to which the water may be applied by the appropriator after it has been diverted, then, of course, the intention to appropriate fails for lack of a purpose.[3] This intention goes to the very foundation of the act of appropriation, and must be evidenced by a constancy, or steadfastness of purpose or labor as is usual with men engaged in like enterprises, who desire a speedy accomplishment of their designs.[4] According to the definition of the appropriation of water given by the early California cases, the intent to take must be accompanied by some open physical demonstration of the intent.[5] There must be such assiduity in the prosecution of the project as will manifest a *bona fide* intention to complete the construction of the works necessary to carry the water to the place where it is to be used, and the actual application of the water to the use intended.[6] And, where there is no evidence of an actual intention at the time the appropriation is attempted to apply the water to some useful purpose, or there is evidence that there is unnecessary delay in the completion of the works for its diversion, then a subsequent appropriator

2 That the consummation of an appropriation is the actual use of the water, see Secs. 725-728.

3 "There must be some actual beneficial purpose, existing at the time or contemplated in the future, as the object for which the water is utilized." Simmons v. Winters, 21 Ore. 35, 27 Pac. Rep. 7, 28 Am. St. Rep. 727; Nevada D. Co. v. Bennett, 30 Ore. 59, 45 Pac. Rep. 472, 60 Am. St. Rep. 777; Hindman v. Rizor, 21 Ore. 112, 27 Pac. Rep. 13.

4 Hague v. Nephi Irr. Co., 16 Utah 421, 52 Pac. Rep. 765, 41 L. R. A. 311, 67 Am. St. Rep. 634; Hewitt v. Story, 64 Fed. Rep. 510, 12 C. C. A. 250, 30 L. R. A. 265, 29 U. S. App. 155; *Id.*, 51 Fed. Rep. 101; Union M. & M. Co. v. Dangberg, 81 Fed. Rep. 73, all citing Kinney on Irrigation, 1st Ed., Sec. 150.

6 Kimball v. Gearhart, 12 Cal. 27, 1 Morr. Min. Rep. 615; Ophir S. M. Co. v. Carpenter, 4 Nev. 534, 97 Am. Dec. 550, 4 Morr. Min. Rep. 640.

For reasonable diligence in the prosecution of the works, see Secs. 733-741.

who first makes a valid appropriation has the better right.[7] Hence it follows that an excessive appropriation can not be considered valid as to the excess.[8] This may be illustrated by actual cases which have transpired many times. A farmer having a certain amount of land which requires a definite amount of water to properly irrigate the same, attempts to appropriate twice or three times the amount of water necessary, and tries to hold the same even to the injury of his land. He can not properly use the excess water and if there is no evidence that he intends to apply it to some other useful purpose within a reasonable time, others have the right to make a valid appropriation of the excess.[9]

The contents of the notice of the attempted appropriation is also evidence of the intent of the appropriator, but it should by no means be regarded as conclusive, either as to the amount claimed or the application to the purpose specified. It is the common habit of appropriators to claim in their notice more water than they really intend to use or oftentimes can appropriate or use for the purpose indicated in the notice. However, in connection with the claim set forth in the notice, the Court may also examine all the other facts in any particular case which tend to prove the actual intent of the appropriator. Such facts may be such as the purpose indicated in the notice, the actual amount of water required for such purpose, the acts of the appropriator in prosecuting the work necessary, the size of the ditch and its capacity, the method of diversion from the stream, the method of the application of the water, and any other facts which tend to show the true purpose of the appropriator.[10] As was said in a Montana case,[11] "As every appropriation must be made for a beneficial or useful purpose, it becomes the duty of the courts to try the question of the claimant's

intent *by his acts* and the circumstances surrounding his possession of the water, its actual or contemplated use and the purposes thereof." [12]

§ 710. **Notice of intent to appropriate water.**—Having shown in the previous sections that there must be an actual and *bona fide* intention, in order to appropriate water to apply the same to some beneficial use or purpose,[1] one of the first steps necessary for the appropriator to take is to give notice of that intent. This is so in order that others may know of the claim of the appropriator, and that the doctrine of relation may apply.[2] This notice in most jurisdictions under the old statutes must be recorded in order that some sort of a record may be made of the claim.[3] It is true that in some jurisdictions, a notice was not required under the early statutes, and that a failure to post and record such a notice would not be fatal to the appropriation,[4] but it is the better practice that one be given and that the same be recorded. One of the great defects of the early law of appropriation in all of the States and Territories is the absence of a record of the claims to water. Upon the other hand, the ownership to land has been carefully recorded in all jurisdictions from the earliest times; and, at the same time, in many localities there was absolutely no record to the claims of waters of the natural streams running through those lands. By recent legislation in the most of the jurisdictions, an attempt has been made, by a system of adjudication of existing water rights, to remedy this defect, and in a way this has been successful.[5]

There should be as complete a record of the existing claims to water rights claimed in the waters flowing in the natural streams or other sources of supply, as there is of the land over which these waters flow. And the notice of the claims of the various appropriators is one of the methods by which this record may be obtained.

12 See, also, Power v. Switzer, 21 Mont. 523, 55 Pac. Rep. 32.

For the right to appropriate without notice, see Sec. 730.

See, also, Longmire v. Smith, 26 Wash. 439, 67 Pac. Rep. 246, 58 L. R. A. 308.

5 For adjudication of existing water rights, see Secs. 1530-1595.

In most of the jurisdictions, even before the adoption of the so-called irrigation codes, laws were passed upon the subject of the appropriation of waters, in which was the requirement that a notice of the claim of an appropriator be posted on the ground and that the same be recorded in the official records designated in the law, and usually the office of the county recorder.[6] And, further, prior to the enactment of any statute, in most jurisdictions, the local customs of the miners relative to the locating of mining claims required also that the same practice be followed relative to the appropriation of waters. One of these requirements was that a notice be posted on the ground and be recorded.[7] The adoption of these early statutes, was, therefore, the embodiment, in statutory form, of the customs and rules of the miners in this respect. The later irrigation codes and water laws passed in all of the States provide for notice and for the recording of the same. This subject will be discussed in other portions of this work.[8]

**§ 711. Notice—Form of—Before statute.**—Under the customs of the miners and early settlers, and also under the early statutes

See, also, for California statute, Chap. 86.

[7] The question, whether a person has made a valid appropriation of water, depends upon the questions, whether he has given a proper notice of his intention to appropriate it, and whether he has prosecuted the work in that behalf with reasonable diligence. Osgood v. Eldorado Water etc. Co., 56 Cal. 571, 5 Morr. Min. Rep. 37.

In Arizona it was customary to post notice prior to the statute of 1893. Dyke v. Caldwell, 2 Ariz. 394, 18 Pac. Rep. 276.

In Oregon it was also customary, prior to the passage of the statute of 1905. See Cole v. Logan, 24 Ore. 304, 33 Pac. Rep. 568; Nevada D. Co. v. Bennett, 30 Ore. 59, 45 Pac. Rep. 472, 60 Am. St. Rep. 777; Umatilla Irr. Co. v. Umatilla Imp. Co., 22 Ore. 366, 30 Pac. Rep. 30.

In New Mexico no notice was required prior to the Act of 1905. Millheiser v. Long, 10 N. M. 99, 61 Pac. Rep. 111.

In Montana, prior to the Act of 1895, no notice of appropriation or record was required. Murray v. Tingley, 20 Mont. 260, 50 Pac. Rep. 724, 19 Morr. Min. Rep. 137.

Colorado has never enacted any statute requiring the posting of a notice nor the doing of any other act prior to the commencement of the work. Mills' Irr. Manual, 1907, p. 74.

See chapter on State Control, Secs. 1337-1367.

See, also, for laws of Colorado, Chap. 87.

[8] See, for laws of various States, Part XIV.

Also, see chapter on the laws of State control, Secs. 1337-1367.

upon the subject, there was no particular form of notice prescribed, and any form which gave the name of the appropriator, a definite description of the locality, the name of the stream from which the appropriation was to be made, a description of the point of diversion, usually with reference to some natural object or permanent monument, the amount of water claimed to be appropriated, and the purpose of the appropriation, was deemed sufficient. In general, the early appropriators followed the forms used to locate mining claims. All that was considered necessary was that the terms of the notice should be sufficient to put a reasonably prudent man upon inquiry as to the rights claimed by the party posting it. Such notices were admissible in evidence, should there be litigation over the water right claimed under them,[1] and were liberally construed in favor of the party claiming rights under them.[2]

§ 712. **Notice—Form of—Under statutes.**—As we have mentioned before,[1] prior to the adoption of the various modern codes, in most jurisdictions, statutes were enacted, which in a way regu-

1 Kimball v. Gearhart, 12 Cal. 27, 1 Morr. Min. Rep. 615, where it was held that where parties go to trial in actions for the diversion of water, upon general averments and denials of title, anything which legally supports or attacks a title is admissible in evidence, and hence the notice under which one of the parties claimed title was admissible.

See, also, Yale on Mining Claims and Water Rights, p. 78.

Hess v. Winder, 30 Cal. 349; McKinney v. Smith, 21 Cal. 374, 1 Morr. Min. Rep. 650; North Noonday M. Co. v. Orient M. Co., 6 Sawy. U. S. 299, 1 Fed. Rep. 522.

2 In Osgood v. Eldorado W. Co., 56 Cal. 571, 5 Morr. Min. Rep. 37, it was held that a notice as follows was sufficient: "In conformity with an Act of Congress, entitled an Act granting a right of way to ditch and canal owners over the public lands, and for other purposes, approved July, 1866, the undersigned truly claims, and are by priority of possession, entitled to the use of the waters of this stream for mining, manufacturing, agricultural, and other purposes, and intend to dam said stream, and carry the same, or a portion thereof, in a flume, ditch, or canal or by natural channels, wherever found suitable, to certain mining and agricultural districts; and that the construction of said flume or ditch will not injure any settler on the public domain.

"J. KIRK.

"F. A. JOHNSON."

See, also, Floyd v. Boulder Flume & Mer. Co., 11 Mont. 435, 28 Pac. Rep. 450, where the Court even went to the extent of curing the obscurity in the notice, and by decree made the rights of the parties under the same definite and certain.

1 See Sec. 620.

lated the appropriation of waters. And, although no exact forms were prescribed as to how the notice should be drawn, in those States requiring notice of appropriation certain essentials were required to be embodied in the notice. And, where this is the case, a notice of appropriation should, of course, contain all of the essentials called for by the statute; and it is held in California that, where the notice did not conform to the requirements of section 1415 of the Civil Code, the party attempting the appropriation could not claim any rights thereunder.[2]

Section 1415, of the Civil Code of California upon the subject of notice went into effect with the rest of the code on the first of January, 1873; and as this was largely followed by other States, and is still in full force and effect, we will here give this section in full.

"Sec. 1415. *Notice of Appropriation.*—A person desiring to appropriate water must post a notice, in writing, in a conspicuous place at the point of intended diversion, stating therein:

"1. That he claims the water there flowing to the extent of (giving the number) inches measured under a four-inch pressure;

"2. The purpose for which he claims it, and the place of intended use;

"The means by which he intends to divert it, and the size of the flume, ditch, pipe, or aqueduct in which he intends to divert it."[3]

In the State of Washington, the form provided by the statute

2 Taylor v. Abbott, 103 Cal. 421, 37 Pac. Rep. 408.

3 The rest of the section applies to the posting of notice and the change of the point of diversion and the place of intended use. See, also, for the California Code upon the subject, Secs. 1410-1422, Laws of California, *post*, Chap. 86.

See, also, 2 Kerr's Cyc. Codes, pp. 1137-1165, and cases cited.

In a California case it was held that a posted notice of a claim of the waters of a lake for irrigation, stating that the water claimed was to be used on land owned by the plaintiff, describing it, contained sufficient statement of the purpose for which the water was claimed, and place of intended use, although it further stated that the water was also to be used for irrigation by other parties, to whom the plaintiff might furnish it on other lands not described. It was further held that where the notice of appropriation stated that the water was to be conveyed to the place of intended use by a "six-inch pipe or by a pipe of other dimensions," it was sufficient to authorize a diversion of the quantity of water that could be carried in a six-inch pipe. Duckworth v. Watsonville etc. Co., 150 Cal. 520, 89 Pac. Rep. 338; *Id.*, 158 Cal. 206, 110 Pac. Rep. 927.

for the notice is almost identical with that of California.[4] The same is true in the State of Montana.[5] In Alaska, by the Act of June 6, 1900,[6] it is provided that the Clerk of the Court as ex-officio Recorder must procure such books for records as the business of his office requires, and such as may be required for the purpose of recording "notices and declarations of water rights." No form of notice is provided.[7] But, as will be seen from the decisions cited in our notes, that the courts in construing these notices hold that as to the form thereof a substantial compliance with the statute is sufficient, and especially is this true if the appropriation is a prior one.[8]

A notice of appropriation need not be verified or acknowledged in order to make it valid, and entitle it to record, unless it is especially provided for by the statute.[9]

**§ 713. Notice—Posting and recording.**—The first physical act necessary in making an appropriation, and one upon which a great

Floyd v. Boulder Flume & Mercantile Co., 11 Mont. 435, 28 Pac. Rep. 450; Kendall v. Joyce, 48 Wash. 489, 93 Pac. Rep. 1091; Beckwith v. Sheldon, 154 Cal. 393, 97 Pac. Rep. 867; Smyth v. Neal, 31 Ore. 105, 49 Pac. Rep. 850; Osgood v. Eldorado etc. Co., 56 Cal. 571, 5 Morr. Min. Rep. 37; Conger v. Weaver, 6 Cal. 548, 65 Am. Dec. 528, 1 Morr. Min. Rep. 594.

[9] De Wolfskill v. Smith, 5 Cal. App. 175, 89 Pac. Rep. 1001.

deal depends, is the posting of the notice of appropriation. The usual mode of giving the notice, at an early period and before any statutory enactment upon the subject had taken effect, was by posting written or printed notices on or near the margin of the stream, or other source of supply, at the point where the diversion was to be made; and, also, perhaps, posting similar notices at various points along the projected line of the ditch or canal.[1]

Later it became customary not only to post the notices as above, but also to file and record the same, either in the office of the county recorder of the county or with the recorder of the mining district where the appropriation was intended. And still at a later period, especially in those States and Territories which have passed statutory enactments relative to this subject, it became necessary to file and record the notice in the office provided for by law, which was usually in the office of the county recorder or the county clerk.[2] At the present time, if an appropriator desires to receive the benefits of the notice as the inception of his right, he is required by statute in all of the Western States to post the notices of appropriation on the stream at the point of diversion, and usually along the line of the projected ditch or canal, and record the same in some official records, which are now designated by the laws of the various States.[3] However, as we shall see in a later section,[4] even in California and other States, where the statutes prescribe that a notice must be given, this is held to be merely directory, and that an appropriation may be made without the posting or the recording of any notice.[5]

1 For form of notice, see Sec. 712.

See, also, Osgood v. Eldorado etc. Co., 56 Cal. 571, 5 Morr. Min. Rep. 37; Beckwith v. Sheldon, 154 Cal. 393, 97 Pac. Rep. 867; Kimball v. Gearhart, 12 Cal. 27, 1 Morr. Min. Rep. 615.

2 A notice may also be posted within the boundaries of a National Forest, if the Acts of Congress and the laws of the State wherein the appropriation is attempted, are complied with. Kings River Pr. Co. v. Knight, 32 Land Dec. 144.

For the appropriation of waters on the National Forests, see Sec. 669.

For rights of way over National Forests, see Secs. 954-966.

3 See laws of various States, Part XIV.

See, also, laws of State control, Secs. 1337-1367.

4 For appropriation without notice, see Secs. 730, 751.

5 See, also, Lower Tule River D. Co. v. Angiola etc. Co., 149 Cal. 496, 86 Pac. Rep. 1081.

**§ 714. Notice—Effect of.**—Although it is held in most jurisdictions, that a valid claim to the use of water may be acquired without the posting of a notice,[1] the posting of a notice is necessary to fix the exact date of the inception of the title of the appropriator, and to preserve his inchoate right from that date until the water is actually applied to some beneficial use or purpose. Provided, always, the appropriator has fully complied with all of the essential requisites necessary to make his appropriation, by the doctrine of relation, the inception of his title begins at the date that he posted his notice.[2] As was said in a recent California case:[3] "Such a claimant to the use of water has an incomplete, incipient, conditional right in the water, which is a vested interest in real property."[4] In fact in some States it is provided by statute that by a full compliance with the statutory requirements, "the claimant's right to the use of the water relates back to the time the notice was posted."[5]

Another effect which the notice has is that upon the rights of others attempting to make appropriations subsequent to the notice from the same source of supply. All subsequent appropriators, who date their claim later than the notice of the first appropriator, acquire only rights to the surplus water, if any, after the valid claim of the prior appropriator has been fully supplied.[6]

1 See Secs. 730, 751.

2 For doctrine of relation, see Secs. 742-756.

The notice of appropriation is not a mere declaration of intention to appropriate water, but is evidence of possession; and, although not of itself sufficient, constitutes one of a series of facts, which, taken together, make a perfect right. Thompson v. Lee, 8 Cal. 275, 1 Morr. Min. Rep. 610.

See, also, Kimball v. Gearhart, 12 Cal. 27, 1 Morr. Min. Rep. 615; De Necochea v. Curtis, 80 Cal. 397, 20 Pac. Rep. 563, 22 Pac. Rep. 198; Wells v. Mantes, 99 Cal. 583, 34 Pac. Rep. 324; Stickney v. Hanrahan, 7 Idaho 424, 63 Pac. Rep. 189; Duckworth v. Watsonville etc. Co., 150 Cal. 520, 89 Pac. Rep. 338; *Id.*, 158 Cal. 206, 110 Pac. Rep. 927.

5 Cal. Civ. Code, Sec. 1418.

Wells v. Mantes, 99 Cal. 583, 34 Pac. Rep. 324.

6 See rights of subsequent appropriators, Secs. 783-786.

See, also, Sand Point etc. Co. v. Panhandle Dev. Co., 11 Idaho 405, 83 Pac. Rep. 347; De Necochea v. Curtis, 80 Cal. 397, 20 Pac. Rep. 563, 22 Pac. Rep. 198; Wells v. Mantes, 99 Cal. 583, 34 Pac. Rep. 324; Broder v. Natoma Water Co., 101 U. S. 274, 25 L. Ed. 790, affirming 50 Cal. 62; Nevada etc. Co. v. Kidd, 37 Cal. 282; Nevada D. Co. v. Bennett, 30 Ore. 59, 45 Pac. Rep. 472, 60 Am. St. Rep.

This is also the rule where the right to the use of the water is claimed by riparian owners, in those jurisdictions which have both the law of appropriation and the common law of riparian rights.[7] The notice, therefore, acts as a warning to all later comers that the party posting it has a claim from the date thereof to the waters of the stream to the extent of the amount claimed in the notice, and later comers act at their own risk, and can appropriate the surplus water subject to the actual rights of the prior appropriator.[8] But whether the claim of the prior appropriator can be maintained depends entirely upon the application of all the water claimed to some beneficial use or purpose.[9] Upon the other hand, the failure to post a notice or the posting of a notice which does not conform to the requirements of the statute is a waiver of all advantages that a proper notice would have given.[10]

**§ 715. Notice—Limits the extent of the water right claimed.**—Another effect that a notice has is in limiting the right of the appropriator to the amount of the water claimed in the notice. It is the settled rule that an appropriator under one appropriation

777; Morris v. Bean, 146 Fed. Rep. 432; *Id.*, 159 Fed. Rep. 651, 86 C. C. A. 519; affirmed in 221 U. S. 485, 55 L. Ed. 821, 31 Sup. Ct. Rep. 703; Cruse v. McCauley, 96 Fed. Rep. 369.

7 Congress, in making grants to railroad companies, can not be supposed to have exercised its liberality at the expense of pre-existing rights, which, though imperfect, are still meritorious and have just claims to legislative protection. Broder v. Natoma W. & M. Co., 101 U. S. 274, 25 L. Ed. 790, affirming 50 Cal. 62.

See, also, De Necochea v. Curtis, 80 Cal. 397, 20 Pac. Rep. 563, 22 Pac. Rep. 198; Nevada etc. Co. v. Kidd, 37 Cal. 282.

For notice limiting the extent of the right, see Sec. 878.

9 See Secs. 725-728.

10 Taylor v. Abbott, 103 Cal. 421, 37 Pac. Rep. 408, where it is said: "The notice posted by him at the spring did not conform to the requirements of Section 1415 of the Civil Code, and he can not therefore claim any rights thereunder as an appropriator of water."

See, also, De Wolfskill v. Smith, 5 Cal. App. 175, 89 Pac. Rep. 1001.

But see appropriation by actual diversion, Sec. 730.

depending upon a notice can claim no more water than is called for in the notice.[1] As all the waters are open to appropriation by successive appropriators this rule is necessary to ascertain the claims of those who are prior.[2]

And, upon the other hand, owing to the tendency of appropriators to claim in the notice more water than they can reasonably use for the purpose for which the water is appropriated, the notice can not always be a guide as to the actual extent of the claim of an appropriator. As we shall see in a subsequent section, the amount which within a reasonable time is actually used for some beneficial use or purpose is the extent of the right.[3] As was said in a recent case decided by the Supreme Court of California: "The amount claimed in the notice is no measure of the right. . . . It extends only to the water actually taken and used."[4]

This subject will be further discussed when we come to that of the extent of an appropriation.[5]

**§ 716. Notice—Alone not sufficient.**—The notice of appropriation, if the law has been fully complied with in that respect, is evidence of possession, but of itself is not sufficient to maintain a claim to a water right. It forms but one of a series of acts which, taken altogether, constitute a perfect right. As we shall discuss in other sections of this work, the notice must be followed up by the commencement and completion of the works for the diversion of the water; there must be an actual diversion of the water; and the consummation of the right is only had when all of the water is actually applied to some beneficial use or purpose.[1] As was held

1 For appropriation without notice, see Secs. 730, 751.

For right of appropriator to make subsequent appropriation, see Secs. 783, 784.

So, where the appropriation was made "in pursuance with a notice duly given and made," a finding by the trial court that the appropriator is entitled to 12 times that amount can not be sustained." Last Chance etc. Co. v. Heilbron, 86 Cal. 1, 26 Pac. Rep. 523.

See, also, Smyth v. Neal, 31 Ore. 105, 49 Pac. Rep. 850; Murray v. Tingley, 20 Mont. 260, 50 Pac. Rep. 724, 19 Morr. Min. Rep. 137.

2 For rights of secondary appropriators, see Secs. 783-786.

3 See Sec. 877.

4 Duckworth v. Watsonville W. & L. Co., 150 Cal. 520, 89 Pac. Rep. 338; *Id.*, 158 Cal. 206, 110 Pac. Rep. 927.

5 See Secs. 877-885.

1 See Secs. 725-728.

Notice alone of an intention to divert the water of a stream, for a specified purpose, will not, of itself,

in a recent Oregon case,[2] the filing of notice of appropriation of waters merely shows an intent to appropriate them, and the notice alone does not establish an appropriation nor determine the time or amount thereof, but there is the necessity for the actual diversion of the water and for its use and the application to a beneficial purpose before title can be acquired.[3] And, upon the other hand, the mere act of commencing or digging a ditch or canal, even with the intent to appropriate the water of a stream and apply the same to some beneficial use, is not sufficient of itself to hold the water right, as against others, without some notice or publication of the intent.[4] But this right to the use of water being simply

constitute an appropriation, but must be followed up by the commencement and completion of the works for the diversion thereof. Thompson v. Lee, 8 Cal. 275, 1 Morr. Min. Rep. 610; Columbia M. Co. v. Holter, 1 Mont. 296.

See, also, Conger v. Weaver, 6 Cal. 548, 65 Am. Dec. 528, 1 Morr. Min. Rep. 594; Kimball v. Gearhart, 12 Cal. 28, 1 Morr. Min. Rep. 615.

Robinson v. Imperial S. M. Co., 5 Nev. 44, 10 Morr. Min. Rep. 370, where the circumstances were that certain parties, Black and Eastman, in December, 1859, posted a notice on a tree, on the bank of the Carson River, of the location of a water right commencing at that point, and of a right of way for a ditch of a certain capacity to a rocky bend of the river below, and within the next six months did some fifteen or twenty days' work on the ditch, but not sufficient to make it of any practical use, *held*, not sufficient acts on the part of Black and Eastman to give them actual possession of the land traversed by the ditch, or to prevent the subsequent appropriation of the same by another party.

2 Ison v. Sturgill, 57 Ore. 109, 109 Pac. Rep. 579, 110 Pac. Rep. 535.

3 See, also, Kendall v. Joyce, 48 Wash. 489, 93 Pac. Rep. 1091; Cardoza v. Calkins, 117 Cal. 106, 48 Pac. Rep. 1010, 18 Morr. Min. Rep. 689; Conger v. Weaver, 6 Cal. 548, 65 Am. Dec. 528, 1 Morr. Min. Rep. 594; Mitchell v. Amador C. & M. Co., 75 Cal. 464, 483, 17 Pac. Rep. 246; Thompson v. Lee, 8 Cal. 276, 1 Morr. Rep. 610; Duckworth v. Watsonville etc. Co., 150 Cal. 520, 89 Pac. Rep. 338; *Id.*, 158 Cal. 206, 110 Pac. Rep. 927; Weaver v. Eureka Lake Co., 15 Cal. 271, 1 Morr. Min. Rep. 642; Smyth v. Neal, 31 Ore. 105, 49 Pac. Rep. 850; Miles v. Butte etc. Co., 32 Mont. 56, 79 Pac. Rep. 549; Morris v. Bean, 146 Fed. Rep. 432; *Id.*, 159 Fed. Rep. 651, 86 C. C. A. 519; affirmed in 221 U. S. 485, 55 L. Ed. 821, 31 Sup. Ct. Rep. 703; Columbia M. Co. v. Holter, 1 Mont. 296; De Wolfskill v. Smith, 5 Cal. App. 175, 89 Pac. Rep. 1001.

For application of the water to a beneficial use, see Secs. 727, 877.

Smith v. Duff, 39 Mont. 382, 102 Pac. Rep. 981, 133 Am. St. Rep. 587; Snyder v. Colo. etc. Co., 181 Fed. Rep. 62, 104 C. C. A. 136.

4 In Kimball v. Gearhart, 12 Cal. 27, 1 Morr. Min. Rep. 615, the Court said: "Thus is put in issue the very question of title, and this involves, necessarily, the due prosecution of the

a possessory one by the appropriator, the giving of public notice of his intent to apply the water to some beneficial use, the surveying the ground, setting stakes along the line of the projected canal, and actually commencing and diligently pursuing the work to its completion, and finally using the water for some beneficial use or purpose, constitute as much possession as the nature of the subject will admit, and form a series of acts of ownership that must be conclusive of his right. Thus under this rule, the giving of notice is merely one of a series of acts which gives possession, but which constitutes only a part of the evidence of the conclusive right of ownership. Indeed, from the very nature and character of these water claims, it is one of the most important acts of the appropriator, and tends more to prevent imposition upon the public than any of his other acts. The appropriator might make a survey, set stakes along the line thereof, and immediately commence work thereon, and continue the same; and yet none of these acts without notice, unless far progressed, would convey an idea to other persons desiring to divert and appropriate the water of a particular stream, that he intended to construct a trail, road, or ditch; but after the notice of the intention to appropriate the water has once been given, in order to hold the right, thus only partially acquired, the works by which the appropriation is to be effected must be actually commenced, and must then be prosecuted with all reasonable diligence, until the same are completed, and the water diverted from its natural stream into the ditch, and conducted to the place where it is to be used, and then actually applied to some beneficial use or purpose.

And again, the notice is of great advantage to the appropriator, as where a valid notice is posted according to law, this constitutes the inception of his title to the water right, and from the date of the posting he can hold his right during the intervening

work after the appropriation, or, in other words, after the indication by some palpable and unequivocal outward sign of the intent to appropriate. The title to the water does not arise, as we have intimated before, from the manifestation of a purpose to take, but from the effectual prosecution of that purpose. This prosecution, therefore, is a necessary element of a title, and the negation of this, the abandonment of the purpose, is not so much matter in avoidance of a title, as it is matter showing that no title was ever obtained." See, also, Robinson v. Imperial S. M. Co., 5 Nev. 44, 10 Morr. Min. Rep. 370.

time to the consummation of his right by the actual application of the water to some useful purpose, provided, of course, that he uses due diligence in the accomplishment of that purpose.[5]

**§ 717. Physical acts necessary other than notice.**—An appropriation of water can not be constructive, but it must be actual, and, as was held in the early cases of California, the intent to appropriate must be "accompanied with some open physical demonstration of the intent."[1] It follows, therefore, as we have seen in a preceding section, that a notice of intention to appropriate the water of a specified stream is not of itself sufficient to constitute an appropriation thereof, although, in connection with other acts, it may be sufficient to hold the attempted appropriation, as against all later comers, until the necessary works are complete and the water actually applied to a useful purpose.[2]

5 For due diligence in construction works, see Secs. 733-741.

For the doctrine of relation, see Secs. 742-756.

1 McDonald v. Bear River etc. Co., 13 Cal. 220, 1 Morr. Min. Rep. 626.

For intent to appropriate, see Secs. 707-710.

For definition of "appropriation of water," see Sec. 707.

See Kelly v. Natoma Water Co., 6 Cal. 105-108, 1 Morr. Min. Rep. 592, in which Mr. Justice Heydenfeldt said: "Possession or actual appropriation must be the test of priority in all claims to the use of water, whenever such claims are not dependent upon the ownership of the land through which the water flows. Such appropriation *can not be constructive*, because there would be no rule or limit to control it, resting, as it must, only in intention. The principle as laid down in Eddy v. Simpson, 3 Cal. 249, 58 Am. Dec. 408, must govern this case. The design of the defendants, two years before, to appropriate Alder Creek, as a connecting link of their enterprise, could not give them exclusive rights until it was executed, because it was not the intention to possess, but the actual possession, which gives the right."

In Conger v. Weaver, 6 Cal. 548, 65 Am. Dec. 528, 1 Morr. Min. Rep. 594, it was held that the enclosure of the ground used in digging a canal, not being necessary for the work, would give its proprietor no higher rights; nor is it necessary, as notice, to those who have received actual notice of the intended line of the canal.

See, also, Tuolumne W. Co. v. Chapman, 8 Cal. 392, 11 Morr. Min. Rep. 34; Coryell v. Cain, 16 Cal. 567.

2 Cruse v. McCauley, 96 Fed. Rep. 369; Millheiser v. Long, 10 N. M. 99, 61 Pac. Rep. 111, both citing Kinney on Irr., 1st Ed., Sec. 159.

See, also, Thompson v. Lee, 8 Cal. 275, 1 Morr. Min. Rep. 610; Weaver v. Eureka Lake Co., 15 Cal. 271, 1 Morr. Min. Rep. 642; Kimball v. Gearhart, 12 Cal. 27, 1 Morr. Min. Rep. 615; Jones v. Jackson, 9 Cal. 237; Robinson v. Imperial S. M. Co., 5 Nev. 44, 10 Morr. Min. Rep. 370; Columbia M. Co. v. Holter, 1 Mont. 396.

As has been shown, there must be, first the *bona fide* intent to appropriate the waters of a stream and apply the same to some beneficial use or purpose. Then, in connection with this intent, there must follow the physical acts necessary to constitute the actual appropriation of the water, which include the notice to the world of the intent, the surveys, and commencement of the digging of the ditches, building of flumes, or other works necessary; their completion within a reasonable time after the notice; the actual diversion of the water appropriated from the natural stream into the appropriator's ditch; and, finally, the actual application of all of the water appropriated and so diverted to some beneficial use or purpose. No one of these acts can stand alone, but all are absolutely essential to the successful and valid completion of the appropriation. But just what physical acts are necessary for its successful termination, depends upon the condition of the stream, the nature of the climate and soil, the length of the canal, the difficulty of obtaining labor, tools, or material, and the many other circumstances connected with each particular case.[3]

§ 718. **The works necessary must be constructed.**—In order to make a valid appropriation of water, certain works must be constructed by means of which the water may be diverted from the stream and conducted to the place where it is to be used. These works must be sufficient to meet the ends of the purpose of the

[3] Kimball v. Gearhart, 12 Cal. 27, 1 Morr. Min. Rep. 615; Osgood v. Eldorado Water Co., 56 Cal. 571, 5 Morr. Min. Rep. 37; Thompson v. Lee, 8 Cal. 275, 1 Morr. Min. Rep. 610; Kelly v. For construction of works, see Secs. 716-721.

For actual diversion of the water, see Secs. 722-724.

For reasonable diligence in construction works, see Secs. 733-741.

For actual application of the water, see Secs. 725-728.

appropriation. The law in this respect does not require impossibilities, or useless or vain things to be done. In the appropriating of the unclaimed water flowing over the public lands, only such acts are necessary, and such indications and evidences of appropriation required, as the nature of each particular case and the topography of the country will admit of, and are under the circumstances and at the time practicable. Notices, surveys, stakes, and the blazing of trees, followed by work and actual labor without abandonment, will, in every case where the work necessary is completed within a reasonable time, and the water actually applied to some beneficial use, give title to the water over subsequent claimants.[1] But in every case, in order to make a valid appropriation of water, there must be some physical act upon the part of the appropriator, in order to hold possession of the right. It is just as necessary to the creation and preservation of a water right to provide means for the continual diversion of the water from its natural channel, and for conducting it to the place where it is to be used, as it is to apply it to a beneficial use or purpose. All this must be provided for by the appropriator himself in a lawful manner. Hence he can not arbitrarily seize and use another's ditch, or an interest in a ditch, for that purpose.[2]

Under the law of appropriation the mere settlement upon the banks of a stream is not enough to constitute an appropriation of the water of the stream without some physical act constituting possession.[3] Hence no valid appropriation of water is made by merely settling on land and cutting the wild grass, or grazing on the same, where it is produced by the water of a river naturally coming down, and, in times of high water, overflowing and spreading over the land, without some act upon the part of the settler to take possession of the water.[4] However, in the Federal case of

Min. Rep. 370, where the Court held that the mere appropriation of a mill site was not an appropriation of water.

See, also, appropriation for mining purposes, Sec. 694.

Schwab v. Beam,[5] Judge Hallett held to the contrary. The holding in this case is contrary to all precedent in the State of Colorado, and has not been followed since. Since writing the above, the case of Snyder v. The Colorado Gold Dredging Co.[6] was decided by the Circuit Court of Appeals, in which Judge Van Devanter, in rendering the opinion, said: "In Schwab v. Beam[7] a different conclusion was announced, but that decision stands alone, is not in accord with the decisions of the Supreme Court of Colorado respecting the application of the doctrine of appropriation as there prevailing to the use of water for purposes other than irrigation, and is not sustained by what seems to be better reasoning."[8] To hold that the mere settlement upon land bordering upon a stream will give rights to the use of the water flowing therein, and that, too, without any act upon the part of the settler to take possession of the water, would be to return to the common law theories of riparian rights, which have been discussed in a previous portion of this work.[9] This is the rule under the common law States, and also in those States which have both the doctrine of appropriation and still adhere to the common law.[10] Under the doctrine of appropriation, the settlement upon land bordering upon a stream constitutes no element of an appropriation. It requires no ownership to land,[11] and the water may be appropriated to irrigate non-riparian land.[12]

**§ 719. The works—Kind necessary.**—The kind of the works necessary for the appropriation of water varies with each particular case. In some cases they must be great, but in others they need be but very small. However, some kind of works is necessary, in order to obtain possession of the water and maintain the water right. And,

11 See Secs. 766, 767.

12 See Secs. 766, 767.

whatever works are necessary, in order to hold possession of a water right, they must be fully constructed, and that, too, within what is termed a "reasonable time."[1]

But the character of the works necessary to make an appropriation and hold title to a water right varies greatly and depends entirely upon the features surrounding each particular case. The farmer, living near a small stream, desiring to irrigate his land consisting of but a few acres, may find that in his case all the works necessary to be constructed by him, in order to make and hold his appropriation of the water, is a brush and earth dam in the stream and a couple of plow furrows from that point to the field where the water is to be used. Yet this work must be actually performed in order to secure and preserve his right. Upon the other hand, the irrigation company, with the purpose in view for making the appropriation, of supplying water for the irrigation of perhaps hundreds of thousands of acres of land, will find that in the large river from which this appropriation must be made, that a rock and cement dam only will suffice; also that reservoirs may have to be built, and that canals and ditches of the most permanent and enduring character, perhaps hundreds of miles in length, must be constructed in order to carry the water to all the lands for which the appropriation is made. Yet all these works must be constructed, and that, too, within a reasonable time, in order to hold the right to the water and shut out subsequent appropriators. Hence it follows that the character of the works necessary, and also what constitutes a reasonable time for their construction, must vary with each particular case.[2]

Although usually some kind of a dam is necessary to divert the water from the stream into the ditch of the appropriator, it is not always the case. If the diversion can be accomplished by a simple cut to the stream it is sufficient.[3] In cases where the natural channel is used to conduct the water to the place where it is to be used, there may be required to be constructed dikes or embankments

1 For reasonable time to construct works, see Secs. 733-741.

2 For a more detailed description of the character of the works necessary, see Secs. 824-836; Malad Val. Irr. Co. v. Campbell, 2 Idaho 411, 18 Pac. Rep. 52; McCall v. Porter, 42 Ore. 49, 70 Pac. Rep. 820, 71 Pac. Rep. 976; Kelly v. Natoma W. Co., 6 Cal. 105, 1 Morr. Min. Rep. 592.

3 Lower Tule etc. Co. v. Angiola etc. Co., 149 Cal. 496, 86 Pac. Rep. 1081.

along the sides of the natural stream to hold the water within the channel, especially at certain seasons of the year. But an actual diversion lower down the stream must be made of the same amount appropriated above.[4] The most common method of conducting the water to the place where it is to be used is by the construction of open ditches and canals. And, for this purpose, flumes or conduits constructed at different parts of the lines of a ditch, can not change the general character of the works, and in all legal respects are the same as an open ditch or canal.[5] These are usually made by the appropriator, and must be so constructed and kept in good repair, as to prevent all unreasonable waste.[6] Whatever ditches and canals are necessary must be constructed in order to hold the right. Again, the dam, ditch, or canal of another may be used by an appropriator, and the only work necessary in this case will be the enlargement of the old works sufficiently to divert and carry the waters of the new appropriation, in addition to the water of the former appropriators.[7]

[4] For use of natural channel of stream for ditch, see Sec. 832; Kelly v. Natoma W. Co., 6 Cal. 105, 1 Morr. Min. Rep. 592; Hoffman v. Stone, 7 Cal. 46; Town of Suisun v. De Freitas, 142 Cal. 350, 75 Pac. Rep. 1092.

For necessity of an actual diversion, see Secs. 722-724.

See, also, McCall v. Porter, 42 Ore. 49, 70 Pac. Rep. 820, 71 Pac. Rep. 976.

"No certain method is necessary to constitute a valid appropriation, so long as the water has been applied to a beneficial use; and this may be done either by ditches or by other methods of diversion and application, such as the placing of dams in the streams and sloughs, and thereby overflowing the land, or sub-irrigating it, as the case may be." Hough v. Porter, 51 Ore. 318, 98 Pac. Rep. 1083.

See, also, Clark v. Nash, 198 U. S. 361, 49 L. Ed. 1085, 25 Sup. Ct. Rep. 676, 4 Ann. Cas. 1171; affirming *Id.*, 27 Utah 158, 75 Pac. Rep. 371, 1 L. R. A., N. S. 208, 101 Am. St. Rep. 953, where the only work necessary was the enlargement of the old ditch and the construction of a ditch about 100 feet long to carry the water to the land of the appropriator.

Water Supply & S. Co. v. Larimer & W. Irr. Co., 24 Colo. 322, 51 Pac. Rep. 496, 46 L. R. A. 322; North Point Consol. Irr. Co. v. Utah & S. L. C. Co., 16 Utah 246, 52 Pac. Rep. 168, 40 L. R. A. 851, 67 Am. St. Rep. 607.

For right to use existing works of another, see Secs. 989, 990, 1085.

As was said upon this subject by the Supreme Court of California:[8] "A person who is making an appropriation of water from a natural source or stream is not bound to carry it to the place of use through a ditch or canal cut especially for that purpose. He may make use of any natural or artificial channel, or natural depression which he may find available and convenient for that purpose, so long as other persons interested in such conduit do not object, and his appropriation so made will, so far as such means of conducting the water is concerned, be as effectual as if he had carried it through a ditch or pipe line made for that purpose and no other."[9]

A distinction, however, must be made in cases where the owner objects to the use of his ditch by another. This subject, however, will be discussed more thoroughly when we come to the subject of rights of way over private lands.[10]

§ 720. **The works—Kind necessary (continued).**—An appropriator may make use of all of the natural advantages of the topography of the country in constructing his works. Many times it is not necessary to construct a ditch, and if so, but for a short distance. The water may be turned from the natural stream into a gulch, ravine, or in any depression in the land along which the water will run to the place where it is needed. Any of these, if available, may be utilized by the appropriator for that purpose.[1] Even in certain places the channel of the stream itself from which the appropriation is made, or the channel of another stream may be

10 See Secs. 989, 990, 1085.

1 Thomas v. Guiraud, 6 Colo. 530, where it was held that the true test of an appropriation of water is the actual application thereof to the beneficial use intended, and that the method of diverting or carrying the water or in making such application is immaterial; and that the construction of ditches may be unnecessary.

Simmons v. Winters, 21 Ore. 35, 27 Pac. Rep. 7, 28 Am. St. Rep. 727; Hoffman v. Stone, 7 Cal. 46; McKinney v. Smith, 21 Cal. 374, 1 Morr. Min. Rep. 650.

used for the purpose of carrying the water either all or a part of the distance required.[2] Again, the character of the works may consist of the construction of pumps, water wheels or other devices for lifting the water directly from the streams or other sources of supply, and letting the same run into ditches constructed to carry it to the place where it is needed. This may be done either with or without the construction of a dam to facilitate the diversion.[3]

All of the different propositions referred to in this and the preceding sections[4] will be discussed more at length in other portions of this work.[5] The only point which we wish to impress upon the mind here is that a water right under the Arid Region Doctrine of appropriation is a possessory right, and consummated only when the appropriator actually takes possession of the water which he attempts to appropriate.[6] Hence one of the essentials is that the appropriator must construct some work or works nec-

essary to take this possession and to conduct the water to the place where its use to a beneficial purpose is the consummating act of his appropriation.[7]

§ 721. **The works—Completed when.**—The works must be deemed completed when they are fully constructed according to the plan thereof, and ready to divert, hold, and to convey all of the water appropriated to the place of use. Some authorities even go to the extent of holding that the works are not completed until the water is actually diverted therein. In California there is a statute to that effect;[1] and, where a statute says that the works can not be deemed completed until the water is actually diverted therein, it is the law in that jurisdiction. But outside of statutory definitions of the word "completion," we never considered that it was necessary to actually divert the water in order to consider the works completed. Of course, the diversion of the water and conducting the same where it is to be used is the ultimate end for which the works are constructed. But they are only the means to an end; and, when the works are fully constructed and ready to divert the water and carry it to the place where it is to be used, we consider the works completed. And, under the definition of the term "appropriation of water,"[2] the taking and diverting the water from the natural stream constitutes a separate and distinct essential element. This we will discuss in other sections of this chapter.[3]

In order, however, to hold the appropriation to the full extent intended, all of the works necessary to that end must be fully completed, and that, too, with reasonable diligence. And it is the doing of the work and the completion of the dams, ditches, and canals or other works, within a reasonable time from taking possession, which gives the right to take possession of the water of which the appropriation is attempted, or the right of way through the public domain.

7 That an actual application of the water is necessary, see Secs. 725-728.

1 See Civil Code of Cal., Sec. 1417. "By 'completion' is meant conducting the waters to the place of intended use." 2 Kerr's Cyc. Codes, p. 1161.

For reasonable diligence in completion of works, see Secs. 733-741.

2 See Sec. 707.

3 For diversion of water, see Secs. 722-724.

In Bear Lake etc. Co. v. Garland,[4] the Court said: "The Bear Lake Company, therefore, never had any legal or equitable right to the land over or through which the ditch for the canal was dug, as against the Government, until the ditch was completed."[5] Where, however, portions of the works are in themselves completed, and are in themselves capable of the diversion of a portion of the water contemplated, they must be deemed completed to that extent, although the project was never fully completed according to the plans of the original scheme. And, if this is followed up with the actual application of the water diverted to some beneficial use or purpose, there is a valid appropriation of the water to that extent. And again, although one may not have completed his works for diverting or using the water, and therefore is not ready to consummate his appropriation by the application of the water to the purpose intended, yet he has the right to use so much of the water, as against intervening rights, as may be necessary to prevent his works from injury while in the process of construction.[6]

**§ 722. Diversion of the water—There must be an actual diversion.**—As we have seen, the appropriation entire can not be constructive;[1] so, also, no step which it is necessary to take to make the appropriation complete can be constructive. As the whole theory of appropriation for beneficial uses is based merely upon a prior possessory right to the water entirely separate from the property in the land over which it runs,[2] and no possession or exclusive property can be acquired while it is still flowing and remaining

4 164 U. S. 1, 41 L. Ed. 327, 17 Sup. Ct. Rep. 7; affirming *Id.*, 9 Utah 350, 34 Pac. Rep. 368.

2 See Secs. 766, 767.

See, also, Crandall v. Woods, 8 Cal. 136, 1 Morr. Min. Rep. 604.

in its natural channel or stream,[3] it follows, therefore, that in order to obtain possession of the water attempted to be appropriated, it is an indispensable requisite that there must be an actual diversion of the water from its natural channel into the appropriator's ditch, canal, reservoir, or other structure.[4]

In a recent Idaho case [5] it is said: "In the further discussion of this case it must be remembered that the respondent has not alleged or established any appropriation or diversion of the waters of this stream for any useful or beneficial purpose. He makes no claim to the water by reason of any appropriation or diversion in accordance with the statute, but rather bases and asserts his right upon the fact that he is a riparian proprietor, and that as such he has for more than 17 years been using the water for 'domestic, culinary, and household purposes and for the use of his live stock,' and that the waters of the stream have continuously flowed through his lands, 'moistening the same.' Whatever rights, therefore, respondent has established are wholly dependent upon his proprietary rights as a riparian owner of lands through which this stream flows."

So, where the common law, as it is recognized in England and in the Eastern States,[6] forbids a diversion of the water from its natural channel, under almost any circumstances whatsoever, the Arid Region Doctrine of appropriation, which is in force in all of the arid and semi-arid States of this country, makes the diversion of the water one of the most essential requisites of an appro-

3 Parks Canal & M. Co. v. Hoyt, 57 Cal. 44; Kidd v. Laird, 15 Cal. 161, 76 Am. Dec. 472, 4 Morr. Min. Rep. 571.

4 Cruse v. McCauley, 96 Fed. Rep. 369, citing Kinney on Irr., 1st Ed. Sec. 162; Parks Canal & M. Co. v. Hoyt, 57 Cal. 44; Kidd v. Laird, 15 Cal. 161, 76 Am. Dec. 472, 4 Morr. Min. Rep. 571; Dalton v. Bowker, 8 Nev. 190; Riverside Water Co. v. Gage, 89 Cal. 410, 26 Pac. Rep. 889.

There must be a diversion of the water; Cardoza v. Calkins, 117 Cal. 106, 48 Pac. Rep. 1010; McPhail v. Forney, 4 Wyo. 556, 35 Pac. Rep. 773; Utt v. Frey, 106 Cal. 392, 39 Pac. Rep. 807.

5 Hutchinson v. Watson Slough Ditch Co., 16 Idaho 484, 101 Pac. Rep. 1059, 133 Am. St. Rep. 125.

6 For the common law, see Secs. 430-551.

For modification of the common law in the Western States, see Secs. 508-511.

For irrigation as a riparian right, see Secs. 498-525.

priation, and an absolute necessity in order to acquire an exclusive property in the water.[7]

But see the case of Cascade Town Co. v. Empire Water & Power Co.,[8] where it is said: "The complainant is not required to construct ditches or artificial ways through which the water might be taken from the stream, in order that it might appropriate the same. The only indispensable requirements are that the appropriator, in order to constitute a valid appropriation, first, must intend to use the waters for a beneficial use, and second, actually apply them to a beneficial use."[9]

In order, therefore, to constitute a valid appropriation of water, within the meaning of the definition as given in a previous section,[10] and within the meaning of the term as understood by the decisions of all the States where the law of appropriation is in force, there must be an actual diversion of the same, with the intent to apply to some beneficial use or purpose, and followed within a reasonable time, by an actual application to such use or to some other.[11]

7 For property in water after diversion, see Secs. 774.

St. Rep. 195, where it was held that to pump water from a stream was a diversion of it.

§ 723. **Diversion—What constitutes a diversion.**—As long as the water is actually diverted from the natural stream or other body and taken into the actual possession of the appropriator, the means employed to divert the same are immaterial;[1] provided that no extraordinary or unreasonable method is used by the appropriator which will interfere with the rights of subsequent appropriators to the use of the water.[2] The most usual method of diversion is by a dam or some obstruction placed in the stream below the intake of the ditch or canal by which the waters of the stream are raised sufficiently to permit the amount appropriated to flow into the ditch by simple gravitation. Care has to be exercised not to have the dam too high, and to have sufficient spillways to permit the water not claimed under the appropriation to run down the stream should there be others below claiming a portion of the water of the stream. In many streams in the Western country there may be found twenty-five or thirty of these dams, each diverting the portion of the water claimed by the owners, the exact amount of the water to which each appropriator is entitled being measured by weir or other measuring device placed in the ditch near the point of diversion.[3] Oftentimes it is not necessary in order to divert the water that the dams extend entirely across the stream. In cases of this kind wing dams are often used. These are dams constructed from the bank of the stream from which the diversion is made and extending out into the stream at an angle and running usually somewhat higher up the stream than the point of diversion. The character of these works, which are necessary to make the diversion, has been discussed in previous sections. In some cases no dam at all is necessary, the lay of the land being such that the intake of the ditch is sufficient to divert the water claimed.[4] Again, in many places, owing to the fact that the water is so much lower than the land where the diversion must be made in

4 Lower Tule River D. Co. v. Angiola W. Co., 149 Cal. 496, 86 Pac. Rep. 1081; Hough v. Porter, 51 Ore. 318, 95 Pac. Rep. 732, 98 Pac. Rep. 1083, 102 Pac. Rep. 728; Simmons v. Winters, 21 Ore. 35, 27 Pac. Rep. 7, 28 Am. St. Rep. 727.

order that it flow by gravity to the place where it is to be used, no dam can be constructed by which the water can be raised to the point desired. In these cases pumps may be used, run by any power such as steam, electricity, wind, gasoline, oil, animal, or even by the hand of man.[5] The word "diversion," as applied to a water course, means the turning aside or altering the natural course of the stream;[6] and, whether this alteration is made so that the water flows horizontally, or is forced vertically, is immaterial. So long as the course of the water appropriated is changed from the natural channel of the stream and taken possession of by the appropriator by means of the works constructed by him,[7] whether the same be by a dam and the intake of his ditch, and thus taking the water practically horizontally, or by means of a pump, taking the water vertically from the stream to the bank, makes no difference, so long as the water is actually taken from the stream by some artificial means provided by the appropriator. And, for this purpose, "every diversion of the water from a stream is artificial—a disturbance of the natural order of things. A dam or ditch is as much an artificial mechanism as a pump—it may, indeed, be much more so; and the one alters the natural conditions in the same sense that the other does."[8] As we have seen, the right to appropriate the water of the natural streams, under the Arid Region Doctrine of appropriation, is a possessory right only. Hence, in order to acquire this right, the appropriator must take possession of the water by means of the artificial works constructed by him. The methods employed by him, so long as their use does not infringe the rights of others, are immaterial.[9]

**§ 724. Diversion—Unreasonable methods interfering with rights of others—Schodde v. Twin Falls Land and Water Co.**—As intimated in our preceding section, no extraordinary or unrea-

[9] Where the method employed does infringe upon the rights of others, see next section.

sonable method can be used by an appropriator, whereby the like right to appropriate the waters of any stream by others may be prevented. If there is ample water in the stream for all desiring the use of the same, the appropriation by some should not be prevented by the mere method of diversion by others. The diversion must be made in a reasonable manner, and so as not to deprive others of their rights. For the right to the appropriation of water "is not unrestricted. It must be exercised with reference to the general conditions of the country and the necessities of the people, and not so as to deprive a whole neighborhood or community of its use."[1] So, dams constructed for the diversion of water must be kept within reasonable limits, if their unreasonable height interferes with the rights of others.[2] Hence it follows, that, while any person is permitted to appropriate water for a useful purpose, it must be with some regard for the rights of the public; and, therefore, an appropriator has no absolute right to his original method of diversion if it interferes with the rights of others in the subsequent appropriation of the surplus waters of the same stream. Such an appropriation and unconditional ownership would work a monopoly and disastrous consequences. The waters of the natural streams of this Western country are open, as far as practicable, to the free use for beneficial and useful purposes by all who are in a position to avail themselves of the right.[3]

The above principle was illustrated recently in an action brought in the Circuit Court of the United States for the District of Idaho.[4] In this case, according to the complaint, the plaintiff owned certain lands upon the banks of the Snake River in Idaho amount-

ing to 429 acres, and water from the river was appropriated to irrigate a certain portion of these lands. The amount claimed was 1,250 miner's inches. Soon after the first steps to appropriate the water were made in 1895, water wheels were erected by the plaintiff, varying from 24 to 34 feet in height. Wing dams were also constructed for the purpose of confining the flow of the water of the river, and so the current of the river would drive the wheels and cause them to revolve and carry the water in buckets attached to the wheels to an average height of about 20 feet, where the buckets would be emptied into the flumes and thence carried to the fields to be irrigated, and there used for that purpose. In the year 1903, while the plaintiff was so diverting and using the water from the river, the defendant took legal steps to appropriate a very large amount of the surplus waters of the river, and, in 1905, completed the construction of a dam across the river about nine miles below the plaintiff's land. This dam was so constructed as to impound all of the waters of the river at that point, and with the canals necessary, cost $1,500,000. The appropriation made by this means was for the purpose of supplying water for domestic purposes and irrigation to settlers, amounting to about 5,000 in number, on about 300,000 acres of land. There was no other water supply available for these settlers, except the waters appropriated by the defendant company. By reason of the dam the waters of the river were backed up to and beyond the plaintiff's premises, and thus the current in the river, by means of which plaintiff's water wheels were driven and made to raise the water to the elevation required, was destroyed. It was also alleged that it was now impossible for the plaintiff to change his dams or wheels, or to build or construct other dams, or water wheels or flumes that will raise any water whatever from said stream that can be used upon the plaintiff's land, by reason whereof the plaintiff has not been, nor will he be, able in the future to irrigate said lands or any part thereof or to raise crops thereon, as long as the defendant's dam is maintained. That there was no other supply of water available for use upon plaintiff's lands except the waters of Snake River; that, by reason of the backing up of said water and the stopping of the plaintiff from *using said water wheels* to raise the waters of the river to and upon said lands, and the cutting off of the water supply from plaintiff's lands, he has been damaged in

the aggregate sum of $56,650. It will be noticed that the gist of the action was the stopping of the plaintiff from using the water wheels to raise the water. In other words, it was the old method of the diversion of the water being prevented which was complained of. The defendant interposed a general demurrer to the complaint, on the ground that the facts stated in the complaint did not constitute a cause of action against the defendant. The demurrer was sustained by the Circuit Court, and the plaintiff elected to stand upon his complaint, and judgment was then entered against him, and he then appealed to the United States Circuit Court of Appeals; and, on February 3, 1909, a decision was rendered by that Court affirming the judgment of the lower court. The decision of the Circuit Court of Appeals was placed entirely upon the method of diversion by the plaintiff, and that an appropriator of a certain quantity of water from a stream does not acquire, as an appurtenant to his appropriation, the right to the current of the stream as a means of operating devices used by him to divert the water from the stream, nor is such current subject to appropriation as a water right. Also that the right to appropriate water from a stream is not an unrestricted right, but must be exercised with regard to the rights of the public and other appropriators, and a single appropriator, who has adopted as a means of raising water to his land water wheels operated by the current of the stream, has no right of action because of the construction of a dam below him designed for the irrigation of a large area of land, the property of many owners, which destroys the current of the stream at the place of the location of his wheels and makes it necessary for him to adopt some other method of diverting the water from the stream to his land. We will only add that we regard the decision sound in every particular.[5]

The Court might have added another reason as to why the current in the river can not be appropriated. For every appropriation, as we have seen in the preceding sections,[6] there must be a diversion. And in this case, the current of the river remaining in the channel of the stream and thus turning the wheels, there was no diversion or attempted diversion as to it; and hence there could be no appropriation as to that portion of the stream. Then

[5] As to what constitutes an appurtenance, see Secs. 1005-1018.

[6] See Secs. 722, 723.

again, there is question of economic use and the wasting of the water, which the Court did not touch upon. To hold that one farmer with a small amount of land of 429 acres could in effect appropriate and hold the right to all of the waters of the Snake River capable of furnishing water for domestic and all other purposes to 5,000 settlers upon 300,000 acres of land, would be to hold with the "dog in the manger" theory of the case with a vengeance.[7]

Since writing the above this case was affirmed by the United States Supreme Court on a writ of *certiorari* on April 12, 1912, in which the Court held that the current of a river can not be appropriated by a riparian proprietor in Idaho to the extent necessary to operate the water wheels used by him to divert water actually appropriated for irrigation, so as to give him a right of action for the destruction of the current by subsequent appropriators when exercising their right under Article 15, Section 3, of the Idaho Constitution, to apply the unused water to beneficial uses. In the main, the Supreme Court simply reaffirmed the points made by the Circuit Court of Appeals, as set forth above.

In a recent Utah case[8] it was held that a prior appropriator acquired a vested right to his means of diversion, and that neither the legislative nor the judicial power could allow an invasion of such a prior right without permitting the confiscation of his property rights.

**§ 725. Consummating act—There must be an actual use of the water appropriated.**—In all the States where there is no Act of the legislature designating the completion of the works as the consummating act of an appropriation,[1] the essential necessary to complete and to finally consummate an appropriation, is the application of all the water attempted to be appropriated to some beneficial use or purpose.[2] Not only must there be an intent

7 "In the appropriation of water there can not be any 'dog-in-the-manger' business by either party, to interfere with the rights of others." Judge Hawley, in Union M. & M. Co. v. Dangberg, 81 Fed. Rep. 73, 119.

1 See Sec. 721.

2 For what purposes water may be appropriated, see Chap. 37, Secs. 690-705.

to apply the water to some such purpose, but as the consummation of that intention, it must be actually applied within a reasonable time; and, as to whether or not this has been done, is a question of fact to be determined from all the circumstances of the case.[3] The actual application of all the water appropriated is the consummating act necessary to complete a valid appropriation, and the continuation of that use, or some other beneficial use, constitutes the continuation of the title to the water right in the appropriator;[4] and there can be no right to take the water unless it is applied to some beneficial use.[5] This proposition is so thoroughly settled by all the statutory law and court decisions that a citation of au-

For the consummation of an appropriation under statute, see next section, Sec. 726.

thorities seems almost unnecessary.[6] On the other hand, the notice of appropriation may have been properly given according to law, the works for diverting and conducting the water may be constructed within a reasonable time,[7] the water diverted from its natural channel, and yet if the water is not actually applied to some beneficial use or purpose, and that, too, within a reasonable time, or, in other words, without unreasonable delay, no legal appropriation has been made of the water.[8]

In Nevada D. Co. v. Bennett,[9] it is said: "An appropriation proper is not made until there has been an actual application of the water claimed, to some beneficial purpose or some useful industry. All rights acquired prior to this time, at whatsoever step in the process, amount simply to a claim of an appropriation." "Compliance with the law in other respects, that is, the filing with the clerk and recorder of the requisite plats and notices, the commencement and construction of the ditch or canal with due diligence, and even the actual diversion of the water from the natural stream—all of these acts, unaccompanied by the beneficial use of the water, constitute but an inchoate right or interest. And unless such beneficial use follows, the interest thus acquired does not ripen into an appropriation; the inchoate right terminates, and the water goes to the junior claimants who have complied with all the requirements of the law."[10]

In Beers v. Sharpe,[11] it is said: "The rule is settled in this State that to constitute a valid appropriation of water there must be (1) an intent to apply it to some beneficial use, existing at the time or contemplated in the future; (2) a diversion thereof from a natural stream; *and* (3) *an application of it within a reasonable time to some useful industry.*"

As was well stated by Mr. Justice Straup, in rendering the opin-

6 Nearly all of the statutes of the Western States have provisions to the effect that beneficial use of the water shall be the basis, the measure, and the limit of the right. See statutes of the various States, Part XIV.

7 For reasonable time, see Secs. 733-741.

8 Maeris v. Bicknell, 7 Cal. 261, 68 Am. Dec. 257, 1 Morr. Min. Rep. 601; McKinney v. Smith, 21 Cal. 341, 1 Morr. Min. Rep. 650; Thomas v. Guiraud, 6 Colo. 530.

11 44 Ore. 386, 75 Pac. Rep. 717.

ion of the Court in a recent Utah case:[12] "The final step, and the most essential element, to constitute a completed valid appropriation of water, is the application of it to a beneficial purpose. Whatever else is required to be, or is done, until the actual application of the water is made for a beneficial purpose no valid appropriation has been effected. . . . In other words, if the proposed appropriator is not able to complete and finally establish his appropriation by applying the water to, and using it for, the beneficial purpose for which it was proposed to be appropriated, either by himself or through the agency of some user, his appropriation fails. He may not file his application, construct his works, and then hold the water and wait for something to happen. He can not withhold the water from the proposed beneficial use. He must not only be diligent in constructing the works, and in making the diversion, but he must also be reasonably diligent and expeditious in making application of the water to the beneficial use for which the appropriation was proposed, else he loses his inceptive right. His appropriation will be measured by the quantity of water actually used for the proposed beneficial purpose."

§ 726. **Consummating act—Under statute.**—In all the States where there is no Act of the legislature designating what act in the series of acts necessary to make a valid appropriation shall constitute the final essential, it is held that the true test as to whether the appropriation is finally completed and valid is the actual application of the water to some beneficial use or purpose.[1] This we consider to be the better rule. But, as we have seen in our account of the Arid Region Doctrine of appropriation, this doctrine originated in California with the early miners.[2] That State also was the first to enact any statute upon the subject of appropriation of waters. In the Civil Code of that State may be found the following: "By 'completion' is meant conducting the waters to the place of intended use."[3] This statute was followed in some of the other States, although in the most of them it has been superseded by later irrigation and water codes. But where this

3 Cal. Civil Code, Sec. 1417, enacted 1872. 2 Kerr's Cyc. Codes, p. 1161.

statute is in force the consummating act in making an appropriation is the act of conducting the water to the place of contemplated use. In other words, the water must be in the actual possession of the appropriator and ready for application to the use for which it was appropriated. But the act of appropriation is consummated with the diversion of the water, without an application to the use intended. Then a reasonable time is given to apply the water after the completion of the appropriation to the use intended, or to some other beneficial use; and, if this is not done it works an abandonment. So the ultimate result is precisely the same, whether the appropriation is deemed in law consummated with the conducting of the water to the place of intended use and a reasonable time thereafter given for the actual application to the use, according to the California rule,[4] or whether the actual application of the water to the beneficial use is deemed the consummating act of the appropriation, as under the Colorado rule,[5] a reasonable time always being allowed for the application of the water to the use after its diversion. Under either rule, in order for the absolute, exclusive title to the water right to vest and continue in the appropriator, there must be, within a reasonable time after the water is diverted, a continuous application of the water to some beneficial use or purpose. And a failure to so apply the water, within a reasonable time, under either rule, works an abandonment.[6]

It was held in a recent case in Montana [7] that under the statute of that State all the steps necessary to be taken to secure a complete appropriation are provided for by the statute, and the actual use of the water sought to be taken is not necessary for the con-

4 Heilbron v. 76 Land & W. Co., 80 Cal. 189, 22 Pac. Rep. 62; Senior v. Anderson, 115 Cal. 496, 47 Pac. Rep. 454; *Id.*, 130 Cal. 290, 62 Pac. Rep. 536; *Id.*, 138 Cal. 716, 72 Pac. Rep. 349.

5 "No principle in this connection with the law of water rights in this State is more firmly established than that the application of water to a beneficial use is essential to a completed appropriation." Conley v. Dyer, 43 Colo. 22, 95 Pac. Rep. 304.

For abandonment, see Secs. 1100-1117.

7 Bailey v. Tintinger, —— Mont, ——, 122 Pac. Rep. 575.

summation of an appropriation. The Court, in the opinion, said: "Assume that a corporation, which does not own, control, or possess any land, is organized for the purpose of selling or renting water to settlers to irrigate arid lands; that it proceeds under the statute to make its appropriation and fully complies with all the statutory requirements, completes its distributing system, and is ready and offers to supply water to settlers upon demand. Now, if the corporation can ever make an appropriation, it has done so, for it has performed every act which it can perform. It can not use the water itself, for it has no land or other means of use. Any further acts must be performed by its customers, who are to be the users. . . . The right thus obtained may be lost by abandonment or non-user for an unreasonable time."

**§ 727. Consummating act—All of the water claimed must be used.**—In the early days prior appropriation was esteemed to cover all in sight, even to the entire amount of water flowing in a natural stream, whether the same was actually used or not. In order to irrigate his land or to work his mine the appropriator might claim the right to all of the water flowing in a certain stream, although the same might have been many times the amount that was actually needed for the purpose for which he made the appropriation. The early irrigators, having no knowledge, even in the slightest degree, of the proper application of water for irrigating their crops, and there being at that time nothing written upon the subject, and, as there was a very plentiful supply of water in the streams for those who wished to use it, it followed as a matter of course that they adopted very wasteful methods in their lavish use of the water. But little cultivation of the land was thought necessary if the ground was kept saturated. As time went on, however, more settlers of the agricultural class came into the arid region and a great many miners also abandoned their search for gold and turned their attention to agriculture. Hence, it did not require any great length of time in order to allow the settlers in many places to appropriate all the waters in the streams under the wasteful methods used, and apportion it among themselves. And with the then prevalent lavish use of water the area of land put under actual cultivation was comparatively small to what it might have been with the same supply of water had ordinary care

been taken in its distribution. And, as there was a continual demand for more water as more land was taken up and cutivated, in the process of time, owing to this demand, many old ideas upon the subject of irrigation were exploded, and it was found that a given amount of water could be made to go further and with far better results than the early settlers had any idea of. In many cases it was demonstrated by actual experiment that five or six times as much land could be irrigated with a certain amount of water and with better results as far as amount and quality of crops were concerned than had been thought possible before.

So, in order to abolish these wasteful methods the rule of "beneficial use" was adopted by all of the legislatures and courts of the Western States where the law of appropriation is in force. And the final test in all jurisdictions now is as to whether all of the water diverted is actually applied to some useful or beneficial purpose.[1] As was said in a recent Utah case:[2] "The ultimate question for determination, however, is not how much water appellants required, but what amount had they applied to a useful and beneficial purpose for a term of years prior to the time when the respondents made their appropriation?" It is, therefore, held that there must not only be a diversion from the stream and a carrying of the water to the place of use, but it must be beneficially applied, and the measure of the appropriation does not depend alone upon the amount diverted and carried, but the amount which

is applied to a beneficial use or purpose must also be considered.[3] This subject, however, will be more thoroughly discussed in other portions of this work.[4]

**§ 728. Consummating act—Concluding remarks as to when appropriation is complete.**—The appropriation becomes perfect only when the dams, ditches, or canals or other works necessary are entirely completed, the water diverted from the natural stream or other source of supply, and all actually used for beneficial purposes.[1] And, to continue the right in the appropriator, the beneficial use of all of the water must be continued. These are two propositions which may be called thoroughly settled by the laws of all the States where the Arid Region Doctrine of appropriation is in force. Where an appropriator fails to use the full amount of the water diverted by him, and for an unreasonable time delays increasing the use, any subsequent increase either in diversion or use thereof is made subject to intervening rights.[2] Upon many questions the laws relative to the subject of irrigation and water rights in this Western country are even now in a state of transition, but it is undoubtedly settled that the actual user of all the water, claimed under an appropriation, for a beneficial or useful purpose is the true and only final test touching the question whether a claim to the water has ripened into an appropriation. There can be no constructive appropriation, nor can any step required to be taken throughout the whole series of acts in the course

of water appropriations be constructively accomplished. It is the actual, physical performance of every essential requisite, from the time that the purpose is definitely conceived down to the ultimate user of the water in connection with the advancement and operation of some useful industry, and that, too, within a reasonable time from the first step to the final application of the water to such a purpose, that matures and finally accomplishes the appropriation.

Upon this subject, Mr. Chief Justice Hayt of the Supreme Court of Colorado, in the opinion in the case of Fort Morgan Land Company v. South Platte Ditch Co.,[3] said: "The Court holds that they must not only take the water out of the stream, but must prove the regular use of it for irrigation. From the first this Court recognized and emphasized the idea that priority can only be legally acquired by the application of the water to some beneficial use. Hence there must not only be a diversion of the water from the natural stream, but the actual application of it to the soil to constitute a constitutional appropriation recognized for irrigation."

The recent legislation and decisions of the courts show more and more the tendency not to permit any water to be wasted by means either of pretended appropriations, where the right to the water has not been finally consummated and has not been actually used for some of the beneficial purposes, or where there is an excessive amount of water claimed for the purpose for which the appropriation is made. And water rights attempted to be held in this manner, without actual user, are subject to appropriation by other parties upon the ground that no appropriation has been made of the excess.[4]

§ 729. **Modification of above rules by local law.**—The above rules laid down, as to how an appropriation may be effected, are the general laws upon the subject relating to the appropriation of public waters for the purpose of applying the same to some beneficial use or purpose. These rules are varied somewhat regarding

Rights of subsequent appropriators, Secs. 783-786.

Duty of water, Secs. 902-908.

the methods of acquiring water rights by the local laws of the various States that are formed out of the arid region. But we may safely say that in all these States the same principle of priority is at the very foundation of the appropriation. The appropriator who is prior in time has the superior right.[1] Also the principle that the water diverted can only be held as a valid appropriation by the application of the same to some beneficial use or purpose, is now as firmly established in all the States as is the principle of priority. The greatest modifications of the rules, as set forth in this chapter, then, are the local statutes of the various States prescribing the specific steps that must be taken in order to acquire a valid water right within their respective jurisdictions.

These local laws, as will be seen in a subsequent portion of this work, vary in the different States quite extensively, according to the supply and demand of water, the topographical and physical features of the country, the objects for which the water is to be used, and various other matters that are supposed, at least, to be of local importance.

Since the first edition of this work was written, prior to the year 1893, in the most of the Western States irrigation or water codes have been provided by statute. These codes are the law upon the subject of the acquisition of water rights within their respective jurisdictions; and, in order to give the appropriator the full benefits allowed under these codes to the exclusive right to the water appropriated and the doctrine of relation, the rules provided in the codes must be fully complied with.[2] These statutory laws will be discussed in another portion of this work.

**§ 730. Notice—Appropriation without—Appropriation by diversion and use.**—We can not leave the subject of notice without a discussion of the validity of an appropriation of water without either the posting or recording of notices, in those States where the statutes provide for notices. In all these jurisdictions, the courts hold that the provisions of the statute relative to the posting and recording of notices of appropriation are merely directory, and that

1 For the rights of prior appropriators, see Secs. 776-782.

2 For the laws of State control, see Chap. 86, Secs. 1337-1367.

For the doctrine of relation, see Secs. 742-756.

For the laws of the various States, see Part XIV.

one may, by a prior, actual, and complete appropriation and use, without proceeding under the statute, acquire a right to the water actually beneficially used which will be superior and paramount to the title of one making an appropriation from the same stream by instituting his claim in the manner provided by the statute by posting the notice thereof, subsequent to the actual use of the water by the prior appropriator.[1] In a recent California case the Court said: "In order to make a valid appropriation it was not necessary for Duncan (the appropriator) to post and record a notice of appropriation as provided in the Civil Code, Sections 1415 to 1421. The method of acquiring a right to the use of water as there prescribed is not exclusive."[2] In Idaho the Court holds to the same effect: "A person desiring to appropriate the waters of a stream may do so either by actually diverting the water and applying it to a beneficial use, or he may pursue the statutory method by posting and recording his notice and commencing and prosecuting his work within the statutory time. . . . In the latter case his appropriation will be entitled to date from the time of posting his notice."[3]

In a late Montana case[4] it was held that the statute of the State intended to provide a method for the appropriation of water in addition to that fixed by early customs, and after its passage an appropriation might be made, either by actual diversion or by compliance with its requirements, the Court saying: "We are of the

1 Wells v. Mantes, 99 Cal. 583, 34 Pac. Rep. 324; De Necochea v. Curtis, 80 Cal. 397, 20 Pac. Rep. 563; *Id.*, 22 Pac. Rep. 198; Watterson v. Saldunbehere, 101 Cal. 107, 35 Pac. Rep. 432; Murray v. Tingley, 20 Mont. 260, 50 Pac. Rep. 724, 19 Morr. Min. Rep. 137; Burrows v. Burrows, 82 Cal. 564, 23 Pac. Rep. 146; Senior v. Anderson, 115 Cal. 496, 47 Pac. Rep. 454; *Id.*, 130 Cal. 290, 62 Pac. Calkins, 117 Cal. 106, 48 Pac. Rep. 1010, 18 Morr. Min. Rep. 689; McDonald v. Bear River etc. Co., 13 Cal. 220, 15 Cal. 145, 1 Morr. Min. Rep. 626; Kimball v. Gearhart, 12 Cal. 27, 1 Morr. Min. Rep. 615; Kelly v. Natoma W. Co., 6 Cal. 105, 1 Morr. Min. Rep. 592; Hill v. King, 8 Cal. 336; Hoffman v. Stone, 7 Cal. 46; Wishon v. Globe etc. Co., 158 Cal. 137, 110 Pac. Rep. 290.

2 Lower Tule etc. Co. v. Angiola W. Co., 149 Cal. 496, 86 Pac. Rep. 1081.

3 Sand Point W. & L. Co. v. Panhandle Dev. Co., 11 Idaho 405, 83 Pac. Rep. 347; Pyke v. Burnside, 8 Idaho 487, 69 Pac. Rep. 477.

See, also, Neilson v. Parker, 19 Idaho 727, 115 Pac. Rep. 488.

4 Bailey v. Tintinger, —— Mont. ——, 122 Pac. Rep. 575.

opinion that the Act of 1885 intended: (1) To preserve the right which the appropriator had theretofore; and (2) to provide an additional method of making an appropriation. In other words, during the first period of our history above, there was but one method of making an appropriation, and that was by complying with the rules and customs of the pioneer settlers, while during the period since 1885, two distinct methods are prescribed, the first by complying with the rules and customs of the early settlers, and the second by complying with the terms of the statute."

But where the statute requires the posting and recording of the notices of appropriation, the effect of not complying with those provisions may be fatal to the claim of one who would otherwise be a prior appropriator. It is also the universal rule of law upon the subject that by not posting or recording a notice, or the posting or recording of a faulty notice, the appropriator loses his right to apply the doctrine of relation, from the time of the actual application of the water to some useful purpose back to the date of the posting of his notice, and he thus fails to shut off the rights of intervening claimants who have complied with the statute in this respect, and, therefore, his own rights to the use of the water, should there not be ample for all, may be cut off by those who have strictly complied with the statute.[5] For the rule is that where an appropriator of water does not post and file for record his notice of appropriation as provided by law, his right dates only from the last act perfecting such appropriation, which, as we shall see in a subsequent section, is the actual application of the water claimed to some beneficial use or purpose.[6]

[5] For doctrine of relations, see Secs. 742-756.

See, also, cases cited in notes above under this section.

For intervening right to appropriate water, see Sec. 702.

Where one fails to post and record a notice of appropriation in accordance with the statute, the effect is to preclude an appropriator from claiming, by the doctrine of relation, to the time when the work was begun as against one who does comply with the statutory provisions, and prosecuted the work to completion in accordance therewith. Morris v. Bean, 146 Fed. Rep. 432; *Id.*, 159 Fed. Rep. 651, 86 C. C. A. 519; affirmed in 221 U. S. 485, 55 L. Ed. 821, 31 Sup. Ct. Rep. 703; Cruse v. McCauley, 96 Fed. Rep. 369.

[6] Pyke v. Burnside, 8 Idaho 487, 69 Pac. Rep. 477; Murray v. Tingley, 20 Mont. 260, 50 Pac. Rep. 724, 19 Morr. Min. Rep. 137; De Wolfskill v. Smith, 5 Cal. App. 175, 89 Pac. Rep. 1001; De Necochea v. Curtis, 80 Cal. 397, 20 Pac. Rep. 563, 22 Pac. Rep. 198.

Where works of others already constructed are used by the appropriator, the statutes for posting notices and the construction of works, etc., need not be followed for the reason that there is no delay in making the diversion, and the appropriation is one by diversion and use, and also one to which the doctrine of relation does not apply.[7]

The rule may be considered as settled that as between the appropriator and the Government or the State the actual possession and use of a water right is a sufficient appropriation where there are no rival claimants to the same, regardless of the fact as to whether or not the steps prescribed by the statute of the particular State wherein the appropriation is made are followed or not. This is true both in the States which have the older statutes prescribing how an appropriation shall be made, and also in those States which have the law of State control, which prescribes more definitely the various steps which must be taken to effect an appropriation.[8] As was said in a recent Utah case,[9] in speaking of the method of making an appropriation of water: "Any person, however, who actually used the water for a beneficial or useful purpose, acquired the right to take the water so used as against all subsequent claimants, regardless of whether the user posted notices or not."[10]

§ 731. **There can be no appropriation by prescription.**—As the right by appropriation is an original right acquired from the Gov-

[7] For this subject discussed under the doctrine of relation, see Sec. 751.

ernment there can be no appropriation by prescription for the reason that there can be no right acquired by prescription as against the general Government.[1] Although there is no right of prescription against the general Government, rights already acquired from the Government by one person may be acquired by another by prescription. This subject, however, will be fully discussed in a subsequent chapter of this work.[2]

§ 732. **Summary of chapter.**—In this chapter we have seen that at the very inception of a valid appropriation of water from a natural stream or lake, there must be a *bona fide* intention upon the part of the one attempting to appropriate the water, to apply the same when his appropriation is completed to some of the beneficial uses or purposes; there must also be sufficient notice to the public of that intent to appropriate the water to put a reasonable man upon his guard; and within a reasonable time after the notice has been given the appropriator must commence his works for the actual diversion of the water, and the same must be prosecuted until they are completed, with all due and reasonable diligence; then there must be an actual diversion of the water into the ditches and works of the appropriator; then all of the water, when so diverted, must be applied to some one of the beneficial or useful purposes.[1] We will also see in other chapters that when the appropriation is completed, if the different steps taken which are necessary to consummate the appropriation, including the application of all of the water to some useful purpose, have been prosecuted with all due and reasonable diligence,[2] by the doctrine of relation the appropriation relates back, as against the rights of all others subsequently attempting to

2 For reasonable diligence, see Secs. 733-741.

appropriate the waters of the same stream, to the time when the first step was taken to secure the right; or in those States requiring notice, to the time when the notice was legally given of the intent to make the appropriation.[3]

[3] For the doctrine of relation, see Secs. 742-756. For the notice of appropriation, see Secs. 709-717.

# CHAPTER 39.

## REASONABLE DILIGENCE.

§ 733. Scope of chapter.
§ 734. Reasonable diligence in construction of works.
§ 735. What efforts are necessary to constitute.
§ 736. Reasonable diligence—How determined.
§ 737. Works must be completed within what time.
§ 738. Time within which water must be applied—Specific cases.
§ 739. Illness—Pecuniary ability or inability affecting reasonable diligence.
§ 740. Reasonable diligence for future needs.
§ 741. Effect of reasonable diligence, or the lack of.

**§ 733. Scope of chapter.**—Under the Arid Region Doctrine of appropriation an appropriator is required by the law to exercise reasonable diligence in every step required to make his appropriation complete. Otherwise, even if the appropriation is finally consummated by the actual application of the water to some beneficial use or purpose, if the appropriator has not exercised reasonable diligence in the prosecution of the necessary steps required to complete his appropriation, he can not take advantage of the doctrine of relation.[1] But his attempted appropriation may be either cut off by intervening rights, or, at any rate, it will only date from his actual application of the water, and come within that class of appropriations termed those by diversion and actual use.[2] In this chapter we will discuss the reasonable diligence that is required of appropriators to perfect their claims.

**§ 734. Reasonable diligence in construction of works.**—Not only must the works necessary to effect the appropriation and diversion of water be commenced soon after the inception of the claims,[1] but the work of construction thereof must be prosecuted with all reasonable diligence until the same shall have been finally completed.[2] In

1 For the doctrine of relation, see Chap. 40, Secs. 742-756.

2 For appropriations by diversion, see Secs. 730, 751.

1 For the works necessary, see Secs. 718-721.

For the time within which work must be commenced under the statutes of various States, see Part XIV.

2 As to what constitutes completion of the works, see Sec. 721.

this the law allows a reasonable time for their construction. No unusual or extraordinary exertions are required in the prosecution of the work of construction in order to hold the appropriation. Where due and legal notice of the intended appropriation has been given,[3] under the beneficent rule of the doctrine of relation,[4] no race with another appropriator is necessary in order to complete the works and be the first to divert and apply the water to some useful purpose.[5] If the work of the prior appropriator is prosecuted with due diligence, his right relates back to the inception of his claim, so that his right is good as against others, the inception of whose claims is later, and that, too, whether the water is actually applied to the purpose for which the appropriation is made or not. All that is required is that, after the notice has been given, the dam, ditch, and canal, and all the other works necessary to effect the diversion and to carry the water to the place where it is to be used must be begun in good faith, and the work thereon must be prosecuted in good faith to its completion with all due diligence. This has been the ruling of the courts in all jurisdictions, and that, too, with or without statutes upon the subject.[6]

[3] For notice of intent, see Secs. 710-716.

[4] For doctrine of relation, see Secs. 742-756.

The same principle also applies to cases where parties have filed notices of appropriation of water for the purposes of storage in reservoirs.[7] Where the site is located upon private lands, the notice must be followed up with reasonable diligence in taking steps to acquire the land for the site. Where it is upon public lands the steps necessary for the location of the reservoir site must also be proceeded with without unnecessary delay. The work of the construction of the reservoirs must also be prosecuted with the same degree of diligence as is required in other cases. A location notice without subsequent acts to accomplish the object named in the notice

prosecuted with reasonable diligence will neither hold the water right nor the reservoir site.[8]

§ 735. **What efforts are necessary to constitute.**—Probably the best definition of the word diligence was given by Lewis, C. J., in rendering the opinion in an early Nevada case.[1] It is there defined as "the steady application to business of any kind, constant effort to accomplish any undertaking." "It is the doing of an act or series of acts with all possible expedition, with no delay except such as may be incident to the work itself."

As has been said, the law does not require any unusual or extraordinary efforts, but it does require that which is usual, ordinary, and reasonable. The diligence required in the prosecution of the construction of all works necessary for the diversion and application of water in an attempted appropriation of the same is that constancy or steadfastness of purpose or labor which is usual with men engaged in like enterprises, and who desire a speedy accomplishment of their designs. There must be such assiduity in the prosecution of the works as will manifest to the world a *bona fide* intention to complete it within a reasonable time. As to what constitutes diligence is a question of fact and must be determined from all the circumstances surrounding each particular case.[2]

§ 736. **Reasonable diligence—How determined.**—As to whether the work of construction was begun within a reasonable time after the notice was given of the intent to appropriate water,[1] and, after its commencement, was prosecuted with all reasonable diligence, are questions of fact to be determined from all the circumstances surrounding each particular case, as the same are disclosed by the evidence.[2] And upon this question there may be taken into considera-

8 Windsor Res. & C. Co. v. Lake Supply D. Co., 44 Colo. 214, 98 Pac. Rep. 729; Cache La Poudre Res. Co. v. Water Supply & Storage Co., 25 Colo. 161, 53 Pac. Rep. 331, 46 L. R. A. 175, 71 Am. St. Rep. 131; Beaver Brook & Res. Co. v. St. Vrain etc. Co., 6 Colo. App. 130, 40 Pac. Rep. 1066.

2 Osgood v. Eldorado W. Co., 56 Cal. 571, 5 Morr. Min. Rep. 37; Kimball v. Gearhart, 12 Cal. 27, 1 Morr. Min. Rep. 615; Weaver v. Eureka L. Co., 15 Cal. 271, 1 Morr. Min. Rep. 642,

tion the acts of the appropriators such as surveys, stakes set, and the blazing of trees, the time of the commencement of the work and its actual prosecution until the same is completed.[3] In other words, as was said by the Oregon Court:[4] "The appropriator is entitled to a reasonable time within which, by ordinary diligence, he may complete the project and actually apply the water to the useful purpose intended. What is reasonable, both as to the amount of water and as to the time any given project may be completed, must depend upon the facts and circumstances of each particular case."[5]

The climate of the part of the country where the appropriation is attempted is also a proper subject, upon the question as to whether the work can be prosecuted during all the year, or only for a portion of the year;[6] also the topography of the country where the works have to be constructed and through which the canal has to run, as to whether the same be level or rough, and whether the soil is easy to work or whether rock work is encountered, and the like. So, also, the difficulty of obtaining labor, tools, or material; also the extent and magnitude of the works themselves.[7] The financial standing of the parties attempting the appropriation, and their ability to raise the means to prosecute the work to completion, are also facts for con-

where the Court said: "As to what constitutes reasonable diligence must be governed by the circumstances of each particular case, and necessarily varies with each particular case. It is a question of fact, and must be determined from all the evidence in the case."

"It is a question of fact, and must be determined from all the evidence in the case." Gates v. Settlers' etc. Co., 19 Okla. 83, 91 Pac. Rep. 856.

sideration.[8] Evidence of any of these facts are proper in the determination of the question as to whether or not reasonable diligence has been exercised in the construction of the works necessary to divert and conduct the water attempted to be appropriated to the place where it is to be used.

§ 737. **Works must be completed within what time.**—The same degree of diligence must be exercised by the appropriator as has been described in the preceding sections, until all of the works are finally completed and ready to divert the water from the natural streams and conduct the same to the place where it is to be used.[1] The commencement of the works and then an unreasonable delay in their completion are as fatal as against the rights of subsequent appropriators—the inception of whose rights began after the works of the first appropriator were started and before they were finished —as though the works of the first appropriator had never been commenced.[2] Where, however, there are no intervening claimants to the water, even if there is unreasonable delay in the completion of the works of the appropriator, when they are finally completed, the right to the water may be maintained as an appropriation by actual diversion.[3]

In most of the States there are statutes upon the subject of the construction of the works, giving a time limit within which they must be completed. So, where a person relies upon the statute for the validity of his appropriation, every provision must be strictly complied with.[4] This also includes the rule that the works must be entirely completed within the time specified in the statute in order to hold the entire claim. Where, however, a part of the works contemplated in the entire scheme are in themselves capable of diverting and conducting a portion of the water at-

8 See Sec. 739.

For appropriation by actual application of the water, see Sec. 730.

4 See chapter on the laws of State control, Secs. 1337-1367.

See, also, the laws of the various States, Part XIV.

tempted to be appropriated to the place of use, and there is an actual application of this amount to some beneficial use or purpose, the title in the appropriator to the water right to this extent is complete, without the completion of the remainder of the works. Unreasonable delay, however, will work an abandonment as to the rest of the water claimed under the original scheme.[5]

**§ 738. Time within which water must be applied—Specific cases.**—As we have seen in previous sections, the last step necessary to the consummation of a water right, under the doctrine of appropriation, is the actual application of all the water appropriated to some beneficial use or purpose.[1] After the works are completed,[2] all of the water attempted to be appropriated must not only be applied to some such use or purpose, but this must also be done within what is known in law as a reasonable time. And, as was said while discussing the subject as to the time within which the works must be completed,[3] as to what constitutes a reasonable time within which the water must be applied to some useful purpose is a question of fact and depends upon the circumstances surrounding each particular case.[4] Therefore what would be reasonable diligence

[5] For abandonment, see Secs. 1100-1117.

Cole v. Logan, 24 Ore. 304, 33 Pac. Rep. 568; Low v. Rizor, 25 Ore. 551, 37 Pac. Rep. 82.

[1] For the consummation of the right, see Secs. 725-728, and cases cited.

Taughenbaugh v. Clark, 6 Colo. App. 235, 40 Pac. Rep. 153; Hindman v. Rizor, 21 Ore. 112, 27 Pac. Rep. 13; Low v. Rizor, 25 Ore. 551, 37 Pac. Rep. 82; Wells v. Kreyenhagen, 117 Cal. 329, 49 Pac. Rep. 128, where it was held that a prior appropriator did not lose his right to the water by unavoidable delay in applying the water, where such delay was due to the accidental breaking of his ditch.

See, also, Conant v. Jones, 3 Idaho 606, 32 Pac. Rep. 250; Ophir Silver M. Co. v. Carpenter, 6 Nev. 534, 97 Am. Dec. 550, 4 Morr. Min. Rep. 640, where it was held that matters which will excuse delay must be incident to the enterprise and not to the person.

Stenger v. Tharp, 17 S. D. 13, 94 N. W. Rep. 402; Gates v. Settlers' etc. Co., 19 Okla. 83, 91 Pac. Rep. 856,

in one case might be inexcusable delay in others. Take for example an Idaho case,[5] where 14 years was held to be a reasonable time for a settler to apply all of the water claimed under an appropriation to the land for irrigation. Upon the other hand, take a California case, where under the facts four years was held to be an unreasonable time within which to apply the water.[6]

In a recent case in California it was held that where an appro-

where it is said: "There seems to be no serious difficulty in determining the law on these questions; but the difficulty, if any, lies in the application of the law to the facts. The law requires that there must be reasonable diligence by one intending to appropriate water from a stream, both in the prosecution of the improvements necessary to conduct the water to the place of use and in the application of the water to beneficial uses."

See, also, Arnold v. Passavant, 19 Mont. 575, 49 Pac. Rep. 400; Elliot v. Whitmore, 23 Utah 342, 65 Pac. Rep. 73, 90 Am. St. Rep. 700; Ft. Morgan Land Co. v. South Platte D. Co., 18 Colo. 1, 30 Pac. Rep. 1032, 36 Am. St. Rep. 259; Becker v. Marble Cr. Co., 15 Utah 225, 49 Pac. Rep. 893; Union M. & M. Co. v. Dangberg, 2 Sawyer 450, Fed. Cas. No. 14,370; 81 Fed. Rep. 73, 119.

Where 60 days had elapsed during which nothing but the survey had been made. Dyke v. Caldwell, 2 Ariz. 394, 18 Pac. Rep. 276.

One Year: Oviatt v. Big Four etc. Co., 39 Ore. 118, 65 Pac. Rep. 811.

Two Years: Nevada D. Co. v. Canyon D. Co., 58 Ore. 517, 114 Pac. Rep. 86.

Three Years: Nevada D. Co. v. Bennett, 20 Ore. 59, 45 Pac. Rep. 472, 60 Am. St. Rep. 777.

Four Years: Whited v. Cavin, 55 Ore. 98, 105 Pac. Rep. 396.

Seven Years: Moss v. Rose, 27 Ore. 595, 41 Pac. Rep. 666, 50 Am. St. Rep. 743.

Thirteen Years: Rodgers v. Pitt, 129 Fed. Rep. 932.

Fourteen Years: Hall v. Blackman, 8 Idaho 272, 68 Pac. Rep. 19.

For other cases holding that the period of time was unreasonable, or that there was unreasonable delay, see:

Ten months to conduct the water one-half mile: Cruse v. McCauley, 96 Fed. Rep. 369.

Two and one-half years: Ophir S. M. Co. v. Carpenter, 6 Nev. 534, 97 Am. Dec. 550, 4 Morr. Min. Rep. 640.

Three years where work was not completed and no water diverted: Colorado etc. Co. v. Rocky Ford etc. Co., 3 Colo. App. 545, 34 Pac. Rep. 580.

Five Years: Seaweard v. Pacific Live Stock Co., 49 Ore. 157, 88 Pac. Rep. 963; Smith v. Hawkins, 110 Cal. 122, 42 Pac. Rep. 453, 19 Morr. Min. Rep. 243; *Id.*, 120 Cal. 86, 52 Pac. Rep. 139; Still v. Palouse Irr. & Pr. Co., 64 Wash. 606, 117 Pac. Rep. 466.

Ten Years: Hindman v. Rizor, 21 Ore. 112, 27 Pac. Rep. 13; Cole v. Logan, 24 Ore. 304, 33 Pac. Rep. 568.

priator of the water of a stream, pursuant to a notice thereof of a specific quantity, and his successors for 30 years failed to make any beneficial use of the water, they lost any right by virtue of the appropriation and the waters became subject to the appropriation by others.[7]

However, it is settled in all jurisdictions that the right of the first appropriator is limited by the amount of water that is actually applied to some beneficial use within a reasonable time for its diversion.[8] Any other rule would permit the appropriator to divert the water from the natural stream and store the same up without the use thereof, and thereby create a monopoly,[9] or to permit him to simply run the water through his land without the use of all of it for some beneficial purpose.[10]

In the consideration of the facts relating to each particular case as disclosed by the evidence, it is proper to consider the magnitude of the enterprise, and the natural obstacles encountered.[11] The difficulty of procuring settlers under a colonization project,[12] and the demand for the water appropriated by a company for the purpose of sale, are proper subjects for consideration.[13] Until there

11 Seaweard v. Pacific etc. Co., 49 Ore. 157, 88 Pac. Rep. 963, where it is said: "What is a reasonable time in which to apply the water originally intended to be used for some beneficial purpose, depends upon the magnitude of the undertaking and the natural obstacles encountered in executing the design."

12 Nevada D. Co. v. Bennett, 30 Ore. 39, 45 Pac. Rep. 472, 60 Am. St. Rep. 777.

13 For the right of irrigation companies to appropriate and store water, see Sec. 704.

has been some demand for the water, I take it that a company may hold the water indefinitely unless there is some statute of forfeiture, providing that unless within a certain time the water is actually applied the right shall be forfeited and subject to appropriation by others. In case of statute limiting the time of application it must be complied with.[14]

This whole subject is summed up in the decision of a recent Utah case,[15] in which the Court said: "He must not only be diligent in constructing the works, and in making the diversion, but he must also be reasonably diligent and expeditious in making application of the water to the beneficial use for which the appropriation was proposed, else he loses his inceptive right. His appropriation will be measured by the quantity of water actually used for the proposed beneficial purpose." And, again, as said by the Arizona Court:[16] "The mere fact that by his notice of appropriation he sought to appropriate all of the flood waters of the stream does not entitle the appellant to relief against the appellee. To make his appropriation effectual, he must make use of the water within a reasonable time. He may then be protected only to the extent that he makes a beneficial use of the water. Whenever there is water in excess of his needs, others may appropriate it."[17]

In California the statute provides: "If the place of intended diversion or any part of the route of intended conveyance of water so claimed, be within, and a part of, any National park, forest reservation, or other public reservation, and be so shown in the notice of appropriation of water, then the claimant shall have 60 days, after the grant of authority to occupy and use such park or reservation for such intended purpose, within which to commence the excavation or construction of said works."[18] It was held relative to this provision by the Supreme Court that the section was to protect claimants who were unable to proceed with the work necessary to perfect their claims by reason of the fact that the place of intended diversion or a part of the route is within some National

reservation, pending the procurement, with due diligence, the authority, from the Federal Government.[19]

**§ 739. Illness—Pecuniary ability or inability affecting reasonable diligence.**—As a general proposition, matters incident to the person of the appropriator are circumstances which will not excuse any great delay in the prosecution of the construction of the works necessary. It is held that the illness of the appropriator is no excuse.[1]

The mere lack of means with which to prosecute the work is not a sufficient excuse for delay. As was said in an early Nevada case:[2] "It would be a most dangerous doctrine to hold that ill health or pecuniary inability of a claimant of a water privilege will dispense with the necessity of actual appropriation within a reasonable time, or the diligence which is usually required in the prosecution of the work necessary for the purpose. We find no recognition of such doctrine in law. Nor are we disposed to adopt it as the rule to govern cases of this kind." Again, as was said in an Oregon case:[3] "The authorities clearly show that the claimant's pecuniary condition is not an excuse; and, though the doctrine may seem harsh, it is nevertheless right."[4] The authorities all agree upon this proposition and there is no conflict upon this point. If the rule were otherwise, a person might post and record his notice to appropriate the waters from a certain stream prior to any one else, and thus take the preliminary step for the inception to his title to the water right; a company might also take this initial step to secure a water right for the purpose of the sale of the water to consumers; and, if

19 Wishon v. Globe Light & Power Co., 158 Cal. 137, 110 Pac. Rep. 290.

See, also, Oviatt v. Big Four etc. Co., 39 Ore. 118, 65 Pac. Rep. 811; Mitchell v. Amador Canal Co., 75 Cal. 464, 483, 17 Pac. Rep. 264.

2 Ophir M. Co. v. Carpenter, 6 Nev. 534, 97 Am. Dec. 550, 4 Morr. Min. Rep. 640.

3 Cole v. Logan, 24 Ore. 304, 33 Pac. Rep. 568.

4 See, also, Keeney v. Carillo, 2 N. M. 480; Mitchell v. Amador C. & M. Co., 75 Cal. 464, 483, 17 Pac. Rep. 246; Kimball v. Gearhart, 12 Cal. 27, 1 Morr. Min. Rep. 615; Nevada etc. Co. v. Kidd, 37 Cal. 282; United States v. Whitney, 176 Fed. Rep. 593, holding that the difficulty of financing a large project is not excuse for delay in the prosecution of the work.

the individuals or company were without means to prosecute the construction of the works necessary, they might hold the water right indefinitely, and thus prevent those who desire to appropriate the water for immediate use from acquiring any right to the water, and they themselves might never complete their appropriation. Hence the courts hold, and properly, that this can not be done. This is true whether there are statutes upon the subject or not, requiring that the work be commenced and prosecuted to completion within a certain time.[5]

However, the term "reasonable diligence" is but a relative one, and the courts recognize this fact. Therefore what might be reasonable diligence in one case might be a great lack of diligence in another. As a general thing the settlers who go upon the public domain to make homes are comparatively poor men. They have to go upon these wild and vacant lands, put up their buildings and fences, "grub" and clear their lands and get it ready for cultivation, construct their ditches and other works necessary for the appropriation of the water to irrigate their lands, and at the same time make a living for themselves and their families. Hence it follows that what is reasonable diligence in their cases is not in the case of an individual having plenty of means, or in the case of the corporation attempting to appropriate the water for the express purpose of selling it to these very settlers.[6] There is also no conflict of authorities upon this point, but the courts have always considered, in the cases of *bona fide* settlers, that they might take a longer time in the construction of their works for the diversion of the water which they attempt to appropriate, and in the actual application of the water to their lands, than was required of those with ample means, and still these works might have been constructed within a time which, in their cases, might be justly considered with reasonable diligence.[7] Hence the wisdom of the rule that, what shall constitute a reasonable time for the construction and completion of

[5] For statutes, see laws of various States and Territories, Part XIV.

See, also, State control, Chap. 68, Secs. 1337-1367.

[6] For right to appropriate water for sale, see Sec. 703.

See, also, for irrigation and ditch companies, Chaps. 73-77.

See, also, reasonable diligence in applying water for future needs, Sec. 740.

[7] See Taughenbaugh v. Clark, 6 Colo. App. 235, 40 Pac. Rep. 153, where Mr. Justice Reed said: "Men of limited means in a new territory, who have not only to 'grub' and clear land, but erect houses, and provide means of living while making a home,

the works necessary is a question of fact depending upon the circumstances connected with each particular case.[8] And, so long as the settler does not abandon his claim to the water, but continues in good faith to prosecute the construction of his ditch and other necessary works, and to make the application of the water to his land as rapidly as his demands and circumstances will permit, he should be held to be within the limit of a reasonable time.[9]

§ 740. **Reasonable diligence for future needs.**—As we said while discussing the subject of the construction of the works necessary,[1] the term "reasonable diligence" is a relative one. What may be reasonable diligence in one case might be a great lack of diligence, or unreasonable delay, in another. And, the fact as to whether or not there has been reasonable diligence in actually applying the water to some useful purpose depends upon the facts of each particular case.[2] Upon this subject there is one class of cases which deserve special notice. The law has always looked with special favor, and in some cases great leniency, upon the efforts of "the poor but honest farmer" who goes upon the public lands, and, often with no capital but his brawn and muscle, attempts to make a home for himself and his family. We will say, for example, that he has filed upon 160 acres of land, all of which is irrigable from some

should not be held to the same rule with those more favored, and having abundant of capital."

See, also, Hall v. Blackman, 8 Idaho 272, 68 Pac. Rep. 19; Conant v. Jones, 3 Idaho 606, 32 Pac. Rep. 250.

8 As to what constitutes reasonable diligence, see Secs. 733-741.

See, also, Sieber v. Frink, 7 Colo. 148, 2 Pac. Rep. 901; Taughenbaugh v. Clark, 6 Colo. App. 235, 40 Pac. Rep. 153; Pyke v. Burnside, 8 Idaho 487, 69 Pac. Rep. 477; Simmons v. Winters, 21 Ore. 35, 27 Pac. Rep. 7, 28 Am. St. Rep. 727; Nevada Ditch Co. v. Bennett, 30 Ore. 59, 45 Pac. Rep. 472, 60 Am. St. Rep. 777; Britt v. Reed, 42 Ore. 76, 70 Pac. Rep. 1029.

It will be noticed that the last three cases are from the Oregon Court, which also rendered the decision in the case of Cole v. Logan, *supra*, adhering to the strict rule, as set forth in the first proposition stated in the text. Upon an examination of the opinion in the case of Cole v. Logan, it will be found that the completion of a ditch about one and one-half miles long in ten years was held, in the face of the rights of subsequent appropriators, not reasonable diligence where the only excuse given for the delay was pecuniary inability.

9 For rights of settlers to make appropriations for future use, see Secs. 886, 887.

1 See Secs. 737-739.

2 See previous section, and cases cited.

natural stream flowing in the neighborhood. The land is raw and covered with sagebrush, greasewood, mesquite, or other wild growth, and when he first files upon the land there is not an improvement of any kind. The first year he has to build some sort of a house; his corrals, and sheds, and fences have to be built if he would protect his stock from the storms and his land from trespass of the cattle running wild upon the range. He has to break up some land and plant crops if he would raise sustenance for his family, himself, and his horses and stock for this year. If, with all that he has to do, the first year he breaks up and puts in crop 10 acres out of the 160 he is doing remarkably well. In order to mature his crop, if his land is within the arid or semi-arid regions, he finds that it must be irrigated. There is plenty of water unappropriated in the stream near by with which he can properly irrigate the whole 160 acres. He properly posts and records a notice of appropriation, stating thereby that he intends to appropriate sufficient water for the whole 160 acres. But he finds, before the water can be used, that a dam for its diversion and ditches for conducting it to his field where it is to be used have to be constructed. All this requires additional labor, and a portion at least must also be done the first year if he would mature his first crop. Therefore he constructs a temporary dam and a small ditch, but of a capacity sufficient only to carry the water to irrigate the 10 acres which he has broken up and put in crop. He conducts the water to this tract and applies it to the land, and thereby saves his crop. He has done the best he could under the circumstances the first year. The next year, we will say, he breaks up and irrigates 20 more acres. In doing this his dam may have to be strengthened and his ditch enlarged to hold the additional water. He continues in this way, each year breaking up additional land, and enlarging his works so as to divert and carry more water, and actually applying the water to the land, until all of it is cleared, plowed, under cultivation, and properly irrigated. He may or may not during the last years be able to progress more rapidly than he did at first. He has finally broken up all of the land, constructed all of the works necessary to divert and carry all of the water necessary for the irrigation of his entire tract, and has applied the water to the land for that purpose. And, although this work might have taken 10 or even 15 years to accomplish, he did it as quickly as he was able under all of the circumstances of his particular case. Under this state of facts, the law holds that

he has used "reasonable diligence," and that "the additional application of water annually to meet the augmented demand causes the appropriation to relate back to its inception, thereby cutting off all intervening rights of adverse claimants to the use of the water." [3]

The law in such a case does not require impossibilities of the appropriator; neither does it require him to do vain or useless things. Therefore it was unnecessary for the settler in our illustration to entirely construct during the first year all of his works necessary for him to make the entire appropriation of the water for all the land; it was also unnecessary for him during that year to apply the entire amount of the water claimed under the full appropriation. The land was not broken up and in a condition to receive it at that time. It would be a vain and useless thing for him to do this in order to hold his entire appropriation. And, again, the proximity to market is a proper subject for consideration. Very many of the agricultural lands of the Western country, when they are first taken up for settlement, are far from transportation and market. This is a proper subject for consideration in determining the question of

See, also, cases cited in last section, No. 739.

For quantity of water which may be appropriated, see Secs. 877-886.

reasonable diligence in this class of cases. It was held in an Idaho case that where crops could not be disposed of at a reasonable profit it was not necessary to cultivate all of the land, and still the water right might be held pending such a time.[4] Therefore, as said before, the law is very considerate of the farmer in this class of cases. To hold that the law required settlers to cultivate all of their land within a very short time or lose a large portion of the water right which they had taken the proper steps to appropriate for their entire irrigable area, would result in defeating the very purpose of the public land laws of Congress, and defeat most settlers in acquiring the right to the use of sufficient water to properly irrigate their lands. Hence the statutes in some of the States, especially the more recent irrigation codes, provide that forfeiture for the statutory period of non-use shall not apply to the class of cases under discussion in this section.[5]

§ 741. **Effect of reasonable diligence, or the lack of.**—If, after notice has been given of the intent to appropriate the water of a certain stream, the dam, ditch, and other works are soon thereafter begun in good faith, and all due and reasonable diligence exercised in the prosecution of the construction of the same to its final completion, the full enjoyment of the water attempted to be appropriated does not, of course, commence until the works are finally completed and capable of conducting all of the water; but, as against all others subsequently attempting an appropriation of the waters of the same stream, the right of the first appropriator to the use of the water dates or relates back, by what is known as the doctrine of relation,[1] to the date of the posting of the notice or the first step taken to make the appropriation.[2] If, however, on the other hand, the work of construction be not prosecuted with all due and reasonable diligence, and the water attempted to be appropriated be not actually

4 Hall v. Blackman, 8 Idaho 272, 68 Pac. Rep. 19, where it is said: "If the demands for the products of the farm were not great enough to make such products bring a little profit over and above the cost of growing, harvesting, and marketing them, the farmer must become bankrupt if he be required to raise crops on all of his lands under those conditions."

5 See Idaho Stats., 1907, p. 507. For the laws of the other States, see Part XIV.

1 For doctrine of relation, see Secs. 742-756.

2 Under the more recent statutes a notice is required in nearly every State. For notice, see Secs. 710-716.

applied to a beneficial use or purpose within a reasonable time after the first step is taken to appropriate the same, then the right to the water does not relate back to the date of the posting of the notice or the first step taken to make the appropriation, and it will either work an abandonment,[3] or, if there is a statute upon the subject in that jurisdiction, a forfeiture [4] of either the entire original claim to the water, or the portion that is not within a reasonable time actually applied to some beneficial use. In the latter case, the right to the use of the water will be confined to the quantity of water which has been actually applied before any subsequent rights had accrued.[5]

It therefore follows that in cases where there has been a lack of reasonable diligence, or, in other words, there has been an unreasonable delay in any of the steps necessary to the final consummation of the right, which, as we have seen, is the actual application of the water, and during this delay all or a portion of the water claimed by the first appropriator has been appropriated by others, the first man may either lose all his right to the water of the stream, or he may only take any water of the stream that may be left, subject to the rights acquired by others who have intervened and have strictly complied with all of the conditions of the law.[6] Unreasonable delay in the final consummation of the right is always fatal as against the rights acquired by subsequent appropriators. This has been the rule from the first in all States and Territories where the law of appropriation is in force.[7] If, however, the work is resumed

[3] For abandonment, see Secs. 1099-1117.

# CHAPTER 40.

## THE DOCTRINE OF RELATION.

§ 742. Scope of chapter.
§ 743. Doctrine of relation—What it is.
§ 744. History of doctrine as applied to appropriations of water.
§ 745. Rule stated as applied to appropriation.
§ 746. In appropriation of water—From what act it relates.
§ 747. In appropriation of water—To what act it relates.
§ 748. Reason of doctrine as between appropriators.
§ 749. Effect of doctrine upon prior appropriators.
§ 750. Effect of doctrine upon subsequent appropriations.
§ 751. Effect of doctrine upon appropriators who do not comply with the statute.
§ 752. As between appropriators and Congressional grantees.
§ 753. As between appropriators and Congressional grantees—Railway companies—Grants in aid of construction.
§ 754. As between conflicting grantees.
§ 755. As applied to the rights of settlers.
§ 756. Effect of doctrine as between appropriators and settlers or purchasers of land.

**§ 742. Scope of chapter.**—As we have seen in the preceding chapters of this work, an appropriation is instituted or begun by the filing of a notice of the same or by the actual commencement of the work of construction.[1] The doctrine of relation has also been referred to as that doctrine which enables an appropriator, where he has followed up the inception of his appropriation with all reasonable diligence, to hold his rights to the full extent of his intended appropriation until such appropriation is finally consummated or completed.[2] In this chapter we will discuss more at length the subject of the doctrine of relation and its effect upon appropriations and other rights to either the waters or lands upon the public domain.

**§ 743. Doctrine of relation—What it is.**—By the doctrine of relation is meant that principle by which, when an act is done at one time, it is considered, by a fiction of law, as if done at some

1 See Secs. 710-718.

2 For the consummation of an appropriation, see Secs. 725-728.

antecedent time.[1] This doctrine is usually invoked where several acts are essential to complete a particular transaction, or to establish an estate; the last act of the series of acts which consummates the transaction is held for certain purposes to take effect by relation as of the day when the first proceeding was had.[2]

This doctrine is a fiction of law adopted by the courts solely for the purpose of justice; and "there is no rule better founded in law, reason, and convenience,"[3] as it is based on broad, equitable principles. But this doctrine is never applied when it would wrongfully defeat the rights of third persons; for, as it is said, "relations are fictions in law which will never do wrong, and can never be applied to a void act."[4]

This doctrine had become an accepted principle of law, and applicable to many subjects, long before it was ever applied to the subject of the appropriation of waters in the arid and semi-arid States and Territories of this country. It is often applied to the acquisition of mining claims, a kindred subject to the acquisition of water rights.[5] It also is applied to the acquisition of title to the public lands by private individuals, and especially as to their right to cut the timber growing thereon; and, in those jurisdictions which maintain both the common law of riparian rights and the Arid Region Doctrine of appropriation,[6] it is applied to determine the relative rights to the water flowing by a certain tract of land, which has been legally filed upon by a settler, as between the appropriators of the water of the stream and the settler's right as a riparian

owner.[7] And it is also often applied to determine the rights between appropriators of the water of the same stream, and often has the effect of cutting out entirely the claims of subsequent appropriators, or in decreasing the amounts of their claims.[8]

**§ 744. History of doctrine as applied to appropriations of water.**—One of the first questions which the courts were called upon to settle, under the Arid Region Doctrine of appropriation, was at what date the rights to the water of the same stream accrue as between rival claimants to the same. As we have seen in previous sections,[1] an appropriation of water is not perfected and finally consummated until the works necessary for diverting and conducting the water are completed, and the water actually applied to some beneficial use or purpose. To consummate any appropriation requires some time. It is true that the construction of some of the works necessary require but little time, as, for instance, is the case of farmers whose lands lie near a stream from which the waters may be easily diverted. In other cases in order to consummate and finally complete an appropriation it may require years to construct the works necessary to divert the water and to finally apply it to the purposes for which the appropriation is made. Such is the case of the large irrigation enterprises, where immense dams must tbe built, reservoirs constructed, and canals and ditches dug many miles in length, and where the purpose of the appropriation is the irrigation of several thousand acres of land. And, from these two illustrations may be readily seen the evil of the situation, and a question which the courts at an early day were called upon to settle. Assuming that the necessary steps to perfect the appropriation were first taken by the parties promoting the large irrigation enterprise, that the construction of their works was prosecuted with all due and reasonable diligence to their final completion, that they were all ready to divert and apply the water to the useful purpose for which the appropriation was being made, and at this time they found that all of the water of the stream was being diverted by the farmers who lived along the banks of the stream and

[7] See Secs. 755, 756.

[1] See for the consummation of an appropriation, Secs. 725-728.

was being applied to the irrigation of their lands, and no other subject entering into the case for consideration, the question was, who was entitled to the water?

We will also take another illustration. Two farmers, each with 160 acres of land, attempt to appropriate water from the same stream for the purpose of irrigating their full acreage. The land of one borders upon the stream and the water is easily diverted and applied to the same. The land of the other is further back from the stream and its natural condition is such that it requires much more labor and time to break and prepare it for crops and irrigation. But this man posts his notice of appropriation, or takes the first step necessary to make the appropriation in that jurisdiction prior in time to the other. He also takes all the necessary steps to complete and consummate his appropriation with all reasonable diligence. But he finds, when he is ready to apply the full quantity of the water claimed under his appropriation and necessary for the use intended, that the other farmer, although he was subsequent in time in taking the first step necessary, has taken such a quantity of the water from the stream and is actually applying it to the irrigation of his own land, that there is not water left running in the stream sufficient to irrigate the land of the one who first took the preliminary step to make the appropriation. It was such questions as these at the time of the earliest history of the doctrine of appropriation, that the courts were called upon to settle. The doctrine of relation was invoked and thus the rights of the one who took the first step necessary to make the appropriation were protected while he was constructing his works and preparing his land for its irrigation. This is the correct rule, for otherwise the doctrine of appropriation would have resolved itself into a scrambling rush for the possession of the water right, and always the question would be decided in favor of the one who either had the most money or the one who had the least to do to effect the diversion of the water. The Supreme Court of California was the first to adopt the rule.[2] And, as was said in one of the first cases where this question was directly involved: "The question now arises, at what point of time does the right commence, so as to protect the undertaker from the subsequent settlements or enterprises of other persons. If it does not

2 Stark v. Barnes, 4 Cal. 412; Kelly v. Natoma W. Co., 6 Cal. 105, 1 Morr. Min. Rep. 592.

commence until the canal is completed, then the license is valueless, for after nearly the whole work has been done, any one, actuated by malice or self-interest, may prevent its accomplishment; any small squatter settlement might effectually destroy it."[3]

The conclusion of the early California courts as stated above as to the application of the doctrine of relation became the rule of decision throughout all the Western States and Territories before there was any statutory law enacted upon the subject. The courts of Nevada, in 1866, followed the rule established in California.[4] And, in 1884, the Supreme Court of Colorado said: "We accept the rule adopted in California and Nevada in this connection."[5] These States were followed by all of the other States and Territories where the doctrine of appropriation is in force,[6] and in most jurisdictions the rule adopted originally by the courts has been adopted in statutory enactments to the same effect.[7]

**§ 745. Rule stated as applied to appropriation.**—The rule of the doctrine of relation as applied to the appropriation of waters, as stated by the Colorado Court, is as follows: "Although the appro-

[7] For the appropriation of water in accordance with the statutes of the respective States, see Part XIV.

priation is not deemed complete until the actual diversion or use of the water, still if such work be prosecuted with reasonable diligence, the right relates back to the time when the first step was taken."[1] We will adopt this statement of the rule as the present law on the subject in all jurisdictions. It is broad enough to cover the law of all the States, regardless of the questions as to what is considered a consummation of the appropriation,[2] or the first step necessary to be taken toward that end.[3] In some States, as will be seen, the consummation of the appropriation is the actual application of the water to some useful purpose, but in others it is the act of conducting the water to the place of intended use.[4] Again, in the States where a notice of appropriation is required, the act of posting a proper notice is considered the first act necessary to the inception of title to the right. But, in the States where the notice is not required, the actual commencement of the construction of the works is deemed sufficient. In any case the right relates back from the last act considered necessary in the jurisdiction where the appropriation is attempted to the first necessary act, or "the first step" as stated in the rule above. In the following sections we will discuss these differences.[5]

As was stated by Judge Hawley for the Federal Court of Nevada:[6] "In determining the question of the time when a right to water by appropriation commences, the law does not restrict the appropriator to the date of his use of the water, but, applying the

1 Sieber v. Frink, 7 Colo. 148, 2 Pac. Rep. 901, citing Ophir S. M. Co. v. Carpenter, 6 Nev. 534, 97 Am. Dec. 550, 4 Morr. Min. Rep. 640; Kelly v. Natoma W. Co., 6 Cal. 105, 1 Morr. Min. Rep. 592.

Where the construction of the works was prosecuted with reasonable and proper diligence: "It is well settled in this State that, under such circumstances, plaintiffs' rights relate back to the commencement of the work." Whited v. Cavin, 55 Ore. 98, 105 Pac. Rep. 396.

So long as it prosecuted the work with reasonable diligence, "it was entitled to have its appropriation relate back to the posting of its notice; and, in that event, appellant would be entitled to protection as a prior appropriator as against the respondent." Sand Point etc. Co. v. Panhandle Dev. Co., 11 Idaho 405, 83 Pac. Rep. 347; Duckworth v. Watsonville etc. Co., 158 Cal. 206, 110 Pac. Rep. 927; *Id.*, 150 Cal. 520, 89 Pac. Rep. 338.

2 For consummation of the appropriation, see Secs. 725-728.

3 For notice of appropriation, see Secs. 710-717.

4 See Secs. 725-728.

For consummation of an appropriation, see Sec. 725.

5 See Secs. 746-756.

6 Union M. & M. Co. v. Dangberg, 81 Fed. Rep. 73.

doctrine of relation, fixes it as of the time when he begins his dam or ditch or flume, or other appropriation is effected, provided the enterprise is prosecuted with reasonable diligence."[7]

The doctrine of relation, however, can not be invoked where the ditch or works of another are used to make the diversion and there is no delay in making the same. Such an appropriation is termed an appropriation by actual diversion and use, to which the doctrine of relation does not apply. Such a diversion, as was said by a leading California case, "must stand or fall upon its own merits."[8] It therefore follows that such an appropriation dates only from the new use, and not from the original building of the ditch or the inception of the right thereto, or the old water right used in connection therewith. In other words, the new appropriation can not be tacked on the old one and relate back to its inception.[9]

**§ 746. In appropriation of water—From what act it relates.**—As we have seen in previous sections, in most jurisdictions, an appropriation is not deemed consummated until there is an actual application of the water to some beneficial use or purpose.[1] Hence, it follows that, this being the final act to complete an appropriation, the right to relate back can only begin from such actual use. So, if there be no actual use of the water for some such purpose within a reasonable time, there is no valid appropriation; and, therefore, the doctrine of relation can not apply to the first step taken toward an attempted appropriation, but one not finally consummated.[2]

O'Hara, 43 Cal. 371, 1 Morr. Min. Rep. 671; Sternberger v. Seaton Mountain etc. Co., 45 Colo. 401, 102 Pac. Rep. 168; Head v. Hale, 38 Mont. 302, 100 Pac. Rep. 222; Burnham v. Freeman, 11 Colo. 601, 19 Pac. Rep. 761.

See, also, for tacking rights, Sec. 787.

1 For consummation of an appropriation, see Secs. 725-728.

2 Seaweard v. Pacific Live Stock Co., 49 Ore. 157, 88 Pac. Rep. 963; Cole v. Logan, 24 Ore. 304, 33 Pac. Rep. 568; Nevada D. Co. v. Bennett,

In other jurisdictions, especially in California and those States which have followed the statute of California, the statutes fix the date of the completion of the appropriation, at the time when the water is conducted to the place of intended use; and, therefore, this being the final act for the consummation of an appropriation, the right relates back from the time when the water is actually conducted to the place of intended use.[3]

Hence, it follows that in either case the date from which the right to the use of the water relates is the date of the last act, which is deemed, in the jurisdiction where the appropriation is attempted, to be the final and consummating act, and that, too, whether that act be the actual application of the water to some useful purpose, or the conducting the water to the place of intended use; provided, always, that the appropriation is consummated within what is deemed a reasonable time.[4]

**§ 747. In appropriation of water—To what act it relates.**—There are also different rules in different jurisdictions as to the act to which the right to the water relates; or, in other words, the act, which in that particular State where the appropriation

"We doubt whether a party could ever invoke the doctrine of relation until his appropriation was completed; and we are led irresistibly to the conclusion that, before the statute makes applicable the doctrine, a completed appropriation must have been effected." Bailey v. Tintinger, —— Mont. ——, 122 Pac. Rep. 575.

[3] Cal. Civil Code, Sec. 1417. "By 'completion' is meant conducting the waters to the place of intended use." And Cal. Civil Code, Sec. 1418. "By compliance with the above rules the claimant's right to the use of the water relates back to the time the notice was posted." See, also, 2 Kerr's Cyc. Codes, p. 1161.

For the consummation of an appropriation, see Secs. 725-728.

If the water is not then applied to some useful purpose, within a reasonable time, it works an abandonment; see Sec. 738.

For abandonment, see Secs. 1100-1117.

See, also, Osgood v. El Dorado Water etc. Co., 56 Cal. 571, 5 Morr. Min. Rep. 37; Ophir S. M. Co. v. Carpenter, 6 Nev. 534, 97 Am. Dec. 550, 4 Morr. Min. Rep. 640; Irwin v. Strait, 18 Nev. 436, 4 Pac. Rep. 1215.

[4] For reasonable time, see Secs. 733-741.

is attempted, constitutes "the first step," or inception of the right. In all of those jurisdictions where it is required that a notice of appropriation of the water be posted,[1] the claimant's right to the use of the water relates back, from the last act necessary, to the time when the notice was posted; provided, of course, that the appropriation is consummated in a reasonable time.[2] In these jurisdictions the act of posting the notice constitutes "the first step" necessary to be taken.[3] In many of the States it is provided by statute that by compliance with the statutory rules and consummating the appropriation with reasonable diligence, the right to the use of the water relates back to the time when the notice of appropriation was posted.[4]

But, in some of the States, as we have seen, no notice is required, or has been required until the adoption of the recent irrigation and water codes.[5] In the States which require no notice of appropriation as the inception of the title, the right to the use of the water relates back to the first act taken by the appropriator for the construction of his works for the purpose of diverting and conveying the water to the place of intended use, provided that

1 For the necessity of notice, see Secs. 710-717, 730.

2 For what constitutes a reasonable time, see Secs. 733-741; Nevada D. Co. v. Bennett, 30 Ore. 59, 45 Pac. Rep. 472, 60 Am. St. Rep. 777.

3 For the States requiring notice, see Sec. 712.

See, also, Woolman v. Garringer, 1 Mont. 535, 1 Morr. Min. Rep. 675; Murray v. Tingley, 20 Mont. 260, 50 Pac. Rep. 724, 19 Morr. Min. Rep. 137; Pyke v. Burnside, 8 Idaho 487, 69 Pac. Rep. 477, where it was held that, where an appropriator does not post and file a notice as provided by law, his right only dates from the last act perfecting his appropriation; Sand Point etc. Co. v. Panhandle Dev. Co., 11 Idaho 405, 83 Pac. Rep. 347; Wells v. Mantes, 99 Cal. 583, 34 Pac. Rep. 324; De Necochea v. Curtis, 80 Cal. 397, 20 Pac. Rep. 563, 22 Pac. Rep. 198.

The mere possession by one person of a water right, originated by another, does not show contractual relation between him and the original appropriator, and the rights of the latter do not relate back to the inception of the original appropriator's claim. Kenck v. Deegan, —— Mont. ——, 122 Pac. Rep. 746.

4 See Cal. Civil Code, Sec. 1418. "By compliance with the above rules the claimant's right to the use of the water relates back to the time when the notice was posted." 2 Kerr's Cyc. Codes, p. 1161.

For other statutes on the subject, see Part XIV.

5 For appropriation of water under the irrigation codes, see Secs. 1337-1367.

For States not requiring notice, see Sec. 710, and notes.

reasonable diligence is exercised thereafter in finally perfecting the appropriation. This is the present rule in Colorado, as that State never enacted a statute requiring the posting of a notice of appropriation, or the doing of any act prior to the actual commencement of the construction of the works necessary.[6] But the courts of that State have always recognized the doctrine of relation, and hold that the right relates back to the first substantial act of the appropriator, for the acquisition of the right, whether that act be the actual commencement of the construction of the works necessary, or whether it be the survey necessary prior to the beginning of the construction work proper.[7] This was also the rule in all States and Territories prior to the enactment of a statute requiring notice as the inception of title.[8]

Hence, it follows, that in either case the date to which the right to the use of the water relates is the date of the first act, which is deemed, in the jurisdiction where the appropriation is attempted, to be the first act necessary for the inception of the right, and that, too, whether that act be the posting of a notice of an appropriation or whether it be the commencement of the construction of the works necessary to consummate the appropriation; provided always that

[6] See Mill's Irr. Manual, 1907, p. 74. See, also, on the question of notice, Secs. 710-717, 730.

St. Rep. 603, where the Court said: "The priority of such appropriation may date, proper diligence having been used, from the commencement of the canal or ditch." Colorado etc. Co. v. Rocky Ford etc. Co., 3 Colo. App. 545, 34 Pac. Rep. 580; Water Supply & S. Co. v. Larimer & W. Irr. Co., 24 Colo. 322, 51 Pac. Rep. 496, 46 L. R. A. 322; Cache La Poudre Res. Co. v. Windsor Res. & C. Co., 25 Colo. 53, 52 Pac. Rep. 1104.

Union M. & M. Co. v. Dangberg, 81 Fed. Rep. 73, Judge Hawley said: "In determining the question of the time when a right to water by appropriation commences, the law does not restrict the appropriator to the date of his use of the water, but, applying the doctrine of relation, fixes it as of the time when he begins his dam or ditch or flume, or other appliance by means of which the appropriation is effected, provided the enterprise is prosecuted with reasonable diligence."

[8] See Irwin v. Strait, 18 Nev. 436, 4 Pac. Rep. 1215; Simpson v. Williams, 18 Nev. 432, 4 Pac. Rep. 1213; Ophir S. M. Co. v. Carpenter, 6 Nev. 534, 97 Am. Dec. 550, 4 Morr. Min. Rep. 640; Conger v. Weaver, 6 Cal. 548, 65 Am. Dec. 528, 1 Morr. Min. Rep. 594; Kimball v. Gearhart, 12 Cal. 27, 1 Morr. Min. Rep. 615.

from that date the appropriation is finally consummated within what is deemed a reasonable time.

§ 748. **Reason of doctrine as between appropriators.**—As between parties who claim the waters of the same stream by its appropriation, the doctrine of relation is often a very important factor in determining both the priority and the extent of the respective rights of the claimants. The application of the doctrine of relation depends largely upon the question of reasonable diligence in the construction of the works necessary to effect the appropriation and the actual application of the water to some useful purpose. Therefore, there are two essential elements absolutely necessary to permit the doctrine to be successfully invoked to the claim of an appropriator. These are, first, the priority in the inception of the right;[1] and, second, reasonable diligence in its consummation. Therefore, its application is oftentimes fatal to the entire claim of one or more of the parties interested, and, that, too, regardless of the fact whether the loser was prior in time in taking the first step or not. This may appear to those who are used to the common law of riparian rights to be a harsh rule, as in the case of the rights of subsequent appropriators of the water of the same stream, the appropriation of all of which had been properly instituted by other parties prior to the time that the first step was taken by the later comers. The intent of the subsequent appropriators may have been just as *bona fide*,[2] as that of the ones prior; the work of construction may have proceeded with all reasonable diligence; they may have actually applied the water to the useful purpose before the prior appropriators were ready to apply the water; yet, under the rule embodied in the doctrine of relation, the first step having been taken by the others and their work toward the consummation of their appropriation also having been prosecuted with reasonable diligence, those first may successfully claim all the water of the stream to the entire exclusion of those who initiated their claims last. This is not as harsh a rule as it would seem, when we consider that the very basis of the right of the first appropriator is based upon his priority. There may be unfortunate circumstances which deprive those subsequent of water which they need, but they are circum-

1 For rights of prior appropriators, see Secs. 776-782.

2 For intent of appropriation, see Secs. 707-709.

stances which grow out of the physical conditions of this Western country.[3] It is an unfortunate circumstance that there is not water enough for the use of all who may be in need of it in this part of the country. The percentage of the water available to irrigate the amount of land which might be irrigated if there was plenty is exceedingly small. Hence, the rule that the one who is prior in time has the superior right, is an absolute necessity in this part of the country. And, then again, in order to successfully maintain their claims to the water the prior appropriators must have given some sort of notice of their claims, and the extent thereof;[4] and this notice should have put those attempting a subsequent appropriation upon their guard.[5]

§ 749. **Effect of doctrine upon prior appropriators.**—When the right to appropriate water has been once perfected, by taking all of the necessary steps for the same, as set forth in another chapter of this work,[1] should any question arise as to the priority of the parties claiming the rights to the water of the same stream, the doctrine of relation is invoked to settle and determine this question. And the rule of law upon this subject, as laid down by the decisions and the statutes where enacted, is that if the first appropriator had given the proper notice in accordance with the law of that jurisdiction,[2] of his intention to appropriate the water of a certain stream, and his works for diverting and conducting the same were begun thereafter in good faith and their construction prosecuted with all due and reasonable diligence to their completion, and he is all ready to apply the water to the beneficial use for which the appropriation is made, then he acquires an exclusive right to the use of the water of the stream to the full extent of his appropriation,[3] as against the rights of all others instituted subsequent to the date of the posting of the notice, even if those subsequent, at the time that the first was ready to apply the water, were actually diverting and using the water for some beneficial purpose. By the doc-

3 For extent of right, see Sec. 781.

trine of relation the right of the first relates back to the time of the inception of his title, the date of the posting of the notice; or in jurisdictions where notice is not required, to the date of the first step of the actual commencement of the work, which in itself is considered notice.[4] It can thus be readily seen that the doctrine of relation protects the rights of the first appropriator from the time that he gives the proper notice to the time of the final consummation of the appropriation. It gives him a reasonable time to construct the works necessary, and also a reasonable time within which to actually apply all of the water claimed to the use for which the appropriation was made.[5] And, although there may be intervening

[5] For appropriation for future uses, see Sec. 740.

Where a delay in the application was caused by the breaking of a ditch

and subsequent appropriations of the water claimed, the prior appropriator need take no notice of them, as, provided he has used but a reasonable time between the first step and the last one necessary for the consummation of the appropriation, he may then successfully claim all of the water to the full extent of his appropriation.[6]

Upon this point the Supreme Court of Montana, in Woolman v. Garringer,[7] said: "The notices posted on the stream, of the appropriation of so much water, for general mining purposes, and the immediate entering upon the continued prosecution of the construction of the dam and ditch, and its extension or branches, were sufficient to put the plaintiffs on their guard, and to apprise them of the prior appropriation of the defendants and of their riparian rights to the premises. And from these facts they were bound to take and were charged with notice of the defendants' prior appropriation, and if they then proceeded, it was at their own option and peril. Nor were the defendants required to take notice of any subsequent appropriation by the plaintiffs."[8]

§ 750. **Effect of doctrine upon subsequent appropriations.**—As may be readily seen from our previous section,[1] if the party who took the first step consummated his appropriation within a reasonable time thereafter, one of the effects that this would have would be either to cut off entirely, or to reduce the claims of the subsequent appropriators, provided, of course, that there was not water in the stream sufficient to supply the wants of all. But the rule works both ways. There must not only be priority but there must be also reasonable diligence. If, therefore, there was unreasonable delay upon the part of the one who took the first step, in any of the proceedings necessary for the consummation of the right, and the rights of subsequent appropriators have been properly instituted and the same have been followed up by a strict compliance with the

of the first appropriator, a reasonable time is given to repair it. Wells v. Kreyenhagen, 117 Cal. 329, 49 Pac. Rep. 128.

[6] Nevada etc. Co. v. Kidd, 37 Cal. 282; Norman v. Corbley, 32 Mont. 195, 79 Pac. Rep. 1059; Osgood v. Eldorado etc. Co., 56 Pac. Rep. 571, 5 Morr. Min. Rep. 37.

[1] See Sec. 749.

law and with all due diligence, then, in that case, the rights of the parties are reversed. The right of relating back does not apply to the one who took the first step, and his right only begins with the actual consummation of his appropriation. Upon the other hand, the rights of those who started their first steps to make the appropriation after the first party started and before the actual consummation of his right, become prior appropriators as against the rights of the first party, and take their places in the order of priority as between themselves. The one who started first then takes what water he may, subject to the rights of those who instituted their rights prior to the actual diversion and use by himself,[2] and the doctrine of relation does not apply to his right, but it does to the rights of the others.

The beneficial effect of the rule of the doctrine of relation may thus be readily seen. It does not permit the water to remain under the claim of any person unless he applies it to some beneficial use or purpose within what the law deems a reasonable time, which, as we have seen, depends upon the circumstances of each particular case.[3] The title to the water does not vest in the appropriator at the time of his giving notice, but in order to acquire title, and to acquire the right of the application of the doctrine of relation, he must comply with all of the conditions subsequent required by the law. Therefore, upon the consummation of his appropriation and from that time only will the doctrine of relation apply, and then only when that consummation has been accomplished within a reasonable time.[4]

**§ 751. Effect of doctrine upon appropriators who do not comply with the statute.**—Where one attempting an appropriation of

water fails to comply with the requirements of the statute, as, for example, in the matter of notice in those States requiring it, a valid appropriation may be made,[1] but the effect is to preclude the appropriator from claiming, by the doctrine of relation, to the time when the first step was taken by him as against one who does comply with all the statutory provisions, and has prosecuted his works to completion in accordance therewith. The rule in a case of this kind is that the right of one who has not complied with all of the statutory provisions dates only from the last act perfecting such an appropriation which is, in the majority of States, held to be the actual application of the water to some beneficial use.[2]

**§ 752. As between appropriators and Congressional grantees.**— We have seen in the previous sections of this chapter that an appropriation of water if properly instituted and followed up by all due and reasonable diligence until the water is diverted and actually applied to some beneficial use or purpose, relates back to the first step taken.[1] The inception of the title to land in Congressional grantees is ordinarily at the date of the grant.[2] Where grants have been made to railroad companies, these grants have been usually *in praesenti*, and under them the title to the land has been adjudged to pass, not at the date of the completion of the road, but at the date of the grant. It creates a present interest, and does not indicate a purpose to give in the future. The phrase usually used in these grants, "there be and is hereby granted" are words of absolute donation, and import a grant *in praesenti*. The Supreme Court of the United States has held repeatedly that they could have no

2 For land grants for internal improvements, see Secs. 427-429.

other meaning, and the Land Department on this interpretation of them, has uniformly administered all similar grants.[3] But it has also been held by the same line of authorities that the title to the land in the railroad company is imperfect as long as the route of the road had not been actually fixed, and the lands surveyed; and, until the line of the road has become definitely fixed, the grant was a float.[4] But after the location of the road, the grant became certain, and by relation had the same effect upon the selected parcels as if they had been specifically named at the date of the Act in the grant itself.[5]

Under a grant, a railroad company becomes a riparian owner in all those natural streams and other bodies of water which flow through or adjoin the lands granted or otherwise acquired, where those lands lie within States which recognize the common law of riparian rights.[6] Now, the question for determination is: When does a grant made to a railroad company in these States take effect so as to cut off the right of appropriation of the waters flowing through or by the lands granted? If the rights of appropriators of water have vested, prior to the date of the Act granting the lands, there is no question but that those rights will be protected. And, again, if the first step was taken toward the accomplishment of an appropriation which was finally consummated within a reasonable time, before the date of the granting Act there will still be no question as to the rights of the appropriator. By the application of the doctrine of relation the rights of the appropriator would still antedate the granting Act; the doctrine, in the case of the railroad

company, relating back to the date of the granting Act, and, in the case of the appropriators, to the date of the first step taken to accomplish the appropriation, provided, of course, that the appropriation was consummated within a reasonable time from its inception.[7] And, the railroad company, in both instances above named, would take the title to the lands subject to all rights of the appropriators, whatever they may be. As was held in the early case of Broder v. Natoma Water & M. Co. by the Supreme Court of the United States: Congress, in making donation grants to railroad companies, can not be supposed to have exercised its liberality at the expense of pre-existing rights to water which, though imperfect, were still meritorious, and had just claim to legislative protection.[8] This rule not only applied to the appropriation of the waters flowing over these lands but to the acquisition of the title to the lands themselves.[9]

§ 753. **As between appropriators and Congressional grantees—Railway companies—Grants in aid of construction.**—The title to the land granted by Congress to a railroad company in aid of construction being imperfect until the route of the road has been definitely fixed; [1] and, after it has been so fixed, it relates back to the date of the granting Act, another question has arisen in this connection. Usually a considerable period of time has elapsed between the date of the Act of Congress granting the land to the company and the time when the line of the road was definitely established. Sometimes this period has been of several years' duration. In the meantime, perhaps upon the strength of the coming of the road, the country along its proposed line became settled up and the water of the streams was appropriated and used for irrigation and other useful purposes. Now, during this period of time, can claims

1 See Secs. 427, 428.

to water from streams flowing through the tracts granted be acquired by private parties; or, can the railroad company, under the application of the doctrine of relation, claim the water as a riparian owner, in those jurisdictions where that right is in force, back to the time of the granting Act? The authorities hold upon this point that rights to water can be so acquired up to the time when the route to the road is "definitely fixed."[2] As was held by the Supreme Court of the United States, the rights of settlers or others who acquire rights, between the passage of the Act and the actual location and identification of the lands, are preserved unimpaired, even though these rights should be found to be acquired within the boundaries of lands granted to a railroad in aid of construction. Hence, in cases of this nature the railroad company has not the right of relation back to the date of the granting Act. But a distinction is made between the lands granted in aid of the construction of the railroad and the land granted for the right of way. In the latter case, a person acquiring any interest, subsequent to the date of the grant, takes it subject to the prior rights of the railroad, and the right of the railroad relates back to the date of the granting Act.[3]

The inquiry then arises, when is the route of the road to be considered as "definitely fixed" so that the grant attaches to the land and cuts off all subsequent claimants? The route is "definitely fixed," within the meaning of the Act of Congress when the company files with the Secretary of the Interior a map of its lines, as the route has thus ceased to be subject of change at the volition of the company. And up to the time when the company files with the Secretary a map of its route, thus identifying the same, and the lands included in the grant, claims to water by appropriation re-

[2] Childs v. Sharai, 8 Idaho 378, 69 Pac. Rep. 111, where it was held that, where one settles upon a part of the unsurveyed lands of the United States and constructs a ditch across the same, he secures a right of way therefor, although such land, when surveyed, is found to be within the grant to a railroad company. Tynon v. Despain, 22 Colo. 240, 43 Pac. Rep. 1039.

[3] Bybee v. Oregon & Cal. R, Co., 139 U. S. 663, 35 L. Ed. 305, 11 Sup. Ct. Rep. 641, aff'g 26 Fed. Rep. 586; St. Joseph etc. R. Co. v. Baldwin, 103 U. S. 426, 26 L. Ed. 578; Doran v. Wilson & Central Pac. R. Co., 24 Cal. 245.

lating back to the first or preliminary act taken, if prior to the time the route is definitely fixed, are not affected by the grant.[4]

Upon the point as to when the route of the road is "definitely fixed," Mr. Justice Field, in rendering the opinion of the Supreme Court of the United States, in the case of Van Wyck v. Knevals,[5] said as follows: "The route must be considered as 'definitely fixed' when it has ceased to be the subject of change at the volition of the company. Until the map is filed with the Secretary of the Interior the company is at liberty to adopt such a route as it may deem best after an examination of the ground has disclosed the feasibility and advantages of different lines. But when a route is adopted by the company and a map designating it is filed with the Secretary of the Interior and accepted by that officer the route is established; it is, in the language of the Act, 'definitely fixed,' and can not be the subject of future change so as to affect the grant, except upon legislative consent. No further action is required of the company to fix the route. It then becomes the duty of the Secretary to withdraw the lands granted from market. But if he should neglect this duty the neglect would not impair the rights of the company, however prejudicial it might prove to others."

§ 754. **As between conflicting grantees.**—As we have seen, a railroad company, as grantee of the Government, in those jurisdictions which recognize the common law rights in water, upon taking the title to the lands granted becomes the riparian proprietor of all such lands as border upon streams flowing through those lands, provided that their waters have not been appropriated prior to the time that the route of the road was "definitely fixed."[1]

Now, as to controversies between different parties claiming two Congressional grants of lands to aid in the building of railroads or for any other purpose, the title to the lands granted relates, after the road is definitely located according to law, to the date of the grant; and in cases where the lands granted, as between different

[1] See Secs. 427, 428.

roads, conflict or encroach upon each other, priority of the date of the Act of Congress and not priority of the location of the line of the road gives priority of title to the land; and, of course, as the road only takes the waters as riparian proprietor, the same principle of relation also applies to the rights in waters flowing over or adjoining those lands. When, however, the Acts of Congress in such cases are of the same date, or when grants are made to different roads by the same statute, priority of location gives no priority of right to the lands and waters granted; but where the limits of the grants which are finally settled by the roads being definitely located conflict by crossing or lapping the railroad, companies building the roads under those grants take the lands and water as an incident thereto within the conflicting limits of the location in equal undivided moieties, without regard to priority of location of the line of the road, or priority of construction, provided that both companies complete their roads within the time limited by law.[2] However, a different rule is in force in case of lands to be selected in lieu of those within the limits of a primary location, which have been sold or pre-empted; the definite location of the roads is fixed, where the limits of selection interfere or overlap. In such cases neither the priority of the grant, nor the priority of location gives priority of right; but this is determined by priority of selection, where the selection is made in accordance to law, and therefore the title can only relate back to this date.[3]

§ 755. **As applied to the rights of settlers.**—The doctrine of relation is also applied to the rights of settlers in the acquisition of their title to the land filed upon or "taken up" by them. The final step in the acquisition of title is the issuance of the patent from the Government to the settler. Yet it is held that a patent from the United States operates to transfer the title, not merely from the date of the patent, but, by applying the doctrine of relation, from the very inception of the equitable right upon which the

patent is based.[1] The inception of the right may be the filing in the proper land office of the application or declaratory statement required under the particular law under which the land is being taken up;[2] or it may be the *bona fide* settlement of the unsurveyed public lands of the United States, followed with the proper filing within the time limit after such lands have been surveyed.[3] Although the patent to the land is not issued until the time limit has expired, and the settler has fully complied with the law governing that particular class of entries, yet when issued, by relation, it becomes operative as of the date of the original entry or the *bona fide* settlement upon the land, and thus cuts out all subsequent claims of others whether they be to the land itself, or to any of the incidents attached thereto. This doctrine has been frequently recognized by the Supreme Court of the United States and by other courts.[4]

The above rule, which is the one now in force, was not always the rule. Some of the early cases did not hold with the above proposition, but held that the right could only relate back to the date of the patent so as to cut off intervening rights.[5]

It is also held that the settler does not have to wait until the patent is actually issued by the Government before the doctrine of relation will apply to the inception of his claim. Where the right to the patent has once become vested in a settler or purchaser of a tract of the public lands, it is equivalent, so far as the Government is concerned, to a patent actually issued. And the courts hold that from the date that the settler or purchaser has fully complied with the law and is entitled to his patent, by applying the doctrine of relation from that date to the date of the inception of his claim it cuts off all subsequent and intervening claims.[6] The issuance of the receiver's receipt is the perfection of the full equitable title, and the execution and delivery of the patent thereafter are mere ministerial acts of the officers charged with that duty.[7] But in either event the right to the land and to all incidents thereto relates back to the very inception of the claimant's title. We will next discuss the doctrine of relation as the same is applied between the rights of settlers or purchasers of Government land and appropriators of waters flowing over those lands, in those States where

the common law of riparian rights and the Arid Region Doctrine of appropriation are both in force.[8]

**§ 756. Effect of doctrine as between appropriators and settlers or purchasers of land.**—In those States which maintain the dual systems of water rights, that of appropriation and the common law of riparian rights, the doctrine of relation is often applied to determine the rights of claimants of water from the same stream as between the appropriators upon the one hand and the settlers on or purchasers of Government land. We have seen in previous sections that,[1] the right of an appropriator relates back from the act consummating the appropriation to the first step taken toward its inception, provided that due and reasonable diligence was exercised from that first step until the final consummation. The rights of settlers and purchasers of land also relate back to the inception of their title or also to the "first step" taken to acquire their equitable and legal title.[2] Hence, it follows that where there is a clash between the rights of the appropriators of water and the settlers or purchasers of the land through which the water flows, the doctrine of relation is applied and it becomes simply a question as to which took the first step. The one prior in time takes the superior right; and, the later comers take their rights, if any, subject to the right of the one who was first in time in instituting his right.[3] This may be considered the settled rule in these controversies in all jurisdictions, and no extended discussion upon the subject is now necessary,[4] although when the first edition of this work was written,

8 See Secs. 507-621.

1 See Secs. 743-754.

2 See Sec. 445.

Riparian owners who located claims in 1876 and were residing thereon on February 28, 1877, when the lands were opened to public settlement, and continued to reside thereon until after patents were issued to them, had a claim to the water rights prior to the water rights of an appropriator locating in 1878. It was held that the patents related back to the date of settlement upon the land, so that a provision in the patents that they were subject to vested and accrued water rights did not apply. Redland Land & Canal Co. v. Jones, — S. D. —, 130 N. W. Rep. 85.

4 Sturr v. Beck, 133 U. S. 541, 33 L. Ed. 761, 10 Sup. Ct. Rep. 350, aff'g 6 Dak. 71, 50 N. W. Rep. 486; Cruse v. McCauley, 96 Fed. Rep. 369; Union M. & M. Co. v. Dangberg, 2 Sawy. 450, Fed. Cas. No. 14,370, 8 Morr. Min. Rep. 113; Id., 81 Fed. Rep. 73, 119; Atkinson v. Washington Irr. Co., 44

prior to 1893, the question was by no means settled. At this time the California and Washington courts were holding that, in those jurisdictions, the rights of settlers did not relate back to their inception of title; and, as against later appropriators, their rights were not protected, until after the patent had issued for the land, or at least until full payment had been made.[5] However, the early ruling of both the California and Washington courts upon this subject have in effect been overruled; both courts later adopting the rule as stated above, to the effect that the riparian rights of a patentee of the Government attach by relation at the time of the very inception of his title, and will be protected as against subsequent appropriation of the water naturally flowing over the land.[6]

[6] McGuire v. Brown, 106 Cal. 660, 670, 39 Pac. Rep. 1060, 30 L. R. A. 384, where the Court, after citing the Farley and Osgood cases cited *supra*, said: "But to the extent that they

And it is further held, and correctly, that the inception of a settler's title may be only the actual *bona fide* settlement upon the unsurveyed public lands of the United States; and, that his right to the water relates back to the settlement, as against all subsequent rights. This is so, provided, of course, he makes his filing on the land as provided by law, and follows this up by fully complying with the law and finally securing his patent. In fact, under the statute an actual settler upon the public lands before survey is given a preference right, after the lands have been surveyed and opened for entry to make his filing. And hence the settlement in this case must be the inception of his title, and his rights to the water are protected under the rule stated above by relating back to the very

must find support in the proposition that the interest of a settler on the public lands under the pre-emption or homestead laws attaches as against the appropriators of water rights on his tract only as of the time of his final proof or obtaining a patent, they appear to be in conflict with the decision of the Federal Supreme Court in Sturr v. Beck, 133 U. S. 541, 33 L. Ed. 761, 10 Sup. Ct. Rep. 350; aff'g 6 Dak. 71, 50 N. W. Rep. 486; and the views of that Court, as those of the tribunal of last resort in cases of this impression, must, of course, prevail." Citing, also, Faull v. Cooke, 19 Ore. 455, 26 Pac. Rep. 662, 20 Am. St. Rep. 836; Black's Pomeroy on Water Rights, Secs. 40-42; Kinney on Irr., 1st Ed., Secs. 212-220.

In Washington, in the case of Benton v. Johncox, 17 Wash. 277, 49 Pac. Rep. 495, 39 L. R. A. 107, 61 Am. St. Rep. 912, where the appellant was contending that, under the previous ruling of the Court in Ellis v. Pomeroy Imp. Co., 1 Wash. 572, 21 Pac. Rep. 27, the rights of the patentee did not relate back of the patent granted, the Court, after citing Sturr v. Beck, *supra*, and referring to that case, said: "While the Court fully recognized the doctrine of prior appropriation of water on the public lands, in accordance with the local customs, laws, and decisions of courts, it announced and established the just and equitable rule that the riparian rights of a patentee of the Government attach, by relation, at the very inception of his title, and will be protected as against subsequent appropriation of the water naturally flowing over the land. That case, it would seem, settles the law adversely to the contention of the appellants in this case." Citing Shepley v. Cowan, 91 U. S. 330, 23 L. Ed. 424; Larsen v. Oregon R. & Nav. Co., 19 Ore. 240, 23 Pac. Rep. 974; Faull v. Cooke, 19 Ore. 455, 26 Pac. Rep. 662, 20 Am. St. Rep. 836, Kinney on Irr., 1st Ed., Sec. 210; Union M. & M. Co. v. Dangberg, 81 Fed. Rep. 73.

See, also, to the same effect, Scott v. Toomey, 8 S. D. 639, 67 N. W. Rep. 838, citing Kinney on Irr., 1st Ed., Sec. 219; Lone Tree etc. Co. v. Cyclone etc. Co., 15 S. D. 519, 91 N. W. Rep. 352; *Id.*, 26 S. D. 307, 128 N. W. Rep. 596, citing Kinney on Irr., 1st Ed., Sec. 220.

inception of his title to the land.[7] This rule applies to valid mining locations, as well as to other lands.[8]

However, the doctrine of relation can not be invoked in the case of the mere settlement or squatting on the land without any intention of acquiring the title to the land, and without the necessary steps being taken therefor, as mere squatters can have no riparian rights.[9]

The effect, therefore, of the doctrine of relation, as between appropriators and settlers upon the public lands, is the basis which underlies all appropriations, and that is: "The one first in time is the first in right." Therefore, the one who takes the first step either to make the appropriation or to settle upon his land is the one to whose rights the doctrine of relation applies, and the other must take subject to the rights of the first; provided, of course, that both have followed up their claims by taking all the steps necessary for their completion and with reasonable diligence.[10] The same rule applies as between the rights of an appropriator, the owner of a mining claim;[11] also, as between a ditch located upon the public land when in conflict with a townsite location.[12]

7 See Morgan v. Shaw, 47 Ore. 333, 83 Pac. Rep. 534; Benton v. Johncox, 17 Wash. 277, 49 Pac. Rep. 495, 39 L. R. A. 107, 61 Am. St. Rep. 912; Morris v. Bean, 146 Fed. Rep. 432; *Id.*, 159 Fed. # PART IX.

## THE NATURE, EXTENT, AND CHARACTER OF RIGHTS ACQUIRED IN WATERS BY APPROPRIATION—RIGHTS OF WAY AND THE POLLUTION OF WATERS.

### CHAPTER 41.

### THE NATURE AND CHARACTER OF A WATER RIGHT.

§ 757. Scope of this part of the work—Scope of chapter.
§ 758. What is a water right?—Court decisions.
§ 759. Our definition of a water right.
§ 760. A water right is an exclusive right.
§ 761. The water must be appropriated according to law.
§ 762. It is but a conditional possessory right.
§ 763. The right is conditional upon continuous use.
§ 764. The right exists independent of the right to the ditch or other works.
§ 765. The right exists independent of any property in the channel of the stream.
§ 766. Title or possession of land on stream unnecessary.
§ 767. Title or possession to any land unnecessary.
§ 768. A water right is property.
§ 769. A water right is real property.
§ 770. A water right is not an easement.
§ 771. A water right is an incorporeal hereditament.
§ 772. Title to the water before diversion.
§ 773. Title to the water after diversion.
§ 774. Water, after diversion—Nature of property in.

**§ 757. Scope of this part of the work—Scope of chapter.**—Having discussed in previous portions of this work the different phases of the subject of the law governing waters, down to and including the acts necessary to make a valid appropriation of water under the Arid Region Doctrine of appropriation, it now devolves upon us to discuss the nature and character of the right so acquired and the extent to which it may be exercised. The following chapters of this part will be devoted to these subjects.

In the present chapter we will discuss the nature and character of a water right under the Arid Region Doctrine of appropriation.

**§ 758. What is a water right?—Court decisions.**—A "water right," under the Arid Region Doctrine of appropriation, was defined by the Supreme Court of Montana to be "the legal right to use water."[1] The defect of this definition is obvious. It is a self-evident fact and defines nothing. It would apply equally as well to the use of water under the common law of riparian rights as under the doctrine of appropriation. As well might the Court have said that a water right is a water right. This definition was afterward modified by the same court and a water right was there defined to mean the right to the use of water appropriated according to law from the streams of the State for any useful or beneficial purpose.[2] There are other definitions of the term "water right" to be found in the decisions, but none of them seem to us to embody all of the essential elements.

The Supreme Court of Oregon, in the case of Morgan v. Shaw,[3] using the term "an appropriation of water" for the term "water right," says: "An appropriation of water is a grant by the general Government to the settler of the right to its use from a non-navigable stream, to the injury of all public land above the point of diversion, which may be within or beyond the boundaries of the settler's claim."

The Supreme Court of Colorado says:[4] "The plaintiffs allege a right to have a certain quantity of water flow through the irrigation company's ditch. This right is an easement in the ditch. It is a right annexed to realty, and, being a perpetual right, is an incorporeal hereditament, descendible by inheritance to plaintiff's heirs,

1 Smith v. Deniff, 24 Mont. 21, 60 Pac. Rep. 398, 50 L. R. A. 737, 81 Am. St. Rep. 408.

2 See City of Helena v. Rogan, 26 Mont. 452, 68 Pac. Rep. 798; *Id.*, 27 Mont. 135, 69 Pac. Rep. 709, where, after quoting the definition in the Smith case, it is said: "This may be modified to mean, in this case, the right to use water appropriated according to law from the streams of the State for any useful or beneficial purpose."

See, also, for definition of "appropriation," Secs. 586, 587.

For nature and character of a riparian right, see Secs. 450-456.

3 47 Ore. 333, 83 Pac. Rep. 534.

4 Wyatt v. Larimer & Weld Irr. Co., 18 Colo. 28, 33 Pac. Rep. 144, 36 Am. St. Rep. 280.

and hence a freehold estate." "A water right is a freehold estate."[5] "Under our decisions a water right is real estate, and not personal property."[6]

At an early day, and during the formative period of the law of appropriation,[7] the California Court, following a wrong definition as applicable to the common law, and as actually used in a decision involving a common law question, said: "The right to running water is defined to be a corporeal right, or hereditament, which follows or is embraced by the ownership of the soil over which it naturally passes."[8]

**§ 759. Our definition of a water right.**—We have found in the decision no definition as to what in our opinion constitutes a water right under the Arid Region Doctrine of appropriation. In some of the decisions some particular elements are given, and in others other elements are given, but there seems to be no definition which in our opinion is entirely complete. Therefore, we will define a water right in our own language, taking the essential elements from the various cases deciding the same, and afterward we will discuss these particular elements in the following sections of this chapter.

A water right, acquired under the Arid Region Doctrine of appropriation, may be defined as the exclusive, independent property right to the use of water appropriated according to law from any natural stream, based upon possession and the right continued only so long as the water is actually applied to some beneficial use or purpose; it is an incorporeal hereditament, so far as it includes the right to have the water flow over the lands of others down to the head of the appropriator's ditch; but the water is a

5 Daum v. Conley, 27 Colo. 56, 59 Pac. Rep. 753.

6 Travelers' Ins. Co. v. Childs, 25 Cal. 360, 54 Pac. Rep. 1020.

"What a 'water right' was is defined by the following language in the deed: 'That is to say, the right to the use of water flowing through the canal of said first party, each water right representing one and forty-four one-hundredths (1.44) cubic feet of water flowing under a weir per second.'" La Junta etc. Co. v. Hess, 6 Colo. App. 497, 42 Pac. Rep. 50; aff'd 31 Colo. 1, 71 Pac. Rep. 415.

7 For history of the doctrine of appropriation, see Secs. 596-626.

8 Hill v. Newman, 5 Cal. 445, 63 Am. Dec. 140, 1 Morr. Min. Rep. 513, citing Sackett v. Wheaton, 17 Pick. 103; 1 Cruise's Digest, 39; Angell & Ames on Water Courses, p. 3.

That riparian rights are not corporeal hereditaments, see Secs. 454, 455.

corporeal hereditament after it has been once taken into the ditch or reservoir of the appropriator and is in his actual possession for the purpose of application to his uses.

With this definition, we will proceed to discuss the nature and characteristics of the property in a water right, and also the property in the water after its diversion.

§ 760. **A water right is an exclusive right.**—In our definition of the term "water right" under the doctrine of appropriation, we said that it was an exclusive right.[1] This is one of the most important distinctions between the right to the use of the water of natural streams under the common law of riparian rights and under the doctrine of appropriation. Under the common law the right to the use of the water by one individual depends upon the equal or correlative rights to its use by all of the riparian owners upon the same stream.[2] In this dry and arid country, where the water is exceedingly scarce and there is not enough for all, instead of following the common law rule as to its use, or "parceling it out generally and making it practically valueless to any,"[3] in the early days of the settlement of this portion of the country, there was adopted the only rule founded in equity that could be rightfully adopted in the premises, based upon priority of the appropriation. He who first appropriated a certain amount of water from a natural stream should be rewarded for his industry and enterprise by the right to the use of the water to the full amount of his appropriation as long as he applied the same to some beneficial use or purpose, and to the exclusion of all others where they interfered with his right.[4] As was stated by the California Court, in a case decided in 1857:[5] "A party appropriating water has the sole and exclusive right to use the same for the purposes for which it was appropriated, and so long as he is not obstructed in the use thereof, he has no ground of action." He does not have to divide

1 See Sec. 759.

2 For right to use the water of a stream under the common law, see Secs. 483-497.

For irrigation as a riparian right, see Secs. 498-525.

3 Armstrong v. Larimer County D. Co., 1 Colo. App. 49, 27 Pac. Rep. 235.

4 For the history of the doctrine of appropriation, see Secs. 595-626.

5 Hoffman v. Stone, 7 Cal. 49, 4 Morr. Min. Rep. 520.

his right with any one, even if it covers all of the water of the stream.[6]

One of the principal distinctions between the right to the use of water by a riparian proprietor and the same right by an appropriator is that in the former the proprietors are tenants in common, and in the latter there is a tenancy in severalty. In other words, an appropriator has the several and exclusive right to the use of the water included within the extent of his appropriation. As was said in a recent Oregon case:[7] "One of the distinctions between appropriation of water and use by a riparian proprietor is that the former contemplates tenancy in severalty, while the latter is essentially a tenancy in common with all other riparian proprietors on the same stream." This exclusive right of the prior appropriator of the waters of a certain stream also includes the right to the tributaries of that stream,[8] or other sources of its water supply.[9] However, this exclusive right does not include the

6 Hillman v. Hardwick, 3 Idaho 255, 28 Pac. Rep. 438; Armstrong v. Larimer County D. Co., 1 Colo. App. 49, 27 Pac. Rep. 235.

The prior right to use water for irrigation, acquired by priority of appropriation, is absolute, regardless of whether the stream furnishes a sufficiency for all. Hunning v. Porter, 6 Ariz. 171, 54 Pac. Rep. 584.

Keeney v. Carillo, 2 N. M. 480; Schilling v. Rominger, 4 Colo. 100; Wellington v. Beck, 30 Colo. 409, 70 Pac. Rep. 687; *Id.*, 43 Colo. 70, 65 Pac. Rep. 626; Trade etc. Co. v. Fraser, 148 Fed. Rep. 587, 79 C. C. A. 37, where the United States Circuit Court for Idaho said: "Beyond question, under our laws, a party may be protected in the use of all the water he actually appropriates and uses, even if it be every drop that flows in as great a river as the Snake."

See, also, Dunniway v. Lawson, 6 Idaho 28, 51 Pac. Rep. 1032; Malad Val. Irr. Co. v. Campbell, 2 Idaho 411, 18 Pac. Rep. 52; Coffin v. Left Hand D. Co., 6 Colo. 443.

The prior appropriator of a particular quantity of water of a stream is entitled to the use of that water or so much thereof as naturally flowed into the stream, unimpaired or unaffected by subsequent changes therein by spring and seepage waters finding their way into a tributary of the stream in the course of nature unaffected by artificial works constructed by a subsequent appropriator. Beaverhead Canal Co. v. Dillon etc. Co., 34 Mont. 135, 85 Pac. Rep. 880.

7 Caviness v. La Grande Irr. Co., — Ore. —, 119 Pac. Rep. 731.

8 See, for appropriation from tributaries, Sec. 649.

9 For appropriation from springs, see Sec. 648.

For appropriation from lakes, see Sec. 650.

For subterranean waters tributary to a stream, see Sec. 655.

For the right of an appropriator to insist on the flow of the stream as it was wont at the time he made his appropriation, see Sec. 801.

right to prevent others from using the same water, or the surplus waters of the same stream, where such use does not interfere with his rights. The same water may be appropriated for power purposes higher up the stream, and, after it has been so used, if it is returned to the stream undiminished in quantity, or undeteriorated in quality, the prior appropriator can not complain.[10] So, again, if there is more than sufficient water flowing in the stream for the full use of the prior appropriator, others have the right to make subsequent or secondary appropriations of the surplus, and[11] the exclusive right of the first appropriator to his own appropriation can not prevent them. However, all later comers can only take their rights, if any, subject to the full, exclusive right of the prior appropriator. These subsequent rights are each in turn as exclusive rights as that of the appropriator who was first. Each appropriation must stand alone, and each appropriator has the exclusive right to the same to the full extent of his appropriation as though he was the first to make it; provided, always, that there is sufficient water in the stream so that the rights of those prior are not infringed upon. As stated by the California Court in a recent case:[12] "The principle in brief is this: That where one is entitled to the use of a given amount of water at a given point, he may not complain of any prior use made of the water which does not impair the quality or quantity to which he is entitled, and, upon the other hand, he may not claim to any excess of water over the amount to which he is entitled, however it may be produced."[13]

**§ 761. The water must be appropriated according to law.**—One of the essential elements of a water right is that the water upon which it is based must have been appropriated according to the

10 For right to appropriate for power purposes, see Secs. 695, 847-855.

For the pollution of water, see Secs. 1129-1147.

11 For rights of subsequent appropriators, see Secs. 783-786.

law of the State where the appropriation is made.[1] An unlawful diversion confers no right and is actionable, unless it has been for the time, and has all of the elements which are required to acquire a right by prescription.[2] If there is a statute or a water code in the State where the appropriation is attempted, its provisions must be strictly complied with in order to secure the benefits allowed under it.[3] To be sure, a water right may be acquired by the mere diversion and use of the water without following the statutes in that regard; but in cases of this character the doctrine of relation will not apply, as in the case where the statute is followed.[4] All of the subject referred to in this section will be found in other portions of this work and there treated more fully.

§ 762. **It is but a conditional possessory right.**—As we have seen in our historical review of the subject of the doctrine of appropriation, water rights originated in the taking possession of the waters of the natural streams and other sources of water supply on the public domain, and followed in that respect the custom of the miners in taking possession of mining claims.[1] Therefore, a water right in early times was considered and was merely a possessory right. And today a water right is but a possessory right. Upon the other hand, statutes have been enacted whereby the owner of a mining claim having but a possessory right thereto can secure an absolute title in fee to the same.[2] There is no law whereby a possessory owner of a water right can secure an absolute title in fee to his right. The title to a water right has never been "elevated to the dignity of a fee."[3] And, furthermore, the right is but a con-

1 For definition of a water right, see Sec. 759.

3 As held by Wiel in Water Rights in Western States, 1908, Sec. 66, where he says: "It was called a

ditional possessory right; the possessory right depending upon the condition that all of the water claimed under the right is continually applied to some beneficial use or purpose.[4] With the failure to comply with the condition of use for a certain time the right terminates, and it is either deemed abandoned,[5] or forfeited under a statute, as the case may be.[6] This is as it should be. If the law were otherwise, and if a person could secure the absolute title in fee to a water right, calling for a definite amount of water flowing in a certain stream, and then continue to own and hold the same, and that, too, whether he applied the water to any beneficial use or purpose or not, and thereby prevent others from using the water, it would subvert and overturn the whole system of the doctrine of appropriation as it is in force today. It is true that a water right has acquired the dignity of real property;[7] but real property is owned and held by many kinds of title, the one highest in degree being an absolute title in fee simple. If the law remains as it is no one can hope to secure an absolute title in fee simple to a water right, but he may, as long as he complies with the condition of applying the water claimed to some beneficial use or purpose, acquire an exclusive possessory right.[8]

Some of the decisions and statutes term a water right a privilege, franchise, or license.[9] In all jurisdictions a water right is conditioned as to its continuance upon the compliance with the

'possessory right,' though today elevated to the dignity of a fee.'' However, see Sec. 67, where he says: ''The right is *conditional*. This is a feature in common with all *possessory* rights on the public domain.'' The writer of this does not recall where there can be a title in fee, which is conditional and based only upon possession.

4 See upon this subject, Secs. 727, 728, 877, 911-916.

5 For abandonment, see Secs. 1099-1120.

6 For forfeiture under statute, see Secs. 1117-1120.

7 Water right real property, see Secs. 768, 769.

8 That a water right is but a possessory right, see Sec. 762.

For what purposes water may be appropriated, see Secs. 690-705.

The consummation of the right of appropriation, Secs. 725-729.

Water right an exclusive right, see Sec. 760.

See, also, for the statutes of the various States relative to the nature of a water right, Part XIV.

local laws of the State wherein the same is situated. And, upon a failure to comply with these laws, it either works an abandonment or a forfeiture of the right.[10]

The Act of Congress of 1866 [11] only recognizes the right as a possessory one: "Whenever, by priority of possession, rights to the use of water . . . have vested and accrued, . . . the possessors and owners of *such* vested rights shall be maintained and protected in the same." [12]

**§ 763. The right is conditional upon continuous use.**—Not only must there be an actual application of the water to some beneficial use or purpose, or at least a diversion of the water from the natural stream and the same conducted to the place where it is to be used [1] before the possessory title to the water right is acquired, but the continuation of the right is also conditional upon the continuous use of the water. In other words, the right is merely usufructuary, and the right to the water lasts so long as it is in actual use and occupation, but no longer. The property in the water in the appropriator ceases the instant the water escapes and is out of his possession, and another man may appropriate it to his own use.[2] The same is true also as to the water right itself. If the right is not used, or rather, if the water claimed under the right is not used for a period of time sufficient to work an abandonment or forfeiture, the right ceases in the original appropriator, and the water claimed by him under it may be appropriated by others. But as long as the first appropriator holds possession of the right by the use of the water claimed under it his possessory title is good, and exclusive in himself, as against all later comers,

Rep. 1042; Davis v. Gale, 32 Cal. 26, 91 Am. Dec. 554, 4 Morr. Min. Rep. 604; Schultz v. Sweeney, 19 Nev. 359, 11 Pac. Rep. 253, 3 Am. St. Rep. 888; Colorado Land & Water Co. v. Rocky Ford Canal etc. Co., 3 Colo. App. 545, 34 Pac. Rep. 580.

See, also, Secs. 783-786.

and the water right arises to the dignity of a distinct, exclusive usufructuary estate.[3]

§ 764. **The right exists independent of the right to the ditch or other works.**—A water right is a species of property in and of itself, and exists separate and independent of the right to the ditch, canal, reservoir, or other works constructed to divert, conduct, or store the water. This is so, although they may be all owned by the same person; and again, the water right may be owned by one person and the ditch or other works by another. A valid water right, although intimately related to and connected with the dam and canal, is a different thing, and that, too, although each is necessary to make the other available and useful. They are each capable of several and distinct injuries, giving rise to separate and distinct causes of action, for which there are separate and distinct remedies.[1] As was said in an early California case: "The dam and canal may be trespassed upon, broken down, destroyed, or taken into possession under a claim of right, without taking away the water, or preventing its use in any other mode or place, or without questioning the plaintiff's right to it, and the plaintiff may have his cause of action for the trespass, or to recover possession of the land constituting the dam and canal, or their site; and the water may also be diverted and taken away without in any way disturbing or interfering with the dam and canal.[2] Ownership of a ditch and the water right for the waters to flow through the ditch may, and often do, exist in different parties. The existence of the one right does not necessarily imply the existence of the other right in the same party."[3] A ditch may be conveyed,

reserving the water right, or the water right may be conveyed, reserving the ditch.[4] Ditches in and of themselves may be abandoned without there being an abandonment of the water right, and the ditches may then be constructed elsewhere to divert the water claimed.[5] Ditches may also be constructed by parties for the express purpose of conveying the water to the place where it is to be used by other owners of the water right.[6] Although the title to the ditch and the water right may be in different parties, or they may be held by one and the same party and are separate and distinct property, one may be appurtenant to the other. And it is held that the water right may be appurtenant to the ditch, if used specifically therewith;[7] and also that the ditch may be ap-

In McLear v. Hapgood, 85 Cal. 555, 24 Pac. Rep. 788, it is said: "The ownership of this ditch is entirely distinct from the right to divert the water of the stream."

See, also, Zimmler v. San Luis Water Co., 57 Cal. 221; Ada County etc. Co. v. Farmers' Canal Co., 5 Idaho 793, 51 Pac. Rep. 990, 40 L. R. A. 485; Stocker v. Kirtley, 6 Idaho 795, 59 Pac. Rep. 891; Parke v. Boulware, 7 Idaho 490, 63 Pac. Rep. 1045.

Rep. 405, where it was held that, where a water right has been acquired by means of a ditch used in carrying the water, a conveyance of the ditch was a conveyance of the water right.

See, also, Jarvis v. State Bank, 22 Colo. 309, 45 Pac. Rep. 505, 55 Am. St. Rep. 129; Willey v. Decker, 11 Wyo. 496, 73 Pac. Rep. 210, 100 Am. St. Rep. 939; Nevada etc. Co. v. Kidd, 37 Cal. 282; Nippel v. Forker, 9 Colo. App. 106, 47 Pac. Rep. 766, 26 Colo. 74, 56 Pac. Rep. 577.

purtenant to the water right.[8] A decree adjudicating the rights in one does not adjudicate the rights in the other unless both are the subjects of the action.[9] The revocation of a license to construct a ditch does not affect the right to the water carried through the ditch.[10]

**§ 765. The right exists independent of any property in the channel of the stream.**—As is the case of the ditch or canal or other means of the conveyance of the water, a water right exists independent of any property right which may be acquired in the channel of the stream.[1] By the appropriation itself the appropriator acquires no right in and to the channel of the stream from which the appropriation is made. The channel of the stream is land, the title to which can only be acquired from the Government in some way provided by the Federal laws, or from some one having the title. Mere user of Government land, however, long continued, gives no title, as against the Government; and, where the use thereof in connection with an irrigation ditch is not such as under the law gives an easement, a patent thereof passes the title free of any right on account thereof. So it was held in a Colorado case that, where a river flowing over Government land changes its course, the abandoned bed becomes part of the surrounding land and passes with the subsequent patent to the patentee; and, after the title to the land had passed from the Government the land can be burdened by a right of way for water only by consent of the owner, or by proper legal proceedings.[2] The ruling under the facts stated in the Colorado case was correct. The right claimed was more in the nature of a question of drainage than of the right to conduct the water in the channel of the natural stream a portion of the way to the place where it is to be used, where such

8 See Sec. 1018.

Jacob v. Lorenz, 98 Cal. 332, 33 Pac. Rep. 119, where it was said: "Appellant's contention that the water right must be appurtenant to a certain ditch is not sound. The water right is the principal thing, and, if either is appurtenant to the other, the ditch is appurtenant to the water right."

See, also, Nippel v. Forker, 9 Colo. App. 106, 47 Pac. Rep. 766, 26 Colo. 74, 56 Pac. Rep. 577.

9 Parke v. Boulware, 7 Idaho 490, 63 Pac. Rep. 1045.

10 Ison v. Sturgill, 57 Ore. 109, 109 Pac. Rep. 579, 110 Pac. Rep. 535.

1 See previous Sec. 764.

2 Boglino v. Giorgetta, 20 Colo. App. 338, 78 Pac. Rep. 612.

use, under the law, gives an easement. That the channel of the stream may be used to conduct the water in the place of an artificial ditch, while the land over which the stream flows belongs to the Government, has been generally recognized from the earliest times as a permanent easement. And, if the Government afterward disposes of the land, the grantees take it subject to the easement of the right of an appropriator to so convey his water, the same as though he had constructed an artificial ditch over the same land for that purpose.[3] This right, however, is as separate and distinct from the water right as it is separate and distinct from the artificial ditch or canal or other works discussed in the preceding section.[4]

But the title to the channel of a non-navigable stream may be acquired from the Government and held in private ownership. Where this is so the channel may be sold by the owner without affecting the water rights of himself or of others.[5]

**§ 766. Title or possession of land on stream unnecessary.**—Contrary to the rule of riparian rights at common law, where the right to the use of the water is dependent upon the ownership of the land adjoining which or through which the stream flows,[1] a water right based upon the doctrine of appropriation in the Western States does not depend upon the legal title, nor, in fact, upon any title to or the possession of lands on the streams or other bodies of water, or elsewhere. But a water right is simply an exclusive possessory right, acquired by the diversion of the waters of a stream in a lawful manner, and the appropriation consummated by either its application to some beneficial use or purpose, or at least conducted to the place where it is to be used, prior to its appropriation, diversion, and use by some one else.[2] All the authorities

agree upon the proposition that it is unnecessary that the appropriator in order to be entitled to the use of the water, as at common law, should have located or taken possession of any tract or parcel of the public domain bordering upon the stream from which the appropriation is made. A valid appropriation may be made for the irrigation of lands, or for any other beneficial use, not situated upon or near the stream from which the water is taken. The very object of the appropriation may be to conduct the water from the stream through a ditch or canal, across the intervening lands, to irrigate a tract of land which the appropriator possesses far from the natural stream, or to work a mining claim or run a mill.[3] In other words, the universal rule is that a water right, or the right to the use of the water, under the doctrine of appropriation, is not in any way dependent upon the *locus* of its application to the beneficial use designed.[4]

§ 767. **Title or possession to any land unnecessary.**—Not only is it unnecessary for the owner of a water right, under the doctrine of appropriation, to own or possess land adjoining the stream from which the water is taken, as stated in our last section,[1] but a perfect title to a water right may be had and maintained without the owner thereof having the title to, or in the possession of, any land anywhere, with the bare exception of the easement or other

1 See Sec. 766.

right of way for the ditch or canal to conduct the water to the place of use.[2] While the common law requires ownership or the possession of land adjoining the stream in order to acquire a riparian right to the use of the water,[3] the Arid Region Doctrine of appropriation is the doctrine of the separate ownership of the land and the water right. Hence it follows that a good title to a water right may be had without the owner thereof having the title or possession of any land, except the ditch or canal; and, upon the other hand, if the water of a certain stream has all been appropriated before the settlement of the land upon its banks, even in those States which recognize both the common law of riparian rights and the doctrine of appropriation, the settlers who afterward become the riparian owners may acquire no right to the use of the water.[4] In fact, it has been held by the Supreme Court of the United States that corporations may be organized for the express purpose of appropriating the waters of some stream and selling

Rep. 73; Hayes v. Buzzard, 31 Mont. 74, 77 Pac. Rep. 423; Frank v. Hicks, 4 Wyo. 502, 35 Pac. Rep. 475, 1025; Sayre v. Johnson, 33 Mont. 15, 81 Pac. Rep. 389; Johnston v. Little Horse Cr. Irr. Co., 13 Wyo. 208, 79 Pac. Rep. 22, 70 L. R. A. 341, 110 Am. St. Rep. 986; Hawaiian etc. Co. v. Wailuku etc. Co., 15 Hawn. 675.

For water rights as appurtenances inseparable from the land, see Secs. 1015, 1016.

the water to consumers; that the corporations need not own or possess any land except the bare right of way for their ditch, nor need the stockholders of the corporation be a combination of land owners.[5] However, because the owner of a water right is not required to own land in connection therewith does not dispense with the rule that all of the water appropriated must be used by some one for some beneficial purpose in order to hold the water right.[6]

§ 768. **A water right is property.**—The distinct, exclusive, usufructuary estate acquired by an appropriator to the use of water, by its lawful appropriation, is property of the highest order, and oftentimes of the highest value. The water right is protected by the law as such, and is subject to all of the usual incidents of property. This property right in water is as important, as valuable, and as extensive as the use to which it is applied, and especially so where that use is the irrigation of lands. The land is comparatively valueless without the water to irrigate it. Without the water it can be purchased for from $1.00 to $2.00 per acre, but with the water its

5 Gutierres v. Albuquerque Land & Irr. Co., 188 U. S. 545, 47 L. Ed. 588; affirming 10 N. M. 77, 61 Pac. Rep. 357, where Mr. Justice White, in rendering the opinion of the Supreme Court of the United States, said: "We perceive no merit in the contention that the proviso in the Desert Land Act of March 3, 1877, declaring that surplus water on the public domain shall remain and be held free for the appropriation and use of the public for irrigation, mining, and manufacturing purposes, is an expression of the will of Congress that all public waters within its control or the control of a legislative body of its creation, must be *directly* appropriated by the owners of the land upon which a beneficial use of water is to be made, and that in consequence a territorial legislature can not lawfully empower a corporation, such as the appellee, to become an intermediary for furnishing water to irrigate lands of third parties." And the Court held that the finding of the Court below that "surplus" water existed negatived the idea that any legitimate appropriation of water which can be made by the company can in anywise violate the rights of others, and therefore holding that a legal appropriation could be made by the company, although it did not use the water, but sold it to others who did.

For appropriation of water for sale, see Sec. 703.

For sale and conveyance of water rights, see Secs. 994-1032.

For water rights as an appurtenance to land, see Secs. 1009-1018.

Rights of private corporations, see Chaps. 72-77.

6 See for purposes for which water may be appropriated, Secs. 690-705.

That the water must be used for a beneficial purpose, see Secs. 874-916.

value at once jumps from the above prices to $100 to $200 per acre, and sometimes to a very much higher price. The property in a water right consists not alone in the amount of water claimed under an appropriation, but also in the priority of the appropriation. And it very often happens that the chief value of an appropriation consists in its priority over other appropriations from the same stream. Hence, to deprive one of his priority to appropriate would be to deprive him of a most valuable property right.[1] A perfected water right is a vested property right and its value capable of estimation in money, and one which the law protects.[2] A water right is such a property right that it comes clearly within the Constitutional provisions that property shall not be taken or damaged for public or private use, except upon due process of law and upon just compensation.[3] A water right is such prop-

Rights to the use of water for beneficial purposes, whatever the use may be, are property in the full sense of that term. Town of Sterling v. Pawnee etc. Co., 42 Colo. 421, 94 Pac. Rep. 431, 15 L. R. A., N. S., 238.

2 Waha v. Lewiston Co. (Idaho), 158 Fed. Rep. 137.

The right to the use of water when acquired by appropriation, is, in its nature, a property right, and becomes a superior and better title to the use and enjoyment of such water than that of a riparian proprietor whose right attaches subsequently. Crawford Co. v. Hathaway (Hall), 67 Neb. 325, 93 N. W. Rep. 781, 60 L. R. A. 889, 108 Am. St. Rep. 647.

3 Fisher v. Bountiful City, 21 Utah 29, 59 Pac. Rep. 520; Armstrong v. Larimer County D. Co., 1 Colo. App. 49, 27 Pac. Rep. 235; Nichols v. McIntosh, 19 Colo. 22, 34 Pac. Rep. 278; Town of Sterling v. Pawnee etc. Co., 42 Colo. 421, 94 Pac. Rep. 339, 15 L. R. A., N. S., 238; Mohl v. Lamar Canal Co., 128 Fed. Rep. 776.

A clear distinction exists and should be drawn between the rights that a party acquires by contract with a canal company, whereby he purchases a water right sufficient for the irrigation of his land, and the rights acquired on the other hand under Sec. 4, Art. 15,

erty that it is capable of being estimated in money.[4] And one who has acquired a legal water right can only be deprived of it by his own voluntary act in conveying it to others,[5] by abandonment,[6] forfeiture under some statute,[7] or by operation of law. And, as long as one is the owner of a valid water right it is such a property right that he has the right to exercise complete dominion, control, and management thereof.[8] The owner may change the use of the water to any other beneficial use, so long as the change does not interfere with the vested rights of others.[9]

Having seen that a water right is a property right, we will now discuss the class of property to which it belongs.[10]

§ 769. **A water right is real property.**—Having seen that a water right is a property right of high order,[1] it remains to determine the class to which it belongs. A water right has none of the characteristics of personal property, although some of the early statutes declared that it might be deemed such property.[2] It is generally conceded by all of the authorities that a water right, or

1 See Sec. 768.

2 "Such right may be appurtenant to the land upon which such water is used, or it may be personal property, at the option of the rightful owner of such right." Comp. Laws of Utah, 1888, p. 135.

an interest in a water right, is real property, and it is so treated under all the rules of law appertaining to such property.[3] It was held in a recent Idaho case [4] that under the laws of that State a water right is real property, and one who actually diverted the water of a stream and applied the same to a beneficial purpose is in actual possession of such real property, and this possession constitutes actual notice to any subsequent appropriator of the water of the same stream, or to any person who subsequently applies to the State Engineer for a permit to appropriate and divert the water of the same stream, the Court saying: "But where one has actually diverted water, and is using it, the right to its use may, by analogy, be likened unto the doctrine that one purchasing real estate must take notice of the rights of those in possession, notwithstanding the recording statutes." [5]

For a water right as an appurtenance to land, see Secs. 1005-1018.

[4] Nielson v. Parker, 19 Idaho 727, 115 Pac. Rep. 488.

[5] See, also, California etc. Co. v. County of Los Angeles, 10 Cal. App.

A water right is an inheritable estate, and, being real property, upon the death of the owner, passes to his heirs or devisees, subject only to the payment of his debts. Hence it therefore follows that an action to quiet title, or to recover possession, does not lie at the instance of the administrator.[6] However, an inchoate or incomplete right is not real property. It is, therefore, held that a water permit granted under the laws of the State of Idaho is not real property, nor is it an appropriation of the public waters of the State, but it is simply the consent given by the State to make an appropriation, and therefore acquire real property.[7] However, at the instance of the proper party[8] a suit to quiet title to a water right for irrigation purposes, and to determine the right to divert the waters from a stream for such purposes, is in the nature of an action to quiet title to real estate.[9] And, in an action to quiet title,

7 Speer v. Stephenson, 16 Idaho 707, 102 Pac. Rep. 365.

In a recent case in California, it was held that an appropriator's right, pending the determination of his application to use public lands, was an "interest in real property." And the Court said: "The person who has an interest in real property may maintain an action to determine the validity of a conflicting claim which is adverse to his own claim." Inyo Consolidated Water Co. v. Jess, —— Cal. ——, 119 Pac. Rep. 934.

8 For parties to actions, see Part XIII.

9 Rickey etc. Co. v. Miller, 152 Fed. Rep. 11, 81 C. C. A. 207. An action to quiet and determine title and to establish the right to divert and use water for such purposes is in the nature of an action to quiet title to real estate. Conant v. Deep Creek etc. Co., 23 Utah 627, 66 Pac. Rep. 188, 90 Am. St. Rep. 721; Gutheil Park Inv. Co.

brought by an irrigation company, it is immaterial whether the company owned the water right in question, or merely distributes the water to the stockholders, who were the owners of the right before the company was organized.[10] So, a water right being real property, a justice of the peace has no jurisdiction over an action for the diversion of the water.[11] An injury to a water right or a wrongful diversion of the water is an injury to real property, and a proper action may be maintained for the same.[12] And, where the injury and the property are both in the same county, an action must be brought in the county where the land is situated.[13] But, where water is wrongfully diverted in one county to the injury of plaintiff's rights in another, it constitutes one cause of action and the plaintiff may elect in which county he will bring the action.[14] Upon the question of the sale or transfer of a water right, it being a species of realty requires for its valid transfer the same form and solemnity as is necessary for the conveyance of any other real estate.[15] It is also such a right that in the case

Farmers' Canal Co., 5 Idaho 793, 51 Pac. Rep. 990, 40 L. R. A. 485; Middle Cr. D. Co. v. Henry, 15 Mont. 558, 39 Pac. Rep. 1054.

The right to the use of water for irrigation is real property, and the proper method of conveying title thereto is by deed. Bates v. Hall, 44 Colo. 360, 98 Pac. Rep. 3.

of sale or transfer the rule under the statute of frauds applies, and a verbal sale is held to be void and to work an abandonment.[16] The recording statutes applicable to the sale and conveyance of real property also apply to the sale and conveyance of water rights.[17]

Water rights may also be assessed and taxed as real property. However, in many of the States they are made exempt from taxation, separate and apart from the lands upon which they are used.[18] This subject will be discussed in another portion of this work. Water which has been diverted from the natural stream or other works may be taxed as personal property.[19] The rules of the statute of limitations, as the same are applied to land, are also applied to water rights. And to acquire title to a water right the use must be continuous for the full period of the statute of limitations, in the State where the action is brought, governing actions for the recovery of other real property.[20]

It was said in a very recent Colorado case:[21] "That a water right is a 'freehold' is not in doubt. . . . A water right has been held to be a freehold or 'real estate' in the following cases."[22]

16 Griseza v. Terwilliger, 144 Cal. 456, 77 Pac. Rep. 1034, citing Kinney on Irr., 1st Ed., Secs. 253, 255, 264.

That such an estate in water rights is real property, and that an agreement for the conveyance thereof is within the statute of frauds, there is no question in this State. Hayes v. Fine, 91 Cal. 391, 27 Pac. Rep. 772; Smith v. O'Hara, 43 Cal. 371, 1 Morr. Min. Rep. 671; Bradley v. Harkness, 26 Cal. 69, 11 Morr. Min. Rep. 389; Oneto v. Restano, 78 Cal. 374, 20 Pac. Rep. 743; *Id.*, 89 Cal. 63, 26 Pac. Rep. 788; Bates v. Hall, 44 Colo. 360, 98 Pac. Rep. 3; Lower Kings etc. Co. v. Kings River etc. Co., 60 Cal. 408; Dorris v. Sullivan, 90 Cal. 279, 27 Pac. Rep. 216; McGinness v. Stanfield, 6 Idaho 372, 55 Pac. Rep. 1020.

22 Citing Wyatt *et al.* v. Larimer & Weld Irr. Co. *et al.*, 18 Colo. 298, 33 Pac. Rep. 144, 36 Am. St. Rep. 280; reversing 1 Colo. App. 480, 29 Pac. Rep. 906; Insurance Co. v. Childs,

**§ 770. A water right is not an easement.**—A water right is an independent property right, and is not a servitude upon some other thing. Therefore, a water right itself is not an easement. This, however, must be distinguished from a right of way or the right to conduct the waters claimed under a certain water right over the lands of others, which is an easement.[1] This subject, however, will be discussed in a subsequent portion of this work.[2]

**§ 771. A water right is an incorporeal hereditament.**—A water right is descendible by inheritance; and, being neither tangible nor visible, it is an incorporeal hereditament.[1] There has been some

1 Incorporeal hereditament — Anything, the subject of property, which is inheritable and not tangible or visible. Bouvier, Law Dict.

2 Woodd. Lect. 4.

"The right of a party to have the water of a stream or water course flow to or from his lands or mill over the lands of another is an incorporeal hereditament." Cary v. Daniels, 8 Metc. 466 (Mass.), 41 Am. Dec. 532.

The right of an appropriator "to have the water flow in the river to the head of his ditch is an incorporeal hereditament appurtenant to its water course." Lower Kings etc. Co. v. Kings River etc. Co., 60 Cal. 408.

"The right to the use of the water is an incorporeal hereditament; an intangible right. From its nature a contract with respect to it can not, technically speaking, establish the relation of landlord and tenant." Custer Consolidated Mines Co. v. City of Helena, —— Mont. ——, 122 Pac. Rep. 567.

"If a riparian owner grants a right to divert the water and convey it away to and upon the lands of the grantee, the grant becomes an easement appurtenant to such lands, which become thereby the dominant estate, and the grant an incorporeal hereditament." Oregon Const. Co. v. Allen D. Co., 41 Ore. 209, 69 Pac. Rep. 455, 93 Am. St. Rep. 701.

"The right of plaintiffs to have that portion of the river, to which they were entitled, flow in the natural water course to the heads of their ditches, is an incorporeal hereditament appurtenant to the water course." Deseret Irr. Co. v. McIntyre, 16 Utah 398, 52 Pac. Rep. 628.

"That a valid appropriation of water from a natural stream constitutes an easement in the stream, and that such easement is an incorporeal hereditament, the appropriation being in perpetuity, can not be well disputed." Wyatt v. Larimer & Weld

slight confusion among the decisions as to whether a water right was a corporeal or an incorporeal hereditament. This originated undoubtedly in the formative period of the Arid Region Doctrine of appropriation, and in the failure to distinguish the common law right of a riparian owner to the running water in the stream which adjoins his land and the right acquired by an appropriator to the use of the water under the doctrine of appropriation. "The right to running water, under the common law, is defined to be a corporeal right, or hereditament, which follows or is embraced by the ownership of the soil adjoining which the water naturally flows."[2] This definition was used by the California Supreme Court, in 1855, in a most inconsistent opinion, in the case of Hill v. Newman;[3] and, it is undoubtedly largely due to this decision that this confusion arose. The Court, after giving a wrong common law definition, as above stated, then said: "From the policy of our laws, it has been held in this State to exist *without private ownership* of the soil, upon the ground of the prior location upon the land, or prior

Irr. Co., 18 Colo. 298, 33 Pac. Rep. 144, 36 Am. St. Rep. 280.

"The right of the prior appropriator to have the water flow in the stream to the head of his ditch is an incorporeal hereditament appurtenant to his ditch, and coextensive with his right to the ditch itself." Willey v. Decker, 11 Wyo. 496, 73 Pac. Rep. 210, 100 Am. St. Rep. 939; Smith v. Deniff, 24 Mont. 20, 60 Pac. Rep. 398, 50 L. R. A. 737, 81 Am. St. Rep. 408; Rickey Land & Cattle Co. v. Miller, 152 Fed. Rep. 11, 81 C. C. A. 207.

"In determining this question we have to consider the peculiar nature of the property designated 'a water right,' and the title thereto, as distinguished from land. This 'right' is said to be intangible and incorporeal." Monte Vista Canal Co. v. Centennial Irr. D. Co. —— Colo. App. ——, 123 Pac. Rep. 831.

See, also, Monte Vista Canal Co. v. San Luis Valley Irr. L. Co. —— Colo. App. ——, 123 Pac. Rep. 835.

"A right to divert and use the waters of a stream, acquired by appropriation, is a hereditament appurtenant to the land for the benefit of which the appropriation is made." Conant v. Deep Creek etc. Co., 23 Utah 627, 66 Pac. Rep. 188, 90 Am. St. Rep. 721.

See, also, Frank v. Hicks, 4 Wyo. 502, 35 Pac. Rep. 475, 1025; Gutheil v. Town of Montclair, 32 Colo. 420, 76 Pac. Rep. 1050; Swift v. Goodrich, 70 Cal. 103, 11 Pac. Rep. 561.

That a water right is real property, but not within the term "land," see Mt. Carmel Fruit Co. v. Webster, 140 Cal. 183, 73 Pac. Rep. 826.

2 For the nature of the common law right, see Secs. 450-456.

Sackett v. Wheaton, 17 Pick. 105; 1 Cruise's Digest 39; Angell & Ames on Water Courses, p. 3.

3 5 Cal. 445, 63 Am. Dec. 140, 4 Morr. Min. Rep. 513.

appropriation and use of the water." This statement was ambiguous, but if it held anything, it held that the doctrine of appropriation was based upon the use of the water independent of the ownership of any land. Then the Court turns around and makes a ruling for the common law by saying: "The right to water must be treated in this State as it has always been treated, as *a right running with the land*, and as a *corporeal privilege* bestowed upon the occupier and appropriator of the soil," etc. Here, again, the Court failed to make the proper distinction. From the very nature of the definition of the word "privilege," it can not be corporeal, having no body or substance, and being neither tangible nor visible. It does not say that a water right is a corporeal or incorporeal hereditament. But this decision has been followed as though the Court had declared it to be a corporeal hereditament. This can not be as the water right itself is not a "substantial, permanent object"[4] and is neither tangible nor visible. It is, therefore, correctly held by the greater weight of authority that a water right is an incorporeal hereditament.[5]

Again, the subject is somewhat confusing from the fact that the right of a riparian owner to have the water flow in the stream as a part and parcel of his land adjoining the same, is, according to the better authorities, an incorporeal hereditament.[6] However, by some of the cases this riparian right is deemed a corporeal hereditament. As was said in an Oregon case:[7] "The plaintiff's riparian right to have the water flow in the stream undiminished in quantity, except by the reasonable use thereof by riparian proprietors, is appurtenant to the land running with it as a corporeal hereditament." It is also a well settled proposition that a riparian owner may grant his riparian rights or any portion thereof, so long as the use of the same by the new owner does not materially and substantially affect the correlative riparian rights of the other owners upon the same stream.[8] A riparian owner may also lose his right to the natural flow of the stream by adverse user on the part of an appro-

4 Corporeal hereditaments: Substantial permanent objects which may be inherited. The term land will include all such. Bouvier, Law Dict.

5 See cases cited above.

6 See Sec. 454.

7 Oregon Construction Co. v. Allen Ditch Co., 41 Ore. 209, 69 Pac. Rep. 455, 93 Am. St. Rep. 701.

8 For conveyance of riparian rights, see Secs. 526-535.

priator amounting to prescription.[9] And, where a riparian right is deemed a corporeal hereditament, as was stated by the Oregon Court cited above:[10] "So that we are confronted with the anomalous proposition that plaintiff has lost a corporeal hereditament appurtenant to its land by reason of the operation of the statute of limitations, and the defendant has acquired an easement or incorporeal hereditament appurtenant to its lands by virtue of the same statute; in other words, that the statute has operated to convert a corporeal hereditament into an incorporeal hereditament, and at the same time to devest plaintiff of the one and invest defendant with the other."

Again, there is a tendency upon the part of some of the courts in defining a water right as an incorporeal hereditament to add that it is appurtenant to something, "to the water course," "to his ditch," "to the land for the benefit of which the appropriation is made," or to something else, the authorities do not agree what. Again, in some cases the water right is called an easement.[11] This seems to be from the wrong impression of the term "incorporeal hereditament," and that it must be subordinate to some land. This is not the fact, as under the definition an incorporeal hereditament may be anything the subject of property which is inheritable and not tangible or visible. A chose in action may be an incorporeal hereditament.

A water right may or may not be an appurtenance to land. It depends upon the circumstances of each particular case, and the question usually arises under statutes, the object of which was to make a water right appurtenant to a particular tract of land,[12] and the sale of land which carries with the water right used in connection therewith.[13] But, for many reasons, a water right should never be considered an inseparable appurtenance to any particular tract of land.[14] But the only point that we wish to impress here is that a water right is not necessarily an appurtenance because it is an incorporeal hereditament. Upon the ques-

9 For loss of riparian right by prescription, see Secs. 1039-1041.

10 Oregon Construction Co. v. Allen Ditch Co., *supra*.

11 See quotations from cases in first note under this section.

12 For the discussion of these statutes, see Secs. 1015, 1016.

13 See Secs. 1005-1014.

14 That it is not an inseparable appurtenance, see Secs. 1015, 1016.

tion of a water right being an easement, we will add that there may be an easement over the lands of another for the conveyance of the water claimed under a water right, but from no standpoint of the case can the water right itself be an easement,[15] although there are some loose statements in some of the decisions which might lead one to believe that the Court so considered it.[16]

A water right, then, is a property right independent in itself, based upon the application of the water claimed thereunder to some beneficial use or purpose, and not subordinate to any land, but may exist independent of any ownership thereof,[17] as well as of the ditch or other works,[18] or of any ownership in the channel of the stream or water course.[19]

§ 772. **Title to the water before diversion.**—The rule under the Arid Region Doctrine of appropriation is similar to that under the common law of riparian rights with respect to the ownership of the water itself while it is still flowing in the stream.[1] A water right is the property of the appropriator, only so long as it is based upon the actual use of the water for some beneficial purpose. Before diversion the appropriator acquires no title to the *corpus*, or "the very body of the water," while it is still flowing naturally in the stream.[2]

[15] See Lux v. Haggin, 69 Cal. 255, 4 Pac. Rep. 919, 10 Pac. Rep. 674.

[16] See Oregon Const. Co. v. Allen D. Co., 41 Ore. 209, 69 Pac. Rep. 455, 93 Am. St. Rep. 701; Wyatt v. Larimer & Weld Irr. Co., 18 Colo. 298, 33 Pac. Rep. 144, 36 Am. St. Rep. 280.

When part of the public domain passes into private ownership, it is burdened by the easement granted by the United States to the appropriator, who holds his rights against this land under an express grant. Smith v. Hawkins, 110 Cal. 122, 42 Pac. Rep. 453, 19 Morr. Min. Rep. 243.

The right of an appropriator to take water from or over the land of another is in the nature of an easement in gross, which may *or may not be* annexed to the land on which the water is used as an appurtenance thereto. Smith v. Deniff, 24 Mont. 20, 60 Pac. Rep. 398, 50 L. R. A. 737, 81 Am. St. Rep. 408.

For the question of easements, see Secs. 990-992.

[17] See Sec. 766.

[18] See Sec. 764.

[19] See Sec. 765.

[1] For title to the *corpus* of the water at common law, see Secs. 455, 456.

[2] See McGuire v. Brown, 106 Cal. 660, 670, 39 Pac. Rep. 1060, 30 L. R. A. 384, where it is said: "It must be remembered that the appropriator is not the owner of 'the very body of the water' until it passes into the appliances he has provided for its reception."

The only rights which were granted by the United States under the Acts of Congress of 1866 and 1870 were "rights to the use of water."[3] No title to the *corpus* of the water itself was, or, in fact, could be, granted. Even the Government of the United States has no title to the water itself while it is naturally flowing, any more than it has to the air over the lands owned by it. The water may be in this country today, and tomorrow it may be in Mexico,

Canada, or in the sea. "For water is a movable, wandering thing,"[4] and no man, State, or Nation can receive or give an absolute title to it while it is still flowing naturally in the streams or other bodies, and that, too, regardless of any law upon the subject, whether it be the common law of riparian rights, the civil law, or the Arid Region Doctrine of appropriation for beneficial uses.

It therefore follows, from the above principles, that the sale of a water right by its owner, does not convey any specific quantity of the water itself, but only sells the right to the use of the water, for the reason that the only property in the water owned by an appropriator is the right to use it.[5] Again, an appropriator can not sue for the value of a specific quantity of water at so much per cubic foot, or so much per inch or gallon diverted from the stream above him, but he must sue for the damages to his enterprise caused by the unlawful diversion.[6] Nor can an appropriator lay claim to water which he has permitted to escape and run off, but this is open to the appropriation of others. Water permitted to escape after it has been appropriated by one, and which finds its way into the natural channel of the same stream from which it was taken or into the channel of another stream, can not be reclaimed by the original appropriator as against subsequent appropriators who have made use of it.[7] But, after the water itself has been actually diverted from the stream, and is taken into the possession of the appropriator in his ditches, canals, or reservoirs, the title to the

4 2 Blackstone Com., p. 18.

5 For the sale and conveyance of water rights, see Secs. 994-1032.

"What the appropriator may sell is his water right. That is all he has to sell . . . The water in the stream is not his property, but his right to use that water, based upon his prior appropriation, for beneficial purposes, is a property right, and, as such, is capable of transfer. . . . The only property in the water owned by an appropriator is a right to use it as measured by his appropriation." Johnson v. Little Horse Cr. Irr. Co., 13 Wyo. 208, 79 Pac. Rep. 26, 70 L. R. A. 341, 110 Am. St. Rep. 986.

For abandonment of water, see Secs. 1099-1117.

same changes and it becomes the absolute property of the appropriator.[8]

§ 773. **Title to the water after diversion.**—After the diversion of the water from the natural streams into the ditches, canals, pipes, reservoirs, or other works of the appropriators, the title to the same changes, and the body or *corpus* of the water becomes the absolute property of the appropriators.[1] Water, when collected in the works of the appropriator, and thus separated from the original source of supply, is considered his individual property, as much as the fish which might have been lawfully captured from the depths of the natural stream or the wild fowl which might have been shot or captured on its surface.[2] In fact, it is a general principle of law that where an individual by his labor reduces to his control or use any object, animate or inanimate, which otherwise could not be brought under the control or use of man, that he acquires a right of property in such object, from which he can not be unlawfully dispossessed. One of the most apt illustrations of this proposition used by the authorities is that of the fish and fowl. As said by Mr. Justice Field, in the Supreme Court of the United States:[3] "The wild fowl in the air belongs to no one, but when the fowler brings it to the earth and takes it into his possession it is his property. . . . So, when the fisherman drags by his net fish from the sea, he has property in them, of which no one is permitted to despoil him."[4] So it is with water. While it is flowing naturally in the channel of the stream or other source of supply, it "is a movable, wandering thing, and must of necessity continue common by the law of Nature,"[5] and, therefore, is nobody's property, or property common to everybody. After it has been captured, as it were, or diverted from the natural channel of the stream by an individual, and taken absolute possession of by him in the ditches, canals, reservoirs, or other receptacles constructed or prepared by

8 For which, see Secs. 773, 774.

1 That there can be no title to the water while flowing in the stream, see Secs. 455, 772.

2 For the title to the fish or fowl before and after capture, see Secs. 359-368.

his work and labor, it is as much his private property as anything else that is reduced to possession which otherwise would be lost to the uses of man. And, furthermore, this is not a rule peculiar to the Arid Region Doctrine of appropriation, but it is the universal rule under the common law,[6] and also under the civil law.[7] It is also the rule under the Western doctrine of appropriation.[8]

This is illustrated by a recent Idaho case,[9] in which it was held that if a man collect and impound surface and flood waters from his own land before they reach any natural stream or channel and hold the same in a reservoir on his lands and premises, the fact that he does not actually use it for irrigation or for any other commercial purpose does not render it any less his property or authorize any one else to invade his property or appropriate and divert the same. It was also held that a permit from the State Engineer can not give any sanction to such a procedure. The Court said: "The State Engineer has no right to grant permits to one man to use another man's property."[10]

**§ 774. Water after diversion—Nature of property in.**—After water has been diverted from the natural stream and taken into the ditches, canals, and reservoirs of the appropriator and is thus in his absolute possession, by the great weight of authorities he has an absolute property right in the *corpus*, or very body of the water,[1] which then takes the nature and character of personal property, and it is so regarded.[2] It may be sold as personal property, and as such is subject to contract.[3] As such personal property it is the subject of larceny.[4] In an action for the recovery for water furnished and delivered to the defendants from the water system of the plaintiff, the question of the title to real property is in no way involved, and hence if no other question enters into consideration,

[1] See Sec. 773.

For the sale of water after diversion, see Sec. 1032.

[2] Heyneman v. Blake, 19 Cal. 579, in which Mr. Chief Justice Field said: "Water collected in reservoirs or pipes, and thus separated from the original source of supply, is personal property, and is as much the subject of sale—an article of commerce—as ordinary goods and merchandise."

See, also, Spring Valley Water Works v. Schottler, 110 U. S. 347, 28 L. Ed. 173, 4 Sup. Ct. Rep. 48, in which Mr. Justice Field, then Associate Justice of the Supreme Court of the United States, also said: "When the plaintiff brought water to the City of San Francisco, it had a right to sell the property at such reasonable prices as it could obtain, as it might have sold grain or fruit or coal, had it brought those articles to market."

See, also, Boise City etc. Co. v. Stewart, 10 Idaho 38, 77 Pac. Rep. 25, 321.

"After it has been diverted from its original channel, and is conveyed elsewhere in pipes for distribution or sale, it loses its original character, and becomes personal property." Dunsmuir v. Port Angeles etc. Co. 24 Wash. 104, 63 Pac. Rep. 1095; Parks Canal etc. Co. v. Hoyt, 57 Cal. 44; Wheeler v. Northern Colo. Irr. Co. 10 Colo. 582, 17 Pac. Rep. 487, 3 Am. St. Rep. 603; Bear Lake etc. Co. v. Ogden City, 8 Utah 494, 33 Pac. Rep. 135; Riverside Co. v. Gage, 89 Cal. 410, 26 Pac. Rep. 889; Hesperia Land & Water Co. v. Gardner, 4 Cal. App. 357, 88 Pac. Rep. 286; Ball v. Kehl, 95 Cal. 606, 30 Pac. Rep. 780; Kidd v. Laird, 15 Cal. 161, 76 Am. Dec. 472, 4 Morr. Min. Rep. 571; Nevada etc. Co. v. Kidd, 37 Cal. 282; Green v. Carotto, 72 Cal. 267, 13 Pac. Rep. 685; Salt Lake City v. Salt Lake City etc. Co., 24 Utah 249, 67 Pac. Rep. 672, 61 L. R. A. 648; Butte Canal & D. Co. v. Vaughn, 11 Cal. 143, 70 Am. Dec. 769, 4 Morr. Min. Rep. 552; Los Angeles v. Baldwin, 53 Cal. 469; McGuire v. Brown, 106 Cal. 660, 670, 39 Pac. Rep. 1060, 30 L. R. A. 384.

[3] See for sale of water after diversion, Sec. 1032.

See, also, cases cited above.

[4] Bear Lake etc. Co. v. Ogden City, 8 Utah 494, 33 Pac. Rep. 135; Fallon v. O'Brien, 11 Q. B. D. 21.

a justice of the peace has jurisdiction.[5] Again, water collected in reservoirs or other works and reduced to actual possession may be taxed as personal property.[6] Upon every phase of the question the great weight of authority has always treated the water which is severed from the stream or other source of natural supply and taken possession of in the works constructed by an appropriator, as personal property. However, a very recent California case, against the almost unanimous authority seems loth to adhere to the rule, and held to the extent only that it may become personal property by being *severed from the land* and confined in *portable* receptacles. The Court, however, fails to cite any authorities upon the proposition and fails to make the proper distinction between the property in a water right and the water after it has been diverted into the ditch, canal, or pipes of an appropriator.[7]

As was well said by the New Mexico Court in a recent case:[8] "While water flowing in a natural stream is not the subject of private ownership any more than the fish in it, yet, when it is impounded and reduced to possession by artificial means, it becomes personal property, as the fish do when caught, or as the common, ownerless air does, when it is liquefied and held in a vessel. Water once reduced to possession and control may be the subject of purchase and sale, or of larceny; and it makes no difference in that respect whether the captured fluid is held in a skin or cask, by an itinerant water vendor, or in the pipes of a modern aqueduct company."

As a hereditament, a canal or reservoir full of water is certainly inheritable. There is a body or *corpus* to the water and it is visible and tangible. It follows, therefore, that such a body of water is a corporeal hereditament. After water has once been taken into the ditch, canal, or reservoir of the appropriator so as to be in his possession for the application to his uses it is a corporeal hereditament.[9]

# CHAPTER 42.

## RIGHTS TO WATER AS BETWEEN APPROPRIATORS.

§ 775. Scope of chapter.
§ 776. Priority of right.
§ 777. The rights of the prior appropriator.
§ 778. The date fixing the priority.
§ 779. Priority—Circumstances under which question arises.
§ 780. Prior appropriator's right to take all the water of a stream—Origin of rule.
§ 781. Prior appropriator's right to take all the water of a stream—Authorities.
§ 782. Enjoyment of the right of priority.
§ 783. The rights of subsequent or junior appropriators—In general.
§ 784. The rights of subsequent, as against those of prior appropriators.
§ 785. In any event any appropriator is limited to the quantity of water actually needed and applied to a beneficial purpose.
§ 786. Subsequent periodical appropriations.
§ 787. Tacking rights.
§ 788. Intermediate or temporary appropriations.
§ 789. Enjoyment of subsequent appropriations.
§ 790. Rotation or the use of accumulated flow of the water.
§ 791. Priority as between different uses.
§ 792. Priority—As affected by constitutional or statutory preference rights.
§ 793. Domestic purposes—Preference right for.
§ 794. Theory of granting preference rights.
§ 795. Classification of rights.
§ 796. Prorating statutes.
§ 797. Distribution of increase in volume of stream.
§ 798. Mingled waters.
§ 799. Mingled waters—Intent to recapture.
§ 800. Mingled waters—Must be no injury to other vested rights—Extent of right to recapture.
§ 801. Right to flow of water to point of prior appropriator's use.
§ 802. Right to natural flow of stream where it sinks below the surface before reaching prior appropriator's ditch.
§ 803. Right to flow of water to point of subsequent appropriator's use.

**§ 775. Scope of chapter.**—The present chapter will be devoted to a discussion of the rights acquired by appropriations of water under the Arid Region Doctrine of appropriation, as between appropriators, leaving the rights acquired as against other classes

to subsequent chapters.[1] We will also discuss in a subsequent chapter the quantity of water which may be diverted and used under any appropriation,[2] and the changes which are permitted after an appropriation has once vested.[3]

§ 776. **Priority of right.**—As we have seen in a previous portion of this work in tracing the history of the adoption of the Arid Region Doctrine of appropriation, which originated with the customs and regulations of the early miners in California, a new element was, at that time, introduced in the laws governing waters theretofore unknown either in the civil or common law upon the subject.[1] This was the element of the superior right granted to the one who was prior in time. This principle, as has been seen, has not the age of centuries, but it is comparatively a new one. It is entirely contrary to the principles of the common law of riparian rights, where priority of the use of the waters of a certain stream confers no exclusive or superior right as against any one or all the other riparian proprietors, but where the rights of all of the proprietors upon the same stream are equal or correlative.[2] Neither was the right of priority recognized under the civil law of the Romans.[3] It was also an additional principle to the use of waters under the civil law as modified by the Spanish-Mexican law, whereunder the State, ever guarding its own interests, granted the right to certain persons under certain conditions to divert the waters from the natural streams and to use the same for irrigation or other purposes under strict Government control.[4]

This element of priority, as we have said, originated with the miners of California, at a time when practically all of the lands and waters in that part were a portion of the public domain of the United States. It followed the rule adopted as to the possessory right to mining claims. The man who first set his stakes and thus

1 For rights as against Congressional grantees, see Chap. 43, Secs. 804-809.

For rights acquired against riparian owners, see Chap. 44, Secs. 810-823.

2 See Chap. 49, Secs. 874-916.

3 See Chap. 48, Secs. 856-873.

1 For the history of doctrine, see Secs. 595-626.

2 For riparian rights, see Secs. 483-497.

For irrigation as a riparian right, see Secs. 498-525.

3 See Chap. 29, Secs. 552-569.

4 For the Spanish-Mexican Law of Waters, see Secs. 570-584.

located a claim had the superior right to the same as against all later comers. So, too, with the waters of the natural streams. The man who took the first step to appropriate the water of a certain stream for the purpose of working his mining claim had the superior right to the use of the water, and later comers could only appropriate water from the same stream subject to the rights of the first. The maxim, *"Qui prior est tempore, potior est in jure,"* became the universal rule; a maxim taken from the common law governing successive grants of real property by a common owner to different persons, and meaning, he who is prior in time is stronger in right;[5] a maxim, strange as it may seem, used to overturn the principles of the common law itself upon the subject of riparian rights.

§ 777. **The rights of the prior appropriator.**—Under the Arid Region Doctrine of appropriation, as between persons who claim the right to the use of the waters of a certain stream, lake, or other source of supply, by a valid appropriation [1] and for some beneficial purpose, he who is first in time has the superior right to such use to the full extent of such appropriation, even if, at times, it takes all of the water of the stream. This rule is one of the fundamental principles of the doctrine of appropriation.[2]

"By the custom which has obtained among the miners in the Pacific States and Territories, where mining for the precious metals is had on the public lands of the United States, the first appropriator of mines, whether in placers, veins, or lodes, or waters in the streams on such lands for mining purposes, is held to have a better right than others to work the mines or use the waters. The first appropriator who subjects the property to use, or takes the necessary steps for that purpose, is regarded, except as against the Government, as the source of title in all controversies relating to the property." [3]

"He who first connected his labor with property thus situated and open to general exploration, did in natural justice acquire a

For the history of the Arid Region Doctrine of appropriation, see Secs. 595-626.

[1] For methods of appropriation, see Secs. 706-732.

[2] We deem it unnecessary to cite all of the cases deciding this point, and the following are a portion only.

[3] Mr. Justice Field, in Atchison v. Peterson, 87 U. S. 20 Wall. 507, 22 L. Ed. 414; affirming 1 Mont. 561, 1 Morr. Min. Rep. 583.

better right to its use and enjoyment than others who had not given such labor."[4]

"By the customary laws of miners in California, as we understand it, the owner of a mining claim and the owner of a water right enjoy their respective properties from the dates of their appropriation, the first in time being first in right; but where both rights can be enjoyed without interference with or material impairment of each other, the enjoyment of both is allowed."[5] This rule

use of such waters for any beneficial purpose. "Whenever, by *priority of possession*, rights to the use of water for mining, agricultural, manufacturing, or other purposes," etc., is the language of the statute; and this has been made the basic principle governing the law of the use of waters in all of the States and Territories of the arid and semi-arid West. In all of these States statutes have also been adopted to this effect;[8] and in some States this rule as to the superiority of right based upon priority is even embodied in their constitutions,[9] and in most of the States it is found in some form or other in the statutes. As was said in a recent Idaho case:[10] "The doctrine prevailed prior to statehood, and in the earliest Territorial history, that the 'first in time is the first in right,' in the diversion and use of public waters. Indeed, this is the doctrine that has prevailed throughout the States and Territories of the arid West; it is found, expressed in some form or other, in the Constitution of most of the arid States, and has been reinforced by statutes in practically all of the irrigation States." A priority right to the use of water under the law of appropriation is a property right, which is the subject of purchase or sale,[11] and its character and method of use may be changed by the appropriator, provided such change does not injure the rights of others.[12]

It is held that one who purchases a water right from a ditch or canal company that has made the appropriation of the same for the purposes of sale, rental, or distribution of the water is entitled to the priority of use as against other subsequent purchasers; and that such priority dates from the time of the *bona fide* settlement

8 See for laws of the States and Territories, Part XIV.

upon the land and the beginning of his improvements. And in a recent case,[13] it was held that a settler who actually settled upon a tract of land lying under a canal owned by such a company with a view to receiving water therefrom for agricultural purposes is entitled to a priority over one who has previously purchased a water right from such canal company, but who has failed to either settle upon the land or to improve the same. Both a prior and subsequent appropriation may be made through the same ditch or by one person or by others. In other words, a single ditch may convey water under several appropriations having separate and distinct priorities.[14]

§ 778. **The date fixing the priority.**—The date fixing the priority of an appropriator differs somewhat in the different jurisdictions, and also depends upon the circumstances of the appropriation itself. Provided, always, that reasonable diligence is used in the construction of the necessary works,[1] and the application of the water to some beneficial purpose, in those States which require no notice of appropriation, the date of the actual commencement of the work is the date fixing the priority of the appropriation. This was also the rule in those jurisdictions the statutes of which at first did not provide for a notice of appropriation, up to the time such a provision was enacted.[2] But, at the present time, the statutes of nearly every State provide for the posting of a notice of appropriation. Where this is so, and the appropriation is finally consummated with reasonable diligence thereafter,[3] the date of the priority, by the doctrine of relation, is fixed as of the date of the posting of the notice.[4] In those jurisdictions in which are to be found the more modern irrigation codes, and which follow what is known as the rule of State con-

[4] For the doctrine of relation, see Secs. 742-756.

trol, based upon the Wyoming system of laws relating to appropriation, the date of the priority is fixed by the date of the application to the proper officer, and upon which the permit is afterward issued.[5] But in all jurisdictions, a valid appropriation may be made by the actual use of the water for some beneficial purpose, and that, too, without complying with the formalities of the statute.[6] Where this is the case, the date of the priority is that of the actual use of the water. This is also the rule in cases where there was an attempt to follow the statutes, but where there was unreasonable delay in the consummation of the appropriation from the date of the posting of the notice or from the date of the commencement of the work as the case may be. The doctrine of relation in these cases does not apply.[7] These rules have been discussed in other portions of this work, and outside of their bare statement in this connection there is no need for further discussion.[8]

It is the history of the law of appropriation in every Western State and Territory, that in the early days the methods were very lax especially as to the perpetuation of the evidence of the dates of the appropriations. As a general thing, even if the law required a notice, no record of the same was required. Therefore, in many instances appropriations have been made which were in every respect valid, but the parties making them have moved away or have died, witnesses have also disappeared, and it is impossible for the successors in interest to prove the date of the priority. In cases of this nature, as was held by the Supreme Court of Montana, the trial court is justified in arbitrarily fixing an appropriate day or date. "In water right suits, testimony relating to original appropriations, some of them made many years before the controversy arises, is very often indefinite as to dates, and when this condition arises at the end of the suit the trial court, for the purpose of framing a decree specifically settling the respective rights of the parties, of necessity must often arbitrarily fix a particular day or days for appropriations of water."[9]

**§ 779. Priority—Circumstances under which question arises.**—The circumstances under which the question of priority of right

arises are many. It arises, of course, to determine the rights between all persons claiming the right to the water of a certain stream by virtue of an appropriation and all claiming that they were prior. The one being actually first in time is first in right. The question also arises to determine the extent or the amount of the water to which the one who is actually prior in time is entitled under his appropriation.[1] Then, it arises to determine the rights of the prior appropriator as against the rights of the subsequent appropriators,[2] and the intervening appropriators;[3] and, also, as to the rights between the individuals of either of these classes. Again, the question of priority is applied to determine the rights of appropriators from the same stream who divert their water through the same ditch;[4] and, also, the relative rights of the individuals of any group of this kind and the individuals of another group.[5] Then, again, where the constitutions or statutes of certain States give a preference right for certain uses, as between those using the water for the same purpose, priority of use gives the better right.[6] Then, the rule is applied where the consumers of the water receive it from a ditch or canal constructed by a company which diverts the water from the natural stream and furnishes it to the farmers, and that, too, regardless as to whether the canal company or the consumers are deemed in law to be the actual appropriators of the water.[7] Then, again, the right of priority applies to the appropriation of water where it is stored in reservoirs for future use as between the rights of the companies storing the

water.[8] And it again applies to determine the rights of those storing the water for future use as against the rights of those who appropriate the water for immediate use.[9] And it is also applied to determine the rights between appropriators from interstate streams. In this case also the priority governs the right to the use of the water.[10] The rule of priority is also applied to settle the rights to the use of water as between appropriators and riparian proprietors.[11] In all these questions, the maxim, "*qui prior est tempore, potior est in jure,*" is the rule of law upon which is determined not only the right to the use of the water but also the extent of the right.

§ 780. **Prior appropriator's right to take all the water of a stream—Origin of rule.**—If there had been water enough flowing in the natural streams or other sources of water supply in this Western country to satisfy the wants of all, the question of superiority of right based upon priority would never have arisen; in fact, the Arid Region Doctrine of appropriation would never have been adopted. However, owing to the great scarcity of water in this part of the country, compared with the amount which might be used if every one got what he wanted, or needed, the rule of priority of right is the only one which could have been adopted, and at the same time have the water do the greatest good to the greatest number. In a strictly agricultural country, it is better that one man who was first in appropriating the water of a certain stream should have a well irrigated farm from which he can raise plentiful crops than that a hundred families who have settled near the stream have barely enough water for domestic purposes. Men in this part of the country, as well as in other parts, have to eat as well as to drink in order to live. And, in certain portions of the country, if they can not secure water for irrigation sufficient to mature crops for the sustenance of themselves and families their efforts will be

8 For extent of rights acquired for storage, see Secs. 837-846; Water Supply & Storage Co. v. Larimer etc. Co., 24 Colo. 322, 51 Pac. Rep. 496, 46 L. R. A. 322; Cache La Poudre Res. Co. v. Windsor Res. Co., 25 Colo. 53, 52 Pac. Rep. 1104.

9 Colorado etc. Co. v. Larimer etc. Co., 26 Colo. 47, 56 Pac. Rep. 185, citing Kinney on Irr., 1st Ed., Secs. 230, 231, 232.

10 See Sec. 664.

11 See Secs. 810-823.

in vain. So, the rule of priority of right was adopted, in order that the few who were first might live and live well, rather than that the many should starve or eke out a miserable existence.

Owing to the topography of the country, a great many of our Western streams become nearly dry in the summer, just at the time when the water is most needed for irrigation, although in the spring they may carry a large volume of water. And, so, if a certain stream in the spring time has a flow of 500 inches; and, in the summer time the flow is reduced to 100 inches or less, and the first appropriator of the waters of the stream has legally consummated his appropriation for 250 inches, and he actually has need of this amount of water for the purpose for which he made the appropriation, and uses it at all times when he can get it, he is entitled under the law as regards all subsequent claimants to all of the water that flows in it during the period that it is equal to 250 inches or less, although he entirely shuts off the supply of the subsequent appropriators.[1] This may seem a selfish rule to one who is acquainted with only the principles of the common law upon the subject, but it is based upon the general and uniform principle applicable to all claims by appropriation to waters upon the public domain of the arid and semi-arid West that, "he who has the prior has the superior right," or, stated in other words, "first in time, first in right."[2] Under this principle, the general doctrine is settled by a long line of authorities, which will be discussed in our next section,[3] that the prior appropriator of the waters of a certain stream or other source of water supply is entitled to the exclusive use of the water up to the amount embraced in his appropriation, even if it cuts off the rights of valid subsequent appropriations, when the stream flows more than the amount claimed by the first appropriator.

As was said in a very recent California case:[4] "Undoubtedly, the plaintiff, under the evidence, as the original appropriator of the

1 See, also, next section and cases cited.

2 "An inspection of the various Acts plainly shows that the guiding star has always been to so legislate as to protect all users of water in the most useful, beneficial way, keeping in view the rule existing all over the arid region, First in time first in right." Hard v. Boise City Irr. & L. Co., 9 Idaho 589, 76 Pac. Rep. 331, 65 L. R. A. 407.

3 See Sec. 781.

4 Hufford v. Dye, —— Cal. ——, 121 Pac. Rep. 400.

water, had a paramount right to the first flow thereof to his land and in a full ditch because the best results through irrigation are attained with the ditch at that capacity, and a right to the use of all the waters at such times as was necessary for him to use them and to the extent of such previous use. But when this is conceded to him he has secured all he is entitled to."

**§ 781. Prior appropriator's right to take all the water of a stream—Authorities.**—As set forth in the preceding section, with the exception of the cases where there is a question of preference rights granted under some constitution or statute,[1] the first appropriator on a certain stream is entitled, by virtue of his prior right, to the use and enjoyment of the water to the full extent of his original appropriation, even when this includes all of the water of the stream, and this right continues so long as he applies all of the water appropriated to some beneficial use or purpose.[2] By the

1 For preference rights as affecting priority, see Secs. 791-794.

2 Edgar v. Stevenson, 70 Cal. 286, 11 Pac. Rep. 704.

Prior appropriation of all the waters of a stream, applied to irrigation purposes, gives the better right to all the tributaries and all the direct and immediate sources of supply of the stream; and when the right once vests, it must be protected. Malad Val. Irr. Co. v. Campbell, 2 Idaho 411, 18 Pac. Rep. 52.

See, also, Strickler v. Colorado Sprs., 16 Colo. 61, 26 Pac. Rep. 313, 25 Am. St. Rep. 245.

The prior appropriator of the water of a stream is entitled to the use of all of it, if necessary to irrigate his land under cultivation. Bolter v. Garrett, 44 Ore. 304, 75 Pac. Rep. 143.

The prior right to the use of waters for irrigation acquired by priority of appropriation, is absolute, regardless of whether the stream furnishes a sufficiency for all; and this even where it is sufficient for all appropriators up to the time of determining the different priorities. Hunning v. Porter, 6 Ariz. 171, 54 Pac. Rep. 584.

"Beyond question, under our laws, a party may be protected in the use of all the water he actually appropriates and uses, even if it be every drop that flows in as great a river as the Snake." Trade etc. Co. v. Fraser, 148 Fed. Rep. 587, 79 C. C. A. 37.

"Under such doctrine the first appropriator may appropriate the entire flow of a stream, if used in proper irrigation. Also, a non-riparian may appropriate and get an exclusive right to the whole water of a stream for non-riparian lands." Meng v. Coffey, 67 Neb. 500, 93 N. W. Rep. 713, 60 L. R. A. 910, 108 Am. St. Rep. 697.

"It follows that respondents' title to the waters of Antoine Creek must date from the time of their entry in 1904, at which time they were subject to the prior appropriation of the appellants, who, as the evidence shows, will probably need the entire flow in the dry season of the year. . . . It is unfortunate that the

term, "to the full extent of his original appropriation," is meant the full amount of water he is entitled to take out of the stream

flood waters of Antoine Creek can not be conserved for the use of all, but so long as our laws measure the rights of the appropriator of water by the necessities of the dry season, the first in time must be held to be the first in right. The just purpose of the trial judge to apportion the waters can not be sustained in the light of the evidence showing that there is no excess of water running to, or waste by, the appellants. . . . This cause is remanded with instructions to enter a decree fixing the amount of water actually necessary to irrigate the lands of appellants, even to the full flow of the stream in the dry season, leaving the residue, if any, subject to the riparian right of respondents." Avery v. Johnson, 59 Wash. 332, 109 Pac. Rep. 1028.

"An appropriator, subject to rights in existence at the time his appropriation is made, may take all the water he can use reasonably and without waste for a beneficial project, although it may be the lion's share, and none may be left for those who come afterwards." Caviness v. Le Grande Irr. Co., —— Ore. ——, 119 Pac. Rep. 735.

See, also, Huffner v. Sawday, 153 Cal. 86, 94 Pac. Rep. 424; Morris v. Bean, 146 Fed. Rep. 432; *Id.*, 159 Fed. Rep. 651, 86 C. C. A., 519; affirmed in 221 U. S. 485, 55 L. Ed. 821, 31 Sup. Ct. Rep. 99; Cave v. Tyler, 133 Cal. 566, 65 Pac. Rep. 1089; Humphreys etc. Co. v. Frank, 46 Colo. 524, 105 Pac. Rep. 1093; United States v. Burley, 172 Fed. Rep. 615.

But see Anderson v. Bassman, 140 Fed. Rep. 14; Cave v. Tyler, 133 Cal. 566, 65 Pac. Rep. 1089.

The Supreme Court of Nevada, at an early day, seems to have had considerable difficulty upon the question as to whether all of the water of a stream could be diverted by the prior

when his appropriation is finally entirely consummated.[3] It does not mean that his rights will be limited simply to the partial amount of his appropriation that he may have taken out while his works were in the course of construction, provided that he prosecuted their construction with all due and reasonable diligence.[4] Neither does it mean that his rights will be limited to the amount required for the land first put under cultivation.[5] But, "one is not permitted to obtain the exclusive control of an entire stream by appropriation 'unless his appropriation is made for some beneficial purpose, presently existing or contemplated.'"[6] In those jurisdictions which adhere to the common law of riparian rights, and at the same time have the law of appropriation, the above rule applies only to cases between appropriators, or the rights of appropriators as against the rights of riparian owners who have settled the lands bordering on the stream subsequent to the appropriation; it does not apply where the land through or adjoining which the stream runs was settled prior to the appropriation.[7] As we have seen,[8] a riparian owner may be an appropriator; and, as such an appropriator he does not lose his right, by being a riparian proprietor, of making an appropriation of all of the water of a stream if it is necessary to his use, and such an appropriation is made prior to the vesting of the rights of others to the waters of the stream.[9]

The appropriator can not exceed the amount of water covered by

appropriator, if it is all necessary for his use, and within the extent of his original appropriation. See Vansickle v. Haines, 7 Nev. 249, overruled in Jones v. Adams, 19 Nev. 78, 6 Pac. Rep. 442, 3 Am. St. Rep. 788; and in Reno S. & M. Co. v. Stevenson, 20 Nev. 269, 21 Pac. Rep. 317, 4 L. R. A. 60, 19 Am. St. Rep. 364. So in that State the law may be considered settled that the first appropriator is entitled to the enjoyment of the water to the full extent of his original appropriation, even when it includes all the water in the stream.

3 For the consummation of an appropriation, see Secs. 725-728.

4 For reasonable diligence, see Secs. 733-741.

5 For appropriation for future use, see Sec. 740.

6 Smith v. Duff, 39 Mont. 382, 102 Pac. Rep. 981, 133 Am. St. Rep. 587.

See, also, Toohey v. Campbell, 24 Mont. 13, 60 Pac. Rep. 396; Spokane Ranch & Water Co. v. Beatty, 37 Mont. 342, 96 Pac. Rep. 727, 97 Pac. Rep. 838.

7 For rights as between appropriators and riparian owners, see Chap. 44, Secs. 810-823.

For the Western States adhering to the common law, see Sec. 507.

8 For riparian owner as an appropriator, see Secs. 507, 621.

9 Healy v. Woodruff, 97 Cal. 464, 32 Pac. Rep. 528.

his appropriation and thus cut out the rights of others. Hence, one who has acquired the right to all of the water of a stream at its ordinary flow can not successfully claim the surplus water in the stream during times of freshets when the stream is swollen by unusually heavy rains.[10] The rule permitting the prior appropriator to take all of the water flowing in a certain stream, if his appropriation calls for that amount, is by no means a variation of the general rule upon the subject. It is, however, what might be called the most extreme illustration of the point in question. If the stream flows more than an amount sufficient to cover the claim of the first appropriator, he has also the right to an amount of water to the full extent of his appropriation before others can take any surplus. But, upon the other hand, if the stream, at times, only flows an amount sufficient for his needs or a less amount, he has the right to all of the water.[11]

From the above propositions which are supported by the cases cited in our notes it is evident that it is the well settled rule in every Western State, with the exception of the preference rights mentioned above,[12] that an appropriator, if he is prior in time to other vested rights to the use of the waters of a certain stream, can take the waters of that stream to the full extent of his original completed appropriation, and that others claiming a right to the use of the waters of the same stream subsequent to the rights acquired by the first appropriator must take subject to his rights, even if the first diverts and uses all of the water at times flowing in the stream.[13]

In summing up this subject, we have no reason to change the statement which we made in the first edition of this work, which is as follows: "From these authorities it is apparent that the rule in the arid region is settled that a prior appropriator can take the waters of a stream to the full extent of his original completed appropriation, and others claiming an appropriation in the waters subsequent to the first appropriation can not devest the first of his

rights, even if the first diverts all the water of the stream, provided he applies it all to some beneficial use or purpose." [14]

§ 782. **Enjoyment of the right of priority.**—A water right, acquired by a valid, prior appropriation gives the owner thereof an absolute, exclusive property right,[1] which the owner thereof may maintain and defend against all the world, with the exception of the United States Government where the enjoyment of the right interferes with the navigable capacity of the navigable streams of the United States,[2] and the right of the United States, as the owner of the lands bordering upon a stream, to the continued flow of its waters; so far, at least, as may be necessary for the beneficial uses of the Government property,[3] which, as we have seen, include the use of waters by Indians upon Government Indian reservations.[4] As we have seen in previous sections of this work, so long as the waters continue running in the channel of the natural streams, prior appropriators acquire no title or ownership of such waters; [5] and it is only after the water has been actually diverted and taken in to the works of the appropriator that he acquires a title to the *corpus* or very body of the water itself. However, after a valid appropriation has been made, and so long as the water is continued to be applied to some beneficial use or purpose by the appropriator, the water right remains the subject of exclusive ownership and control and is the property of the appropriator in every legal sense of the word.[6] He has an absolute right to the use of the water to the extent of his appropriation, and may maintain this right unimpaired by subsequent appropriators of the waters of the stream; [7]

[7] For rights of subsequent appropriators, see Secs. 783-786.

and the courts will protect in a proper action this right of the prior appropriator to the use of the water.[8] And subsequent appropriators can appropriate only the surplus water of the stream subject to the right of the first. He has, however, no control over the surplus water, and this may be appropriated by subsequent appropriators.[9] He has such an interest in the stream from his point of diversion to its source that he is entitled to the natural flow of the stream to the extent of his appropriation undiminished in quantity,[10] and undeteriorated in quality.[11] He has the right to change his point of diversion,[12] the means of conducting the water to the place of use,[13] the place of use,[14] and even the use of the water itself from that for which it was originally appropriated to some other, so long as the water is actually used for some beneficial purpose,[15] and so long as he does not interfere with the rights of others. He can not, however, in making these changes interfere with the rights of others or enlarge his rights to the injury of later comers by increasing the amount of water from that claimed under the original appropriation. But he can make an appropriation which will be subsequent to his original appropriation and also subsequent and subject to that of others intervening.[16] However, this appropriation must stand upon its own merits as an independent appropriation and can not be tacked on his first.[17] The prior appropriator may also sell and dispose of his water right, and his grantee will take the portion originally enjoyed by himself, and all subsequent appropriators must continue to take the water subject to the right of such

grantee, whose source of title is traced back to that of the original appropriator.

The most of the propositions referred to in this section have been or will be discussed in other sections of this work under their respective subjects. We will now discuss the rights of subsequent appropriators, after which we will discuss the general propositions which relate to the extent of rights as applicable to all.

§ 783. **The rights of subsequent or junior appropriators.—In general.**—The rights of the prior appropriator being fixed by the extent of his appropriation, as discussed in previous sections of this chapter,[1] and the quantity of water which he may lawfully claim, as discussed in another chapter,[2] others later may appropriate all of the surplus water that is left flowing in the natural stream, provided that no interference with, or injury to the rights of the prior appropriator is thereby caused. These later parties are termed under the law subsequent or junior and, sometimes, successive appropriators, and are themselves prior appropriators as regards those whose rights are still subsequent to theirs. Or, in other words, among the successive appropriators, in the order in which they make their respective appropriations, each is in the position of a prior one towards all, the inception of whose valid rights is subsequent in time to the inception of his own rights.[3]

1 See Secs. 776-782.

The taking up of the water of a certain stream for a special limited purpose is an appropriation of only so much water as is necessary for that particular purpose. The surplus may be the subject of a new appropriation, which will give to the second appropriator a paramount use to all the waters of the stream not required for the specific purpose of the first appropriator. McKinney v. Smith, 21 Cal. 374, 1 Morr. Min. Rep. 650.

See, also, Davis v. Gale, 32 Cal. 26, 91 Am. Dec. 554, 4 Morr. Min. Rep. 604; Nevada etc. Co. v. Kidd, 37 Cal. 282.

2 See Secs. 874-887.

3 For the date fixing priority, see Sec. 778.

For doctrine of relation, see Secs. 742-756.

Appropriators of the waters of a stream have priorities of rights in their chronological order of appropriation, the later appropriator being limited to the rights not interfering with those of the earlier appropriator. McCall v. Porter, 42 Ore. 49, 70 Pac. Rep. 820, 71 Pac. Rep. 976.

See, also, Williams v. Altnow, 51 Ore. 275, 95 Pac. Rep. 200; Peterson v. Payne, 43 Colo. 184, 95 Pac. Rep. 301; Head v. Hale, 38 Mont. 302, 100 Pac. Rep. 222; Hutchinson v. Watson Slough D. Co., 16 Idaho 484, 101 Pac. Rep. 1059, 133 Am. St. Rep. 125;

And each successive appropriator acquires the same rights, if there is surplus water flowing in the stream, as the one whose rights are

Rep. 334; Santa Paula Waterworks v. Peralta, 113 Cal. 38, 45 Pac. Rep. 168; Senior v. Anderson, 115 Cal. 496, 47 Pac. Rep. 454; *Id.*, 130 Cal. 290, 62 Pac. Rep. 563; Union M. & M. Co. v. Dangberg, 81 Fed. Rep. 73; Austin v. Chandler, 4 Ariz. 346, 42 Pac. Rep. 483; Smith v. Hawkins, 120 Cal. 86, 52 Pac. Rep. 139; Salina Cr. Irr. Co. v. Salina Stock Co., 7 Utah 456, 27 Pac. Rep. 578; Moe v. Harger, 10 Idaho 302, 77 Pac. Rep. 645, where it was held that, so soon as the prior appropriation and right of use is established, it is clear, as a proposition of law, that a subsequent appropriator is entitled to have sufficient of the unappropriated waters flow down to his point of diversion to supply his right, and an injunction against interference therewith is proper protective relief to be granted.

See, also, Mann v. Parker, 48 Ore. 321, 86 Pac. Rep. 598; Creek v. Bozeman etc. Co., 15 Mont. 121, 38 Pac. Rep. 459; Simmons v. Winters, 21 Ore. 35, 27 Pac. Rep. 7, 28 Am. St. Rep. 727; Manning v. Fife, 17 Utah 232, 54 Pac. Rep. 111; McCall v. Porter, 42 Ore. 49, 70 Pac. Rep. 820, 71 Pac. Rep. 976; Salt Lake City v. Salt Lake etc. Co., 24 Utah 249, 67 Pac. Rep. 672, 61 L. R. A. 648, 25 Utah 441, 71 Pac. Rep. 1069; Roeder v. Stein, 23 Nev. 92, 42 Pac. Rep. 867.

The prior appropriator of water is entitled to the use of all of it if necessary to irrigate his land under cultivation, but the surplus, after a reasonable use by him, should be distributed to the subsequent claimants in the order of their respective appropriations. Bolter v. Garrett, 44 Ore. 304, 75 Pac. Rep. 142.

See, also, Hough v. Porter, 51 Ore. 318, 95 Pac. Rep. 732, 98 Pac. Rep. 1083, 102 Pac. Rep. 728; Whited v. Cavin, 55 Ore. 98, 105 Pac. Rep.

prior to him; each taking all that is necessary for his needs, if that amount is within the extent of his appropriation, of the water in the stream after the prior rights have been satisfied. As was said in a recent Oregon case:[4] "Where several rights are acquired from the same stream, they will have priority in the order of the time of their diversion. If more water is diverted by a settler than is needed for the purpose intended, or is actually used for such need, he acquires a right only to the amount so needed and used."

From some streams there may be a large number of successive appropriations, or appropriations subsequent in time to the first. In fact, there is no limit to the operation of the doctrine, except such physical limits as arise from the size of the stream itself, and the amount of water taken by each claimant. The right of each successive appropriator is independent of the rights of the others on the stream, and one appropriator can not dictate to another as to the manner of the use of the water as long as his rights are not in any way infringed upon.[5] So, again, where the majority of the appropriators of the waters of a certain stream incorporated, and regulated the use of the water in their corporate capacity among the stockholders, still the corporation has no power to regulate the use of the water of the other appropriators of the stream who did not come into the corporation, at a meeting or proceeding in which they have no right of representation nor voice in the action taken.[6]

A prior appropriator on a stream may also acquire a right to the waters of the same stream as an appropriator subsequent in time to his first appropriation and also subsequent to the rights of others intervening. But his subsequent right will depend wholly upon the validity of the new appropriation; such an appropriation is entirely independent of his former appropriation and can not be tacked on to the same.[7] But, as affecting the right of subse-

396; Featherman v. Hennessy, 42 Mont. 535, 113 Pac. Rep. 751; Baer Bros. etc. Co. v. Wilson, 38 Colo. 101, 88 Pac. Rep. 265; Mann v. Parker, 38 Ore. 321, 68 Pac. Rep. 598; Niday v. Barker, 16 Idaho 703, 101 Pac. Rep. 254.

4 Porter v. Pettengill, 57 Ore. 247, 110 Pac. Rep. 393.

5 Fisher v. Bountiful City, 21 Utah 29, 59 Pac. Rep. 520.

6 Bartholomew v. Fayette etc. Co., 31 Utah 1, 86 Pac. Rep. 481, 120 Am. St. Rep. 912; affirmed in 31 Utah 220, 87 Pac. Rep. 707.

7 Healy v. Woodruff, 97 Cal. 464, 32 Pac. Rep. 528.

quent appropriators, as was said in a recent Oregon case:[8] "He had the right to make one appropriation and to follow it up by actual application to the useful purpose designed within a reasonable time; but that would determine his right as of that date, if, indeed, it did not exhaust his privilege under that license. At any rate, each new enterprise or material enlargement of the old one requiring additional water would call for a new appropriation," as against others who had appropriated water from the stream in the meantime.

**§ 784. The rights of subsequent as against those of prior appropriators.**—Each subsequent appropriator is entitled to have the water flow in the stream in the same manner, as far as the interference by others is concerned, and he may insist that the prior appropriators shall confine themselves strictly within the rights which the law gives them, that is, to the amount of water within the extent of their appropriation which they actually apply to some beneficial use or purpose. The rights of the prior appropriator being fixed, he can not enlarge his rights to the injury of the subsequent appropriators by increasing his demands, even if used for a beneficial purpose.[1] This principle is illustrated by the

8 Andrews v. Donnelly, —— Ore. ——, 116 Pac. Rep. 569.

1 "A subsequent appropriator has a vested right as against his senior, to insist upon the continuance of the conditions that existed at the time he made his appropriation." Handy D. Co. v. Louden Irr. C. Co., 27 Colo. 515, 62 Pac. Rep. 847, citing Kinney on Irr., 1st Ed., Secs. 175, 231, 248.

"The rights of the former being thus fixed he can not enlarge his rights to the detriment of the latter by increasing his demands, or by extending his use to other lands, even if used for a beneficial purpose." Becker v. Marble Cr. Irr. Co., 15 Utah 225, 49 Pac. Rep. 892, citing Kinney on Irr., 1st Ed., Secs. 175, 176; Union M. & M. Co. v. Dangberg, 81 Fed. Rep. 73; Lobdell v. Simpson, 2 Nev. 274, 90 Am. Dec. 537; Nevada W. Co. v. Powell, 34 Cal. 109, 91 Am. Dec. 685, 4 Morr. Min. Rep. 253; Salina Cr. Irr. Co. v. Salina S. Co., 7 Utah 456, 27 Pac. Rep. 578; Fuller v. Swan River etc. Co., 12 Colo. 12, 19 Pac. Rep. 836, 16 Morr. Min. Rep. 252; Saint v. Guerrerio, 17 Colo. 448, 30 Pac. Rep. 335, 31 Am. St. Rep. 320; Strickler v. Colorado Sprs., 16 Colo. 61, 26 Pac. Rep. 313, 25 Am. St. Rep. 245; Cache La Poudre Irr. Co. v. Larimer etc. Co., 25 Colo. 144, 53 Pac. Rep. 318, 71 Am. St. Rep. 123; affirming *Id.*, 8 Colo. App. 237, 45 Pac. Rep. 525; Church v. Stillwell, 12 Colo. App. 43, 54 Pac. Rep. 395; Junkins v. Bergin, 67 Cal. 267, 7 Pac. Rep. 684; Hague v. Nephi Irr. Co., 16 Utah 421, 52 Pac. Rep. 765, 41 L. R. A.

rule that a priority to waters for irrigation confers no right to appropriate them for storage in any greater quantity or at any other time than they can be appropriated for irrigation, as against another appropriator, whose right is subsequent to the appropriation for irrigation, but prior to that for storage.[2] Hence, it follows, that a prior appropriator for some purpose which does not consume the water, can not, as against subsequent appropriators, enlarge his claim to some use which does consume it.[3] Upon the other hand, water which has already been appropriated is subject to a subsequent appropriation above the head of the ditch of the prior appropriator, for some purpose which does not consume it, as for furnishing power, provided that the water is delivered to the prior appropriator, above the point where it is needed for use by him,

[3] For right of appropriator to change the use of water, see Secs. 869-872.

A prior appropriator of water for mill purposes only, the water to be returned to the stream when used, can not confer on another by contract or otherwise the right to use the water, as against appropriators below the mill having the right to use the water for irrigation purposes. Cache La Poudre etc. Co. v. Water Supply etc. Co., 25 Colo. 161, 53 Pac. Rep. 331, 46 L. R. A. 175, 71 Am. St. Rep. 131.

See, also, Hague v. Nephi Irr. Co., 16 Utah 421, 52 Pac. Rep. 765, 41 L. R. A., 311, 67 Am. St. Rep. 634; Featherman v. Hennessy, 43 Mont. 310, 115 Pac. Rep. 983.

whose rights must not be impaired or interfered with.[4] We have seen, in previous sections of this chapter while discussing the rights of the prior appropriator, that he who is first in time has the superior right to the use of the water, as against subsequent appropriators, even if, at times, it takes all of the water of the stream.[5] After the prior appropriator's legal claim has been supplied, the same rule applies to the rights of the subsequent appropriators in the exact order of the time of their respective appropriations. So, if the subsequent appropriators do in no way impair the rights of the first, they may take in the order of their respective appropriations an amount of water from any part of the stream, sufficient for the purpose for which they may claim it, even if they take all of the water remaining in the stream.[6] The right of the prior appropriator includes the water legally appropriated and used, within the extent of his appropriation. So long as there is enough to supply him with the quantity of water which he has been so using, he has, in the protection of this right, "no concern with the disposition of the remainder."[7] The subsequent appropriators being entitled to the surplus, a prior appropriator, who has attempted to appropriate all of the water of the stream, can not deprive them of the water by selling the surplus to others.[8] He can not give away or dispose of surplus water to the injury of subsequent appropriators, for the reason that it being surplus to his rights he has no title to the same.[9] He can not charge the subsequent appropriator for the use of the surplus water.[10] A second appropriator is entitled to protection against the acts of a third which will in any way injure his right to the enjoyment of the water appro-

priated.[11] Hence, it follows, that a senior appropriator from a main stream may require a junior from a tributary which joins such stream below the point of the intake of the former's ditch to surrender, before the senior does, his use of the water, in favor of appropriators from the main stream, still prior to both, below the point where the tributary joins the stream.[12]

There are many other propositions which we might discuss under this heading, but as they relate to the general subject as between appropriators, they will be taken up together in the latter part of this chapter.

§ 785. **In any event any appropriator is limited to the quantity of water actually needed and applied to a beneficial purpose.**—As we shall discuss in a subsequent chapter of this work, any appropriator either prior or subsequent is limited in his right to the actual quantity of the water which he applies to a beneficial use or purpose.[1] As was said in a recent Oregon case: "Where several rights are acquired from the same stream, they will have priority in the order of the time of their diversion. If more water is diverted by a settler than is needed for the purpose intended, or is actually used for such need, he acquires a right only to the amount so needed and used."[2]

§ 786. **Subsequent periodical appropriations.**—It makes no difference in the application of the doctrine of subsequent appropriations from what source the surplus or residue of the water may

11 For injuries and remedies therefor, see Chaps. 81-83.

A subsequent appropriator of water from a stream, who is required to permit a certain amount of water to flow by his head gate to supply a prior appropriator, may maintain an action against a third appropriator, or one junior to him, to abate a ditch so constructed along the stream as to withdraw water by seepage from the stream. arise. It may be constant, resulting from a prior appropriation of a portion only of the water, or it may be intermittent, resulting from a prior appropriation of all the water only a part of the time. At such times as a prior appropriator is not using the water under his appropriation for a beneficial purpose, such waters are considered and treated, under the doctrine of appropriation, as unappropriated public waters, and for such periods of time are subject to appropriation and use by others.[1] There is no difference in principle between appropriations measured by time and those measured by volume. As was said in a Colorado case: "It seems, both upon principle and authority, that one may make a prior appropriation of a certain quantity of water to be enjoyed for a designated period of time, and another person an appropriation of a like quantity from the same source during another period, and, as to the same, he is a prior appropriator himself. In other words, there is no difference in principle between an appropriation measured by quantity and an appropriation measured by time."[2] As was said by the

One may establish a right to the use of water of a stream during one part of the year, while another may at the same time acquire a perfect right to the use of the water for the remainder of the season. Gardner v. Wright, 49 Ore. 609, 91 Pac. Rep. 286; Davis v. Chamberlain, 51 Ore.

Federal Court:[3] "There is no doubt that where a party in the appropriation of water limits himself in using it to certain specific dates, subsequent appropriators may acquire vested rights to the water to be used at times not embraced in the claim of the first appropriator."[4]

In a very recent California case,[5] it was held that where the evidence showed that waters of a stream were not used by the prior appropriator for irrigation purposes except for occasional periods during the irrigation season, a subsequent appropriator could make an appropriation of the waters for use on his land at such times as the former had no use for them. The fundamental principle underlying this rule is that, under the Arid Region Doctrine of appropriation, in order that they may do the greatest good to the greatest numbers, all of the waters flowing in the natural streams or other sources of supply are for use all of the time. Hence, one person can appropriate the water in such a manner that he only diverts and uses it on certain days of the week or month, or certain hours of each day, and other appropriators who are actually subsequent in time to him may acquire a vested right to the same amount of water flowing in the stream on the other days or hours not embraced in the claim of the first. As, where the first only diverts and uses the water on Mondays, Wednesdays, and Fridays of each week, a subsequent appropriator may acquire a perfect right to use the same quantity of water on Sundays, Tuesdays, Thursdays, and Saturdays. And, again, the days may be likewise divided, as where the first uses the water only in the day-time or certain hours of the day, later parties may acquire a vested right to use the water in the night-time, or during the remaining hours of the day-time when it is not being used by the first. One of the most common divisions is by seasons. The farmers along a certain stream may successfully lay claim to all of the waters thereof during the "irrigating sea-

3 Rodgers v. Pitt, 89 Fed. Rep. 420, 129 Fed. Rep. 932.

4 See, also, Twaddle v. Winters, 29 Nev. 88, 85 Pac. Rep. 283, 89 Pac. Rep. 289; Mann v. Parker, 48 Ore. 321, 86 Pac. Rep. 598; Hough v. Porter, 51 Ore. 318, 95 Pac. Rep. 732, 98 Pac. Rep. 1083, 102 Pac. Rep. 728; Whited v. Cavin, 55 Ore. 98, 105 Pac. Rep. 396.

5 Hufford v. Dye, —— Cal. ——, 121 Pac. Rep. 400.

son." This season varies somewhat in certain parts of the country from March to November. It is synonymous with the expression "dry season of the year," which the Supreme Court of California defines as meaning that season, regardless of the time of the year, when resort to irrigation is necessary for the preservation and cultivation of the crops.[6] During the remainder of the year when the water is not needed by the farmers for the purpose of irrigation, the water may be appropriated for some other purpose, as for municipal purposes,[7] for mining,[8] for the storage of water for future use,[9] or for any other beneficial use or purpose which does not infringe upon the rights of the first appropriators. Hence, the law may be regarded as settled that if a certain portion of the water of some source of supply is appropriated only for certain periods of time by the first appropriator, others following may not only appropriate the surplus in whole or in part, but may also take the quantity of water appropriated by the first at such times as it is not used or needed by him, and when so appropriated by the second parties, their right thereto is as perfect and entitled to the same protection as that of the first appropriator to the portion claimed by him. Even in those States which recognize the right to use the water for irrigation as a riparian right, it is held that the water may be divided between the riparian owners periodically, rather than by specific quantities.[10]

This principle was well summed up in a recent Oregon case,[11] in which it is said: "We see no reason why, even in cases involving prior and subsequent appropriations of water, the courts can not

6 Daly v. Ruddell, 137 Cal. 671, 70 Pac. Rep. 784.

7 Stowell v. Johnson, 7 Utah 215, 26 Pac. Rep. 290.

8 An agriculturist might appropriate the waters of a stream for irrigation during the dry season, and a miner might appropriate them for his purposes during the remainder of the year, and so may several persons appropriate the water for use during any different periods. Smith v. O'Hara, 43 Cal. 371, 1 Morr. Min. Rep. 671.

Where plaintiffs claimed the water of a stream for mining purposes, and where the stream only flowed during the winter season, the fact that they did not use the water the entire year did not prevent their adverse use from being continuous. McDougal v. Lane, 39 Ore. 212, 64 Pac. Rep. 864.

9 See, for right to store water, Secs. 837-846.

10 Wiggins v. Muscupiabe etc. Co., 113 Cal. 182, 45 Pac. Rep. 160, 32 L. R. A. 667, 54 Am. St. Rep. 337.

For use of accumulated flow, see Secs. 790, 909, 910.

11 McCoy v. Huntley, — Ore. —, 119 Pac. Rep. 481.

require the appropriators to alternate in the use of the water. The time when water may be used recklessly or carelessly has passed in this State. With increasing settlement water has become too scarce and too precious to justify any but an economical use of it. An appropriator has only the right to use so much as his needs require at the time his needs require. And if these are satisfied by a use of the whole flow every other day, or every alternate week, he ought not to be heard to complain." And, the Court held, upon the ground that it tended toward a more economical use of the water that the parties might be required to alternate that use by a decree of the Court.[12]

§ 787. **Tacking rights.**—The right of a person to tack a water right originated by another, and to claim it either as an independent right or in connection with other rights owned by him, depends entirely upon the contractual relations between the two parties. If he can deraign his title to the right back to the original appropriation, he may then successfully claim and protect the right. This he may do by a purchase of the water right or a purchase of the land to which the water right was appurtenant.[1] But, upon the other hand, where one in the possession of land fails to connect his claim to the water with the right of the original appropriator, he can not tack the right to his other interests, and his own appropriation must be considered as the inception of all of his rights to the water. So, the right of a person claiming an appropriation of water can not be tacked to that of a mere squatter on the land, who, while he was in the actual possession of the land acquired a right in the water to irrigate it, but who had afterward abandoned it.[2] Neither can an appropriator tack his rights to the rights originally appropriated through an abandoned ditch. His right in

12 See, also, for the economic use of water and suppression of waste, Chap. 49, Secs. 874-916.

1 For the sale of water rights, see Secs. 994-1032.

2 For right of squatters to appropriate waters, see Sec. 687.

Where plaintiff failed to connect himself in interest with those who first cultivated his land and appropriated the water for the irrigation of the same, the right to tack was denied as against the rights acquired by subsequent appropriators. Chiatovich v. Davis, 17 Nev. 133, 28 Pac. Rep. 239.

See, also, Hough v. Porter, 51 Ore. 318, 95 Pac. Rep. 732, 98 Pac. Rep. 1083, 102 Pac. Rep. 728; Low v. Shaffer, 24 Ore. 239, 33 Pac. Rep. 678; Turner v. Cole, 31 Ore. 154, 49 Pac. Rep. 972; Smith v. Logan, 18 Nev. 149, 1 Pac. Rep. 678; Simpson v. Will-

such a case will depend for priority, as against other appropriators of the waters of the same stream, upon the date of his possession and appropriation, and not upon the date of the original construction of the ditch and appropriation by some person under whom he does not hold, and between whom and himself there is no privity of estate. His appropriation in such a case is a new and independent one, and must stand or fall upon its own merits.[3] As was said in a late Montana case:[4] "The mere possession by one person of a water right originated by another does not show such privity. In order to make good his claim to the right as of the date at which it was initiated, the possessor must show some contractual relation between himself and the original appropriator, or privity with him under the laws of succession. Otherwise, the initiation of the right will be fixed as of the date at which possession was taken."[5] Neither can an appropriator tack a new use of the water to an old use, where the new use requires a greater quantity of water than the old one. So, a right to store water can not be tacked to a right for direct irrigation, as against intervening reservoir rights, since the priority of water for irrigation does not carry priority for storage use.[6]

**§ 788. Intermediate or temporary appropriations.**—Between the time of the inception of the right of the prior appropriator and the time of the full consummation of his appropriation,[1] intermediate or intervening appropriators may acquire a right to the use

iams, 18 Nev. 432, 4 Pac. Rep. 1213; MacRae v. Small, 48 Ore. 139, 85 Pac. Rep. 503.

A riparian proprietor in no way connecting with a prior occupant and appropriator of water can not avail himself of such prior appropriation, but his own appropriation must be treated as the inception of his right. Union M. & M. Co. v. Dangberg, 81 Fed. Rep. 73.

[3] Utt v. Frey, 106 Cal. 392, 39 Pac. Rep. 807; McGuire v. Brown, 106 Cal. 660, 670, 39 Pac. Rep. 1060, 30 L. R. A. 384; Wood v. Etiwanda etc. Co., 122 Cal. 152, 54 Pac. Rep. 726; Tubbs v. Roberts, 40 Colo. 498, 92 Pac. Rep. 220.

[4] Kenchk v. Deegan, — Mont. —, 122 Pac. Rep. 746.

See, also, for changes in use, Secs. 869-872.

[1] For consummation of appropriation, see Secs. 725-729.

of the water by an appropriation of the same; this, however, is but a temporary right and must give way to the rights of the prior appropriator when he has completed his appropriation and is ready to use the water claimed, provided, of course, his appropriation was consummated with due diligence;[2] and, provided, further, that the prior claimant has the use of so much of the water as is necessary to preserve his works from injury while in the process of construction.[3] But, while the prior appropriator's dam, canal, or other works are in the process of construction, but he is not yet ready to actually use the water for the purpose intended, its use by other persons causing no injury to the first appropriator gives him no cause of action for relief, either equitable or legal.[4]

The same rule includes the appropriation for future use during the time in which the farmer is getting his land broken up and ready for irrigation and where he has instituted an appropriation for all of his land.[5] Again, it may be said that it is the general rule, that at any time that the water is not in actual use by the appropriators who have the legal right to its use, it may be taken from the stream and used by others for the time being, but by this means no legal right can be acquired when those who are entitled to it again claim it, unless there has been a failure upon the part

2 Nevada W. Co. v. Kidd, 37 Cal. 282; Woolman v. Garringer, 1 Mont. 535, 1 Morr. Min. Rep. 675; Kimball v. Gearhart, 12 Cal. 27, 1 Morr. Min. Rep. 615; Rincon etc. Co. v. Anaheim etc. Co. 115 Fed. Rep. 543.

Until a claimant is himself in a position to use the water of a stream, the right to the water or water right does not exist in such a sense that the mere diversion of the water by another is ground of action either to recover the water, or for damages for the diversion. Miles v. Butte etc. Co., 32 Mont. 56, 79 Pac. Rep. 549.

See, also, Bear River etc. Co. v. Boles, 24 Cal. 354; Brown v. Smith, 10 Cal. 508; Harvey v. Chilton, 11 Cal. 114; Union Water Co. v. Crary, 25 Cal. 504, 85 Am. Dec. 145, 1 Morr. Min. Rep. 196.

3 Weaver v. Conger, 10 Cal. 233, 6 Morr. Min. Rep. 203.

4 A court of equity will not restrain the diversion of water by injunction until the party complaining is in a condition to use it. While the dam and canal of the party claiming the water are in the process of construction, but are not yet in a condition to receive the water, the use of the water by the other parties is no injury, and such use affords no ground for relief, legal or equitable. Nevada etc. Co. v. Kidd, 37 Cal. 282.

Bear River etc. Co. v. Boles, 24 Cal. 354.

See, also, cases cited *supra*.

5 For appropriation for future needs, see Sec. 740.

of the legal claimants to use the water for a time sufficient to work an abandonment,[6] or the right is acquired by adverse user and prescription.[7] But it is held that as against the rights of a subsequent appropriator, regardless of the question of prescription, that non-user by the prior appropriator will work a forfeiture of the right and that the right of the subsequent appropriator will become permanent.[8]

§ 789. **Enjoyment of subsequent appropriations.**—As we have seen in the preceding sections,[1] the waters of a natural stream are subject to successive appropriations; and, so long as the subsequent appropriators do not injure or impair the rights of those prior to them, they may use such methods of appropriation[2] and such amounts of water within the legal extent of their own appropriations as they may choose to apply to some beneficial use or purpose, as though they were each the only one taking the water from the stream. There may thus be numerous and different appropriations of the waters of the same stream; the rights of each depending, as against the others, on the date or time of his appropriation. The enjoyment of each of these rights is independent in itself as far as the rights of those subsequent in time are concerned, but is dependent upon the rights of those prior to them in that they must be supplied with the water first to the full extent of their appropriations. Hence, it follows that, one who acquires rights subsequent to another can not question the prior appropriator's right to the amount of water actually diverted and used by him on the ground that such an appropriation may interfere with the rights of some one else. The validity of such an appropriation as against subsequent appropriators does not depend upon, and is not affected by, the fact that there may be still prior vested rights on the stream, either above or below.[3] Thus, if a subsequent appropriator takes the water of a certain stream for mechanical purposes, from the stream above the point of diversion of one having the primary

8 Smith v. Hawkins, 120 Cal. 86, 52 Pac. Rep. 139, 19 Morr. Min. Rep. 243.

1 See Secs. 783, 784.

2 For methods of appropriation, see Secs. 706-732.

3 McCall v. Porter, 42 Ore. 49, 70 Pac. Rep. 820, 71 Pac. Rep. 976, citing Kinney on Irr., Sec. 181.

right to the water for the purpose of irrigation, he may do so and use it to drive his mill or to generate electricity, provided he returns all of the water after its use, undeteriorated in quality, to its natural channel in the stream before it reaches the prior appropriator's point of diversion; and, further provided, that in his use of the water the rights of the prior appropriator are in no manner impaired.[4] But, upon the other hand, the diversion of the waters from a stream, by either a subsequent appropriator or a riparian proprietor the inception of whose rights are subsequent to the rights of the prior appropriator, without returning it to the channel for his use, is an unreasonable exercise of the right of a subsequent appropriation.[5] What diminution in quantity or deterioration in quality will constitute an invasion of the rights of the first appropriator by those subsequent in time to him will depend upon the special circumstances of each case. The question for determination is whether the use and enjoyment by the prior appropriator of the water to the extent of his original appropriation has been impaired by the acts of other parties.[6] So long as the prior appropriator obtains all the water of satisfactory quality[7] to the full extent of his appropriation, he has no right to interfere with or complain of the enjoyment of the rights of subsequent appropriators on the stream.[8] And, furthermore, the Court will protect the rights of the

App. 155, 30 L. R. A. 265; *Id.*, 51 Fed. Rep. 101; Salt Lake City v. Salt Lake etc. Co., 24 Utah 249, 67 Pac. Rep. 672, 25 Utah 441, 71 Pac. Rep. 1062, 61 L. R. A. 648, where the Court held that appropriated water is subject to a secondary appropriation above the head of the ditch of the prior appropriator for the purpose of

subsequent appropriator, both as against the invasion of the prior appropriator or as against that of those who are subsequent to him.[9] And, further, where there can be two uses of the *same* water under a prior and subsequent appropriation, neither one interfering with the other and both for beneficial purposes, the two appropriations will be allowed, and the prior appropriator can not complain simply because of the use by the subsequent appropriator, where there is no injury to his rights. This is the law of appropriation as well as the law of eminent domain.[10] Again, where the prior appropriator is not using the water covered by his appropriation during certain periods of time, a subsequent appropriator may store the same for future use, provided, of course, that the rights of the prior appropriator are not injured or interfered with. This subject, however, will be discussed more thoroughly in a subsequent chapter.[11] Hence, it follows that, if there has been no injury done to the rights of the prior appropriator, the results of the act of the subsequent appropriators will at most be *damnum absque injuria.* Upon the other hand, where there has been an injury done, what diminution in quantity or deterioration in quality will injuriously affect the use of the water by the prior appropriator under his rights, is a

furnishing power, the water to be delivered to the prior appropriator near the head gate of his ditch and the point where it is needed for use by him; and, further, that, so long as a prior appropriator's use of the water is neither interfered with nor abridged, he has no cause to complain, although another appropriator above him also uses the water for a beneficial purpose. question of fact to be determined under all of the circumstances of the case.[12]

§ 790. **Rotation or the use of accumulated flow of the water.**—There is another phase of the question, which is closely allied to the question of periodical appropriations, although it is somewhat different in principle, and that is what is termed the use of the accumulated flow of the waters at stated periods, or by rotation, by those who are entitled to a certain quantity of the water all of the time. These cases arise among appropriators of the waters of a certain stream, either of the same or of different rank, where they are each entitled to a certain quantity of the water of a stream all of the time; and, upon certain occasions, owing to the small amount of water flowing in the stream, find that if the water is divided according to the exact quantity to which each is entitled it would be practically worthless to all. Where this is the case there is no objection in law why they may not agree among themselves that each shall have the use of all of the water during certain stated periods of time.[1] In fact, this is one of the principal methods of division between the appropriators taking the water through the same ditch. It is also a common practice between the owners taking through different ditches from the same stream. By this means during exceedingly dry periods by "doubling up" the flow in one ditch for a time while the other is dry, and then reversing conditions, the users thereunder are enabled to maintain a stream which may be utilized to good advantage while the ditch is receiving the water, when, otherwise, if divided according to quantity, the stream would be so small that the most of it would be wasted. As was said in an Idaho case:[2] "Rotation in irrigation

1 Hewitt v. San Jacinto etc. Dist., 124 Cal. 186, 56 Pac. Rep. 893, where it was held that, where water for irrigation is worthless unless delivered in an accumulated flow, at stated periods, a general usage to so deliver it is reasonable and valid.

An arrangement as to periods of user of water, by co-tenants, affects them only, and is for their convenience. Lytle Cr. W. Co. v. Perdew, 65 Cal. 447, 4 Pac. Rep. 426.

2 Helpfrey v. Perault, 12 Idaho 451, 86 Pac. Rep. 417.

undoubtedly tends to conserve the waters of the State and to increase and enlarge their duty and service and is, consequently, a practice that deserves encouragement in so far as it may be done within legal bounds." In a Federal case,[3] the Court entered a decree applying the system of rotation, by restraining the defendants from diverting the waters in excess of five days in every ten days, during the irrigation months of June, July, August, September, and October of each year. In a recent case in Oregon,[4] the Court also applied the same rule and by decree required the appropriators to rotate in their use of the water.[5]

In another portion of this work, we will discuss the subject of rotation as a matter of economy.[6]

§ 791. **Priority as between different uses.**—In discussing the subject of the purposes for which water may be appropriated, we stated that under the doctrine of appropriation, water may be appropriated for any beneficial use or purpose.[1] Outside of the preference rights for certain uses granted by constitutional or statutory provisions in some of the States in times of scarcity, and discussed in other sections,[2] the general law of appropriation gives no preference right to any particular use to which the water may be applied over other uses. Hence, it follows that the right of priority is based upon the date of the particular appropriation regardless of the use for which the appropriation is made. In other words, as far as the acquisition of a priority of right is concerned, with the exception above mentioned, all uses stand upon equal ground. This was recognized by Congress in the Act of 1866,[3] by describing the uses of water the right to which might be acquired by priority of possession, as "mining, agricultural, manufacturing,

or other purposes." Soon thereafter the right was also recognized by the Supreme Court of the United States,[4] and was also recognized by the Supreme Court of every Western State and Territory of this Western country where the law of appropriation is in force. This subject has been discussed under other phases of the subject, hence there is no need for an extended discussion here.[5]

**§ 792. Priority—As affected by constitutional or statutory preference rights.**—Under the early law of appropriation no preferences were given to any particular use or purpose for which the water might be applied, so long as it was a beneficial one. And, as we stated in the previous section, the Federal statutes gave no preferences, but that "the right of water by prior appropriation for any beneficial purpose is entitled to protection."[1] Later on the constitutions of some of the States, and legislative enactments in others, provided for preferences for certain uses of the water in times when there was not water enough for all purposes. The use for domestic purposes was usually placed first; and after that the use for the principal industry of the particular State was placed second, and after that followed the uses for other industries. In Colorado and Idaho there are constitutional provisions. In Col-

orado it is provided: "But when the waters of any natural stream are not sufficient for the service of all those desiring the use of the same, those using the water for domestic purposes shall have the preference over those claiming for any other purpose, and those using the water for agricultural purposes shall have the preference over those using the water for manufacturing purposes."[2] And, in Idaho, under the same conditions in the constitution, it is provided that the preference rights shall be: First, domestic uses; second, mining, in mining districts; third, agriculture, and, fourth, manufacturing.[3] In other States similar statutes exist, but not in all.[4] These rules, in the States adopting them, modify the doctrine of priority of right to the extent of their provisions only in times of scarcity of the water. At other times the rule of priority governs, regardless of the use to which the water is put. It is also held that these provisions are prospective in their operation, and do not apply to water rights acquired prior to their adoption.[5] As between those using the water for the same preference right, the priority of right generally governs, although in Colorado by the Act of the legislature of 1879 an attempt was made in times of extreme scarcity to prorate the water appropriated through the same ditch, among the different users.[6] But the courts of that State, while not declaring the Act unconstitutional, have at times been loth to follow its provisions, and in

2 Const. Colo., Art. 16, Sec. 6.

See, also, for constitution and laws of Colorado, Chap. 87.

Const., Art. 16, Sec. 6, giving an appropriator of waters for irrigation priority as against appropriators for other purposes, does not affect the rights to the waters acquired prior to the adoption of the constitution. Colorado etc. v. Larimer & W. Irr. Co., 26 Colo. 47, 56 Pac. Rep. 185.

See, also, Strickler v. Colorado Springs, 16 Colo. 61, 26 Pac. Rep. 313, 25 Am. St. Rep. 245.

See, also, preference for domestic uses, Sec. 793.

3 Idaho Const., Art. 15, Sec. 3.

For constitution and laws of Idaho, see Chap. 89.

It will be noticed from the above that the second preference given under the constitution is for mining. The Supreme Court in a recent case held that this did not give the miner such a preference right that he could pollute the stream by debris, as against prior appropriators of the waters for irrigation below. Hill v. Standard M. Co., 12 Idaho 223, 85 Pac. Rep. 907.

4 For these statutes see laws of respective States, Part XIV.

5 Strickler v. Colorado Sprs., 16 Colo. 61, 26 Pac. Rep. 313, 25 Am. St. Rep. 245.

6 See Gen. Stat. Colo., 1883, Sec. 1722.

the face of the statute have held that different users of water, obtaining their supply through the same ditch, may have different priorities, even in times of scarcity.[7] These priorities are protected by the constitution of that State, and can not be interfered with by legislative action. Therefore, it is held that the most favorable view that can be taken of the statute is that in times of scarcity it may be resorted to among consumers having priorities of the same or nearly the same date.[8] California has never adopted any statute as to preference rights, but the question of priority governs as to all industries; even the question of domestic uses being left to the same rule.[9] This seems to us to be the better rule, unless it may be in times of extreme scarcity domestic uses should have the preference. And even then the use should be kept within the rule of what are known as strictly domestic uses.[10]

§ 793. **Domestic purposes—Preference right for.**—As we have seen in a previous section, that in those States, which by their constitutions or statutes, grant in times of scarcity a preference right for the use of water for certain purposes, the right of the use for domestic purposes is placed first.[1] This right granted modifies to that extent the doctrine of priority, and the courts do not permit it except in extreme cases, and confine the use within the limits as defined in the previous section,[2] that is to say for drinking

7 Farmers etc. Co. v. White, 32 Colo. 114, 75 Pac. Rep. 416, where it is said: "It therefore may be considered as *stare decisis* in this jurisdiction that there may be circumstances in which water consumers from the same ditch may not be compelled to pro-rate with each other." Citing Nichols v. McIntosh, 19 Colo. 22, 34 Pac. Rep. 278; Farmers' High Line Canal Co. v. Southworth, 13 Colo. 111, 21 Pac. Rep. 1028, 4 L. R. A. 767; Farmers' Ind. D. Co. v. Agricultural D. Co., 22 Colo. 513, 45 Pac. Rep. 444, 55 Am. St. Rep. 149; Brown v. Farmers' etc. Co., 26 Colo. 66, 56 Pac. Rep. 183.

2 See Sec. 792.

and cooking purposes and for the watering of the stock of the appropriator. Where a preference right is given without limitation to use the water for domestic purposes it has been exercised as a subterfuge to use the water for other purposes. Take, for instance, the case of Crawford Co. v. Hathaway (Hall),[3] where a company claimed a right, under a statute granting a preference right for domestic purposes,[4] to divert the greater portion of a stream to furnish water to a municipality for general purposes, including sprinkling streets, furnishing power for a lighting plant and for flushing sewers. The Court, in holding that this could not be done under the preference right given by the statute, said: "If all the water of a stream may be diverted by a canal for so-called domestic purposes involving identical use for power, the priority given agricultural uses is rendered nugatory." The same rule has also been followed in other jurisdictions. In Colorado it was found necessary to enact a law supplementary to the constitutional provision, permitting the use of water for domestic purposes as first in times of scarcity, making it a misdemeanor where water is claimed under the constitutional provision for domestic purposes and is used for irrigation to any extent whatever.[5]

As a general thing statutory preference rights have not given satisfaction throughout the Western States where they have been enacted. It tends to modify the Arid Region Doctrine of appropriation based upon priority. They should never be allowed as against a prior right for any purpose without compensation, even for domestic purposes, and then that use should be kept within the limits of "domestic purposes" as defined in our previous section.[6]

See, also, Montrose Canal Co. v. Loutzenheizer, 23 Colo. 233, 48 Pac. Rep. 532; Broadmoor etc. Co. v. Brookside etc. Co., 24 Colo. 541, 52 Pac. Rep. 792; Strickler v. Colorado Springs, 16 Colo. 61, 26 Pac. Rep. 313, 25 Am. St. Rep. 245, where the Court held that even for domestic purposes, the rights acquired to the use of water for irrigation, prior to the adoption of the constitution, could not be taken by a city, without compensation. Armstrong v. Larimer County D. Co., 1 Colo. App. 49, 27 Pac. Rep. 235; Town of Sterling v. Pawnee D. Ex. Co., 42 Colo. 421, 94 Pac. Rep. 339, 15 L. R. A., N. S., 238; Fulton Irr. D. Co. v. Meadow Island Irr. Co., 35 Colo. 588, 86 Pac. Rep. 748; Colorado etc. Co. v. Larimer etc. Co., 26 Colo. 47, 56 Pac. Rep. 185.

[6] See Sec. 792.

Domestic uses under this preference right are held to be similar to the common law right of each individual riparian proprietor to domestic use on his land, that is to say, for household purposes and for the watering of stock.[7] It is, therefore, held that any claim to the waters under such preference right for any extension or further use than the above will not be sustained. Therefore, it is held that the preference right given by the statute does not include the right of a municipality to take waters from prior appropriators for municipal purposes without condemnation and payment for such rights.[8] As was said in a recent case:[9] "It clearly was the intention of the framers of the constitution to provide that water previously appropriated for manufacturing purposes may be taken and appropriated for domestic use, upon due and fair compensation therefor. It certainly could not have been the intention of the framers of the constitution to provide that water appropriated for manufacturing purposes could thereafter arbitrarily and without compensation be appropriated for domestic purposes. This would manifestly be unjust, and clearly in contravention of the provisions of this section, which declare that the right to divert and appropriate the unappropriated waters of any natural stream for beneficial use shall never be denied, and that priority of appropriation shall give the better right."

§ 794. **Theory of granting preference rights.**—The theory under which preference rights are granted by the provisions of the constitutions or statutes of some of the States, outside of the right for domestic purposes, is to assist in protecting some favored industry in which the State is particularly interested. With the rapid growth of all industries in all of the Western States, there is no telling which one will predominate over the others in a few years. And where such a law is enacted in a certain State to protect a certain industry at the time of its passage, and, especially where such a provision is in the constitution, with the change of the situation, the progress of the State may be greatly impeded. Take,

7 For domestic use by riparian proprietors, see Secs. 486-488.

8 See cases cited *supra*.

See, also, Crawford County v. Hathaway, 67 Neb. 325, 93 N. W. Rep. 781, 60 L. R. A. 889, 108 Am. St. Rep. 647.

9 Montpelier M. Co. v. City of Montpelier, 19 Ida. 212, 113 Pac. Rep. 741.

for example, the State of Idaho. At the time of the adoption of its constitution the mining industry of the State was predominant. But during recent years, since the great Snake River valleys have been settled, due to the great irrigation enterprises along the river and its tributaries, the agricultural interests are ahead, and it looks now as though they were bound to stay ahead, and it will not be many years before it will be found that the provisions of the constitution will greatly hamper these interests, when it could have been avoided by permitting the priority rule to govern. Then, again, there is the great question of the use of water for the development of power in the Western States. This is becoming a most important industry. In the lists of preferences in those States which have them, this would come under the classification of manufacturing purposes and is usually placed at the last. This also may greatly hamper the progress of the State where this rule is in force. With mountains of coal, iron, and other materials at hand, which go to make up a manufacturing country, the question here has always been the want of cheap fuel and power. Fuel and power have always been higher here than in the East. Both of these, owing to the inventions along electrical lines during recent years, may be furnished by the water rushing down the mountain streams found everywhere in this Western country. If the Western States are to compete with the East in manufacturing, the question of the development of power must be given at least an equal chance with the other industries requiring the use of water. In many instances, however, we will state that the water may be used for power several times over before it is consumed by other industries.[1]

In Idaho the second preference use is given to mining, but the Court has held that this right did not permit miners to pollute the stream, to the injury of the farmers below.[2] But, upon the other hand, in Colorado the second preference right is given for the purpose of irrigation.[3] In California after the first preference right for domestic use, the right to the use of water was given at first

1 For the appropriation of water for power, see Secs. 695, 847-855.

2 For pollution of waters, see Chap. 58, Secs. 1129-1147.

See, also, McCarthy v. Bunker Hill etc. Co., 164 Fed. Rep. 927, 92 C. C. A. 259; Hill v. Standard etc. Co., 12 Idaho 223, 85 Pac. Rep. 907.

3 Colorado etc. Co. v. Larimer etc. Co., 26 Colo. 47, 56 Pac. Rep. 185; Humphreys etc. Co. v. Frank, 46 Colo. 524, 105 Pac. Rep. 1093.

to mining and afterward to agricultural uses.[4] Later all preferences were abolished and the right to the use of water was given to any beneficial purpose, which was first in time to the full extent of such appropriation.

§ 795. **Classification of rights.**—The Idaho statute provides that any ditch or canal company shall classify the rights as between the various consumers, whom such company furnish with water. The statute upon the subject reads as follows:[1] "When any ditch, canal, or reservoir delivering or distributing water to several users, has one or more rights or priorities by reason of enlargements made from time to time, the rights of the land being irrigated by such works shall be divided into classes; rights of the first class belonging to those lands reclaimed between the dates of the first and second priorities or rights of such works; rights of the second class belonging to those lands reclaimed between the dates of the second and third priorities of such works; rights of any other class being determined in like manner; but all rights belonging to the same class shall be equal and subject alike to the regulations of their respective classes."

In a recent Idaho case,[2] decided by the Supreme Court of that State, in construing the above statute, the Court said: "The statute is merely administrative, and is the declaration of a policy in the administration of the distribution of water by irrigation companies which the legislature deems proper and just, and which is to be followed by the canal company in the absence of a judgment of a court of competent jurisdiction directing such matters." And the Court further held that the statute did not require any impossibility but it was intended that the owner of a ditch shall make a classification upon such information as he may be able to obtain in fairness and in accordance with the terms of the statute. The object of the statute as explained by the Court was, no doubt, in contemplation of the possibility that owners of irrigation systems might possibly make water contracts in excess of the capacity of the system, and that a shortage might thereby be created in the supply to the consumers under the system and because of that fact the legislature

[4] See Sec. 606.

[1] Rev. Codes of Idaho 1908, Sec. 3287.

[2] Brose v. Board of Directors of Nampa etc. Co. Irr. Dist., 20 Idaho 281, 118 Pac. Rep. 504.

thought it best to require the owners of all water systems to make a classification according to the rights acquired upon the reclamation of lands between the dates of the priorities named in the statute; and by making such a classification a record would thereby be made by the distributors of water which would be a reminder of the limit in capacity of the irrigation system and irrigation companies would be less liable to make contracts in excess of the capacity of the system.

**§ 796. Prorating statutes.**—There is another statute found in some of the States which interferes with the priority rights as between the respective appropriators, and that is the prorating statute. This statute applies only in times of extreme scarcity of water, and is a beneficial law enacted for the purpose of saving crops of the farmers which otherwise would perish without the application of some water.[1] This subject we will discuss in different portions of this work, and no further mention of the same need be made here.[2]

**§ 797. Distribution of increase in volume of stream.**—There is another important question which arises as to the relations between the prior and subsequent appropriators who claim the waters of a certain stream by the successive appropriations thereof, and that is the disposition of the increase of the water flowing in the stream by natural or artificial means after the respective appropriations have been made. This subject does not relate to the subject of developed water where there is an intent and a right to reclaim it by the party who does the developing. This subject will be treated under the subject of subterranean waters in a subsequent portion of this work and also under the subject of mingled waters in the following section.[1] It does, however, relate to waters which may have been developed as an incident to some other business, as, for instance, mining, and where there is a resultant increase in the flow of a stream, without any intention upon

1 For the pro-rating statutes of the respective States, see Part XIV.

2 See rights of corporations to prorate the water, Chap. 76.

For contracts to pro-rate water, see Sec. 923.

1 For developed waters, see Secs. 1205, 1206.

For the extent of rights to recapture mingled waters, See Secs. 798-800.

the part of the miner of recapturing it, or for using it for any beneficial purpose, after it leaves his control. It also relates to all natural increase of the flow of a stream from any cause. And the question before us is to whom does this increase belong? The authorities upon the subject hold that if several parties have acquired successive rights to the use of the waters of a certain stream and the volume of the flow is afterward increased from natural causes, the increased flow belongs to the several appropriators respectively, according to their priority of right, and within the limits of their respective rights. That is to say, if the first appropriator is fully supplied at all times when he needs the water to the full extent of his appropriation, he can take none of the increase. If the next subsequent to him is also fully supplied, the same result follows, and so on, until the right reaches a subsequent appropriator who is at times short of obtaining the full amount to the extent of his claim. This one may take from the increased flow sufficient water up to the full quantity lawfully claimed by him, and the surplus, if any, of the increased flow passes on to the next subsequent appropriator and so on.[2] The same rule also applies where the increase in the flow of a stream is due to artificial means, as where water from an artificial source is turned into the stream without any intention of recapturing it; also, to waste water which seeps or finds its way on the surface to augment the flow of the stream. There is no difference in principle between waste water thus added to a natural stream and water which, by natural law, so finds its way

2 Davis v. Gale, 32 Cal. 26, 91 Am. Dec. 554, 4 Morr. Min. Rep. 604; Churchill v. Rose, 136 Cal. 576, 69 Pac. Rep. 416; Drew v. Hicks, 35 Pac. Rep. 563, 101 Cal. 17.

The prior appropriator of a particular quantity of water of a stream is entitled to the use of that water or so much thereof as naturally flowed into the stream unimpaired or unaffected by subsequent changes therein by springs and seepage water finding their way into a tributary of the stream in the course of Nature unaffected by artificial works constructed by a subsequent appropriator. Beaverhead C. Co. v. Dillon etc. Co., 34 Mont. 135, 85 Pac. Rep. 880; Raymond v. Wimsette, 12 Mont. 551, 31 Pac. Rep. 537, 33 Am. St. Rep. 604; Glassell v. Verdugo, 108 Cal. 503, 41 Pac. Rep. 403.

Only the actual increase resulting from the addition of water to a natural stream, which would not otherwise pass down either its surface or subterranean channel, can be diverted as against those entitled to its natural flow. Buckers etc. Co. v. Farmers' Ind. D. Co., 31 Colo. 62, 72 Pac. Rep. 49.

into such channel by percolation, surface, or subterranean flow.[3] So, also, where by the removal of obstructions which formerly held back the waters of a stream which strictly belonged to it its flow was increased, this increased flow belongs to the appropriators on the stream in the order of their priorities.[4] So, again, where the natural channels of the stream are combined in order to avoid seepage, a subsequent appropriator can not take any of the water of the stream on the theory that he is only taking what would be lost by seepage.[5]

It will be noticed that there is nothing new in principle in the rule as stated above, but the water from an increase in the flow of a stream under these conditions belongs to those who are prior in time and in the order of their priorities, and who have not theretofore been able to obtain the full quantity of water which might be legally claimed under their respective appropriations.

§ 798. **Mingled waters.**—Where, by artificial means, the waters from a different source of supply than that of a natural stream are turned into the channel of the stream, there necessarily follows a commingling of the waters from the two sources. Therefore, where the right to the use of the water from the two sources is in different ownership, there is a commingling of property belonging to the different owners. This commingling of property may also result where the water is from the same stream. As, for example, where a portion of the water of a stream is diverted for some use by an appropriator above, and, after such use, it is again turned into the stream for the object of using the stream as a portion of the ditch or canal of the appropriator in conducting the water to a point lower down the stream and there to be again diverted or recaptured and used by the owner. Again, the mingling of water

[5] Howcroft v. Union & Jordan Irr. Co., 25 Utah 311, 71 Pac. Rep. 487; Platte Val. Irr. Co. v Buckers etc. Co., 25 Colo. 77, 53 Pac. Rep. 334.

may result from what are known as developed waters being turned into the natural channel of a stream and there mingling with the waters flowing therein. No matter what the source from which the water comes, causing the mingling of the waters, in the following sections we will discuss the question of the rights between the various appropriators of the waters of a stream as to these mingled waters, or waters which are purposely turned into a stream for the express purpose of using the channel of the stream as a portion of the ditch or canal of the appropriator and with the intent of recapturing it at some point lower down the stream for use at that point.[1]

As we shall see in the following two sections, the courts have often been called upon to settle this question of the rights to mingled waters as between the various parties interested. But as was held in one of the earliest and one of the latest California cases, the difficulty which the trial court experiences in cases of this nature in arriving at the facts is not an unusual one, but it is one which, nevertheless, must be met. It is the duty of the trial court, with the evidence before it, to determine the question with such exactness as may be possible. The Court said: "There may be some difficulty in cases like the present, in determining with exactness the quantity which parties are entitled to divert. Similar difficulty exists in the case of a mixture of wheat and corn. The quantity to be taken by each owner must be a matter of evidence. The courts do not, however, refuse the consideration of such subjects because of the complicated and embarrassing character of the questions to which they give rise. If exact justice can not be obtained, an appropriation to it must be sought, care being taken that no injury is done to the innocent party."[2]

§ 799. **Mingled waters—Intent to recapture.**—Assuming that a certain amount of water is added to the natural flow of a stream by artificial means, the right to recapture the same at a point lower down depends largely upon two facts: First, the right to the water as acquired by the appropriation of the same in the first instance for some beneficial purpose; and, second, at the time the water is

1 For developed water, and the right thereto, see Secs. 1205, 1206.

2 Pomona etc. Co. v. San Antonio W. Co., 152 Cal. 618, 93 Pac. Rep. 881, quoting Butte etc. Co. v. Vaughn, 11 Cal. 143, 70 Am. Dec. 769.

discharged into the stream, there must be clearly evidenced the intent to recapture it. The acquisition of the right to the water in the first instance does not differ in any respect from the right acquired to other waters by appropriation, and has been fully treated under the rules for the appropriation of water under the Arid Region Doctrine.[1]

As to the second proposition stated above, the clear intent to recapture must be present at the time the water is turned into the stream. For, without this intent to recapture the increase due to the artificial discharge into the stream will be treated as abandoned by the one discharging the same,[2] and will go to those appropriators of the stream, in the order of their priorities, as is the case of any natural increase in the flow of the waters of the stream, the rule governing which has been treated in another section of this chapter.[3] In fact, the rule governing the right of recapture is just the converse of the rule governing discharged waste into a stream.[4] In this case there must be the intent to recapture; and, in the latter case, the water is turned into the stream without any intent to recapture.[5] As was held by the Supreme Court of Nevada in making this distinction, in the former case the water was turned into the stream for the purpose of diverting a like quantity at a point further down—this was the end to be accomplished; while in the latter case the water is discharged into the stream as a matter of convenience and without any intention of recapturing it.[6]

[1] How water is appropriated, see Secs. 706-732.

Where claimants of the right to recapture water whose point of diversion was upwards of 30 miles below the point of inflow from a tunnel, and who had neither expended money nor labor in driving the tunnel, nor had purchased any rights from the persons who had driven it, it was held that they were not entitled to segregate from the stream a volume of water equal to that flowing from the tunnel, and assert an exclusive right thereto as against others diverting waters from the stream, even if it appears that the water from the tunnel causes an actual increase to its natural volume, but that the water from the tunnel finding its way to the stream had become a part thereof, and inured to the benefit of all taking water therefrom. Farmers' etc. Co. v. Rio Grande C. Co., 37 Colo. 512, 86 Pac. Rep. 1042.

For the right to mingle waters in the ditches and canals of others, see Sec. 800.

[4] See Sec. 661.

[5] See abandonment, Secs. 1099-1117.

[6] Schultz v. Sweeney, 19 Nev. 359, 11 Pac. Rep. 253, 3 Am. St. Rep. 888.

And hence it follows that, where water is discharged into a natural stream that there must at that time be an intention upon the part of the owner to reclaim it, otherwise it becomes a part of the volume of the stream and inures to the benefit of the appropriators of its waters, in the order of their respective appropriations, and the original owner will be held to have abandoned all further rights to the use of such water.[7] But, upon the other hand, where there is a certain amount of water added to the flow of a stream by artificial means and where there is, at the time of the discharge of the water into the channel of the stream, an actual and *bona fide* intention upon the part of the owner thereof to redivert or recapture the water, to use the term used frequently by the courts, but to use a better term, to divert an amount of water equal to the amount turned into the stream, less seepage and evaporation, at some point lower down the stream, at the same time coupled with a beneficial use at that point to which the water can be applied by the owner, and where the rights of others are not injured thereby, there can be no doubt but that it is one of the settled principles of the law of appropriation that this may be done.[8] In other words, where

See, also, Farmers' etc. Co. v. Rio Grande etc. Co., 37 Colo. 512, 86 Pac. Rep. 1042; Wilcox v. Hausch, 64 Cal. 461, 3 Pac. Rep. 108.

"There is no difference in principle between waste water added to a natural stream and water which, by natural law, so finds its way into such a channel by percolation, surface, or subterranean flow." La Jara etc. Assn. v. Hansen, 35 Colo. 105, 83 Pac. Rep. 644.

waters of a stream flowing in one watershed may be conducted to a stream flowing in another and rediverted for the irrigation of lands in that locality.[10]

**§ 800. Mingled waters—Must be no injury to other vested rights—Extent of right to recapture.**—Where waters are purposely turned into a stream, with the intent to recapture them at a point lower down, there is one fundamental rule which must be observed, and that is that the rights of others to the use of the waters naturally flowing in the stream must not be interfered with or impaired. The quantity of water to which they are entitled is fixed by their respective priorities and the extent of their appropriations.[1] And, although the rule is that, where it is possible, an appropriator has the right to use the channel of a stream as a part of his ditch system, it must be done with reference to the vested rights of others, who have appropriated the waters of the stream.[2] In the recapture of the water he is entitled only to such a quantity as he can clearly show that he may recapture without the impairment of the rights of others. As was said in an early California case by Mr. Justice Field, rendering the opinion: "The rights of the parties, after such mingling, are not unlike the rights of the owners of goods of equal value after their mixture—both are entitled to take their given quantity."[3] Where, however, it is clearly

10 For change of water from one watershed to another, see Sec. 866.

See, also, Miller v. Wheeler, 54 Wash. 429, 103 Pac. Rep. 641, 23 L. R. A., N. S., 1065.

1 For quantity of water an appropriator is entitled to, see Secs. 877-887.

2 For the use of a stream as part of ditch, see Secs. 719, 720.

For the right to mingle waters in the ditches and canals of others, see Sec. 683.

3 Butte Canal Co. v. Vaughn, 11 Cal. 143, 70 Am. Dec. 769, 4 Morr. Min. Rep. 552.

See, also, Miller v. Wheeler, 54 Wash. 429, 103 Pac. Rep. 641, 23 L. R. A., N. S. 1065, where it was held that persons who use a stream, the waters of which have been appropriated, as a conduit for other waters can take out only what they put in, after making allowance for natural waste and evaporation and for cutting off or drying up any original tributaries of the stream.

See, also, Smith v. Duff, 39 Mont. 382, 102 Pac. Rep. 981, 133 Am. St. Rep. 587; Evans v. Prosser etc. Co., 62 Wash. 178, 113 Pac. Rep. 271; Mayberry v. Alhambra etc. Co., 125 Cal. 444, 54 Pac. Rep. 530, 58 Pac. Rep. 68; Buckers etc. Co. v. Farmers' etc. Co., 31 Colo. 62, 72 Pac. Rep. 49; Farmers' Union etc. Co. v. Rio Grande etc. Co., 37 Colo. 512, 86 Pac. Rep. 1042; Mentone etc. Co. v. Redlands

shown that the water turned into the stream by artificial means actually increases the flow of water therein over and above the natural flow of the stream, the one turning the water into the stream is entitled to be protected from interference in the enjoyment of it, provided that his appropriation of it is valid in other respects.[4] As was said in a California case, the right to the artificial increment is quite distinct from the title to the natural flow, and the owner thereof may reclaim it from the channel."[5] The same principle is applied to the rights of riparian owners in those States which have both the common law of riparian rights and the doctrine of appropriation. The riparian owner is under no circumstances entitled to have more water flow down to his lands than the natural flow of the stream. If he receives this his rights are satisfied. Hence, it follows that water may be added to the flow of the stream and an equal quantity taken out before it reaches the land of the riparian owner as long as the natural flow of the stream is not impaired in quantity or quality.[6]

The burden of proof, where waters are thus mingled with the natural waters of a stream which have been fully appropriated, is upon the party mingling the waters, to show that he does not take out more water than he is entitled to after allowing for seepage and evaporation. He must show clearly to what portion he is entitled. He can only claim and redivert such a portion of the water as is established by decisive proof that he has a prior right to the use of by reason of his turning it into the stream.[7] The en-

etc. Co., 155 Cal. 323, 100 Pac. Rep. 1082, 22 L. R. A., N. S., 382, 17 Am. & Eng. Ann. Cas. 1222; Ripley v. Park, 40 Colo. 129, 90 Pac. Rep. 75.

Rocky Ford etc. Co., 83 Cal. 84, 21 Pac. Rep. 1102, 23 Pac. Rep. 875, where it is held that the right to such waters was held by an entirely different claim than that to the natural flow of the stream.

See, also, Hoffman v. Stone, 7 Cal. 46; Parks Canal Co. v. Hoyt, 57 Cal. 44.

[6] Wiggins v. Muscupiabe etc. Co., 113 Cal. 182, 45 Pac. Rep. 160, 32 L. R. A. 667, 54 Am. St. Rep. 337; Elliott v. Fitchburg Railway Co., 10 Cush. 191, 57 Am. Dec. 85; Fox etc. Co. v. Kelly, 70 Wis. 298, 35 N. W. Rep. 744.

[7] Where one turns water developed from his land into a natural stream, and takes it out lower down the stream, the burden is on him to show that he does not take out more than he is entitled to after allowing for seepage and evaporation. Herriman Irr.

forcement of his right must leave the opposite party in the full use of the quantity to which he was originally entitled, and a party conducting water in this manner to a point lower down the stream can not there recapture more water than he turns into the stream above; and, after allowance for seepage and evaporation, not as much.

§ 801. **Right to flow of water to point of prior appropriator's use.**—Although, as we have seen in previous sections, the appropriator has no property in the *corpus* or very body of the water while it is still flowing in the natural stream above the head of his ditch or canal,[1] yet, by virtue of his prior appropriation, he acquires a most important legal and equitable property right in and to such water and the right to have the same flow down, either to his point of diversion, as it flowed at the time of the inception of his appropriation, or, at least, in lieu thereof, to have the full amount of water and of the same quality to which he is entitled, delivered to him by some artificial means at a point above his place of use. In regard to the latter method, owing to the multiplication of uses to which the same water can be put without interfering with the rights of others, and in order that the greatest good shall accrue to the greatest number, we can see no legal objection, so long as the rights of the prior appropriator are in no way infringed upon to his material injury, and he receives the full amount of water that his appropriation calls for and at a point where he can use it to the same advantage as though it was left flowing in the natural stream to the intake of his ditch. In the matter of the right to have the water flow in the natural stream to his point of diversion, and in cases where the question of artificial delivery was not involved, it has been repeatedly held that the right of the prior appropriator to have the water continue to flow in its usual manner

Co. v. Keel, 25 Utah 96, 69 Pac. Rep. 719; Herriman etc. Co. v. Butterfield M. Co., 19 Utah 453, 57 Pac. Rep. 537, 51 L. R. A. 930; Miller v. Wheeler, 54 Wash. 429, 103 Pac. Rep. 641, 23 L. R. A., N. S., 1065; Burnett v. Whitesides, 15 Cal. 35; Wilcox v. Hausch, 64 Cal. 461, 3 Pac. Rep. 108; Buckers etc. Co. v. Farmers' etc. Co., 31 Colo. 62, 72 Pac. Rep. 49; Hoffman v. Stone, 7 Cal. 46; Butte Canal Co. v. Vaughn, 11 Cal. 143, 70 Am. Dec. 769, 4 Morr. Min. Rep. 552; Davis v. Gale, 32 Cal. 26, 91 Am. Dec. 554, 4 Morr. Min. Rep. 604; Ellis v. Tone, 58 Cal. 289; Schultz v. Sweeney, 19 Nev. 359, 11 Pac. Rep. 253, 3 Am. St. Rep. 888.

[1] See Sec. 772.

through its natural channel to the full extent of his appropriation down to the head of his ditch, without diversion or interruption by others claiming subsequent to him, is an incorporeal hereditament appurtenant to the ditch and co-extensive with the appropriator's right to the ditch itself.[2] Of course this is upon the assumption that the appropriation through the ditch is a valid one, as a ditch might exist for which no water could be legally claimed. But the prior appropriator of the waters of a certain stream has the right to insist that the water continue to flow as it did when he first made the appropriation, as far as the interference by other subsequent appropriators is concerned. "The appropriator took the water with the right to have the stream flow as it was wont to flow" is the language of the law under the Arid Region Doctrine of appropriation,[3] which is as strict a rule as that of the common law of riparian rights, *aqua currit et debet currere ut currere solebat.*[4] He has also the right to insist on this flow and that no change be made in it by later comers to his material injury.[5] And in this connection

the authorities also hold that a mere temporary irregularity in the flow of the water of the stream, such as does not cause actual injury to the prior appropriator, will not be actionable.[6] The gist of the question is, Are the rights of the prior appropriator injured to any material extent? If not, then other seeming irregularities are allowed by the law. For instance, the water need not be delivered to him in the channel of the natural stream, but may be delivered in his ditch or canal above the place of his use, and the prior appropriator can not complain if his rights are not injured and he receives his full quantity of water at that point.[7] But, upon the other hand, if a positive and material injury is caused, by the actions of subsequent appropriators, an action will lie, not only to

See, also, Austin v. Chandler, 4 Ariz. 346, 42 Pac. Rep. 483.

Where one is entitled to use a given amount of water at a given point, he may not complain of any prior use made of the water not impairing the quantity or quality to which he is entitled, and he may not claim any excess of water over the amount to which he is entitled, however it may be produced. Pomona etc. Co. v. San Antonio W. Co., 152 Cal. 618, 93 Pac. Rep. 881.

"The plaintiff could under no circumstances be entitled to the use of more water than would reach his land by natural flow of the stream, and, if he receives this flow upon his land, it is immaterial to him whether it is received by means of the natural course of the stream, or by artificial means." Wiggins v. Muscupiabe etc. Co., 113 Cal. 182, 45 Pac. Rep. 160, 32 L. R. A. 667, 54 Am. St. Rep. 337; Pomona W. Co. v. San Antonio W. Co., 152 Cal. 618, 93 Pac. Rep. 881; Fuller v. Bay City Water Co., 157 Cal. 256, 107 Pac. Rep. 115, 27 L. R. A., N. S., 772.

"So long as they were being conveniently supplied with the water to which they were entitled, they had no right to demand that it should come from one or another source of supply." Smith v. Cucamonga Water Co., 160 Cal. 611, 117 Pac. Rep. 764.

recover damages, but also to enjoin the future commission of the wrong. The first appropriator of the waters of a stream has the right to insist that the water shall be subject to his use and enjoyment to the full extent of his original appropriation.[8] It is well settled in this arid region by abundant authority that when the waters of a natural stream have been appropriated according to law, and put to a beneficial use, the rights thus acquired carry with them an interest in the stream from the points where the waters are diverted from the natural channel to the source from which the supply is obtained, and any interference with the stream by a party either having no interest therein, or an interest subsequent in time to the right of the prior appropriator, that materially deteriorates the water previously appropriated in quantity or quality, to the injury of the rights of those entitled to its use, is unlawful and actionable.

An appropriator of the waters of a stream can not claim the waters which are turned into the same by artificial means by others with the intent to recapture them or an equivalent amount below. He has no rights in such artificial flow, but in the recapture of the same his own rights must not be infringed upon.[9]

§ 802. **Right to natural flow of stream where it sinks below the surface before reaching prior appropriator's ditch.**—It is a matter of common knowledge that, in the arid region, in many of the streams the water flowing on the surface, at times, sinks from sight and flows slowly through the rocks, gravel, and sand which form the bed of the stream. In some cases the surface flow, during the dry season, disappears entirely for considerable distance, but it usually reappears lower down and again flows on the surface. This process may be repeated several times during the course of the entire stream. Where these physical conditions are present, it will be presumed at law, until the contrary is proven, that water once flowing on the surface in a natural channel of a stream, and there disappearing in the sands of the bed by percolation and seepage, finds its way down the stream and augments the surface flow in the

[8] For priority of right, see Secs. 776-785.

[9] For recapture, see Secs. 799, 800. For the use of a stream as a part of a ditch system, see Secs. 718-720, 832.

For developed water, see Secs. 1204, 1206.

stream below.[1] It is not our intention to discuss here the rights in the "underground" or "subsurface" flow of streams as such,[2] except so far as those waters relate to the surface flow of the streams by reappearing again on the surface. The question here, then, is what right, if any, has a party to appropriate the waters of such a stream while they are flowing on the surface, upon the assumption that they will be lost anyway, unless so appropriated, by sinking in the ground before they reach the point of diversion of a prior appropriator below, who is short in his water supply under a legal claim? This can not be done, unless the party attempting to make the appropriation can show that if the water continued to run in its natural course it would not have reached the intake of the prior appropriator's ditch in any event, but would have been wasted; and the burden of proof is on the party diverting such water to establish by legal evidence that it would not have augmented the flow of the stream below had it not have been diverted by him.[3] As was said in a Colorado case: "Where a senior seeks to enjoin a junior appropriator of water from diverting the same to the injury of the former, and the junior appropriator seeks to avoid the same upon the ground that if the use which he threatens to make of it is restrained the owner of the senior right will derive no benefit, such a defense ought to be established by clear and satisfactory evidence. The infringement of a prior by the owner of a junior right constitutes a legal injury, and, before the junior can justify his acts of interference with the prior right upon the ground stated, a strong showing should be made."[4] Where there was evidence in an action to enjoin a diversion of water from a stream from which plaintiffs irrigated their lands, which showed that there were long stretches of sandy bottom between the defendants' pro-

posed works and the lands of the plaintiffs, and that the water flowing over the rocky bed above sinks into the sand which must become saturated before there can be a flow over its surface, and to so fill this sand, required, as was testified, several weeks; it was held that "the Court was justified in drawing from this testimony the inference that an interruption to the flow of this water would prevent or diminish the saturation of the sandy bed underlying the stream and thereby materially postpone the time when a surface flow would come to plaintiffs' lands. Such postponement would be a clear injury to the plaintiffs, whose interest in the waters of the stream included the right to have the river bed continue to hold sufficient water to supply and support the surface stream in its natural state."[5] This, as can be readily seen, is oftentimes hard to prove, for the reason that, owing to the porous beds of these streams, it requires water to saturate them before any of it will flow upon the surface below. As water always flows downward, whether it is on the surface of the stream or through the bed under the surface, secondary appropriations should never be allowed upon this ground unless the evidence is clear and convincing that the water would never have reached the prior appropriators so that they might have the use of the same. As was said by the Circuit Court of the District of Montana: "That water would not reach one lower down on the stream is quite a common defense. It is often urged in irrigation suits by trespassers for their invasion of the rights of others. It is probably as old as irrigation and perhaps as

5 Huffner v. Sawday, 153 Cal. 86, 94 Pac. Rep. 424, citing Los Angeles v. Pomeroy, 124 Cal. 597, 57 Pac. Rep. 585.

St. Rep. 604; Booth v. Trager, 44 Colo. 409, 99 Pac. Rep. 60; Union M. & M. Co. v. Dangberg, 81 Fed. Rep. 73; Duckworth v. Watsonville etc. Co., 150 Cal. 520, 89 Pac. Rep. 336; *Id.*, 158 Cal. 206, 110 Pac. Rep. 927; Gutierrez v. Wege, 145 Cal. 730, 79 Pac. Rep. 449; *Id.*, 151 Cal. 587, 91 Pac. Rep. 395; Fuller v. Sharp, 33 Utah 431, 94 Pac. Rep. 817; City of Telluride v. Blair, 33 Colo. 353, 80 Pac. Rep. 1053.

trespass itself."[6] There are, however, some cases which hold to the effect that, before an appropriator can be enjoined for the diversion of these waters by an appropriator further down the stream, it must satisfactorily appear that had the water been allowed to pass down the stream it would have reached the land of the prior appropriator.[7] Upon principle, the ruling in these cases is wrong, as the water diverted is the water of the stream whether it flows over the bed or through the bed. Then, again, due to recent scientific investigations, the later authorities relative to subterranean water hold that if percolating waters form a source of supply to a stream the waters of which have been appropriated, any attempt to divert these underground waters by subsequent appropriators will be enjoined.[8] Why there should be any distinction in respect to percolating waters which gradually find their way through the soil and through the banks of the stream to the stream itself, and waters which are already within the banks of the stream and flowing part of the time upon the surface and a part of the time through the bed, we are unable to see.

§ 803. **Right to flow of water to point of subsequent appropriator's use.**—The right of those who are subsequent in time to the first appropriator in the order of their respective priorities to have the water flow down the natural stream to their point of diversion, or at least to a point above their place of use, as against those whose rights are still subsequent to them, is the same as discussed in the previous sections relative to the right of the prior appropriator in this respect.[1] In other words, a second appro-

6 Morris v. Bean, 146 Fed. Rep. 432; *Id.*, 159 Fed. Rep. 651, 86 C. C. A. 519; affirmed in 221 U. S. 485, 55 L. Ed. 821, 31 Sup. Ct. Rep. 703.

7 West Point etc. Co. v. Moroni etc. Co., 21 Utah 229, 61 Pac. Rep. 16; City of Telluride v. Blair, 33 Colo. 353, 80 Pac. Rep. 1053; Raymond v. Wimsette, 12 Mont. 551, 31 Pac. Rep. 537, 33 Am. St. Rep. 604; Beaverhead C. Co. v. Dillon etc. Co., 34 Mont. 135, 85 Pac. Rep. 880.

It will be noticed that there is a conflict of authority upon this point between the Supreme Court of Montana in the last two cases cited, and the Federal Court for Montana as decided in Morris v. Bean, *supra*.

8 Katz v. Walkinshaw, 141 Cal. 116, 70 Pac. Rep. 663, 74 Pac. Rep. 766, 64 L. R. A. 236, 99 Am. St. Rep. 35.

1 See Secs. 779-782.

priator is entitled to protection against the acts of a third which will deprive him of the enjoyment of his rights.[2]

And, upon the other hand, a subsequent appropriator has a vested right, as against those prior in time to him, to insist upon the continuance of the conditions that existed at the time he made the appropriation; and if a change in these conditions is made by the prior appropriator, which interferes with the flow of the water to the material injury of his rights, he may justly complain.[3] As was said in a Colorado decision:[4] "When a subsequent appropriator makes his diversion, he acts under the belief that the water appropriated by his senior will continue to be used as it was at the time of the making of the appropriation of the junior. So, a subsequent appropriator has a vested right as against his senior to insist upon the continuance of the conditions that existed at the time he made his appropriation."[5] This question usually arises when there is an attempt upon the part of the prior appropriator to make some change, such as changing his point of diversion, which interferes with the rights of the subsequent appropriator to his injury.[6] It has also arisen many times where the prior appropriator has attempted to increase the amount of water for his own use after the rights of the subsequent have vested. The first appropriator can not increase his appropriation where this would materially injure the rights of the subsequent appropriator.[7]

# CHAPTER 43.

## APPROPRIATION, AS AGAINST CONGRESSIONAL GRANTS.

§ 804. Scope of chapter.
§ 805. Review of subject.
§ 806. Rights of prior grantees of Government to waters flowing over land.
§ 807. Priority gives the better right as between appropriators and grantees —In general.
§ 808. Rights of prior appropriators as against rights of grantees.
§ 809. Grants to States as affecting water rights.

**§ 804. Scope of chapter.**—We have discussed in a previous chapter how, by special Acts of Congress, vast tracts of the public domain have been granted for various purposes.[1] In this chapter we will discuss the extent of rights acquired by appropriators of the waters flowing over these lands so granted as against the rights of railway and other companies, and to the States, as grantees of the Government, leaving the question as to the rights as between appropriators and private grantees of the Government to the chapter following.[2]

**§ 805. Review of subject.**—A land grant, as has been seen in a previous portion of this work,[1] is the term used for a grant by Congress, either by special or general legislation, of a portion of the public domain of the United States. The term "public land grants" is usually used to indicate those larger tracts granted, and generally for the purpose of internal improvements. The grantee is, of course, the party receiving the land, and it may be a person, a corporation, or a State. The Government, as the source of all title both to the lands and waters of the public domain, has the unlimited right to dispose of its lands and the waters flowing thereon as it sees fit.[2] It had the power to dispose of the lands and waters together, or it might have disposed of the soil only and reserved the waters; or, again, it might have disposed of the waters and reserved the lands. But, as we have seen in previous sections,[3]

1 See Chap. 20, Secs. 408-449.
2 See Secs. 810-823.
1 See Secs. 409-449.
2 See Sec. 409.
3 See Sec. 411.

it chose to enact specific laws relative to the disposal of its lands, while as to the waters flowing over those very lands, it enacted no laws as to their disposition, but they were left to the jurisdiction and control of the respective States and Territories where they happened to flow. These States and Territories, as we have seen, adopted different rules as to the control and disposition of the waters, or rather the use of these waters. Some States and Territories abrogated entirely the common law of riparian rights, while others followed that rule of law alone. Other States, and we may say all of the States and Territories of the arid and semi-arid West, have adopted the later law upon the subject known as the Arid Region Doctrine of appropriation.[4] And in some of these Western States we find a dual system of laws governing waters within their respective jurisdictions, that of the doctrine of appropriation and the common law of riparian rights.[5] The Government as the original owner of the public domain was also at that time the sole riparian owner in the streams and other sources of supply.[6] But the Government instead of enforcing this right, first, by its acquiescence and afterward by direct recognition, permitted the right to the use of the waters flowing over its lands to be acquired by appropriation; and, when the Government eventually disposed of these lands, in many cases, the title to the waters flowing over them, or to the use thereof which, to all practical purposes is the same thing, had passed to others. When water first began to be appropriated from the natural streams and other sources of supply flowing over the public lands in the arid and semi-arid regions of the West, the Government, as the proprietor of the lands over which the waters flowed, might have put a stop to all such appropriations, and thereby forever have put an end to the doctrine of appropriation. But the policy of the Government was different, due partially to ignorance upon the part of the members of Congress as to the values of both the land and water in this Western country and partially to the desire to have this part of the country settled up at any cost. The country at that time was considered nothing but a vast desert, covered only as far as vegetation was concerned with

[4] For history and cause of its adoption, see Secs. 595-626.

[5] For those States having both systems, see Secs. 507, 621.

[6] For the United States as riparian owner, see Sec. 480.

sagebrush, greasewood, and mesquite, and inhabited only by savages and wild animals. The streams were comparatively small, and washed but a very limited portion of the country, and what water did flow in them flowed uninterruptedly, and was lost in the ocean or sank out of sight in the sands. Land in this part of the country was considered absolutely worthless, and, without the application of water was indeed so. The Government could not give it away. No one would take it as a gift and much less settle on it for a home for himself and family. Gold was discovered in California, and afterwards agriculturists settled in these arid regions. But the mining claims and farms could not be worked without water, and so it was diverted from the natural streams and conducted, in many cases, at a vast expenditure of money, to other lands than those bordering upon the streams and there applied to these useful purposes. It was not too late then to interfere, and the Government might have denied this right to the miners and treated it as non-existing, as it could also have denied the right to those who appropriated the water for the purpose of agriculture after the gold excitement had died out. But, what would have been the result? The country would have remained in its primitive condition, except, perhaps, small strips of land bordering upon some of the streams. The mines would have remained unworked. The railroads would have remained unbuilt. And the Government, through its selfishness, would still be the owner of nearly all of its public domain, intact and uninhabited. In looking back over the history of this Western country, we, living here in these later times, can say that the policy of the Government relative to the subject of the use and control of its waters, whether the same resulted from the ignorance of the majority of the members of Congress, guided by a few wise members from this part of the country, or from whatever cause, although not as wise as it might have been, in the light of subsequent events, was the best under the then existing conditions, and its results have been most beneficent. Transcontinental railroads have been built with their numerous branches and feeders. Settlers have followed in their wake. Vast tracts of land have been brought under cultivation, cities and towns have been built, and a general prosperity has sprung up on what was termed by Mr. Webster, in speaking of the Western territory which we had acquired from Mexico, "that region of savages and wild beasts, of deserts, of shifting sands, and whirling wind, of dust, of cactus, and prairie dogs."

**§ 806. Rights of prior grantees of Government to waters flowing over land.**—The United States, as the proprietor of the public lands, and waters flowing over them, originally had the same rights and property in the streams and other sources of water supply as is possessed by any other riparian proprietor.[1] In those States only, which adhere to the common law of riparian rights, when the Government has granted tracts of its public lands to corporations, or individuals,[2] the question has often arisen, as to what rights, if any, did the grantees acquire to the waters flowing in the natural streams over those lands? The only answer to this question is that the grantees of the Government acquired the same rights which the Government had, that is to say, the rights of a riparian proprietor, unless there was an express limitation in the grant itself, or by appropriation rights in and to these waters had vested in others prior to the taking effect of the grant. In those States which have only the doctrine of appropriation and have abolished the common law of riparian rights,[3] no question arises as to the rights to waters by mere grantees of the Government for the reason that the acquisition of a tract of land is in nowise an appropriation of waters, but waters have to be appropriated by other methods.[4]

So, confining our discussion to the larger grants of land to railroad and other corporations, and leaving the subject of the rights of settlers as against the rights acquired by appropriation to the next chapter,[5] we will say that, in the common law States mentioned above in the absence of actual vested rights in the waters by appropriation, or limitations in the grant itself, the grantee of the Government receives not only the title in fee to the soil, but also, as incidents thereto, the benefit of all the natural streams which flow through it.[6] The grantee then becomes a riparian owner and can insist that the stream continue to flow as it was wont, without

2 For riparian rights of settlers as against appropriators, see Secs. 810-823.

3 See Secs. 507, 621.

4 For methods of appropriation, see Secs. 607-732.

5 See Secs. 810-823.

6 Union etc. Co. v. Ferris, 2 Sawyer 176, Fed. Cas. No. 14,371, 8 Morr. Min. Rep. 90; Los Angeles v. Baldwin, 53 Cal. 469; Pope v. Kinman, 54 Cal. 3; Ferrea v. Knipe, 28 Cal. 340, 87 Am. Dec. 128.

any material alteration in quality or quantity, and that he have such other rights in and to the waters of the same as are allowed at common law in England and the Eastern States, or, at least, as are allowed by that law as modified to meet Western conditions.[7] So, where there was no prior appropriation of the waters flowing over a tract of land granted to a railway company, the company takes the fee to the land without any limitation or burden as regards the waters which naturally flow over the same.[8] And in this case the company became the riparian owner of all the lands bordering upon the natural stream flowing through them, and all subsequent rights to the waters flowing therein must be acquired from such riparian proprietor, either by grant, prescription, license, or by some other method according to the laws of the State where such waters flow.[9]

§ 807. **Priority gives the better right as between appropriators and grantees—In general.**—As between the right of a railroad company as the grantee of the Government and the rights of an appropriator of the waters of a stream flowing through the lands granted, in those States which adhere to the common law of riparian rights, the same rule applies as in the case as to the rights between appropriators; that is, priority in time gives the better right.[1]

[7] For the modification of the common law of riparian rights, see Secs. 509-512.

[8] When a railroad company has by grant from Congress a right of way over the public lands, a person subsequently acquiring any part of such right of way takes it subject to the prior right of the railway company. Bybee v. Oregon etc. R. Co., 139 U. S. 663, 35 L. Ed. 305, 11 Sup. Ct. Rep. 641; affirming 26 Fed. Rep. 586; Doran v. Wilson & Central Pac. R. Co., 24 Cal. 245.

See, also, Lux v. Haggin, 69 Cal. 255, 4 Pac. Rep. 919, 10 Pac. Rep. 674.

[9] For the right to divert water acquired by prescription as against a railway company, see Wood v. Etiwanda etc. Co., 122 Cal. 152, 54 Pac. Rep. 726; Jatunn v. Smith, 95 Cal. 154, 30 Pac. Rep. 200.

See, also, for prescription, Secs. 1033-1058.

[1] Broder v. Natoma etc. Co., 101 U. S. 274, 25 L. Ed. 790, affirming 50 Cal. 621, where it was held that if the right of appropriation was preexisting, although imperfect, the above rule applied.

See, also, for cases holding that the appropriator had the better right, San Jose etc. Co. v. San Jose Ranch Co., 189 U. S. 177, 47 L. Ed. 765, 23 Sup. Ct. Rep. 487; affirming 129 Cal. 673, 62 Pac. Rep. 269; Childs v. Sharai, 8 Idaho 378, 69 Pac. Rep. 111; Tynon v. Despain, 22 Colo. 240, 43 Pac. Rep. 1039.

The same rule also applies in those States which have abrogated the common law of riparian rights. This was the principal question before the Court in the two appeals taken to the Supreme Court of the United States from the Supreme Court of Utah, in the case of the Telluride Power Transmission Co. v. Rio Grande W. R. Co.[2] After discussing the statute of 1866,[3] Mr. Justice Brown, in the opinion on the first appeal said: "But the difficulty in this case is that, before it could be said that any right or title under a statute of the United States had been denied, it was necessary to establish as a question of fact priority of possession on the part of the Telluride Company, as well as conformity to local customs, laws, and decisions." And the Court further held that these were local and not Federal questions. The same language was reiterated by Mr. Justice McKenna in rendering the opinion on the second appeal of the same case.

It may be regarded as a settled question of law that, if the grant to a railroad company took effect before the inception of any right of appropriation, in the common law States, the railroad takes the rights to the water flowing in the streams included within the area of the grant as a riparian owner and a successor to the Government, and the grantees of the company also take the same rights. But, upon the other hand, if appropriations had been made of the waters before the grant to the company took effect, then in that case the company took the land subject to all vested rights to the water and rights of way then existing. The same rule may also be said to be in force in those States which have abrogated the common law of riparian rights. The one who is first in time in the inception of an appropriation of the water has the superior right. But a railroad grantee in these States can not claim any rights as a riparian owner. However, upon the question of rights of way for ditches and canals over granted railway lands, a similar principle is applied.

For cases holding that the railway company had the better right, see Bybee v. Ore. Central Pac. R. Co., 139 U. S. 663, 35 L. Ed. 305, 11 Sup. Ct. Rep. 641; affirming 26 Fed. Rep. 586; Doran v. Wilson & Central Pac. R. Co., 24 Cal. 245.

2 175 U. S. 639, 44 L. Ed. 305, 20 Sup. Ct. Rep. 245, dismissing 16 Utah 125, 51 Pac. Rep. 146; *Id.*, 187 U. S. 569, 47 L. Ed. 307, 23 Sup. Ct. Rep. 178, dismissing 23 Utah 22, 63 Pac. Rep. 995.

3 For Act of Congress of July 26, 1866, and construction thereof, see Secs. 611-618.

**§ 808. Rights of prior appropriators as against rights of grantees.**—As between persons who claim the waters of the natural streams and other sources of water supply by appropriations of the same while they were flowing upon what was then the public domain of the United States and the subsequent grantee of the Government of a tract of land through or adjoining which the waters ran, the appropriator, first in time, has the exclusive right to the use of the water to the extent of his appropriation, and the grantee takes the land subject to all such valid appropriations. And, in construing the grant to the Pacific railroad companies, this principle is eminently applicable.[1] This principle is based upon the general policy of the Government as embodied in the Acts of Congress to protect the rights of all those, who by its license or forbear-

[1] Broder v. Natoma etc. W. Co., 101 U. S. 274, 25 L. Ed. 790, affirming 50 Cal. 621, where it was held that Congress, in making donation grants to railroad companies, can not be supposed to have exercised its liberality at the expense of pre-existing rights which, though imperfect, were still meritorious and had just claims to legislative protection; and, in construing the grant to the Pacific railroad companies, this principle is eminently applicable. Telluride etc. Co. v. Rio Grande W. R. Co., 175 U. S. 639, 44 L. Ed. 305, 20 Sup. Ct. Rep. 245; dismissing 16 Utah 125, 51 Pac. Rep. 146; *Id.*, 187 U. S. 569, 47 L. Ed. 307, 23 Sup. Ct. Rep. 178; dismissing 23 Utah 22, 63 Pac. Rep. 995.

One who enters on public land and constructs a pipe line thereon, under a claim of ownership of a water right, is entitled to the protection afforded vested ditch and water rights by the Act of Congress of July 26, 1866, subsequent purchasers of land from the Southern Pac. R. Co., whose only claim to such land rests upon the right of purchase of March 3, 1887 (24 Stat. L. 556, Chap. 376, U. S. Comp. Stat. 1901, p. 1595), Sec. 5, to *bona fide* purchasers from railway companies to forfeited lands. San Jose etc. Co. v. San Jose Ranch Co., 189 U. S. 177, 47 L. Ed. 765, 23 Sup. Ct. Rep. 487; affirming 129 Cal. 673, 62 Pac. Rep. 269.

See, also, Childs v. Sharai, 8 Idaho 378, 69 Pac. Rep. 111.

In an action for damages for wrongfully interfering with the plaintiff's irrigation ditch by a railroad company, in which the plaintiff showed possession of the land and defendant claimed no title, and where plaintiff could show by parol evidence priority of possession and right to use the water and the ownership of the ditch and land, it was held that the bare possession was sufficient to maintain the action as against the defendant. Chicago etc. R. Co. v. McPhilamey, —— Wyo. ——, 118 Pac. Rep. 682.

Secs. 2339, 2340, Rev. Stat. 1878, are a recognition of the legality of water rights given by local customs and laws, and the lands granted to the Pacific railroads continued subject to the rights and easements given by such customs and laws, including rights of way for irrigation ditches. Tynon v. Despain, 22 Colo. 240, 43 Pac. Rep. 1039.

ance appropriated water upon the public domain before the lands were granted to others. The general policy of the Government has been, instead of pursuing the selfish policy mentioned in a previous section,[2] of a more generous nature and many inducements have been offered to those who in good faith have settled upon and improved any portion of the public domain. In the first place, as we have seen,[3] the Government remained passive and permitted water to be appropriated from its natural channels upon the public domain, and by costly artificial works to be conducted for perhaps miles over mountains and ravines, to be used for mining operations, irrigation, and other useful purposes. So fully did the Government recognize these rights of the appropriators, and tacitly encourage them, that it has been held by the Supreme Court of the United States that, even without any Act of Congress, the appropriators had secured rights to the use of the water, which "the Government had, by its conduct, recognized and encouraged and was bound to protect before the passage of the Act of 1866."[4] However, the Government did not rest there; but, on the contrary, instead of trying to repudiate these claims, Congress formally acknowledged the rights acquired in waters, whenever, by priority of possession, rights to the use of water for mining, agricultural, manufacturing, or other purposes, had vested and accrued, by the Act of July 26, 1866. This Act made the National ownership of the public domain, over or adjoining which streams of water flowed, subject to the rights of the appropriators of such streams. Thus, wherever the water was appropriated, or there was the inception of *bona fide* rights to appropriate, the public domain was burdened to that extent, and the same burden would, under the law of real property, accompany the title if afterwards the lands were transferred to a railroad company or other corporation, or to a private individual.[5] And, so, whoever succeeded to the title of the United

2 See Secs. 432-435.

3 For history of doctrine of appropriation, see Secs. 595-626.

4 Broder v. Natoma etc. Co., 101 U. S. 274, 25 L. Ed. 790, affirming 50 Cal. 621; Atchison v. Peterson, 1 Mont. 561; *Id.*, 87 U. S. 20 Wall. 507, 22 L. Ed. 414, 1 Morr. Min. Rep. 583; Basey v. Gallagher, 87 U. S. 20 Wall. 670, 22 L. Ed. 452, 1 Morr. Min. Rep. 683; Forbes v. Gracey, 94 U. S. 762, 24 L. Ed. 313; Jennison v. Kirk, 98 U. S. 453, 25 L. Ed. 240, 4 Morr. Min. Rep. 504.

5 For appropriation as against rights of settlers, see Secs. 810-823.

For Act of 1866, and construction thereof, see Secs. 611-618.

States through any mode of acquisition whatsoever, took only what the United States had to give at the time of the grant taking effect. And, therefore, if the waters of the natural streams flowing through the lands granted had been appropriated, the company would take the land subject to the same servitude, which before existed in favor of the prior appropriator. But this is not all. There being some doubt as to the rights of the parties even after the Act of 1866 was passed, Congress amended that Act by the Act of 1870, which still more strengthened the positions of the appropriators of waters flowing over lands prior to the time the grants to the same took effect.[6] By this Act, "all patents granted" were made subject to any vested and accrued water rights. And all Congressional grants to railroad companies and others since that time have been made with a clause reserving all vested rights of appropriators of the waters flowing through the lands granted. But, whether a reservation clause of this nature is embodied in the grant itself or not, it has become the settled law that, where the right of appropriation has once vested a subsequent grantee of the Government takes the land subject to this right, even in cases where the claims at the time of the grant taking effect were still in an imperfect condition, but *bona fide* and meritorious.[7]

In a recent Wyoming case,[8] it was held that rights acquired while the land was unoccupied public land of the United States were vested rights within the provisions of sections 2339 and 2340, as against one who is not in a position to dispute such water right and deraigns title by grant from the Government thereafter. And the Court said: "There are numerous decisions to the effect that if an appropriator is first in time with reference to possession and use as compared with the date an entry is made, the rights of the entryman are junior and inferior."[9]

[6] For Act of 1877, as amended by Act of March 3, 1891, and construction thereof, see Sec. 622.

[7] Broder v. Natoma etc. Co., 101 U. S. 274, 25 L. Ed. 790; affirming 50 Cal. 621.

See, also, Wolcott v. Des Moines R. Co., 72 U. S. 5 Wall. 681, 18 L. Ed. 689; Williams v. Baker, 84 U. S. 17 Wall. 144, 21 L. Ed. 561; Leavenworth etc. R. Co. v. United States, 92 U. S. 733, 23 L. Ed. 634.

[8] Chicago etc. R. Co. v. McPhillamey, —— Wyo. ——, 118 Pac. Rep. 682.

[9] Citing Broder v. Natoma Water Co., 101 U. S. 274, 25 L. Ed. 790; affirming 50 Cal. 621; Brosnan v. Harris, 39 Ore. 148, 65 Pac. Rep. 867, 54 L. R. A. 628, 87 Am. St. Rep. 649;

It was said by the Federal Court:[10] "When land included in a railway grant reverts to the Government a subsequent patentee under the homestead laws takes the title subject to the right of way for a ditch or canal over it which was acquired prior to his entry, and it is immaterial whether the appropriation was made prior or subsequent to the time the Government was reinvested with title."[11]

§ 809. **Grants to States as affecting water rights.**—As we have seen in a previous portion of this work, the Government has granted tracts of land to the different States for various purposes.[1] In general the waters flowing through these granted lands are subject to the laws of the respective States, as are the other waters within their jurisdiction. If the State law permits the acquisition of water rights by appropriation only, that law prevails. If, upon the other hand, the State laws permit the dual system of water rights, either the rule of appropriation or the common law of riparian rights may prevail, depending upon the right which was prior in time.[2] In California and the most of the other States, by statute, the law of appropriation is made to apply to the waters flowing over State lands,[3] and a prior appropriator acquires a good title to the water, to the extent of his appropriation, as against a subsequent purchaser from the State of lands lying upon the stream below the point of diversion, in those jurisdictions which have both laws.[4] Upon the other hand, riparian rights

Smith v. Hawkins, 110 Cal. 122, 42 Pac. Rep. 453; Maffet v. Quine, 93 Fed. Rep. 347; *Id.*, 95 Fed. Rep. 199; De Necochea v. Curtis, 80 Cal. 397, 20 Pac. Rep. 563, 22 Pac. Rep. 198; South Yuba Water & Min. Co. v. Rosa, 80 Cal. 333, 22 Pac. Rep. 222; Cottonwood Ditch Co. v. Thom, 39 Mont. 115, 121, 101 Pac. Rep. 825, 104 Pac. Rep. 281.

10 Maffet v. Quine, 93 Fed. Rep. 347.

11 See, also, Le Quine v. Chambers, 15 Idaho 405, 98 Pac. Rep. 415, 21 L. R. A., N. S. 76; San Jose Land & Water Co. v. San Jose Ranch Co., 129 Cal. 673, 62 Pac. Rep. 269; Southern Pacific etc. Co. v. Dufour, 95 Cal. 615, 30 Pac. Rep. 873, 19 L. R. A. 92.

1 See Sec. 430.

2 For appropriations as against riparian rights, see Secs. 810-823.

3 For laws of the various States, see Part XIV.

See, also, Lux v. Haggin, 69 Cal. 255, 4 Pac. Rep. 919, 10 Pac. Rep. 674.

4 Wood v. Etiwanda etc. Co., 122 Cal. 152, 54 Pac. Rep. 726; Smith v. Deniff, 24 Mont. 20, 60 Pac. Rep. 398, 50 L. R. A. 737, 81 Am. St. Rep. 408; Carson v. Gentner, 33 Ore. 512, 52 Pac. Rep. 506, 43 L. R. A. 130, where it is said that it is immaterial whether

may attach to State lands, and descend to the grantees of the State where the common law is in force.[5]

In a case arising in Montana, where Congress granted to the State one section of land of a former military reservation, to be selected "so as to embrace the buildings and improvements thereon," it was held that the grant did not include any right to the use of the water of a stream from which the Government had taken water by means of a ditch across other lands to the land granted to the State, but that it was the intent of the Government, when it abandoned the reservation, that the water should continue to flow in its natural channel, and be subject to appropriation by any one who should take and use it for beneficial purposes.[6]

the title to such lands passed to the State, or whether the United States held the title in trust for the State, or for the use and benefit of the general Government, for in either case the rights of the original appropriators and their successors in interest are protected.

For the State as a riparian proprietor, see Sec. 481.

[5] "Our conclusion upon this branch of the case is that Sec. 1422 saves and protects the riparian rights of all those who, under the land laws of the State, shall have acquired from the State the right of possession to a tract of riparian land prior to the initiation of proceedings to appropriate water in accordance with the provisions of the code." Lux v. Haggin, 69 Cal. 255, 4 Pac. Rep. 919, 10 Pac. Rep. 674.

The riparian rights of a grantee of the State are not affected by the claim of an appropriator of water, made after such selection, though made before his grant. Ison v. Nelson M. Co. (Ore.), 47 Fed. Rep. 199.

NOTE. The above ruling is not in accordance with the general rule.

[6] Story v. Woolverton, 31 Mont. 346, 78 Pac. Rep. 589.

# CHAPTER 44.

## APPROPRIATION AS AGAINST RIPARIAN RIGHTS.

§ 810. Scope of chapter.
§ 811. The two doctrines of water rights may exist in the same State.
§ 812. Priority also gives the better right as between appropriators and riparian owners.
§ 813. Appropriations made prior to riparian rights gave the better right, even before statute.
§ 814. Appropriations made prior to riparian rights give the better title after statute.
§ 815. Riparian rights vested prior to appropriations give the better title.
§ 816. Vested riparian rights in those States which afterward abrogated the common law rule.
§ 817. Appropriations and riparian rights—Effect of Desert Land Act of 1877.
§ 818. Mixed rights on the same stream—Some inconsistencies.
§ 819. Mixed rights—Appropriations prior to vesting of riparian rights.
§ 820. Mixed rights—Appropriations subsequent to vested riparian rights—Rule in California.
§ 821. Mixed rights—Appropriations subsequent to vested riparian rights—Rule in other States.
§ 822. Mixed rights—Appropriations subsequent to vested riparian rights—Effect of Kansas-Colorado case.
§ 823. Mixed rights on the same stream—Our conclusions.

**§ 810. Scope of chapter.**—In previous portions of this work, we have discussed the rights which riparian proprietors have under the common law rules of riparian rights in and to the streams or other sources of supply, which flow through or adjoin their lands, and also the uses which they may make of the water flowing therein, as permitted under that law.[1] In a separate chapter we also discussed the subject of irrigation as a riparian right under the common law as in force in England and the Eastern States, and also as that law was modified to meet the conditions in the Western States.[2] We have also mentioned several times that in some States in the semi-arid and arid West there are dual systems of laws governing waters, including both the common law of riparian rights and the Arid Region Doctrine of

1 For common law theories of riparian rights, see Secs. 450-551.

2 For irrigation as a riparian right, see Chap. 26, Secs. 489-525.

appropriation for beneficial uses.[3] In the present chapter we will discuss the rights acquired by appropriation, as against the riparian rights of settlers or other private owners, and the reverse of the proposition, where these rights clash or are continually "jostling" each other, as it were, yet still existing side by side.[4]

**§ 811. The two doctrines of water rights may exist in the same State.**—The rules of these two systems being based upon entirely different fundamental principles of law—under the common law, that the water must continue to flow in the channels of the streams as it was wont to flow by Nature, without any material diminution in quantity or alteration in quality, and the law of appropriation that, in order to acquire a right to the water, it must be diverted from the natural channels of the streams and applied to some beneficial use—it necessarily follows that the rights of persons claiming under these different systems, where they are both in force in the same jurisdiction, are constantly clashing.[1] In some States, as we have seen, owing to the view that the common law of riparian rights was entirely inapplicable to the physical conditions of an arid country,[2] they have done away with this confusion by entirely abolishing the common law of riparian rights.[3] In other States, usually in the more humid regions,[4] it is held that the two doctrines of water rights—one the right of a riparian proprietor, and the other the right of appropriation and application to a beneficial use by a non-riparian owner—may exist in the same State at the same time; and, the fact that they do actually so exist concurrently is sufficient argument upon our part that they may exist.[5] As was said in a Nebraska case: "The two

3 For list of States having both systems, see Secs. 507, 621.

4 Mill's Irr. Manual, 1907, p. 28.

1 For the common law of riparian rights, see Secs. 450-551.

For the Arid Region Doctrine of appropriation, see Secs. 585-594.

2 See Secs. 588-593.

3 For the list of States abolishing the common law of riparian rights, see Secs. 507, 621.

4 For list of States having both systems, see Secs. 507, 621.

5 "The two doctrines are not necessarily so in conflict with each other as that one must give way when the other comes into existence. . . . The two doctrines stand side by side. They do not necessarily overthrow each other, but one supplements the other." Crawford Co. v. Hathaway (Hall), 67 Neb. 325, 93 N. W. Rep. 781, 60 L. R. A. 889, 108 Am. St. Rep. 647.

See, also, Lux v. Haggin, 69 Cal. 255, 4 Pac. Rep. 919, 10 Pac. Rep.

doctrines stand side by side."[6] The riparian owner acquires title to his riparian rights to the water when he takes the first step to appropriate the land to which the stream is incident,[7] and, when

[7] For the inception of title to land, see Sec. 756.

For the doctrine of relation, see Secs. 742-756.

the right has once vested it can not be devested except by some established rule of law, such as by grant,[8] adverse user, and prescription,[9] or by eminent domain under condemnation proceedings, and then only for a public use and upon the payment of just compensation.[10] The appropriator acquires his title to the use of the water by the appropriation thereof in some lawful manner and the application of the water to some beneficial use or purpose, the right to which he can not be deprived of except in some of the modes prescribed by law.[11]

**§ 812. Priority also gives the better right as between appropriators and riparian owners.**—In California and in other Western States, which have both the doctrine of appropriation and the common law of riparian rights governing the waters within their jurisdictions,[1] we find that it is now the settled rule of law that the priority of the inception of the respective claims gives the better, and often the exclusive right to the use of the waters flowing in the natural streams or other sources of water supply over the riparian lands through which or adjoining which the waters in question flow.[2] Or, in other words, if the appropriator is first in time in the institution of his claim, and, before the inception of the claim of the settler or other owner of the riparian land, then the appropriator can take the waters of the stream to the full extent of his appropriation, regardless of the subsequent settlement of the land on the stream. However, if, upon the other hand, the inception of the claim of the riparian owner is first, he can successfully claim all of his riparian rights to the use of the waters flowing in the stream, to, perhaps, the prohibition of the acquisition of any claim to the use of the waters of the stream by appropriation. As will be seen, this rule is no new departure, but is the general rule governing the rights to waters throughout the arid and semi-arid West, that he who is first in time has

8 Grant of riparian rights, see Secs. 526-535.

9 Prescription as against riparian rights, see Secs. 1038-1040.

10 For eminent domain, see Secs. 1059-1098.

11 For the loss of the right of appropriation, see Secs. 1099-1128.

1 For States having both rules, see Secs. 507, 621.

2 For inception of a right by appropriation, see Secs. 708-712.

For the inception of right in the settlement of land, see Secs. 445, 815.

the superior right to the use of the waters.[3] Or, as was said in a Nebraska case: "The time when either right accrues must determine the superiority of title as between conflicting claimants."[4]

**§ 813. Appropriations made prior to riparian rights gave the better right even before statute.**—Prior to the 26th day of July, 1866, there was no legislation by Congress which tended in any way to limit the rights of the patentee of the Government, or to recognize the rights acquired by the appropriator of water of the streams upon the public domain and no authority for the same except the local customs and laws of the respective States and Territories where the appropriation was sought to be made. Therefore the laws governing all controversies between those who claim the waters of a stream upon the public domain by the mere appropriation of the same for some useful purpose, and those who claim the waters of the same stream as riparian owners by virtue of a patent from the Government to the lands adjoining the stream, have been divided by the authorities into two periods—those laws in force governing the transfer of lands by the Government prior to the Act of Congress of July 26, 1866, and those in force relative to

[3] For priority as between appropriators, see Secs. 775-803.

For priority as between appropriators and Congressional grantees, see Secs. 804-809.

Johncox, 17 Wash. 277, 49 Pac. Rep. 495, 39 L. R. A. 107, 61 Am. St. Rep. 912; Barrett v. Metcalf, 12 Tex. Civ. App. 247, 33 S. W. Rep. 758; McCall v. Porter, 42 Ore. 49, 70 Pac. Rep. 820, 71 Pac. Rep. 976; Oregon Const. Co. v. Allen D. Co., 41 Ore. 209, 69 Pac. Rep. 455, 93 Am. St. Rep. 701; Brown v. Baker, 39 Ore. 66, 65 Pac. Rep. 799, 66 Pac. Rep. 193; Boyce v. Cupper, 37 Ore. 256, 61 Pac. Rep. 642; Smyth v. Neal, 31 Ore. 105, 49 Pac. Rep. 850; Nevada D. Co. v. Bennett, 30 Ore. 59, 54 Pac. Rep. 472, 60 Am. St. Rep. 777; Woolman v. Garringer, 1 Mont. 535, 1 Morr. Min. Rep. 675.

Both the right to occupy Government land and the right to appropriate water flowing thereon were derived from the implied consent of the Government, and the first possessor had the better right. Lux v. Haggin, 69 Cal. 255, 4 Pac. Rep. 919, 10 Pac. Rep. 674.

the same subject subsequent to that date. The latter period brings us down to the present time, and is the present law upon the subject, which we will discuss in the next section. In the first edition of this work we discussed at considerable length the rights as between appropriators and the grantees of the Government, where their rights to the land and the incidents thereto had vested prior to the passage of the Act of 1866. Since that time the law on the subject has not only become settled, but it has also become obsolete, for the reason that all conflicting claims arising prior to the Act of 1866 have long since either been adjudicated or have been settled. Hence, no extended discussion is necessary in this edition.

As to the title to the lands which had gone to patent before there was any Act of Congress limiting the effect of the grant, the early authorities were somewhat divided, even in the arid portion of the country, as to whether the patentee took the title to the land, with all the riparian rights to the waters flowing through or adjoining the same, even if there were prior appropriations, or whether the land was taken subject to the rights of the prior appropriators. This conflict seems to have originated in the State of Nevada, which is in the very heart of the arid region. And in that State it was first held by the State and Federal courts, that the rights of an appropriator, even if prior in time, were subordinate to those of subsequent patentees of the Government in cases where the patent was issued prior to the Act of 1866.[1] Later, however, the ruling of the State court in this respect was expressly overruled by the same court, upon the ground that the common law of riparian rights was inapplicable to the wants and necessities of the people in an arid region,[2] whether engaged in mining,

1 Vansickle v. Haines, 7 Nev. 249, 15 Morr. Min. Rep. 201.

An appropriator can acquire no right as against the United States or its subsequent grantee unless there was a reservation in the grant itself, and the Act of 1866 did not affect the right of persons whose patents had been issued prior to its passage. Union M. & M. Co. v. Ferris (Nev.), 2 Sawyer 176, Fed. Cas. No. 14,371, 8 Morr. Min. Rep. 90.

See, also, Union M. & M. Co. v. Dangberg (Nev.), 2 Sawyer 450, Fed. Cas. No. 14,370, 8 Morr. Min. Rep. 113; Crandall v. Woods, 8 Cal. 136, 1 Morr. Min. Rep. 604; Duckworth v. Watsonville etc. Co., 150 Cal. 520, 89 Pac. Rep. 338; *Id.*, 158 Cal. 206, 110 Pac. Rep. 927.

2 For the cause of the abrogation of the common law of riparian rights, see Secs. 585-594.

agriculture, or other pursuits, and that the Act of Congress of July 26, 1866, merely confirmed to prior appropriators the rights and privileges they had formerly enjoyed by local customs and the decisions of the courts, even as against persons who had, prior to its passage, obtained patents to the lands through which or adjoining which the waters flowed.[3] And afterward, in the State of Nevada, the common law doctrine of riparian rights was entirely abolished in that State.[4] So, the law may be regarded as settled, at least by the great weight of decision, that the rights of an appropriator will be protected, where he was prior in time to the inception of the title of a riparian proprietor as a grantee of the Government, even though the statute establishing the right of appropriation was not passed until after the rights of the grantee had become perfected.[5]

[3] Crawford Co. v. Hathaway (Hall), 67 Neb. 325, 93 N. W. Rep. 781, 60 L. R. A. 889, 108 Am. St. Rep. 647; Redwater etc. Co. v. Reed, 26 S. D. 466, 128 N. W. Rep. 702; Redwater etc. Co. v. Jones, —— S. D. ——, 130 N. W. Rep. 85; Jones v. Adams, 19 Nev. 78, 6 Pac. Rep. 442, 3 Am. St. Rep. 788; Jerrett v. Mahan, 20 Nev. 89, 17 Pac. Rep. 12.

[4] Reno etc. Co. v. Stevenson, 20 Nev. 269, 21 Pac. Rep. 317, 4 L. R. A. 60, 19 Am. St. Rep. 364.

See, also, Sec. 591.

[5] In the case of Jones v. Adams, 19 Nev. 78, 6 Pac. Rep. 442, 3 Am. St. Rep. 788, the decision in the case of Vansickle v. Haines, 7 Nev. 249, holding that the rights by appropriation could not be acquired as against the riparian rights of a grantee of the Government, who obtained his patent prior to the Act of 1866, was expressly overruled. Mr. Chief Justice Hawley, whose decisions have been universally regarded as sound, in rendering the opinion of the court upon the point in question said:

"We are of the opinion that the ninth section of the Act of Congress confirmed to the owners of water rights on the public lands of the United States *the same rights* which they held under the local customs, laws and decisions of the Courts prior to its enactment; that the Act of Congress did not introduce, and was not intended to introduce, any new system, or to evince any new or different policy upon the part of the general Government; that it recognized, sanctioned, protected and confirmed the system *already established* by the customs, laws, and decisions of Courts, and *provided for its continuance.*"

See, also, Barnes v. Sabron, 10 Nev. 217, 4 Morr. Min. Rep. 673; Shoemaker v. Hatch, 13 Nev. 261; Hobert v. Wicks, 15 Nev. 418, 2 Morr. Min. Rep. 1; Jerrett v. Mahan, 20 Nev. 89, 17 Pac. Rep. 12.

In Basey v. Gallagher, 87 U. S. 20 Wall. 670, 22 L. Ed. 452, 1 Morr. Min. 685, the Court, after quoting the ninth section of the Act of Congress of 1866, said: "It is very evident that Congress intended, although the language used is not happy, to recognize as valid the customary law

The acquiescence and consent, prior to any Act of Congress relative to the use of the waters flowing over the public domain, at first amounted only to a license on the part of the Government, which license might have been revoked at any time, but which, instead, was actually ratified and confirmed by the ninth section of the Act of July 26, 1866. And, after this Act, the right of appropriation had the effect of a grant, where it was prior in time to the rights of riparian proprietors, and related back to the

with respect to the use of water which has grown up among the occupants of the public land under the peculiar necessities of their condition."

In Jennison v. Kirk, 98 U. S. 453, 25 L. Ed. 240, 4 Morr. Min. 504, the Court, referring to the same section, said: "The object of the section was to give the sanction of the United States, the proprietor of the lands, to possessory rights, which had previously solely rested upon the local customs, laws, and decisions of the Courts, and to prevent such rights from being lost on a sale of the lands. The section is to be read in connection with other provisions of the Act of which it is a part, and in the light of matters of public history relating to the mineral lands of the United States."

In Broder v. Natoma etc. Co., 101 U. S. 274, 25 L. Ed. 790, affirming 50 Cal. 621, the same Court, after again referring to the Act, said: "But we do not think that defendants are under the necessity of relying on that statute. We are of the opinion that it is the established doctrine of this Court that rights of miners, who had taken possession of mines and worked and developed them, and the rights of persons who have constructed canals and ditches to be used in mining operations and for purposes of agricultural irrigation, in the region where such artificial use of the water was an absolute necessity, are rights which the Government had, by its conduct, recognized and encouraged and was bound to protect before the passage of the Act of 1866.

See, also, Ross, J., in Lux v. Haggin, 69 Cal. 255, 4 Pac. Rep. 919, 10 Pac. Rep. 674; Coffin v. Left Hand D. Co., 4 Colo. 443.

A grant of Government lands is subject to a prior appropriation of waters made according to the customary law of the locality, although the Act of Congress on the subject had not then been passed. Isaacs v. Barber, 10 Wash. 124, 38 Pac. Rep. 871, 30 L. R. A. 665, 45 Am. St. Rep. 772.

See, also, San Luis W. Co. v. Estrada, 117 Cal. 168, 48 Pac. Rep. 1075; Hayden v. Long, 8 Ore. 244; Hindman v. Risor, 21 Ore. 112, 27 Pac. Rep. 13; Davis v. Chamberlain, 51 Ore. 304, 98 Pac. Rep. 154; Carson v. Gentner, 33 Ore. 512, 52 Pac. Rep. 506, 43 L. R. A. 130; Hough v. Porter, 51 Ore. 318, 372, 95 Pac. Rep. 732, 98 Pac. Rep. 1083, 102 Pac. Rep. 728; Parkersville v. Wattier, 48 Ore. 332, 86 Pac. Rep. 775; Jones v. Adams, 19 Nev. 78, 6 Pac. Rep. 442, 3 Am. St. Rep. 788; Twaddle v. Winters, 29 Nev. 88, 85 Pac. Rep. 208, 89 Pac. Rep. 289; United States v. Winans, 198 U. S. 371, 49 L. Ed. 1089, 25 Sup. Ct. Rep. 662.

inception of the right. This Act simply put in statutory language what the Government had before allowed, and gave the prior owners of water rights upon the public lands of the United States the continuation of the same rights which they had held before the passage of the Act under the local customs, laws, and decisions of the courts. Upon the other hand, in those States which still enforce the common law of riparian rights, where the inception of the title of the riparian owner was prior in time to the inception of the right by appropriation, the riparian rights are upheld. From the authorities cited it can be determined that the doctrine of appropriation has existed in the West from the dates of the earliest appropriations of water as a valid right, even as against the riparian rights of those who obtained a patent to their lands adjoining the streams prior to the Act of July 26, 1866, where the waters had been appropriated before the inception of the patentee's title. And, that as between these rights the same rule applies that is applicable in other cases—he who was first in time has the superior right.

**§ 814. Appropriations made prior to riparian rights give the better title after statute.**—As we have seen in a previous portion of this work, the inception of a right to appropriate water is the posting of the notice of appropriation,[1] or the actual commencement of the work,[2] or, in some cases, where the statute of the State has not complied with, the actual application of the water to some beneficial use or purpose.[3] We have also seen that the inception of the right of a settler or other owner of riparian land is either the settlement upon the land or the first act necessary in the proceedings to acquire title, and hence it follows that any riparian rights which he may acquire date from this first act.[4] Bearing in mind the dates of the inception of

1 For notice, see Secs. 710-716.

2 For the inception by commencing work, see Secs. 716-718.

3 For appropriation by application, see Sec. 730.

4 For the inception of title to lands, see Sec. 445.

For the doctrine of relation as applied to settlers' rights, see Secs. 755, 756.

The doctrine that the rights of a patentee or grantee of the Government relate back to the first act of the settler in the proceedings to acquire title is also announced in the following cases: Benton v. Johncox, 17 Wash. 277, 49 Pac. Rep. 495, 39 L. R. A. 107, 61 Am. St. Rep. 912, citing Shepley v. Cowan, 91 U. S. 330, 23 L. Ed. 424; Larsen v. Oregon etc. Nav. Co.,

title under these two rights, it is the settled rule of law in those Western States which have not abolished the common law of riparian rights and have both systems of laws governing waters[5] that, where the inception of a valid appropriation of the waters of a certain stream flowing over the public lands is prior in time to the inception of a right of a settler, or other riparian owner, to the land through or adjoining which the stream flows, the appropriator has the paramount and superior right to the use of the waters of the stream to the full amount and extent of his appropriation, as against the riparian rights of the owner of the land.[6] And, in this connection, we will also state that the same rule applies to the rights of the appropriator in and to his right of way for his ditches, canals, or other works, which are constructed, or are about to be constructed, over the lands subsequently acquired by the riparian owner, for the purpose of making his appropriation available. And hence it follows that the subsequent rights in and to the land acquired by the riparian owner are subject to both the right of the appropriator to the use of the water of the stream, and also to the right of way for his ditch, canal, and other works; and that, too, regardless as to how or for what purpose the land is acquired, whether it be for agricultural purposes, acquired under the general laws of Congress appertaining to those lands,[7] whether it be for mining purposes, acquired under the Acts of Congress relating to the obtaining of title to mineral lands, or for any other purpose, or under any other laws providing for the acquisition of title to the public lands by either private individuals or by companies.[8] It has been the universal holding of the courts, especially

19 Ore. 240, 23 Pac. Rep. 974; Faull v. Cooke, 19 Ore. 455, 26 Pac. Rep. 662, 20 Am. St. Rep. 836; Union etc. Co. v. Dangberg, 2 Sawyer 450, Fed. Cas. No. 14,370, 8 Morr. Min. Rep. 113; McGuire v. Brown, 106 Cal. 660, 670, 39 Pac. Rep. 1060, 30 L. R. A. 384.

See, also, for doctrine of relation, Secs. 742-756.

[5] For list of States having both systems, see Secs. 507, 621.

For list of States which have abolished riparian rights, see Secs. 507, 621.

[6] For the rights of prior appropriators as against Congressional grantees, see Chap. 43, Secs. 804-809.

[7] For the acquisition of title to agricultural land, see Secs. 432-441.

For rights of way, see Secs. 927-993.

[8] The right to the use of water when acquired by appropriation is, in its nature, a property right, and becomes a superior and better title to the use and enjoyment of such water than that of a riparian proprietor whose right attaches subsequently. Crawford Co. v. Hathaway (Hall), 67

where rights to water were acquired by appropriation after the passage of the Act of 1866, as the same was amended by the Act

Neb. 325, 93 N. W. Rep. 781, 60 L. R. A. 889, 108 Am. St. Rep. 647.

"From the foundation of the State, waters pertaining to the public lands of both the Federal and State Governments have been appropriated and used for mining, agriculture, and other useful purposes. . . . It thus became a part of the law of the land, of which every citizen was entitled to avail himself, and of which every purchaser from the United States, as well as the State, was bound to take notice." Lux v. Haggin, 69 Cal. 255, 4 Pac. Rep. 919, 10 Pac. Rep. 674.

"Thus under the laws of Congress and the Territory (Dakota) and under the applicable custom, priority of possession gave priority of right." Sturr v. Beck, 133 U. S. 541, 33 L. Ed. 761, 10 Sup. Ct. Rep. 350.

Any rights acquired by a discovery of mineral on a mining claim subsequent to the construction of a ditch across the claim by a third person are subject to the easement of the ditch, and to the owner's rights as prior appropriator. Tuolumne Consol. M. Co. v. Maier, 134 Cal. 583, 66 Pac. Rep. 863, 21 Morr. Min. Rep. 678.

See, also, Broder v. Natoma M. Co., 101 U. S. 274, 25 L. Ed. 790, affirming 50 Cal. 621.

"Upon well-settled principles, the plaintiff's earlier rights of appropriation are superior to Pogue's (defendant's) later rights either as an appropriator or as a riparian landowner." Wutchumna W. The same rule as above applies in the more arid States which have abrogated the common law, and it is universally held that one who takes possession of unoccupied public land does so subject to existing conditions as to the appropriation of water and rights of way for ditches and canals thereover.[11] In the patents issued by the Government there are now clauses to the effect that the land is taken subject to all vested rights to the appropriations of water and rights of way for ditches and canals. Although where the patent did not reserve any right to the water or to the ditch, the rights of a prior appropriator and his successors in interest are protected. This is the rule, whether the patentee receives his patent from the Government [12] or from a State.[13]

§ 815. **Riparian rights vested prior to appropriations give the better title.**—In those States which enforce both the Arid Region Doctrine of appropriation and the common law of riparian rights,[1] in all controversies between the rights acquired under these respective laws, the time when either right accrues must determine the superiority of title as between the conflicting claimants.[2] Hence it follows that, where the inception of title of a riparian owner to the lands, through or adjoining which a stream or other source of water supply flows, is prior in time to the inception of a claim by appropriation of the waters of the stream, the appropriator can not acquire any right, by appropriation merely,[3] to the injury of the rights of the riparian owner. In

this case, following the general rule, the riparian owner being first in time has the superior right. As was said by the Supreme Court of the United States in deciding this question, "No subsequent attempt to take the water only can override the prior appropriation of both land and water."[4] This rule originated at an early day in California in the cases of Irwin v. Phillips,[5] and Crandall v. Woods,[6] and the ruling in these cases was affirmed in what may be considered the leading case in that State upon this subject—the often cited, greatly criticised, and much misunderstood case of Lux v. Haggin.[7] And, since the decision in the latter case, the law may be regarded as settled in that State that both the law of appropriation and the common law of riparian rights may exist together in that State, at least; and, as against each other, the right which was instituted first in time under one system is superior and paramount to a claim instituted subsequently under the other system in and to the use of the waters of the same stream.[8] But this rule is not a peculiar characteristic of the laws of California. Other States, upon the Pacific Coast or in the Middle West, have adopted the same rule. In fact, it is now the

universal rule of all of the Western States which have the dual systems of laws governing water rights.[9]

It was held, in a South Dakota case,[10] that riparian owners who located on claims in 1876, and were residing thereon on February 28, 1877, when the lands were opened to public settlement, and continued to reside thereon until after patents were issued to them, had a claim to the water rights prior to the water rights located in 1878 by another, the patents relating back to the date of the settlement, so that a provision in the patents that they were subject to vested and accrued water rights did not apply.

This rule applies to all riparian lands, whether they be the

[10] Redwater Land & Canal Co. v. Jones, 26 S. D. 466, 130 N. W. Rep. 85.

lands of settlers who acquire their lands under some of the land laws of the United States,[11] the claims of miners,[12] or the lands held by a railroad company under a Congressional grant.[13]

The riparian rights of settlers will attach to the surplus water flowing in a stream over and above prior appropriations, and such riparian rights to the surplus water can be successfully claimed over the claims of appropriators attempting to appropriate the water from the same stream.[14]

In all States, whether they recognize the common law of riparian rights or not, all prior grants of land are protected against the invasion of subsequent parties attempting to acquire rights of way thereover, unless such rights of way shall be acquired in some lawful manner by contract, prescription, or by eminent domain.[15]

§ 816. **Vested riparian rights in those States which afterward abrogated the common law rule.**—Many of the States and Territories of the West, upon the theory that the common law rule was inapplicable to their conditions, by constitutional provisions, statute, or by court decisions, entirely abrogated riparian rights, as they had the power to do, and in lieu thereof adopted the Arid Region Doctrine of appropriation.[1] The adoption of the new rule could not and did not have the effect of abolishing riparian rights which had already accrued and vested, but only prevented the acquisition of such rights in the future. The substitution of the law of appropriation, instead of the common law rule of

14 For discussion under mixed rights on the same stream, see Sec. 823.

15 For rights of way over private land, see Secs. 972-993.

1 For list of States abolishing riparian rights, see Secs. 507, 621.

For right to abolish, see Secs. 586-594.

For cause of abolishing, see Secs. 588, 593.

"While this is undoubted, and the rule obtains in those States in the Union which have simply adopted the common law, it is also true that as to every stream within its dominion a State may change this common law rule and permit the appropriation of the flowing waters for such purposes as it deems wise." U. S. v. Rio Grande Dam & Irr. Co., 174 U. S. 690, 43 L. Ed. 1136, 19 Sup. Ct. Rep. 770.

See, also, Kansas v. Colorado, 206 U. S. 46, 51 L. Ed. 956, 27 Sup. Ct. Rep. 665.

riparian ownership, is applicable only to those waters in the State which are unappropriated; or, in other words, which have not become the property of riparian proprietors.[2] Hence it follows that even in those States which have abolished riparian rights there may be old rights of this nature which the new rule can not affect. As between these early rights and rights claimed by appropriation the same rule of priority applies, that the one which was first in time has the superior right.

**§ 817. Appropriations and riparian rights—Effect of Desert Land Act of 1877.**—Section 1 of the Desert Land Act of March 3, 1877,[1] among other things, provided: "And all surplus water over and above such actual appropriation and use, together with the water of all lakes, rivers, and other sources of water supply, shall remain and be held free for the appropriation and use of the public for irrigation, mining, and manufacturing purposes, subject to existing rights." It is viewed by some authorities that this provision abolished even "the so-called modified doctrine of riparian rights,"[2] as to all lands through which non-navigable streams flow, the title to which has been acquired from the Government of the United States since the passage of that Act, even in those Western States which had theretofore adhered to this common law rule as one of their dual systems of laws governing the use of the waters flowing within their respective boundaries; and, that thereafter all waters flowing within the boundaries even of these States were subject to the law of appropriation only.[3] We do not believe that this is the correct construction to give to the

2 Crawford v. Hathaway (Hall), 67 Neb. 325, 93 N. W. Rep. 781, 60 L. R. A. 889, 108 Am. St. Rep. 647.

1 6 Fed. Stat. Ann., 1905, p. 392; 2 U. S. Comp. Stat., 1901, p. 1548; 19 Stat. L. 377.

For Act and construction thereof, see Sec. 622.

2 For modified doctrine, see Secs. 508-512.

3 "It is a serious question whether the Desert Land Act does not abolish the so-called modified doctrine of riparian rights, which gives to riparian proprietors the right to use water for irrigation as to all lands through which non-navigable streams flow, the title to which has been acquired since the passage of the Act. . . . And it is at least a debatable question whether, by the language quoted, Congress did not intend to recognize and assent to the appropriation of such waters in contravention to the common law doctrine of riparian rights as to persons subsequently acquiring title from the United States." Williams v. Altnow, 51 Ore. 275, 95 Pac. Rep. 200.

provisions quoted in the Act of 1877. The trouble seems to be in confusing the rights of the United States as the proprietor and as sovereign. To be sure, the United States was primarily the owner and proprietor of both the public lands and the waters flowing over them. The Government is still the owner and proprietor of all the surplus waters flowing over its lands, to which vested rights have not attached. But the United States has not the sovereign control over waters which flow within the boundaries of a certain State, except so far as it has reserved the waters of the natural streams for the general use of the public for navigation,[4] and for its own uses as a riparian owner or otherwise upon the Government reservations and lands used by the Government itself for some purpose.[5] We do not believe that Congress has the power to abolish the law of riparian rights either in the Western or Eastern States, where a State by its laws has declared that, governing the subject of waters, the common law shall be followed. The sovereignty, jurisdiction, and control over all waters flowing within the boundaries of a State are left, with the exceptions above mentioned, to the laws of that State upon its admission to the Union. That State may adopt the common law as it is strictly construed in England and in the Eastern

Citing U. S. v. Rio Grande Irr. Co., 174 U. S. 690, 43 L. Ed. 1136, 19 Sup. Ct. Rep. 770.

"We are of the opinion that all lands settled upon after the date of the latter Act (that of 1877) were accepted with the implied understanding that the first to appropriate and use the water for the purposes specified in the Act should have the superior right thereto." Hough v. Porter, 51 Ore. 318, 372, 98 Pac. Rep. 1083, 95 Pac. Rep. 732, 102 Pac. Rep. 728.

In the recent case decided by the Supreme Court of the United States of Boquillas Land & Cattle Co. v. Curtis, 213 U. S. 339, 53 L. Ed. 822, 29 Sup. Ct. Rep. 493; *Id.*, 11 Ariz. 128, 89 Pac. Rep. 504, while not deciding the question under discussion, said: "The opinion that we have expressed makes it unnecessary to decide whether lands in the arid region, patented after the Act of March 3, 1877, Chap. 107, 19 Stat. L. 377, 2 U. S. Comp. Stat., 1901, p. 1548, are not accepted subject to the rule that priority of appropriation gives priority of right by virtue of that Act, construed with the Rev. Stat., Sec. 2339, U. S. Comp. Stat., 1901, p. 1437." And referring to the above decision in the Hough v. Porter case, the Court said: "The Supreme Court of Oregon has rendered a decision to that effect on plausible grounds."

[4] For the right of protection of navigation, see Secs. 341-357.

[5] For the United States as a riparian owner, see Sec. 480.

For Governmental use upon Indian reservations, see Sec. 668.

States of this country; it may adopt the modified form of that law, as has been done to meet the peculiar conditions in the Western States; or, upon the other hand, it may entirely abolish the common law upon the subject of waters and adopt in lieu thereof the Arid Region Doctrine of appropriation only; or again, it may adopt both the common law and the doctrine of appropriation. But, as far as Congress is concerned, it can not force any particular law governing waters upon any State. As was said by Mr. Justice Brewer in the case of Kansas v. Colorado,[6] "It may determine for itself whether the common law rule in respect to riparian rights, or that doctrine which obtains in the arid regions of the West of the appropriation of waters for the purposes of irrigation, shall control. Congress can not enforce either rule upon any State." Hence it must follow that the Desert Land Act of 1877 did not, nor could it, abolish the common law of riparian rights in a State where that law had been adopted as at least one of the rules of law governing waters within its boundaries. The only effect that that Act had, or could have had, in regard to the subject under consideration, was to emphasize the right already granted under the Act of 1866 and as amended in 1870, to the effect that the surplus waters of the natural streams, or other sources of water supply, flowing over the public lands might be taken under the doctrine of appropriation, as far as the rights of the Government as the owner thereof were concerned, for irrigation or other beneficial purposes.[7]

There was no intent upon the part of Congress to change, nor could it change by the Act in question, the rule that any State has the right to govern the waters within its boundaries. As the owner of the surplus water flowing over the public domain, however, the effect of this clause in the Desert Land Act was merely for the Government to emphasize the fact that the waters flowing over its public lands were subject to further appropriation; and

[6] 206 U. S. 46, 51 L. Ed. 956, 27 Sup. Ct. Rep. 655.

See, also, upon this subject, Secs. 593.

[7] "If any consent of the General Government was primarily requisite to the inception of the rule of prior appropriation, that consent is to be found in the several enactments of Congress, beginning with the Act of July 26, 1866, and including the Desert Land Act of March 3, 1877." Farm Investment Co. v. Carpenter, 9 Wyo. 110, 61 Pac. Rep. 258, 50 L. R. A. 747, 87 Am. St. Rep. 918.

in doing this the Government, also as the riparian proprietor of these waters, waived its right to the undiminished flow of the natural streams, in order that these appropriations might be effected.[8] But as far as changing the rule in any State, from that of the common law of riparian rights to that of the Arid Region Doctrine of appropriation, Congress did not and could not, for the reason that this right has been entirely left to the various States themselves.[9]

§ 818. **Mixed rights on the same stream—Some inconsistencies.**—In those States which have both the Arid Region Doctrine of appropriation and the common law of riparian rights,[1] the continual clashing between these two rights is nowhere so apparent as where there are mixed rights on the same stream or other source of supply. This may seem a paradoxical statement to those who are unfamiliar with the conditions in this Western country and the laws in force here governing the use of the waters in the natural streams. For, under the strict construction of the common law, as it is enforced in England and in the Eastern States, a riparian proprietor is entitled to the full flow of the stream by his land as it was wont to flow by Nature. In other words, he is entitled to the natural flow of the stream undiminished in quantity and undeteriorated in quality, and, when his riparian rights have once attached, subsequently there could be no appropriation of the waters of the stream which would diminish the quantity naturally flowing therein. But, as we have seen in a previous portion of this work, the common law of riparian rights itself has been greatly changed and modified in this Western country to meet the conditions here.[2] In all of the Western States adhering to the common law the water may be diverted from its natural channels and used for irrigation and other purposes by the riparian owners, which uses were either not allowed at all or were very reluctantly granted under the strict enforcement of that law.[3]

8 For the modern Western rule, as to the undiminished flow of streams, see Sec. 549.

9 See Sec. 593.

1 For list of States, see Secs. 507, 621.

2 For the modification of riparian rights, see Secs. 509-513.

3 For irrigation as a riparian right, see Secs. 498-525.

And, there is no use of denying the fact, in this Western country the rights allowed under either law are very much the same, and depend largely upon the same rule, and that is the application of the water to some beneficial use or purpose. Or, to state the rule in more definite language, that right of the appropriator depends upon his actual use of the water to some beneficial purpose, and the right of the riparian owner depends either upon what he actually uses, or upon what he *might* use for some such purpose. Therefore, water being an exceedingly scarce article in this part of the country, compared to the amount which might be used beneficially if there were plenty, the authorities hold that there must be no water wasted, or permitted to run to waste, which is the same thing. In many parts of the country the very life of the community depends upon the use of all of the water flowing in the streams. Therefore, the time has long since passed when a riparian owner in the common law States in the West, although prior in time to any attempted appropriations from the stream running by his land, is permitted by virtue of a small holding of land near the mouth of the stream, which flows more water than he can possibly use on his land, to successfully maintain that the surplus of the water over and above the amount which might be used by him, must continue to flow by his land, and, perhaps, be wasted in the sea, and that, too, regardless of the needs of appropriators higher up on the stream. And, strange as it may seem, it is to California to which we must look for the modification of this rule of riparian rights, as it is to California to which we must look for the history of the Arid Region Doctrine of appropriation.[4] And it is that State which first held so tenaciously to the doctrine that both the law of appropriation and that of riparian rights might exist together in the same jurisdiction in a sort of fraternal relationship, although when each is strictly enforced, on principle, they are as antagonistic as it is possible for two laws to be—the law of riparian rights holding to the rule that the water in a stream must continue to flow in the natural channel as it was wont to flow by Nature, and the law of appropriation that, in order to acquire a right to the use of the water, it must be diverted from the natural stream and applied to some beneficial use or purpose. In the following sections we will dis-

[4] For history of doctrine, see Secs. 595-626.

cuss the law, upon the subject of mixed rights upon the same stream, as it is today held by the courts.[5]

§ 819. **Mixed rights—Appropriations prior to vesting of riparian rights.**—Where there are appropriations of the waters of a stream before the vesting of any riparian rights, of course, the appropriators can successfully claim the full amount of water in the order of their priorities to the extent of their respective appropriations.[1] But where, after certain appropriations have been made, the riparian rights of settlers attach, and afterward there are other appropriations or attempted appropriations, the rights of the later appropriators must be made in some method known to law, as against the rights of the riparian owners. The riparian right of a settler will attach to the surplus of the water of the same stream from which there are prior appropriations. If, however, the prior appropriators do not use the whole of the stream, the riparian rights of the settler will attach to the unused surplus and will prevail over the rights claimed by the later appropriators.[2] As to what extent the riparian owners are entitled to the full flow of this surplus water, as against the subsequent appropriators, we will discuss in the subsequent sections of this chapter.[3]

§ 820. **Mixed rights—Appropriations subsequent to vested riparian rights—Rule in California.**—As we intimated in the previous section,[1] the tendency of the courts in their later decisions in the Western common law States is more and more toward the rule that the extent of a claim to the use of the waters of the natural streams, either under the common law as modified to suit the conditions of the country, or under the law of appropriation, depends largely upon the application of the water to some beneficial use or purpose; and, that the application of either law in this respect was very much the same.[2] This is especially true,

5 See Secs. 818-823.

1 For amount of water, see Secs. 866-877.

3 See Secs. 820-823.

1 See Secs. 509-513.

2 For the application of the water to some beneficial use under the doctrine of appropriation, see Secs. 725-729.

as we shall see in a subsequent portion of this work, where injunctive relief is sought by a riparian owner to prevent the appropriators above on the same stream from interfering with the natural flow of the stream by the land of the owner, or in actions for damages for diverting the water, and where he either does not use the water at all, or uses but a small quantity.[3] This we deem to be the correct rule and one tending to effect the utmost use of the water without waste.[4] In sections of the country where irrigation is greatly needed, and where large tracts of land are comparatively worthless unless the water is applied to the same, it is true that where there are mixed rights on the same stream it is difficult to lay down any definite rule as to the extent of riparian rights which will be applicable to, and cover, all cases. It seems clear, however, that in no case should a riparian owner be permitted to demand, as of right, that the natural flow of the stream be not interfered with, when the water is needed by appropriators above, simply because the riparian owner wishes to see the stream flow by or through his land undiminished in quantity. In other words, a riparian owner ought not to be permitted to successfully claim the "undiminished flow" of a stream as a riparian right, under the strict construction of the common law, and thereby prevent the actual use of the water of the stream by appropriators above, when the amount diverted by them would not be used by the former, and would cause no loss or injury to him or to his land, present or prospective, but would greatly benefit the parties diverting it. The leading case holding to this view, and the one most often cited, is that of Modoc Land etc. Co. v. Booth,[4a] and was decided by the California Supreme Court in 1894. Since that time this decision has been followed, not only by some of the later decisions by the California courts, but also by the courts of the other Western common law States, and the same principle announced.[5] And again, where the riparian owner has use for a

3 For injunctive relief, see Chap. 81.

For actions for damages by riparian owners, see Chap. 83.

4 For wasting water, see Secs. 911-916.

4a 102 Cal. 151, 36 Pac. Rep. 431.

5 In a later California case, the Court, in refusing an injunction, in an action brought by the plaintiff, said: "There is no evidence or finding that its lands are susceptible of cultivation, or can be made productive, or that plaintiff is or can be injured as to its riparian lands, though deprived of all the water flowing in

certain amount of the water of the stream, instead of strictly enforcing the common law rule of permitting all of the water to flow by his land, the California court in a recent case held that, to authorize an award to a riparian owner to take water from the stream for irrigation, the owner must plead his riparian rights, the amount of his irrigable lands, and the amount of water reasonably necessary for his use thereon.[6] Again, in a case decided in the Supreme Court of that State in 1908,[7] in which Mr. Justice McFarland rendered the opinion, who, by the way, dissented to the decision in the Modoc case,[8] a still more advanced step was taken, and it was held that the patentee of land situated on a stream, in a State where the common law of riparian ownership prevails to the full extent, would have the right to have the water of the stream flow down to his land without any material diminu-

the stream." Vernon Irr. Co. v. City of Los Angeles, 106 Cal. 237, 39 Pac. Rep. 762.

Riparian rights can only entitle the owner to a reasonable use of the water on his land. Senior v. Anderson, 130 Cal. 290, 62 Pac. Rep. 563.

See, also, Montecito etc. Co. v. Santa Barbara, 151 Cal. 377, 90 Pac. Rep. 935; *Id.*, 144 Cal. 578, 77 Pac. Rep. 1113; Harris v. Harrison, 93 Cal. 676, 29 Pac. Rep. 325; Gould v. Eaton, 117 Cal. 539, 49 Pac. Rep. 577, 38 L. R. A. 181; Fifield v. Spring Val. Water Works, 130 Cal. 552, 62 Pac. Rep. 1054.

But see Anaheim W. Co. v. Fuller, 150 Cal. 327, 88 Pac. Rep. 978, 11 L. R. A., N. S., 1062, where it is held that a wrongful diversion of the waters of a stream will be restrained at the instance of a person having riparian rights in the stream, although no actual damages are averred or proved.

See, also, Huffner v. Sawday, 153 Cal. 86, 94 Pac. Rep. 424.

[6] Wutchumna etc. Co. v. Pogue, 151 Cal. 105, 90 Pac. Rep. 362.

"He (plaintiff) did not, however, allege that he was entitled as a riparian owner to any definite quantity of water for the irrigation of his riparian lands, nor did he allege any facts showing or tending to show what proportion of the waters of the stream he could reasonably exhaust for that purpose." Riverside Water Co. v. Gage, 89 Cal. 410, 26 Pac. Rep. 889.

And, in a very recent case, where it was alleged that "many of said parties are owners of land through which said stream flows," it was held that the answer was uncertain in not alleging which of said defendants are owners of riparian land or the quantity of water required for any of their lands as such riparian owners. Strong v. Baldwin, 154 Cal. 150, 97 Pac. Rep. 178, 129 Am. St. Rep. 341; *Id.*, 137 Cal. 432, 70 Pac. Rep. 288.

Wiggins v. Muscupiabe etc. Co., 113 Cal. 182, 45 Pac. Rep. 160, 32 L. R. A. 667, 54 Am. St. Rep. 337; San Luis W. Co. v. Estrada, 117 Cal. 168, 48 Pac. Rep. 1075.

[7] Los Angeles v. Los Angeles etc. Co., 152 Cal. 645, 93 Pac. Rep. 869.

[8] *Supra.*

tion in quantity; but such right would not accrue to a patentee of land in an arid region of a Western State where irrigation is necessary to successful agriculture. Again, in a case decided in 1909 by the same court,[9] it was asserted by the plaintiffs that under the common law rule the riparian proprietor had the right to the full flow of the stream in its natural course through his land.[10] But the Court, by Mr. Justice Shaw, said: "It is obvious, of course, that, if this *supposed* rule were strictly enforced against riparian owners, as well as appropriators, the waters of the streams in the State could not be used at all, but would flow to the sea, or until they disappeared in the sands and washes, without benefit to any one, except in the few instances where flood waters might escape and flow upon lands situated similarly to those of the plaintiffs. *The rule is evidently not suited to the conditions of a dry climate, such as we have in this State.*" Again, the California court, in a case decided in 1910,[11] held that even if at common law or under the civil law it was a part of the usufructuary right of the riparian proprietor to have the water flow by his lands for no purpose than to afford him pleasure in its prospect, such was not the present rule of decision in that State. And the Court further held that a lower riparian owner must show damage to justify a court of equity in restraining an upper claimant from his beneficial use of the water.[12]

And these later decisions practically overruled all previous de-

9 Turner v. James Canal Co., 155 Cal. 82, 99 Pac. Rep. 520, 22 L. R. A., N. S., 401, 132 Am. St. Rep. 59, 17 Am. & Eng. Ann. Cas. 823.

10 And the Court said: "The cases are numerous wherein the right of a riparian proprietor to have the stream flow to his land undiminished by any diversion made by an appropriator for use on non-riparian lands has been declared. Among them may be cited Lux v. Haggin, 69 Cal. 396, 4 Pac. Rep. 919, 10 Pac. Rep. 674; Heilbron v. Last Chance etc. Co., 75 Cal. 117, 17 Pac. Rep. 65, and Heilbron v. Fowler etc. Co., 75 Cal. 426, 17 Pac. Rep. 535, 7 Am. St. Rep. 183."

11 San Joaquin etc. Co. v. Fresno etc. Co., 158 Cal. 626, 112 Pac. Rep. 182, 35 L. R. A., N. S., 832.

Right of riparian proprietors to injunction, Chap. 81.

Right of riparian proprietors to damages, Chap. 83.

See, also, Fifield v. Spring Valley Water Works, 130 Cal. 552, 62 Pac. Rep. 1054; Miller & Lux v. Madera Canal Co., 155 Cal. 59, 99 Pac. Rep. 502, 22 L. R. A., N. S., 391; Mentone Irr. Co. v. Redlands etc. Co., 155 Cal. 323, 100 Pac. Rep. 1082, 22 L. R. A., N. S., 382, 17 Am. & Eng. Ann. Cas. 1222.

cisions of the California courts holding to the right of a riparian owner to the full flow of the waters of a stream through his lands, and especially those cited by the Court, as set forth in our note, and which include the case of Lux v. Haggin, so long relied upon and so many times cited to sustain the riparian right of a proprietor to this flow. From these cases it is very evident that it is the tendency of the California court to still further limit the right of the riparian proprietor to the flow of the water of natural streams by or through his lands to either the water which he actually uses, or to the amount which he might use for some beneficial purpose. And, as the country is fast becoming settled up and the demand for water is each year becoming greater and greater, we believe that the time is not far distant when the courts will hold that the riparian owner's right to have the water of a stream flow down to his land, as against appropriations above him from the same stream, will depend upon the amount which he actually applies to a beneficial use or purpose, upon the principle that his right to the water is simply usufructuary; and, if he does not use the water, it is an abandonment of this right, and others may take the water who will use it.[13] This ruling would then be uniform with the ruling as to the extent of the right of an appropriator of the waters, to the effect that he can only successfully claim such an amount of water as he actually applies to some beneficial use or purpose.[14]

§ 821. **Mixed rights — Appropriations subsequent to vested riparian rights—Rule in other States.**—From the previous section [1] we have shown that there is a radical change in the decisions of California of more recent date, as against the earlier decisions of that State upon the subject of the right of the riparian proprietor to the "undiminished flow" theory of the common law, or the right of the riparian owner to have a stream which flows through or adjoins his land, undiminished in quantity, as of right, simply by virtue of the fact of his riparian ownership, and regardless of his use of the water for some beneficial purpose. As will be seen,

13 See, also, irrigation as a riparian right, Secs. 498-525.

Injuries and remedies therefor, Chaps. 81-83.

For the holding upon this proposition in other States, see Sec. 549.

See, also, injunctions, Chap. 81.

14 For beneficial use, see Secs. 690-705.

1 See Sec. 820.

it is the later rule of the Supreme Court of that State to limit the right to the flow of a stream by riparian lands, as a riparian right, to the amount which the owner actually uses, or might use, for the irrigation of the irrigable tract of riparian land owned by him. But we do not have to depend entirely upon the California cases to sustain the rule to the effect that so long as the usufructuary estate of the riparian owner is in no way injured, the waters of the stream may be appropriated as against his prior location on the land. The riparian owner does not own the *corpus* or very body of the water. He has the right only to enjoy the advantage of a reasonable use of the water of the stream as it flows by his land. It is also well settled in all of the Western States that even a riparian owner himself has a right to use a reasonable amount of the water flowing by his land for the purpose of irrigating that land.[2] Hence, under this phase of the question, the rule of the common law right of "undiminished flow," as to the other riparian owners on the same stream, falls. The Nebraska Court has held to the effect that the mere fact that the riparian proprietor is deprived of the full flow of the stream adjacent to his land would furnish no basis for compensatory damages. At most the naked right to the full flow of the stream, and its loss by diminishing the volume of the water when appropriated for irrigation purposes, could result only in *damnum absque injuria*.[3] The Kansas Court followed the ruling of the Supreme Court of Nebraska in the Crawford case, and quoted largely from the opinion in that case.[4] The Oregon Court also

2 For irrigation as a riparian right, see Secs. 498-525.

3 "In order to entitle the riparian owner to compensation, he must suffer an actual loss or injury to the use of the water which the law recognizes as belonging to him, and to deprive him of which is to take from him a substantial property right." Crawford v. Hathaway (Hall), 67 Neb. 325, 93 N. W. Rep. 781, 60 L. R. A. 889, 108 Am. St. Rep. 647.

See, also, Meng v. Coffey, 67 Neb. 500, 93 N. W. Rep. 713, 60 L. R. A. 910, 108 Am. St. Rep. 697; McCook Irr. Co. v. Crews, 70 Neb. 115, 102 N. W. Rep. 249; Cline v. Stock, 71 Neb. 70, 102 N. W. Rep. 265, 98 N. W. Rep. 454.

4 Clark v. Allaman, 71 Kan. 206, 80 Pac. Rep. 571, 70 L. R. A. 971, and the Court added: "In other words, a diminution of the flow of water over riparian land, caused by its use for irrigation purposes by upper riparian proprietors, occasions no injury for which damages may be allowed, unless it results in subtracting from the value of the land by interfering with the reasonable uses of the water which the landowner is able to enjoy."

lays down the same rule.[5] And the most recent exposition of what we deem to be the correct rule, as laid down by the Oregon Court, is in the recent case of Hough v. Porter, wherein Mr. Justice King, in an exceedingly well argued case, held that the rigid rules of the common law, as interpreted and sought to be applied by those insisting upon the "undiminished flow" theory, are inapplicable to the many new and intricate questions arising throughout the arid and semi-arid sections.[6] This is also the rule in South Dakota,[7] and in Washington, where it was held that a subsequent appropriator had the right to enjoin a prior riparian owner from interfering with the free flow of the creek, for the reason that it did not appear from defendant's answer that he was making any beneficial use of the water he was diverting.[8] The Federal Court for the State of Montana has also announced the same rule.[9]

As we view the question, the great weight of authority, as well as all of the reason and common sense, is with this side of the proposition. All of the water should be put to some actual use, and one riparian proprietor, on account of a small holding upon the bank of some stream should not be permitted to successfully contend that the water must continue to flow in the stream as it was wont to flow by Nature, regardless of the requirements of

5 "The plaintiffs, therefore, were not entitled to an injunction restraining the defendant from using the water of the stream for the purpose of irrigation, because such use was no injury to them." Jones v. Conn, 39 Ore. 30, 64 Pac. Rep. 855, 54 L. R. A. 630, 87 Am. St. Rep. 634.

See, also, Boyce v. Cupper, 37 Ore. 256, 61 Pac. Rep. 642.

6 Hough v. Porter, 51 Ore. 318, 372, 95 Pac. Rep. 732, 98 Pac. Rep. 1083, 102 Pac. Rep. 728. For further reference to this case in this connection see Sec. 549.

7 See Lone Tree D. Co. v. Cyclone D. Co., 15 S. D. 519, 91 N. W. Rep. 352; *Id.*, 26 S. D. 307, 128 N. W. Rep. 596, where the Court held that a subsequent appropriation was valid as against the rights of a riparian owner, after the Court had fixed by decree the amount of 100 inches of water as the amount necessary for his use on his riparian land.

But see the case of Sturr v. Beck, 133 U. S. 541, 33 L. Ed. 761, 10 Sup. Ct. Rep. 350. For the argument that this case was practically overruled as to the undiminished flow question, in the case of Kansas v. Colorado, 206 U. S. 46, 51 L. Ed. 956, 27 Sup. Ct. Rep. 655, see Sec. 549.

8 Northport Brewing Co. v. Perrot, 22 Wash. 243, 60 Pac. Rep. 403.

9 Cruse v. McCauley, 96 Fed. Rep. 369; Morris v. Bean, 146 Fed. Rep. 432; *Id.*, 159 Fed. Rep. 651, 86 C. C. A. 519; affirmed in 221 U. S. 485, 55 L. Ed. 821, 31 Sup. Ct. Rep. 703.

But see decision of the Federal Court for California in the case of California etc. Co. v. Enterprise etc. Co., 127 Fed. Rep. 741.

those above who are in need of the water. If riparian rights must be sustained, the very utmost that should be granted is that which was allowed by the South Dakota case,[10] where the amount of water necessary to irrigate the land of the riparian owner was set apart for his use and the surplus of the stream given to the appropriators. The riparian owner might then use the water set apart to him or not.

§ 822. **Mixed rights — Appropriations subsequent to vested riparian rights—Effect of Kansas-Colorado case.**—The greatest example illustrating this question of the extent of the right of a riparian proprietor in this Western country to the flow of the water of a stream, from which there were appropriations above, arose in the facts in the case of Kansas v. Colorado, an original action brought in the Supreme Court of the United States [1] by the State of Kansas, as a riparian owner, to enjoin the diversion by the State of Colorado and a great number of defendant corporations within that State of the waters of the Arkansas River, which river has its source in the Rocky Mountains in the central part of the State of Colorado, thence flowing through the eastern portion of that State, Southwestern Kansas, and into Oklahoma. It was the State of Kansas which invoked the action of the Court, alleging that, through the action of the defendants, a large portion of its territory was threatened with disaster, and the plaintiff prayed for injunctive relief. In other words, Kansas maintained the position that, as a riparian proprietor, it was entitled to the rule of the "undiminished flow" theory of the common law as the same is recognized and enforced under the strict construction thereof, and, that it was entitled to injunctive relief under the common law, as a matter of right, regardless of the rights or needs of the appropriators above, and that, too, without having shown that the plaintiff had been damaged to any considerable extent. The Court, through Mr. Justice Brewer, in summing up its conclusions upon the point in question, held: That the appropriation of the waters of the river by Colorado, for the purposes of irrigation, had dimin-

10 Lone Tree D. Co. v. Cyclone D. Co., 15 S. D. 519, 91 N. W. Rep. 352; *Id.*, 26 S. D. 307, 128 N. W. Rep. 596.

1 206 U. S. 46, 51 L. Ed. 956, 27 Sup. Ct. Rep. 655; *Id.*, in demurrer, 185 U. S. 125, 46 L. Ed. 838, 22 Sup. Ct. Rep. 552.

ished the flow of the water into the State of Kansas; that the result of the appropriation had been the reclamation of large areas of land in Colorado, transforming thousands of acres into fertile fields, and rendering possible their occupation and cultivation, when otherwise they would have continued barren and unoccupied; that while the influence of such diminution had been of perceptible injury to portions of the Arkansas Valley in Kansas, particularly those closest to the Colorado line, yet, to the great body of the valley it had worked little if any detriment, and the Court, not being satisfied that Kansas had made out a case entitling it to an injunction, dismissed the bill. It will be noticed that the Supreme Court of the United States went much further in this ruling than did the Supreme Court of California in the case of Modoc Land etc. Co. v. Booth,[2] discussed in a previous section.[3] In the latter case the Court held that a riparian proprietor ought not to be permitted to successfully claim the "undiminished flow" of the stream, when the amount diverted by the upper appropriators would cause no loss or injury to him or to his land, present or prospective, while in the Kansas-Colorado case it was found that "the influence of such diminution has been of perceptible injury to portions of the Arkansas Valley in Kansas," and still the Court refused to grant an injunction. This ruling of the Supreme Court of the United States, while in no way changing the law that a State has the right to adopt whatever rule governing waters it sees fit, and expressly stating that a State "may determine for itself" what law "shall control," will undoubtedly have a wide influence upon the future decisions of the State courts upon the subject of the common law right of a riparian owner to the "undiminished flow" of a stream which runs through or adjoins his land, when the waters of the same are needed for irrigation by appropriators above. In fact, it can only be regarded that the Court upon this point overruled its decision in the case of Sturr v. Beck,[4] where the facts were identically the same, only as between private individuals. In this case it was held by the Court that, "As the riparian owner has the right to have the water flow *ut currere solebat*, undiminished except by reasonable consumption by upper proprietors," the plaintiff could make no appropriation as against Beck, who was a ripa-

[2] 102 Cal. 151, 36 Pac. Rep. 431.
[3] See Sec. 549.
[4] 133 U. S. 541, 33 L. Ed. 761, 10 Sup. Ct. Rep. 350.

rian proprietor, and who was entitled to the undiminished flow of the stream. This is already the view taken by some of the State courts, notably the Supreme Court of Oregon. In the recent case of Hough v. Porter,[5] Mr. Justice King, in a most well-reasoned case, said: "The opinion in the Kansas-Colorado case not only brushes aside the rule claimed to have been announced in Sturr v. Beck, regarding riparian rights, but disclosed what, in the opinion of the writer, is a strong and commendable tendency on the part of that great court to recognize that the rigid rules of common law, as interpreted and sought to be applied by those insisting upon the 'undiminished flow' theory, are inapplicable to the many new and intricate questions necessarily arising under our form of government and throughout the arid and semi-arid sections."

§ 823. **Mixed rights on the same stream—Our conclusions.**—In closing our argument upon the phase of the question of mixed rights on the same stream, we will add that owners of land adjacent to streams and other bodies of water, in the Western States which still adhere to the doctrine of the common law upon the subject of waters, have riparian rights other than those presented in this controversy, and which are not affected by any rule which a State may adopt as to the flow of streams by the lands of the riparian owners.[1] These rights the riparian owner may hold unimpaired in these States. But in this part of the country, where water is so very scarce, compared with the amount which might be used if there were plenty, where the very life of certain communities now depend upon the utmost use of all of the water available, and where the demand for water is each year becoming greater and greater, as the country is becoming more and more settled, we consider that, upon the question of the flow of the stream adjacent to the lands of a riparian owner, the correct rule should be that if the riparian owner does not actually apply the water to some beneficial purpose, others should be permitted

[5] 51 Ore. 318, 372, 95 Pac. Rep. 732, 98 Pac. Rep. 1083, 102 Pac. Rep. 728.

[1] For riparian rights, see Secs. 450-584.

See, also, Morton v. Oregon etc. R. Co., 48 Ore. 444, 87 Pac. Rep. 151, 1046, 7 L. R. A., N. S., 344, 120 Am. St. Rep. 827; Hough v. Porter, 51 Ore. 318, 95 Pac. Rep. 732, 98 Pac. Rep. 1083, 102 Pac. Rep. 728; Coquille etc. Co. v. Johnson, 52 Ore. 547, 98 Pac. Rep. 132, 132 Am. St. Rep. 716.

to appropriate it who will so use it. The extent of the right of the riparian owner to the "undiminished flow" of the stream should be conditional upon his application of all of that flow to some beneficial use or purpose; and, where he either does not use the water at all, or uses but a small portion of it for such a purpose, appropriators above should be entitled to appropriate all the surplus. This would make a uniform rule as between the rights of appropriators and those of riparian owners in this respect, where there are both rights upon the same stream. The tendency of the decisions, as will be seen from the preceding sections, is already in that direction. And we predict that it will not be many years before this rule is adopted in each of the Western States which has both the Arid Region Doctrine of appropriation and the common law of riparian rights as the same has been modified from time to time to meet the conditions in the arid and semi-arid States. In fact, this is the only method of reconciling these two principles of law, which, if each is strictly enforced, are so irreconcilable. Thus in those States which still adhere to the common law, there would be at least one uniform rule of law applicable to both systems, and that is, that in order to hold a right to the use of the water under either system, there must be an actual application of all of the water claimed to some beneficial use or purpose.

# CHAPTER 45.

## MEANS OF THE USE AND CHARACTER OF THE WORKS.

§ 824. Scope of chapter.
§ 825. Means of the use of the water appropriated.
§ 826. Right to construct dams.
§ 827. Reservoir dams—Diverting dams.
§ 828. Means of conducting the water to the place of use.
§ 829. The right to construct ditches on the public lands.
§ 830. The right to construct ditches on private lands.
§ 831. The ditches of others may be used.
§ 832. The natural channel of stream may be used for the ditch.
§ 833. Ditches, canals, etc., are not in themselves easements.
§ 834. Character of property in ditches, canals, and reservoirs.
§ 835. Reservoirs and storage rights.
§ 836. Character of construction of works—In general.

**§ 824. Scope of chapter.**—In the acquisition of a water right under the Arid Region Doctrine of appropriation, as we have seen in a previous chapter,[1] it is necessary that certain artificial works be constructed by the appropriator, in order to divert and conduct the water to the place of use.[2] In the previous chapter we discussed the nature and character of a water right.[3] The discussion in this chapter will be devoted to the means of the use of water and to the character of the works required to be constructed by an appropriator, including the dam, ditch, canal, flume, reservoir, and other works necessary to the appropriator as a means of diverting, conducting, storing, and using the water claimed under an appropriation.

We will leave the discussion of the question of the injuries to and from the works of this nature to the portion of this work treating of injuries and remedies,[4] and, although in this chapter we refer to the rights of way for these works, we will leave the discussion of that subject to another chapter.[5]

**§ 825. Means of the use of the water appropriated.**—The means by which water may be diverted from the natural streams or other

1 For how water is appropriated, see Secs. 706-732.
2 See Secs. 717-721.

sources of water supply, stored, or conducted to the places of use are many. We have referred to this subject in a previous chapter in tracing the steps necessary to make a valid appropriation, under the subject of the construction of the works necessary to make a valid appropriation,[1] and also that these works must be completed with reasonable diligence.[2] And, in general, we will only add here that any means which will divert, store, or conduct the water to the places of use may be used so long as the rights of others are not injured or infringed upon. The means, by which the appropriation is made, are immaterial so long as the water appropriated is actually applied to some beneficial use or purpose, and the rights of others are not injured thereby.[3] All that is necessary to make a valid appropriation is that there be an actual diversion of the water from the natural channel or other source of supply, with an intent to apply it to some beneficial use, followed by an actual application of the water either to the use designed or to some other within a reasonable time,[4] and any lawful means toward attaining that end may be used.

§ 826. **Right to construct dams.**—The right to construct dams in the channels of the streams is based upon one of the fundamental propositions of the Arid Region Doctrine of appropriation, namely, that in order to acquire a right to the use of the water, it must be diverted from its natural channel.[1] As was said in the

4 For appropriation of water, see Secs. 706-732.

1 That the water must be diverted, see Secs. 722-724.

See Conger v. Weaver, 6 Cal. 548, 65 Am. Dec. 528, 1 Morr. Min. Rep. 594, where it is held that the building of a dam is a taking possession of the right to use the water.

California case of Charnock v. Higuerra:[2] "Every diversion from a stream is artificial—a disturbance of the natural order of things. A dam or a ditch is as much an artificial mechanism as a pump—it may, indeed, be much more so; and the one alters the natural conditions in the same sense that the other does. The right to take the water at all is a right to change the ordinary course of Nature; and the methods employed, so long as their use does not infringe the like and equal rights of others, are immaterial." It is also held that a riparian owner may place a dam in the stream if he takes thereby no more than his proportion of the water, taking into consideration the correlative rights of the other owners upon the same stream. In such a case it is held that the dam is not *per se*, an improper structure as to lower owners.[3] In a recent Arizona case it was held that one who had a prior appropriation of surplus and flood waters in a gulch or wash could construct a dam above a subsequent appropriator and impound so much of the water falling above it as he required for his beneficial purpose; but it was further held that he must maintain the dam so as to permit such water as he does not require to pass to the lower appropriator and to so construct the dam as not to endanger the dam of the other appropriator.[4] This right also depends, as is the case of ditches, canals, or other works, upon the right of way, for the purpose acquired by the appropriator. Of course, if the site of the dam is upon his own premises, or upon the public lands, not reserved, there is no question as to his right in this respect; but, upon the other hand, if the site is upon the lands of others, or upon Government reservations, the right to construct the dam must be acquired in some lawful manner. This subject will be more fully treated when we come to the question of rights of way.[5] There is another general rule which must be adhered to, and that is that the rights of others upon the stream or elsewhere must not be interfered with, trespassed upon, or injured. Otherwise, the courts will interfere and possibly the destruction of the dam may be ordered. This is not always the case, however, where

the party whose rights are injured can use the water as well through the works of the owner of the dam. This is illustrated by the decision in a case which arose in Oregon. In the first hearing of the case before the Supreme Court, it having been found that the dams maintained by the defendant interrupted the flow of the water to which the plaintiff was entitled, the Court made a mandatory order that the dams "be removed sufficiently to permit the quantity of water awarded to plaintiff to flow to his premises." Upon a rehearing, however, the Court modified its former order, it having been found that the destruction of the dam would injure the lands of the defendant, and it was ordered that the defendant conduct the water, to which the plaintiff was entitled and which the dam prevented from flowing down the stream, by means of his dam and ditch to the plaintiff's land, it having been found that this could be done without loss or injury to the plaintiff's rights.[6] The rule adopted under the facts in this case was undoubtedly correct, but it is an exception to the general rule that a dam may be constructed to the injury of the rights of others.[7] The appropriator can not construct a dam of such a height that it will back the water upon the lands of others, unless he in some legal way acquires the right to do so.[8] The rule in this respect under the doctrine of appropriation is the same as it is at common law.[9] Neither can one maintain a diverting dam to such a height that it backs up the water over a flat part of the country, and thereby

much is lost by evaporation, when this infringes upon the rights of others who have a right to the water.[10] Under the law, therefore, dams may be constructed, but this right is not unrestricted. They may be constructed so far as may be reasonably necessary to the appropriation and use of the waters claimed, and provided always that in their construction the rights of others are not infringed upon or injured. The right must be exercised within reasonable limits.[11]

§ 827. **Reservoir dams—Diverting dams.**—One of the most common and necessary instrumentalities included within the means of use of water by appropriation is the dam. The water must be diverted from the natural channel of the stream, and the dam is the most usual method. Dams may be divided into two distinct classes, the reservoir dams and the diverting dams. The first class includes those which are used in the construction of reservoirs for the purpose of storing the water for future use. The second class may be defined as those dams constructed for the immediate diversion of the water into the ditches or canals.

The right to build a reservoir dam is coincident with the right to construct the reservoir itself, discussed in previous sections. As to the matter of their construction, any dam which is used for the impounding of any great quantity should be strongly constructed, and the owners thereof are liable for any injuries to life or property caused by their negligence, at least, in defective construction, or careless inspection.[1] And, in some jurisdictions, by statute, they are made liable for all damages caused, regardless of the element of negligence. Such is the case in Colorado.[2] However, no rule for the construction of these dams can be stated which will be applicable to all cases. But the one attempting to store water must exercise in the construction of his dams such care as will be com-

mensurate with the amount of water which he attempts to store and the other facts connected with the magnitude of his undertaking.[3]

As a general proposition, diverting dams need not be constructed with the same solidity as is the case of reservoir dams. They are not used for the storing of any water, but simply to raise the water to such a height as will cause it to flow by gravity into the ditches and canals of the appropriator for immediate use. These dams are sometimes very small and crude, but they are just as effective, so far as the rights of appropriators to the use of the water are concerned, as the larger ones.[4] In cases where small amounts of water are only required from a small stream, often a very crude dam will suffice. It may be constructed of rocks thrown in the stream below the intake of the ditch, so that the water will be raised high enough to permit it to run freely into the ditch. Very often these small dams are constructed out of brush, with gravel or earth thrown on, to hold the water. They need not necessarily be water tight; and, oftentimes, on account of the rights of those who claim the water below, are not permitted to be. In many cases they are constructed only a part of the way across the stream, and these are called wing dams. In many instances these crude dams are washed away in times of high water, and they are so constructed that they will wash away. In this way the adjacent lands are protected from injury by the stream cleaning its own channel in times of flood. If they are replaced when the water lowers, the right of the appropriator to the use of the water is not impaired. In cases of larger appropriations of water, the larger streams and rivers must, of course, be used, and the dams must be of a more substantial character, both in order to divert sufficient water for the purpose intended, both from the standpoint of the injuries liable to be caused from their breaking, and also from that of economy. It is a costly undertaking to have to replace one of these large dams; and hence it is much cheaper to build one which will withstand the ordinary floods in the first instance than to be compelled to reconstruct it when washed out. Then, again, in cases where the appropriation is made for the sale of water to others, comes the question of liability for damages for the failure to furnish water to consum-

[4] See Secs. 718-720.

ers, as well as those to life and property, where the dam is destroyed.[5]

§ 828. **Means of conducting the water to the place of use.**—The most common method of conducting the water, after it is diverted from the natural streams to the place of use, is by open ditches and canals. These words mean the same, but the word "ditch" is usually applied to the smaller works of this nature, and the word "canal" to the larger. Sometimes, in order to more economically conduct the water and to prevent waste by seepage and leakage, the ditch or canal is lined with cement, stone, or wood. There has also been a tendency during the later years to construct closed conduits, or to use wooden or iron pipes. By these methods all leakage and seepage are prevented, and the water is conducted to the place where it is needed without loss. This, of course, requires considerable expense in the construction in the first instance. But it is generally conceded that it pays not only in the amount of water saved to the appropriator, but it also prevents injuries to land from seepage and leakage. But, again, these also prevent seepage to lands which would be benefited thereby. These water-tight conduits are used in the older countries of the world, where water is scarce and the population dense. In this country they are bound to come more and more into use as the same conditions arise.[1] It is not always necessary that the appropriator construct his works for the carrying of the water in these expensive methods.[2] However, he is required to employ means which are reasonably economical, and which will prevent unnecessary waste. He must, at least, keep his ditches, canals, and flumes in reasonably good repair, as the amount appropriated is the amount which he actually applies to some beneficial use or purpose, less a reasonable amount for seepage in conducting the water to the place of use.[3] Wooden flumes may be used where necessary to conduct the water over depressions in the land, but these must be so constructed as to prevent leakage

or waste. And, in general, any waste from faulty or leaky means of conveying the water will be enjoined, if it in any way interferes with the rights of others.[4]

§ 829. **The right to construct ditches on the public lands.**—The right to construct ditches and canals and other works for the conveyance of the water to the place of use, as in the case of dams,[1] is based upon one of the fundamental propositions of the doctrine of appropriation. In order to acquire a right to the use of water it must be diverted from the natural stream and conducted by some means to the place of use. In tracing the history of the doctrine of appropriation, we found that this right originated with the customs of the early miners of California, and was based upon the acquiescence of the Government, amounting to a grant, or at least a license, both as to the right to the use of the water and also as to the right to conduct it over the public domain to the place of use, and the rights which originated in these customs were afterwards enacted into statutory law.[2] Relative to the construction of ditches over the public domain, the Act of Congress of 1866 as the same was amended by the Act of 1870, first granted the right.[3] These Acts were supplemented by the Act of March 3, 1891,[4] under the provisions of which rights of way may be acquired for the construction of ditches, reservoirs, and canals over the public lands and the reservations of the United States. This subject will be more thoroughly discussed in another portion of this work under the subject of rights of way.[5]

§ 830. **The right to construct ditches on private lands.**—When land has once passed into private ownership no person has the right

4 Barrows v. Fox, 98 Cal. 63, 32 Pac. Rep. 811; Town of Sterling v. Pawnee Co., 42 Colo. 421, 94 Pac. Rep. 339, 15 L. R. A., N. S., 238; Montrose Canal Co. v. Loutsenheizer D. Co., 23 Colo. 233, 48 Pac. Rep. 532.

5 See Chap. 51, Secs. 927-971.

to construct a ditch or canal across it without the owner's consent, unless the right is obtained by virtue of the right of eminent domain.[1] Hence it follows that as far as the right to construct ditches and canals over the lands of others is concerned, it depends largely upon the right of way which must be acquired for this purpose over these lands.[2] This may be acquired by grant,[3] license,[4] prescription,[5] or by the right of eminent domain,[6] and will be fully discussed in this work in the chapter on rights of way.

**§ 831. The ditches of others may be used.**—Although works of some description must be constructed to conduct the water to the place of use, it is not necessary that they be always owned by the appropriator of the water or the consumer. He may acquire a right to convey the water to the place of use, or a portion of the way, through the ditch or canal owned by others, and he is then in the same position to protect his rights to the use of the water as though he owned absolutely the ditch or canal.[1] Or, as said by the Supreme Court of California, "and his appropriation so made will, so far as such means of conducting the water is concerned, be as effectual as if he carried it through a ditch or pipe line made for that purpose and no other."[2] In fact, it has been the policy of the law in most of the States and Territories of the West, in order to

For extent of rights to mingled waters, see Secs. 797, 798.

avoid having the country cut up with a multiplicity of ditches and canals, that where one ditch can answer the purpose of more, the right to use the same is granted by statute to others than the owner thereof.[3] Of course, this right is in the nature of a right of way, and must be acquired in a lawful manner.[4] It may be acquired in the same manner as a right of way for the ditch, that is, by grant, contract, license, and by eminent domain.[5] But the appropriations, in cases of this nature, stand alone, and the later comer can claim nothing from the rights of those who were prior, although the method of use is through the same works.[6] And in such a case it is held also that the appropriator need not proceed under the statutory formalities, but that he is an appropriator by actual diversion and use.[7] Where the water of several appropriators are thus mingled in one ditch, great care must be exercised in the measurement to determine the rights of each.[8] And, further, after the enlargement is completed, the duty of keeping the ditch or canal in repair is upon all parties interested in and using the same, and the expense may be equitably adjusted by the Court.[9] And in the enlargement of a ditch for this purpose, the owner can not be compelled to pay any of the cost or expense of the enlargement.[10]

**§ 832. The natural channel of stream may be used for the ditch.**—As was mentioned in a previous section, an appropriator

has the right to make use of all of the natural advantages of the country, and even to use the channel of the same stream from which the water was appropriated, or the channel of another stream, for a portion of his ditch in conducting the water to the place of use.[1] One of the essential elements of a valid appropriation is that there must be an actual diversion of the water from the natural stream.[2] But the authorities have held from the earliest history of the doctrine of appropriation that, after the water has been once diverted from its natural channel, it may be turned back into the stream from which it was originally taken and be recaptured at a point below by the same appropriator, provided that the rights of others are not injuriously affected thereby; thus using the channel of the natural stream for the time being as a link in a ditch or canal for conducting the water to some lower point.[3] It would be a harsh

One may adopt as a part of his ditch a depression, slough, or high-water channel, and have his right to the possession and use thereof protected, the same as if such ditch had been wholly artificially made. Parke v. Boulware, 4 Idaho 692, 43 Pac. Rep. 680.

One who by dikes or dams prevents water from flowing from the main stream at low places or by natural channels, thus confining it to the main stream, and by it conveying it down to his land, where he uses it for necessary and reasonable irrigation, appropriates it. McCall v. Porter, 42 Ore. 49, 70 Pac. Rep. 820, 71 Pac. Rep. 976.

rule to require those engaged in these enterprises to construct an actual ditch or canal along the whole route through which the water has to be carried, and to refuse them the economy which Nature occasionally affords in the shape of a dry ravine, gulch, canyon, or the channel of a natural stream.[4] Not only may the water from the same stream be turned back into its channel and reclaimed, but also the waters from any different source of supply may be turned into the channel of any stream, conducted therein for a distance, and again taken out by the appropriator thereof.[5] In order to take advantage of the right to use the channel of the stream for a part of a ditch, there must be an intention to recapture it, otherwise the water belongs to the other appropriators on the stream, according to their priority of rights, the water being treated as abandoned by the one who turned it into the stream.[6] Then, again, no more water can be taken from the stream than was turned in after

For abandonment, see Secs. 1099-1117.

making due allowance for natural seepage and evaporation.[7] This branch of the subject will be discussed when we take up the subjects of the rights in mingled waters[8] and developed waters.[9]

Another limitation to the right to use the channel of a stream for this purpose is that the capacity of the stream must be considered, and no more water must be turned into it than can be safely carried within the banks, together with the water naturally flowing therein. The flooding or overflowing of property along the stream from this cause will render the party turning the water into the stream liable for injuries caused by the overflow.[10] The appropriator, however, may clean out the channel of the stream, and remove obstructions therefrom, in order to prevent injuries of this nature,[11] provided that in making such changes he does not injure the rights of the other appropriators on the stream.[12]

**§ 833. Ditches, canals, etc., are not in themselves easements.**—The works constructed for the means of use of water, consisting of ditches, canals, flumes, or reservoirs, are not in themselves easements, but are land.[1] Where these works are constructed upon the lands of the appropriator, the portion whereon they are located is held by no different title from the rest of the land.[2] The same is also true where they are constructed over lands owned by others than the appropriator. They are still land, although the fee to the same may belong to a person other than the appropriator. What the appropriator acquires in this instance is not a ditch or canal as an easement, but an easement *for* a ditch or canal or other

7 Miller v. Wheeler, 54 Wash. 429, 103 Pac. Rep. 641, 23 L. R. A., N. S., 1065; Burnett v. Whitesides, 15 Cal. 35; Wilcox v. Hausch, 64 Cal. 461, 3 Pac. Rep. 108; Paige v. Rocky Ford etc. Co., 83 Cal. 84, 21 Pac. Rep. 1102, 23 Pac. Rep. 875.

12 Lobdell v. Simpson, 2 Nev. 274, 90 Am. Dec. 537; McPhail v. Forney, 4 Wyo. 556, 35 Pac. Rep. 773.

1 See Secs. 928, 973.

2 No easement exists so long as the unity of possession and ownership remains, because the owner of the whole may at any time rearrange the quality of the several servitudes. Quinlan v. Noble, 75 Cal. 250, 17 Pac. Rep. 69.

See, also, Cave v. Crafts, 53 Cal. 135; Lampman v. Milks, 21 N. Y. 505; Dixon v. Schurmeier, 110 Cal. 582, 42 Pac. Rep. 1091.

works, as the case may be. The very definition of the word easement precludes the idea that a ditch or canal in and of itself is an easement. It is simply a privilege or private way, "in which a particular man may have an interest or right, though another be the owner of the soil." It is an incorporeal hereditament.[3] Or, again, "an easement is a liberty, privilege, or advantage without profit which the owner of one parcel of land may have in the lands of another. . . . They are incorporeal."[4]

Upon the other hand, the ditch or canal is land; and, being visible and tangible, is corporeal. Because a ditch or canal is dug on land in no way changes its character as land. It is still land, although the bed of the same may be sunk below the surface of the land adjoining it. It has the bed and sides still consisting of the same character of soil or rock as that of the adjoining land, and it is as much a part of this land as though the ditch or canal had never been dug. This may be illustrated by another easement, for a right of way given for a private roadway. Because an easement or privilege is given by the owner of lands to another person to pass over those lands in a private roadway in no way changes the character of the roadway from land, and that, too, although in this case the surface of the bed of the road may be elevated above the surface of the adjoining land. It is still land, and a part and parcel of that adjoining. It is visible and tangible, and therefore corporeal. What is granted is simply the right or privilege to pass over this land, as the easement. This right or privilege is intangible and invisible, hence it follows that the road itself is not the easement. But the easement consists of the invisible, intangible, and incorporeal right or privilege of passing over the road. So it is with a ditch or canal. The ditch or canal itself is not the easement. But the easement consists of the invisible, intangible, and incorporeal right or privilege, or right of way, *for* the ditch, canal, or other works, as the case may be, which the owner of certain lands may have over the lands of another. As was said in an early California case, brought in ejectment: "Substantially the conveyance was of

[3] 2 Blackstone, Chap. 3, Incorporeal Hereditaments, p. 35.

Bouvier, Law Dict. A right in the owner of one parcel of land, by reason of such ownership, to use the land of another for a special purpose not inconsistent with a general property in the owner. They are incorporeal.

[4] 14 Cyc. 1139.

the ditch, for there can be no distinction taken between a 'right of way in a ditch' or 'for' an existing ditch, and the ditch itself.'' [5]

That a right of way for a ditch or canal is an easement we will concede, and will fully discuss this subject in a subsequent chapter.[6] The only point which we wish to make here is that the character of property in a ditch, canal, reservoir, or other means of diversion and use of water, is not in and of itself an easement, or servitude, but is a corporeal estate or land, and relative to which any action at law or in equity will lie, which may be maintained as to any other real property.[7]

The reason that we have elaborated upon this subject to this extent is the fact of the misconception of some of the authorities, including some Courts, as to the nature and character of the property in a ditch or canal where it passes over lands of others than those of the appropriator, and the loose expressions found in some of the decisions, to the effect that the ditch or canal was in itself an easement.[8]

**§ 834. Character of property in ditches, canals, and reservoirs.**—Ditches, canals, flumes, and reservoirs used for the conveyance or storage of water are artificial water courses, lakes, or ponds, and are real property, and the rules of law governing the same are, in general, the same as the rules governing other real property.[1] A ditch, canal, or reservoir is not a mere easement or incorporeal

Larrien, 2 Ariz. 202, 11 Pac. Rep. 397; Ada County etc. Co. v. Farmers' Canal Co., 5 Idaho 793, 51 Pac. Rep. 990, 40 L. R. A. 845, citing Kinney on Irr., 1st Ed., Sec. 224.

An interest in a ditch is realty. Burnham v. Freeman, 11 Colo. 601, 19 Pac. Rep. 761; Oppenlander v. Left Hand D. Co., 18 Colo. 142, 31 Pac. Rep. 854; McPhail v. Forney, 4 Wyo. 556, 35 Pac. Rep. 773; Bashore v.

hereditament. It is itself land,[2] for the recovery of the possession of which an action in ejectment will lie the same as for the possession of any other real property.[3] An action to quiet title to such property will lie, it being real estate. And although in a suit to quiet title to an irrigation ditch the complaint alleged the plaintiff to be the owner of the ditch in fee, it did not preclude the Court from finding that the right or ownership was in the nature of an easement.[4] One who constructs a ditch on the land of another may acquire title to the ditch by adverse use for the statutory period.[5] Ditches dug for the purpose of irrigating land occupied as a homestead, and where without the use of the water thereon the

3 Integral etc. Co. v. Altoona etc. Co., 75 Fed. Rep. 397, 21 C. C. A. 409, 44 U. S. App. 566, where the action was in ejectment for the recovery of a water ditch known as the "Boston Ditch," and the Court held that the suit was for the recovery of the ditch itself, and that the action of ejectment would lie.

See, also, the case of Reed v. Spicer, 27 Cal. 58, 4 Morr. Min. Rep. 330, where an action in ejectment was brought to recover possession of the "Mountain Brow Water Company's ditch." The decision of the Court depended upon the construction of a certain deed in which there were two independent descriptions of the property intended to be conveyed, first by name: "A way to, in, and for the ditch called 'Mountain Brow Water Company'; second, by indicating the land which the way crosses, namely, 'the land owned by Spicer.'" And the Court in the opinion said: "Substantially the conveyance was of the ditch itself. . . . If a mining ditch is to be regarded as a mere easement or incorporeal hereditament, it would follow that this action could not be maintained."

See, also, Nevada etc. Co. v. Kidd, 37 Cal. 282; Dondero v. O'Hara, 3 Cal. 633, 86 Pac. Rep. 985; Mitchell v. Amador etc. Co., 75 Cal. 483, 17 Pac. Rep. 246.

See, also, injuries and remedies therefor, Chaps. 81-83.

4 Bashore v. Mooney, 4 Cal. App. 276, 87 Pac. Rep. 553; Fudickar v. East Riverside Irr. Dist., 109 Cal. 29, 41 Pac. Rep. 1024.

For actions to quiet title, see Chap. 78.

5 Bashore v. Mooney, 4 Cal. App. 276, 87 Pac. Rep. 553; Smith v. Hampshire, 4 Cal. App. 8, 87 Pac. Rep. 224; Abbott v. Pond, 142 Cal. 393, 76 Pac. Rep. 60.

For adverse use and prescription, see Secs. 1033-1058.

land would be of but little value for agricultural or horticultural purposes, are treated as a part of the land itself, and not severable therefrom, and hence, therefore, exempt from liability for debts contracted prior to the issuing of the patent to the full extent to which the homestead is exempt.[6] Nor is there anything in the decision in the case of Mt. Carmel Fruit Co. v. Webster [7] to the contrary, as some have been led to believe. In that case the homestead entryman conveyed "an interest in appropriated water, and the right to convey the same over and across the land." This conveyance was attacked as being in violation of Sections 2290, 2291, of the Revised Statutes of the United States,[8] as an attempt to alienate a portion of his homestead claim. In deciding against this contention, the Court, by Mr. Justice Van Dyke, said: "Such a transaction, so far from being prohibited by the Acts of Congress in question, or against public policy, is favored and encouraged, not only by the legislation of Congress, but by the decisions of the courts, Federal and State." The ruling in this case was correct, as there was no conveyance of any land as prohibited under the Homestead Act. The only conveyance outside of the water right, which must have been acquired as a separate right to the homestead,[9] was an incorporeal privilege, right, or easement "to convey the water over and across the land, the title to which remained in the homestead entryman." [10]

These works are inheritable, and as hereditaments, being substantial, permanent, visible, and tangible, are corporeal.[11]

§ 835. **Reservoirs and storage rights.**—The right to construct reservoirs and store waters is also given under the laws of the United States, and also the laws of every State within the arid and

6 Faull v. Cooke, 19 Ore. 455, 26 Pac. Rep. 662, 20 Am. St. Rep. 836; Fitzell v. Leaky, 72 Cal. 477, 14 Pac. Rep. 198.

semi-arid regions. The subject, however, of reservoirs and storage rights will be fully discussed in a separate chapter of this work, and no further discussion is necessary here.[1]

§ 836. **Character of construction of works—In general.**—In previous sections we have discussed the kinds of works necessary to be constructed by an appropriator in order to consummate an appropriation,[1] and also that these works must be completed with all reasonable diligence.[2] We did not there discuss the character of the construction of these works, which the law requires in order that the lives and property of the people below them may be safe from breakage and overflow.[3] Water, like fire, when unrestrained, is one of the most dangerous elements known to man. Unfortunately, this has been illustrated many times in this and other countries by the breakages in the works constructed by man to regulate, control, and especially to store water. Upon the other hand, when these works are properly constructed and made safe, and thereby the water is retained on the upper lands of the water courses during periods of flood, there are no means known to man which will so surely prevent the great inundations and floods that recur almost annually in the lower valleys,[4] and at the same time, during the periods of low water, insure a uniform flow in the rivers, which may be utilized for navigation and other purposes.[5] In fact, in the construction of great storage reservoirs along the upper reaches of the great water courses, man is but an imitator of Nature, which, by the forests along the headwaters of these very rivers, so rapidly becoming depleted in this country, stored up the waters in times of plenty and let it gradually seep down to the streams during the hot, dry summer months, and thus secured a uniform and permanent flow at times when the water was needed the most in the lower portions of the rivers. But, in order for man to successfully imitate Nature in this respect, and in order to artificially maintain these many benefits and uses of water, and to prevent the

5 For irrigation as an aid to navigation, see Sec. 12.

danger to life and property, when like a wild beast the water unrestrained tears through the land, these works of man should be so constructed that they will be as safe as human foresight can determine. And in the construction of these works we should remember that at all times we are dealing with a most dangerous element, and one which ever is seeking to escape. It may in our hands, under proper safeguards, be one of the greatest blessings to humanity; but if, upon the other hand, it breaks from control, it may become one of the greatest of curses.

Upon this subject I do not at all agree with the policy of some of our laws, and especially with some of the decisions of our Courts, discussed in subsequent sections of this work.[6] But in those sections we will discuss the law as we find it, and not what we think it ought to be. However, we believe it to be the duty of the text-book writer to call attention to the defects of the law, as well as to the law as it actually exists. There has been too great a tendency upon the part of some of the statutes and the decisions of the courts to relieve companies constructing these works, especially in the cases of dams and reservoirs where enormous bodies of water are held back or stored, upon the ground that there was no failure to use the care which an ordinarily prudent man would have used under the circumstances. And especially is this true when the question to be determined is the correct strength required in the construction of a certain dam to resist and hold back not only the water of a certain stream at its ordinary stages, but also in times of extraordinary high water and floods, which might reasonably be expected, and those which are unexpected. Hydraulic engineering requires much technical learning, and the layman, although he may be an "ordinarily prudent man," has not, nor can he be expected to have, the technical knowledge required to make a correct computation in such a case. Hence these matters should be referred to a skillful engineer, and one particularly trained in this class of work. As was said in a recent Oregon case,[7] "The true test, considering all the circumstances, is: Ought a competent and skillful engineer reasonably to have anticipated such a flood as caused the damage to the plaintiff, and to have made provisions therefor?" But it may be

[6] For actions for damages from negligent construction and maintenance, see Chap. 83.

[7] Price v. Oregon etc. R. Co., 47 Ore. 350, 83 Pac. Rep. 843.

said, in reply to this argument, the ordinarily prudent man, projecting works of this nature, might employ a skillful engineer and still come within the general rule of negligence. That may be true in certain cases, but it is not always so. Sometimes "the ordinarily prudent man" employs no engineer, and at other times he employs unskillful engineers. This was the fact in a leading case arising in England involving this subject,[8] where the work was done through the agency and inspection of an engineer, who, as the Court said, did not exercise that reasonable care and caution which might have been exercised, and where the Court held that the true rule of law is that a person who, for his own purposes, brings on his land and collects and keeps there anything likely to do mischief if it escapes, must keep it at his peril, and if he does not do so, he is *prima facie* answerable for all damage which is the natural consequence of its escape. In other words it is the duty of a person storing water on his property to keep it at his peril. This we believe to be the correct rule of law in such cases, and was the theory upon which certain recent statutes have been enacted in a number of States, making the owners of such works liable for all damages from leakage or overflow of the water or by floods, causing the breaking of embankments. Such statutes have been upheld by the courts.[9]

As was said by the United States Circuit Court of Appeals in the Salton Sea cases:[10] "The fact that an extraordinary flood came down the river, contributing to the disaster, does not relieve the defendant from responsibility. Under the conditions prevailing in that locality and known to have existed for many years, it was the duty of the defendant to have maintained proper control of the water at its headgates."[11]

We do not mean by this that every man who constructs a duck

8 Rylands v. Fletcher, L. R. 3 H. L. 330, 37 L. J. Exch. N. S. 161, 19 L. T. N. S. 220, affirming L. R. 1 Exch. 265, 12 Jur. N. S. 603, 14 Week. Rep. 799, which reversed 3 Hurlst. & C. 774.

See, also, for damages from breakage and overflow, Chap. 83.

pond upon his premises should do so under the directions of a skilled engineer. But in this Western country dams have been and are now being constructed sometimes a hundred and fifty feet and over in height, and thereby holding back great quantities of water in the reservoirs spreading out above them. Settlers are being induced by the very parties who have constructed, and are now constructing, these great reservoirs to settle upon the lands under them and make them their homes, which lands are directly in the path of the flood which will follow should these reservoirs break. In many instances cities and towns are also situated under them. Great property interests also lie below. Should these dams or reservoirs break, irreparable injury is liable to be done to life and property. Many dams have broken in the past, caused by unskillful construction, extraordinarily high floods, or cloudbursts. Some of these works will undoubtedly break in the future. When they do break, injuries to property alone are liable to exceed in value an amount so great that few of these companies would be able to respond in damages, not taking into consideration the lives which may be destroyed. And therefore what we do mean is this, that these works should be so constructed as to withstand all pressure of water on both ordinary and extraordinary occasions, so far as *skilled* human foresight may determine, and with that reasonable care which is commensurate with the nature and character of the undertaking.[12]

12 See, also, Chap. 83.

# CHAPTER 46.

## RESERVOIR AND STORAGE RIGHTS.

§ 837. Scope of chapter.
§ 838. Storage reservoirs.
§ 839. Right to construct reservoirs on Government land.
§ 840. Right to construct reservoirs on State and private lands.
§ 841. Jurisdiction over the construction of reservoirs.
§ 842. The right to store water.
§ 843. The right of storage as against the rights of appropriators for immediate use.
§ 844. "Direct irrigation," "immediate use," and "storage" distinguished.
§ 845. The right of storage as against other reservoir rights.
§ 846. The right to the use of stored water.

**§ 837. Scope of chapter.**—In this chapter we will discuss certain features concerning reservoir and storage rights which are not discussed in other portions of the work. Many of the laws regulating these rights are the same as those which apply to other water rights, and have been discussed in various parts of this work. And in this chapter, in order to avoid duplication, we will not discuss them again.

The subject of damages from reservoirs will be treated in another chapter under the general subject of damages.[1] Also the question of the adjudication between reservoirs will be treated elsewhere.[2] The question of condemnation of lands for the construction of reservoirs will also be discussed in the chapter upon the subject of eminent domain. We will also treat in a separate chapter the rights of way over public lands for the construction of reservoirs in accordance with the Acts of Congress provided therefor.[3]

**§ 838. Storage reservoirs.**—In the first edition of this work we referred to the necessity of the adoption of systems of storage reservoirs to store the flood and waste waters of the non-irrigating season so that it can be used when needed.[1] At that time irrigators looked

forward to that method as one of the most effectual means of obtaining relief from the troubles and uncertainties resulting from the ever-growing shortage of water. Since then much has been accomplished in that direction. Progress, however, has been slow, from the fact that in undertakings of this kind the outlay of capital before any return can be realized must be very large. Much remains to be done, but the activity in this direction is yearly increasing from both Governmental aid and private enterprise. The work in this direction has been greatly encouraged by the National Reclamation Act of 1902, private capitalists deeming that if the Government considers such an enterprise a safe investment, they can afford to assume the risk in backing such enterprises.[2]

In the States of the Western part of this country there are millions of acres of arid land still lying wild and uncultivated. The soil is of a most excellent character, and, according to the locality, with irrigation, will raise anything from the tropical fruits to hay and grain; but without irrigation it will raise nothing except the wild vegetation found growing naturally thereon, unless the extensive experiments along the lines of scientific "dry farming" prove a success.[3] It is also a matter of common knowledge that the rivers and streams flow their largest volume of water during the seasons when it is not needed and can not be used for irrigation. In some sections of the country, such as parts of New Mexico, Arizona, and Nevada, owing to the physical features of the country, the cultivation of land by irrigation must depend almost absolutely upon the storage of the water supply. There are also certain sections of the Great Plains where this can be successfully accomplished. But this system has been most satisfactorily applied upon the small mountain streams which take their source in the high mountains and flow rapidly down into the valleys, where their waters may be used for irrigation. Without storage systems during the spring and early summer months, water sufficient to irrigate millions of acres of land runs to waste and is lost in the sea. This might be hoarded up for the summer season, when it becomes of inestimable value at a time when these very streams themselves are so reduced in the volume of their flow as to be barely sufficient perhaps to supply the

2 For Act of Congress, 1902, see Chap. 65, Secs. 1235-1286. For the acquisition of land under the Act, see Secs. 1271-1275.

3 See Secs. 1309-1311.

few farmers who lay claim to all of their waters at that period by prior appropriation. The ever-increasing demand for homes and good farm land, and the ever-present shortage of water in this Western country will require that this work of the construction of storage reservoirs for the conservation of water for use in time of need shall continue.

The laws of all the States favor these storage enterprises upon the part of private parties, and in a number of the States these reservoirs are constructed by the States themselves, or special aid is given to private enterprise for this purpose.[4]

§ 839. **Right to construct reservoirs on Government land.**—By the Act of Congress of March 3, 1891,[1] a right was granted to any corporation duly organized under the laws of any State or Territory, individuals, or association of individuals, upon taking the proper steps, to construct reservoirs upon the public lands and reservations of the United States;[2] and also in connection with this right there was also granted rights of way for the ditches and canals connecting with these reservoirs; and upon approval by the Secretary of the Interior all lands thereafter granted, over which such rights of way shall pass, shall be disposed of subject to such rights. The Act only applied to the vacant and unoccupied public land, and the last clause of Section 19 provided: "Whenever any person or corporation, in the construction of any canal, ditch, or reservoir, injures or damages the possession of any settler on the public domain, the party committing such injury or damage shall be liable to the party injured for such injury or damage." This has been correctly held to apply to the rights of settlers upon the public lands who are lawfully in possession without title.[3]

[4] For the laws of the States upon the subject, see Part XIV.

[1] 6 Fed. Stat. Ann. 1905, p. 313; 2 Comp. Stat. 1901, p. 1570; 1 Supp. Rev. Stat. 942, 946, 26 Stat. L. 1101.

For copy of Act and construction thereunder, see Secs. 937-950.

For right of way thereunder, see Secs. 945-947.

[2] For a further discussion of this subject, see rights of way over public land, Secs. 927-970.

In the case of Nippel v. Forker, 9 Colo. App. 106, 47 Pac. Rep. 766, 26 Colo. 74, 56 Pac. Rep. 577, affirming *Id.*, 9 Colo. App. 106, 47 Pac. Rep. 766, it was held that a person is not entitled to an easement over any public lands for a reservoir, until he has first acquired a vested and accrued water right.

[3] Nippel v. Forker, 9 Colo. App. 106, 47 Pac. Rep. 766, 26 Colo. 74, 56 Pac. Rep. 577.

Under this Act many reservoirs have been constructed upon the public lands of the United States in every State of the arid West, and many additional acres of land have been reclaimed and brought under cultivation by this means. The general effect of the Act has been good. Some complaints have been made of the technical difficulties which applicants under the law had to overcome in getting their plats approved by the Secretary of the Interior. Then, again, during the early history of the Act the rights thereunder granted were abused somewhat by unscrupulous parties acquiring reservoir sites, and even constructing the reservoirs, and then inducing settlers to take up lands under them, when the projectors had no water with which to fill the reservoir. Thereby the settlers were not only defrauded, but also the parties who furnished the money for the construction.

Another right to construct reservoirs upon the public domain which we will barely mention here, and fully discuss in a subsequent portion of this work, is the right granted by Congress to the General Government itself to construct reservoirs upon these lands.[4] A great many reservoirs have been and are now being built by the General Government under the terms of the Act. Some of these reservoirs are of great capacity, and require millions of dollars to construct. The money required for the construction of some of these works in a number of instances is too great, and the time required before substantial returns can come in is too long for private capital to undertake. In the construction of these irrigation works the Government is following the precedent set by England in India and Egypt, where works of enormous capacity have been constructed at the expense of the government.[5]

**§ 840. Right to construct reservoirs on State and private lands.**—The right to construct reservoirs for the storage of water for future beneficial uses is not limited to those which may be constructed upon the public lands of the United States.[1] But the right is given to construct them upon State as well as upon private lands

For possessory rights of settlers, see Sec. 445.

For irrigation in Egypt, see Secs. 88-102.

[1] See Secs. 927-971.

by the statutes of nearly all of the States of the Western portion of this country.[2] The storage of water for this purpose is declared by statute to be a public use, and hence it follows that the right to sites for the construction of reservoirs may be acquired under the right of eminent domain.[3] Outside of this, the rights of others either as to their water rights or lands in their lawful possession must not be injured or trespassed upon, but are protected, and the construction of reservoirs can only be made subject to them.[4]

In the location of a reservoir site the natural depressions in the land may be utilized, and also the bed or channel of a natural stream may be used, or lakes or ponds at the source of supply, but always provided that the superior rights of others are not impaired.[5]

**§ 841. Jurisdiction over the construction of reservoirs.**—The details of the construction of all of these reservoirs, with the exception of those constructed by the Government under the National Reclamation Act,[1] and the jurisdiction and control of the water rights used therewith are left to the respective States. By Section 18 of the Act of Congress of March 3, 1891,[2] it is provided: "And the privilege herein granted shall not be construed to interfere with the water for irrigation and other purposes under the authority of

2 For these various statutes, see Part XIV; see, also, Sec. 840.

In a recent California case it was held that a deed conveying a reservoir site in which was the following description, "All that real property . . . described as follows": (being a full description of all of the land) expresses an intention to grant the fee or the entire estate in the land described, and not merely an easement of flooding. Van Slyke v. Arrowhead Res. & Power Co., 155 Cal. 675, 102 Pac. Rep. 816.

3 For the right of eminent domain, see Secs. 1059-1098.

4 Larimer County Res. Co. v. People, 8 Colo. 614, 9 Pac. Rep. 794; Water Supply etc. Co. v. Larimer etc. Co., 24 Colo. 322, 51 Pac. Rep. 496, 46 L. R. A. 322, where it was held that the priority between reservoirs belongs to the first one begun, although the other was first completed, if, of course, the first was completed with reasonable diligence.

For the extent of right to store appropriated water, see Secs. 837-846.

5 Beaver Brook etc. Co. v. St. Vrain etc. Co., 6 Colo. App. 130, 40 Pac. Rep. 1066; Phœnix Water Co. v. Fletcher, 23 Cal. 482, 15 Morr. Min. Rep. 185; Larimer etc. Res. Co. v. People, 8 Colo. 614, 9 Pac. Rep. 794.

For the right to construct dams in the bed of a stream see Secs. 826-828; Leamington Water and Land Co., 15 Land Dec. 468.

But see Pecos Irr. & Imp. Co., 15 Land Dec. 470; Penasco Reservoir, 13 Land Dec. 682.

1 See Secs. 1235-1236

2 For this Act and construction thereof, see Secs. 937-948.

the respective States and Territories." And the Secretary of the Interior, in construing this Act, held that the department can not inquire into the merits of protests against the construction of a reservoir, but must refer the parties to the courts for their proper remedies, if in anywise they are injured in their possession by the building and use of a proposed reservoir.[3] Therefore, in nearly all of the Western States, by statute, the construction of reservoirs, at least of considerable size, whether upon public or private land, is under the direct supervision or inspection of some public officer, and usually the State engineer. The object of this is to protect the public as far as possible from the danger to life and the injuries to property from weak and faulty construction.[4] It is the duty of these officers to closely inspect the site of the proposed reservoir and the plans relative to the construction of the same, as well as to inspect and supervise the construction as it progresses, and take such other steps as the safety of the public may demand.[5]

§ 842. **The right to store water.**—Having discussed sufficiently in the previous sections of this chapter the right to the construction of storage reservoirs, we will now discuss the legal right to store water. And in the first place we will say in order to give this legal right there must be a valid appropriation of the water proposed to be stored, and which water must be applied within a reasonable time to a beneficial use or purpose. As was held in a Colorado case, that one has no right to store water to be disposed of for irrigation purposes unless he first appropriates the water in accordance with the provisions of the constitution and statutes of the State.[1]

But upon the general right to store water we will say that it is the policy of the law in this Western country that all of the available supply of water may be utilized for some beneficial or useful purpose or purposes. It therefore follows that any water which is found running to waste may be appropriated either for immediate

1 Beaver Brook etc. Co. v. St. Vrain Res. etc. Co., 6 Colo. App. 130, 40 Pac. Rep. 1066.

use or it may be stored up in reservoirs for future use. The mere fact that water appropriated and diverted from the natural stream is not put to an immediate use, but is kept in reservoirs until needed does not necessarily affect the legality of the appropriation. As we have seen in a previous chapter of this work, a reasonable time is given to an appropriator to apply the water which he claims by virtue of his appropriation to the beneficial use or purpose for which the appropriation is made.[2] It therefore is held that the storage of water as an aid to irrigation or to any other beneficial use is a useful purpose, and that water may be appropriated for such storage.[3]

In most of the States direct authority is given by the statute to store the unappropriated and unused waters of the natural streams for future use. In Colorado it is provided: "Persons desirous to construct and maintain reservoirs, for the purpose of storing water, shall have the right to take from any of the natural streams of the State and store away any unappropriated water not needed for immediate use for domestic or irrigating purposes; to construct and maintain ditches for carrying such water to and from such reservoir, and to condemn lands for such reservoirs and ditches in the same manner provided by law for the condemnation of lands for right of way for ditches."[4] Similar provisions are also to be found in the statutes of many of the other States. Also provisions are found for the conducting of waters from reservoirs by means of

2 For the question of consummation of the right, see Secs. 725-728.

For reasonable diligence, see Chap. 39, Secs. 733-741.

3 For cases upon the general subject of the right to store water, see Ruply v. Welch, 23 Cal. 452, 4 Morr. Min. Rep. 243; Water Supply etc. Co. v. Larimer etc. Co., 24 Colo. 322, 51 Pac. A. 266; Larimer County etc. Co. v. People, 8 Colo. 614, 9 Pac. Rep. 794; Water Supply Co. v. Tenny, 24 Colo. 344, 51 Pac. Rep. 505; Newby v. People, 28 Colo. 20, 62 Pac. Rep. 1036; Seven Lakes Res. Co. v. New Loveland etc. Co., 40 Colo. 387, 93 Pac. Rep. 485, 17 L. R. A., N. S., 329; Miller v. Wheeler, 54 Wash. 429, 103 Pac. Rep. 641, 23 L. R. A., N. S., 1065.

4 Rev. Stat. Colo. 1908, Sec. 3202; 3 Colo. Stat. Ann., Sec. 3203.

the natural streams to the place of use and the general supervision of the same by State officials.

Of course, following the general rule, in the storage of water for future use the rights of others must not be materially injured. But it is held that so long as the required volume of water is maintained at the heads of the irrigated ditches of the parties entitled to a priority thereto, other parties damming the sources of supply need not permit any flow from their reservoirs, whether it consists of the natural outflow of the stream or of the stored body of water.[5] The most that an appropriator is entitled to claim at any time is that the amount to which he lays claim shall flow to the headgate of his ditch for his use.[6]

It is also held that a riparian owner has the right to store the water in reservoirs for future use so far as is consistent with the rights of the lower riparian owners upon the same stream; but such use of the water by one owner as will prevent a lower owner from storing water for irrigation is not reasonable.[7] And in a recent Washington case [8] it was held that an upper riparian owner did not have the right to impound all of the waters flowing in a stream for fourteen hours out of every twenty-four without the consent of the lower owners.[9]

It was held in a recent Utah case,[10] that a corporation, the object of which as specified in its articles was "to construct, manage, and control the number of canals and ditches hereinafter described taken from Huntington Creek," followed by a description of such ditches, had no power to build reservoirs for the purpose of storing water. And the Court said: "It follows that the board of directors,

having had no power to build reservoirs for the purpose of storing water, had no authority to levy an assessment upon the capital stock for that purpose. Under the circumstances and the law applicable to this case, the assessment was unauthorized, and therefore null and void."

§ 843. **The right of storage as against the rights of appropriators for immediate use.**—The question of the right of appropriators to store water for future use as against the rights of appropriators entitled to water for immediate use has been the subject of considerable discussion by the courts and others. In general it may be said that the owner of a priority for direct irrigation is entitled to use his discretion as to whether he shall store the water up in reservoirs for future use or use it immediately. This was the direct ruling in a recent Colorado case,[1] wherein it is said: "If water for direct irrigation can only be utilized for that purpose, the result would be to retard agricultural progress and limit the growth of agricultural products to those which can be matured by means of direct irrigation early in the season." But, on the other hand, if the rights of other appropriators upon the stream are materially injured, no change can be made from direct irrigation to storage; neither can any change be made which requires a greater quantity of water flowing in the natural stream. It is, therefore, held that reservoirs can not be added to an irrigation system if thereby other appropriators' rights would be materially injured by such addition and the storage of water instead of the immediate use of the same.[2]

It is held in Colorado that water which is appropriated for direct irrigation can not be stored and afterwards drawn off and used so as to do double duty.[3] And in a recent Colorado case it was held

1 Seven Lakes Reservoir Co. v. New Loveland etc. Co., 40 Colo. 382, 93 Pac. Rep. 485, 17 L. R. A., N. S., 329.

2 Colorado etc. Co. v. Larimer etc. Co., 26 Colo. 47, 56 Pac. Rep. 185; New Loveland etc. Co. v. Consolidated etc. Co., 27 Colo. 526, 62 Pac. Rep. 366, 52 L. R. A. 266; Windsor Res. etc. Co. v. Lake Supply Co., 44 Colo. 214, 98 Pac. Rep. 729; Greeley etc. Co. v. Von Trotha, 48 Colo. 12, 108 Pac. Rep. 985; Seven Lakes etc. Co. v. New Loveland etc. Co., 40 Colo. 382, 93 Pac. Rep. 485, 17 L. R. A., N. S., 329.

3 See Fort Lyon Canal Co. v. Chew, 33 Colo. 392, 81 Pac. Rep. 37, where it is held that the owner of a water right would not be permitted to make it do double duty, and when he had applied it for the purpose for which

that it was error to grant two separate reservoir priorities of the same capacity and date to the same reservoir as result of the same construction and the same act of storing the water.[4]

Nor can a system of exchanges of water between reservoirs be made so that the effect would be to convert a junior into a senior right. As was said by the Colorado Court in a recent case:[5] "We do not attribute to the inventors of this scheme a design to obtain an undue advantage over other appropriators; but if such system of exchange, taken in connection with other parts of the decree in favor of the owner of the Fossil Creek reservoir, is put into practice, it will necessarily convert a junior into a senior right. It will make many of the reservoirs of the appellants, which were built and used for storage a decade before Fossil Creek reservoir was conceived, subordinate to the latter. No device or combination of appliances that would produce such a flagrant injustice should be looked upon with favor or sanctioned by a court of equity." It was also held in this case that that there could be but one filling of the reservoir under one appropriation, and upon this subject the Court said: "A double filling in effect would give two priorities of the same date and of the same capacity to the same reservoir, on the same single appropriation, which is impossible in fact and in law, and if allowed would violate the fundamental doctrine of the law of appropriation—he who is first in time is first in right—by making a junior superior to a senior reservoir appropriator." In other words, as was held in an earlier case of the same court,[6] a priority to water for irrigation confers no right as against subsequent appropriators to appropriate it for storage in any greater quantity or at any other time than they could be appropriated for direct irrigation, and the Court said, relative to the rights of subsequent appropriators: "An appropriator of water from a

it was appropriated, he could not loan or lease it to another for irrigation purposes.

See, also, Seven Lakes Res. Co. v. New Loveland Co., 40 Colo. 382, 93 Pac. Rep. 485, 17 L. R. A., N. S. 329; Cache La Poudre etc. Co. v. Hawley, 43 Colo. 32, 95 Pac. Rep. 317; Diez v. Hartbauer, 46 Colo. 599, 105 Pac. Rep. 868; New Loveland etc. Co. v. Consolidated etc. Co., 27 Colo. 526, 62 Pac. Rep. 366, 52 L. R. A., 266.

4 Windsor etc. Co. v. Lake Supply etc. Co., 44 Colo. 214, 98 Pac. Rep. 729.

5 Windsor Res. etc. Co. v. Lake Supply etc. Co., 44 Colo. 214, 98 Pac. Rep. 729.

6 Colorado Mill etc. Co. v. Larimer etc. Co., 26 Colo. 47, 56 Pac. Rep. 185.

stream already partly appropriated acquires a right to the surplus or residuum he appropriates; and those in whom prior rights in the same stream are vested can not extend or enlarge their use of water to his prejudice, but are limited to their rights as they existed when he acquired his; because, in such case, each, with respect to his particular appropriation, is prior in time and exclusive in right."[7]

The valid rights of the owners of stored water will be protected both at law and in equity, and it is held in a recent Colorado case[8] that where there was at all times water enough in the stream for both parties, it did not justify the defendants in going upon plaintiff's premises and withdrawing water which he had stored in his reservoir, especially where the rights of the plaintiff in the waters of the stream were superior, and an injunction was therefore granted against such acts. In a still later case it was held that it was no defense to a suit by a reservoir company to enjoin interference with its water flowing in the canal of an irrigation company that there was a large volume of water in the natural stream available under the irrigation company's appropriation.[9]

**§ 844. "Direct irrigation," "immediate use," and "storage" distinguished.**—Considerable confusion seems to have arisen, especially in Colorado, as regards the terms of "direct irrigation," "immediate use," and storage"; and it is well to define these terms and afterwards discuss their distinguishing features and characteristics.

"Direct irrigation" may be defined as the diversion and carriage of water by means of canal, flume, or some other way of conveyance and the application of the water to the land in practically one and the same operation.

"Immediate use" may be defined as the immediate application of the water after diversion from the natural stream to the land as

Actions for damages, Chap. 83.

limited by the appropriator's actual present needs, and as distinguished from the storage of the water for future needs. This term is held to be practically synonymous with the term "direct irrigation."[1]

"Storage" may be defined as the temporary accumulation, conservation, or the storage of water for future use, as distinguished from either "direct irrigation" or "immediate use." The water stored may be from two sources: First, the residue from heavy flows or flood waters during the spring or winter months, where economical use requires the construction of reservoirs for collecting these fragments for use when most needed. Second, it may be from the waters of the normal flow of the stream. The impounding or the storage of water in reservoirs is not in and of itself a beneficial use of the water. "Storage" is not a use. The storage is merely an incident of the means of making the use occurring between the diversion and the application. Storage, therefore, like diversion and the conducting of the water to the place of use, is but a "means to an end."[2] The appropriation is not made for the mere purpose of storage; it is made for the irrigation of lands or for some other useful or beneficial purpose. It might just as well be said that the waters diverted into a ditch were diverted for the purpose of carriage only, because they are conducted into a ditch on the way from the stream to the land. Under the prevailing authorities the direct test of an appropriation is not the method of diverting or carrying the water, but the successful application of all the water claimed to a beneficial or useful purpose.[3]

The question has arisen, Can the owner of a prior right to make direct application of appropriated water for irrigation purposes during the irrigation season store the water for use later in the season? The existence of the right to store water as long as it did not interfere with the vested rights of others has long been recognized by the courts,[4] but the extent of the right to store water as against direct irrigation or immediate use has been passed upon in but few cases.

1 Water Supply etc. Co. v. Tenny, 24 Colo. 344, 50 Pac. Rep. 505.

2 Farmers' High Line etc. Co. v. Southworth, 13 Colo. 111, 21 Pac. Rep. 1028, 4 L. R. A. 767.

3 See Secs. 227, 877.

4 For the right to store water, see Sec. 842.

In a late Colorado case,[5] as clearly stated by Mr. Justice Gabbert, the question before the Court was as follows: "The question presented by this appeal is the right of the owner of a priority for direct irrigation to store the water thereby represented for use later in the season." The right as stated was upheld by a bare majority of the Court. Mr. Justice Gabbert, in rendering the decision of the majority of the Court, said: "The particular question presented by this appeal has not been determined in the concrete by any previous decision of this Court; but it is by no means a new one, because it merely involves the application of principles which have been announced in numerous cases. A priority to the use of water is a property right, which is the subject of purchase and sale, and its character and method of use may be changed, provided such change does not injuriously affect the rights of others."[6] And further in the opinion he stated: "It appears from the record that the stockholders of appellant, instead of planting crops which require irrigation during the early part of the season, utilize their lands by growing crops which do not require irrigation until about August, when the direct supply through the ditches is not sufficient to furnish the volume of water necessary to irrigate such crops. And so, instead of applying the water to which they are entitled for direct irrigation in the early part of the season, they store this water for use later to mature crops, like beets and potatoes, which do not require irrigation until about the month of August. It would be unfortunate, indeed, if the law were such that it could not be adapted to changed conditions resulting from the character of crops grown by those engaged in agricultural pursuits. If water for direct irrigation early in the season. If the judgment of the trial would be to retard agricultural progress, and limit the growth of agricultural products to those which can be matured by means of direct irrigation early in the season. If the judgment of the trial court should be sustained upon the theory that one owning a priority for direct irrigation may not cease to utilize it for that purpose

[5] Seven Lakes Res. Co. v. New Loveland & Greeley Irr. Land Co., 40 Colo. 382, 93 Pac. Rep. 485, 17 L. R. A., N. S., 329.

[6] Citing Fuller v. Swan River P. M. Co., 12 Colo. 12, 19 Pac. Rep. 836, 16 Morr. Min. Rep. 252; Strickler v. Colorado Springs, 16 Colo. 61, 26 Pac. Rep. 313, 25 Am. St. Rep. 245; Cache La Poudre I. Co. v. Larimer & Weld R. Co., 25 Colo. 144, 53 Pac. Rep. 318, 71 Am. St. Rep. 123; affirming *Id.*, 8 Colo. App. 237, 45 Pac. Rep. 525.

upon crops in May, June, and July, and store it for use during the same season thereafter, the result would be to take from the owner of such priority his rights and confer them upon others growing crops of a different nature. Such a rule would make the right to the use of water dependent upon the character of crops grown instead of upon the right to utilize it in any manner which does not injuriously affect the vested rights of others. In principle the case is no different from that of Strickler v. Colorado Springs,[7] wherein the right to change the use of water from agricultural to domestic purposes was recognized. If the right to change from agricultural to domestic, and from mining to agricultural uses, and *vice versa*, is legal, certainly no good reason can be advanced why the change from one agricultural use to another may not be allowed."

In the opinion denying the petition for rehearing in the same case, Mr. Justice Gabbert stated the reasons of the majority of the Court more strongly than before, and more clearly defined what had been determined by the decision of the Court. He said: "The arguments of counsel for appellee, and *amici curiae* in support of the petition for rehearing of appellee, are evidently based upon an erroneous assumption of what has been determined in this case. It is contended that adjudication decrees are disturbed, and appellant, by the decree directed, will be awarded an enlarged use of water represented by its purchases, both in quantity and time. It must be borne in mind that this decision is based upon the fact, which is undisputed, that the stockholders of appellant are growing crops which do not, from their nature, require irrigation during the early part of the season, but do later, and that they desire to utilize the water in controversy for this purpose. Based upon these facts, we have declared, what has time and time again been decided by this Court, that the character and method of use of a priority to the use of water may be changed, provided such change does not injuriously affect the rights of others, and that appellant is entitled to divert and store the water represented by the priorities purchased for the use of its stockholders for application to crops later, but in no greater quantity and at no other or different time than could be diverted and applied to land directly to nourish crops requiring irrigation at the time of such diversion; or, otherwise expressed, appellant is permitted to divert and store the water in controversy,

[7] *Supra.*

but this right is measured and fixed by the limitations which the law would impose upon its use for diversion and application to crops requiring irrigation at the time of such diversion. This does not conflict with any previous decisions of this Court.[8] This does not enlarge the use of the priorities of appellant, either in time or quantity; neither does it confer upon it any right to divert and store the water represented by its priorities every day during the irrigation season, or to convert such priorities into a storage right during the non-irrigating season, as contended by counsel, but limits its rights strictly to the diversion of water, both as to volume and time, to the same quantity and the same time we have indicated. Thus it is apparent that no rights are infringed, that no one is deprived of water to which he is entitled by reason of the change in the method of use, and that to supply appellant with the water which it will be entitled to store under the decree directed there can not possibly be any greater burden imposed upon the common source of supply of the respective ditches owned or controlled by the parties to this appeal. Neither are any priorities disturbed; but, on the contrary, the decree directed leaves the relative rights of the parties to this appeal precisely as they were, whereas, if the judgment of the lower Court should be affirmed, the result would be, where an appropriator had no use for water represented by his priorities in the early part of the season, because of the fact that he was growing crops of a character which did not require irrigation during that period, and he could not store it at that time for use upon these crops, when later it was necessary to irrigate them, to take from him and give to another."

In conclusion upon this subject we will add that the withdrawal of water from a natural stream and the storage of the same for future use does not in any manner injuriously affect other appropriators, nor does it lessen the common source of supply to any greater extent than had the water been applied in direct irrigation or immediate use. But in allowing this right two principles must be kept in mind, namely, that the vested rights of no one must be injured by the withdrawal of the water for storage, and no more water must be withdrawn, measured by the volume and time, than the previous use allowed. This rule, as it appears

8 "But, on the contrary, is sustained by Colorado M. & E. Co. v. Larimer & Weld I. Co., 26 Colo. 47, 56 Pac. Rep. 185."

to us, is an equitable and just one, for it permits the appropriator to apply the water to his use at such time as the particular use needs the water the most, and it also permits the greatest good to be derived from the use of the water. And as long as the rights of others are not injured thereby, this right should be allowed.

**§ 845. The right of storage as against other reservoir rights.**—In the previous section we discussed the subject of the right of storage as against the rights of appropriators for immediate use of the water. In this section we will briefly discuss the rights of reservoirs as between each other. As in the case with other rights acquired under the Arid Region Doctrine of appropriation, the rule of priority governs, and it is held that the reservoir having the prior right is entitled to fill the same first from the flow of the stream to the full extent of the capacity of the appropriation made therefor.[1] But having once during any one season filled such reservoir, a later appropriation or a subsequent reservoir may take the surplus of the water flowing in the stream, after the prior reservoir has been once filled.[2] And it was further held that if a double filling were permitted, it would in effect give the same reservoir two priorities, to which it was not entitled.[3]

**§ 846. The right to the use of stored water.**—After water has been once stored in reservoirs, it becomes personal property, and

1 Church v. Stillwell, 12 Colo. App. 43, 54 Pac. Rep. 395, where it was held that defendant's acquiescence in plaintiff's filling his reservoirs first, while the waters of the stream were sufficient to fill both reservoirs, did not estop the defendant from questioning plaintiff's right to priority. And the Court further held that where the water was sufficient for both, a right by one could not be gained by prescription.

2 Windsor Res. etc. Co. v. Lake Supply Co., 44 Colo. 214, 98 Pac. Rep. 729.

3 See, also, Colorado etc. Co. v. Larimer etc. Co., 26 Colo. 47, 56 Pac. Rep. 185; Nevada W. Co. v. Powell, 34 Cal. 109, 91 Am. Dec. 685, 4 Morr. Min. Rep. 253; New Loveland etc. Co. v. Consolidated etc. Co., 27 Colo. 526, 62 Pac. Rep. 366, 52 L. R. A. 266, wherein it is said: "The defendant having completed its reservoirs long before the time when plaintiff first began the work of construction of its reservoir, and having continually used them for a beneficial purpose, we think the District Court was clearly right in awarding to it priorities ahead of that of plaintiff."

may be sold, contracted for, and disposed of as such property.[1] It is protected in such reservoirs by the statutes of the various States, providing that the stealing of water from a canal, ditch, or other works is a criminal offense, and also providing for the punishment therefor.

Also, in the States which have advanced in the process of the construction of reservoirs for the storage of waters are to be found statutes regulating the distribution and the use of such waters. It is also provided that these stored waters may be conducted down the natural streams to the place of use under certain specific regulations and the supervision of the State officials. And while the water from the reservoir is passing down the stream it is provided that the headgates of all ditches taking out of such stream may be closed temporarily until the stored water passes to the place of its intended use. All this must be done, however, without injury to the vested rights of those entitled to the use of the waters of the regular flow of the stream. And in taking out the artificial increase of the flow of the stream it is provided usually that due allowance must be made for seepage and evaporation. These subjects, however, will be discussed when we come to a discussion of the statutes of the various States.[2]

[1] That water severed from the source of supply is personal property, see Secs. 773, 774.

[2] For reservoir rights of the various States, see Part XIV.

# CHAPTER 47.

## MILL AND POWER RIGHTS.

§ 847. Scope of chapter.
§ 848. The use of water for power purposes.
§ 849. Importance of subject.
§ 850. Who is to own and control the water power of the country.
§ 851. Recent action by States relative to power rights.
§ 852. The development and transmission of power for general distribution a public use.
§ 853. Right of a riparian owner at common law to make a reasonable use of the water for power purposes.
§ 854. Under common law—Non-riparian transmission of power.
§ 855. Use of water by appropriators for power purposes.

**§ 847. Scope of chapter.**—As we stated under a previous section, appropriations of water may be made for the purpose of power, light, and heat.[1] They may be also made for all mining and milling purposes.[2] In another portion we will discuss the right of eminent domain for power purposes.[3] The apportionment of the use of water between riparian owners for mill and other purposes will be discussed under the subject of the adjudication of water rights in equity.[4] We have incidentally discussed many of the features relating to the appropriation of waters for power, and, therefore, herein will only discuss those questions which have not been considered elsewhere.

**§ 848. The use of water for power purposes.**—There are many methods for the utilization of water for power purposes, but there are two general classifications which are recognized: First, the energy derived from falling water and transmitted by a shaft and belt to near-by machinery, where the power is consumed; and, second, the generation of electrical energy at the stream and its long-distance transmission to the place of use.

The first of these methods is the more primitive, and will be found in the small mills, factories, and plants located along the

1 See Sec. 695.
2 See Sec. 694.
3 See Secs. 1072, 1073.
4 See Chap. 78.

streams both in the Eastern and Western portions of this country, where the direct force of the current is applied to the machinery and thereby such mills or factories are run. The second classification of the long-distance transmission of electrical power is more modern, and has sprung into active operation within, comparatively speaking, the last few years. But in regard to the latter use, as said by President Taft in his message of January 14, 1910: "The development in electrical appliances for the conversion of the water power into electricity to be transmitted long distances has progressed so far that it is no longer problematical, but it is a certain inference that in the future the power of the water falling in the streams to a large extent will take the place of natural fuels."

§ 849. **Importance of subject.**—Although the United States and the respective States have regarded the development and use of electrical energy by means of water power in a somewhat indifferent manner, the importance of the subject can not be overestimated. Its development is still in its infancy, and during even the next decade great changes therein will be brought about.

No better statement can be made of the situation than was made by W. J. McGee, Secretary of the Section on Waters, in his report to the National Conservation Commission,[1] taking his data from those furnished by Mr. Marshall O. Leighton, Chief Hydrographer of the United States Geological Survey. Mr. McGee said: "The theoretical power of the streams is reckoned by Leighton at 230,000,000 horse-power. The amount now in use is computed by the census office at 5,350,000 horse-power, and the amount running over Government dams and not used is estimated by the chief of engineers at about 1,400,000 horse-power. The amount now available at a cost comparable with that of steam installation is estimated by the hydrographic branch of the Geological Survey at 37,000,000 horse-power, and the amount prospectively available at 75,000,000 to 150,000,000 horse-power. The 37,000,000 horse-power today available exceeds our entire mechanical power now in use, and would operate every mill, drive every spindle, propel every train and boat, and light every city, town, and village in the country. The nominal value is $20 per horse-power year; the price ranges up to

1 See Vol. 1, Report of the National Conservation Commission 1909, p. 41. See, also, p. 22.

$100 or $150. While the utilization of water power ranks among our most recent and most rapid industrial developments, little effort has been made to control catchment areas or storm waters in any large way for power development, though most plants effect control through reservoirs and structures. Nearly all of the freshet and flood water runs to waste, and the low waters, which limit the efficiency of power plants, are increasing in frequency and duration with the increasing flood run-off."[2]

§ 850. **Who is to own and control the water power of the country.**—There has been a great deal of discussion during the last few years as to who should own and control the water power of the country, that is to say, whether the ownership and control should be by the United States, the State, or by private corporations. Considerable agitation has been caused by recent utterances of prominent officials of the Government, and this agitation has been followed by some legislation. However, it is not our province in this work to discuss what the law ought to be, but what it is.

There is no question but that a transfer of sovereignty from the Federal Government to the States upon their admission to the Union includes the government and control and sovereignty over the water power in the rivers, with all other waters and rights to the same within the boundaries of the State.[1] The only possible exceptions to this are the rights that were owned by riparian proprietors within the territory covered by the State. And as we have discussed before upon the public domain of the United States, the Government is the riparian proprietor upon all streams, the lands adjoining which have not been granted to others. This right of the Government was recently recognized by President Taft in his message to Congress, under date of January 14, 1910, in which

2 See, also, the article on Undeveloped Water Power by Marshall O. Leighton, statistics in the article compiled by the Bureau of Census, Vol. 2 of the report of the National Conservation Commission 1909, p. 141.

See, also, the article by Marshall O. Leighton upon the subject "Undeveloped Water Power," p. 159, same report as last above.

See, also, article on Concentration of Ownership of Water Power by Herbert Knox Smith, Commissioner of Corporations, p. 171 of the same report as last above.

1 See United States v. Hansen, 167 Fed. Rep. 881; United States v. Burley, 172 Fed. Rep. 615.

he said: "With respect to the public land which lies along the streams offering opportunities to convert water power into transmissible electricity, another important phase of the public-land question is presented. There are valuable water-power sites through all the public-land States. The opinion is held that the transfer of sovereignty from the Federal Government to the Territorial governments as they become States includes the water power in the rivers, except so far as that is owned by riparian proprietors. I do not think it necessary to go into a discussion of this somewhat mooted question of law. It seems to me sufficient to say that the man who owns and controls the land along the stream from which the power is to be converted and transmitted owns land which is indispensable to the conversion and use of that power. I can not conceive how the power in streams flowing through public lands can be made available at all except by using the land itself as the site for the construction of the plant by which the power is generated and converted, and securing a right of way thereover for transmission lines. Under these conditions, if the Government owns the adjacent land—indeed, if the Government is the riparian owner—it may control the use of the water power by imposing proper conditions on the disposition of the land necessary in the creation and utilization of the water power. . . . In the disposition of the domain already granted, many water-power sites have come under absolute ownership, and may drift into one ownership, so that all the water power under private ownership shall be a monopoly. If, however, the water-power sites now owned by the Government—and there are enough of them—shall be disposed of to private persons for the investment of their capital in such a way as to prevent their union for purposes of monopoly with other water-power sites, and under conditions that shall limit the right of use to not exceeding fifty years, with proper means for determining a reasonable graduated rental, and with some equitable provision for fixing terms of renewal, it would seem entirely possible to prevent the absorption of these most useful lands by a power monopoly. As long as the Government retains control and can prevent their improper union with other plants, competition must be maintained and prices kept reasonable."

And in this connection we will say that the suggestion made by President Taft in the message above referred to was followed by

Congress in the Enabling Act for the admission of New Mexico and Arizona to Statehood,[2] in which Act it was provided: "There is hereby reserved to the United States and exempted from the operation of any and all grants made or confirmed by this Act to said proposed State all land actually or prospectively valuable for the development of water powers or power for hydroelectric use or transmission, and which shall be ascertained and designated by the Secretary of the Interior within five years after the proclamation of the President declaring the admission of the State; and no lands so reserved and excepted shall be subject to any disposition whatsoever by said State, and any conveyance or transfer of such land by said State or any officer thereof shall be absolutely null and void within the period above named; and in lieu of the land so reserved to the United States and excepted from the operation of any of said grants, there be, and is hereby, granted to the proposed State an equal quantity of land to be selected from land of the character named and in the manner prescribed in Section 11 of this Act."

Also, by the Act of Congress, approved June 25, 1910,[3] it was provided that the Secretary of the Interior, in his discretion, might reserve from location, entry, sale, allotment, or other appropriation any lands within Indian reservations valuable for power or reservoir sites, or which may be necessary for use in connection with any irrigation project theretofore or thereafter to be authorized by Congress. The Secretary of the Interior was also given the authority, after notice and hearing, to cancel any trust patents issued to Indian allotments within any Indian reservation for irrigation purposes.

By the Act of Congress of March 4, 1911, the Secretary of the Interior is authorized to grant a fifty-year easement for power development projects. This Act may be taken advantage of by persons previously holding revocable permits, as well as by those instituting new projects.

**§ 851. Recent action by States relative to power rights.**—But as to the other States which were admitted to the Union without

2 See Act approved June 20, 1910, Stat. of the United States, passed at the 2d Session of the 61st Congress, 1909-1910, Chap. 310, Secs. 10, 28.

3 See Laws of Congress, 61st Congress, 1910, 2d Session, Chap. 431, Secs. 13, 14.

any specific reservation by the Government of power sites, there is no question that such States upon their admission acquired full sovereignty, jurisdiction, and control over such sites.

And the legislatures of some of these States have recently enacted laws regulating and controlling the use of water for the generation of electricity or of electrical or other power and providing for the appropriation of such water for such purposes, and also providing that all appropriations of water or the use of water for the generation of electricity or electrical or other power shall be subject to the right of the State to regulate and fix the rights of compensation for which such electricity or electrical or other power may be sold, rented, or distributed, and also fixing the term of years during which any person, firm, association, or corporation may exercise the franchise for such purposes.[1]

Also, in the State of Oregon by the Act of 1909,[2] as supplemented by the Act of 1911,[3] the right is granted to any person, firm, or association to the right to the use of water for power development for a period of forty years from the date of the application, subject to a preference right of renewal, and also subject to a graduated scale of charges per horse-power for the right.[4]

§ 852. **The development and transmission of power for general distribution a public use.**—Although in the early history of power rights especially as relating to the generation and distribution of electrical energy the courts were somewhat loth to declare that such a use of the waters of a stream was a public use, the decisions are rapidly changing to hold that the use of water in generating electric energy and the use of lands for the stringing of poles and wires, in order to transmit such energy, is a public use, in the strict sense of the term. And in this connection it may be said that a public utility must be absolutely defined by the controlling conditions of the times. What is today private use may tomorrow be a public one. The term "public use" must readily adapt

1 For the various Acts for the generation of electrical power, see Part XIV.

2 Lord's Oregon Laws, Secs. 6575-6580; Laws 1909, Chap. 221, p. 370.

3 Laws 1911, Chap. 236, p. 418.

4 For further discussion of the Oregon law upon the subject, see Part XIV, under Oregon.

itself to new demands and conditions imposed by the ever-increasing necessities of the general public and society. Today the distribution of electric energy is one of the foremost necessities of the general public, and is rapidly becoming more and more a public use. Already we have lines of railways whose cars are propelled by the electrical energy which is generated on some distant stream. The propulsion of trains over the great continental lines in this country is now in the process of development, and it will be but a few years before the coal and oil locomotives will be relegated to the scrap heap, and the trains pulled by the more modern electric engines. As the operation of railroads has for many years been held a public use, this shows how the development and transmission of electrical energy is becoming merged into one of the greatest public utilities known.

Again, take a power company organized for the purpose of furnishing light, heat, and power, to distant cities and towns and to the inhabitants thereof, and we often find that under the modern methods of electrical transmission a single company is able to transmit its energy to a distance of from five to six hundred miles from its generating plant upon the river, and this distance is rapidly becoming greater, and will progressively increase with the increase in efficiency of electrical transmission. No one would contend for a moment that such a use is not a public one, and that such a company is not a public service company.[1]

Of course, upon the other hand, we can readily see that where an individual or a company uses the water of a stream to develop electrical energy for use upon their respective individual properties and without the general distribution of the energy to the public, that it might be contended that this was strictly a private use, and not a public one. However, in a recent case arising in Utah, decided by the Supreme Court of the United States,[2] it was held that a mining company might condemn a right of way across private land for the purpose of the erection of an aerial bucket line of the mining company and for its own private use where the same was

1 For public service corporations and companies, see Chap. 76.

For eminent domain for the purpose of developing and transmitting power, see Sec. 1072.

2 Strickley v. Highland Boy Min. Co., 200 U. S. 527, 50 L. Ed. 581, 26 Sup. Ct. Rep. 301, 4 Am. & Eng. Ann. Cas. 1174.

authorized by the statutes of the State, and that the granting of the right was not contrary to the provisions of the Fourteenth Amendment of the Constitution of the United States.[3] Therefore it may be said that the use of water for the development and transmission of electricity in all cases, at least where the same is for distribution to others than the owners of the generating plant, is a public use.[4] This subject, however, will be discussed more at length in the chapter devoted to the question of eminent domain.[5]

**§ 853. Right of a riparian owner at common law to make a reasonable use of the water for power purposes.**—In the early history of the Government and in fact in the early history of the common law, it has always been held that a mill owner upon the banks of a stream had the right to make a reasonable use of the water for power purposes, after taking into consideration the relative or correlative rights of the other riparian owners upon the same stream. In a previous section of this work, we have discussed what is a reasonable use of the water by riparian owners for power purposes.[1] And in this connection it may be said that in the early history of this country, especially in New England, certain mill rights were granted which are commonly termed the "New England Mill Acts," which granted to the owners of mills upon the banks of streams certain rights, which without such statutes would have been deemed extraordinary or rights in excess of the common law rule relative to such use of the water. For instance, the right was granted under these Mill Acts to flood lands of others by damming the stream and holding back the water. To be sure, the actual land taken had to be paid for by the mill owner, but the granting of

3 See, also, Clark v. Nash, 198 U. S. 361, 49 L. Ed. 1085, 25 Sup. Ct. Rep. 676, 4 Am. & Eng. Ann. Cas. 1171; affirming *Id.*, 27 Utah 158, 75 Pac. Rep. 371, 1 L. R. A., N. S., 208, 101 Am. St. Rep. 953.

4 The taking of land for a right of way for a ditch and flume to convey water used in furnishing electricity to the public generally or to all persons within reach for lighting, power, and heating purposes is a public use. Walker v. Shasta Power Co., 160 Fed. Rep. 856, 87 C. C. A. 660, 19 L. R. A., N. S., 725.

See, also, Rockingham etc. Power Co. v. Hobbs, 72 N. H. 531, 58 Atl. Rep. 46, 66 L. R. A. 581; Brown v. Gerald, 100 Me. 351, 61 Atl. Rep. 785, 109 Am. St. Rep. 526, 70 L. R. A. 472.

5 For eminent domain, see Chap. 55, Secs. 1059-1098.

1 See Sec. 492.

such right was somewhat an extraordinary one. This subject, however, will be more fully discussed when we come to the chapter upon the question of eminent domain.[2]

In a leading case decided by the Supreme Court of Minnesota,[3] the question of reasonable use for mill purposes was discussed and defined in language which meets our approval. Upon this subject the Court said: "The law does not lay down any fixed rule for determining what is a reasonable use of the water of a stream by a riparian owner. What constitutes a reasonable use is not a question of law, but of fact, to be determined by the jury or the Court from all the circumstances of the case. But, like any other finding of fact, it is subject to review, and will be set aside if against the evidence or not supported by it. In determining what is a reasonable use, regard must be had to the subject-matter of the use; the occasion and manner of its application; the object, extent, necessity, and duration of the use; the nature and size of the stream; the kind of business to which it is subservient; the importance and necessity of the use claimed by one party, and the extent of the injury to the other party; the state of improvement of the country in regard to mills and machinery, and the use of water as a propelling power; the general and established usages of the country in similar cases; and all the other and ever-varying circumstances of each particular case, bearing upon the question of the fitness and propriety of the use of the water under consideration."[4]

Outside of domestic uses the early common law cases had to

2 For eminent domain, see Chap. 55, Secs. 1072, 1073.

Dexter, 202 Mass. 31, 88 N. E. Rep. 332; Timm v. Bear, 29 Wis. 254; Mentone v. Redlands etc. Co., 155 Cal. 223, 100 Pac. Rep. 1082, 22 L. R. A., N. S., 382, 17 Am. & Eng. Ann. Cas. 1222; Tyler v. Wilkinson, 4 Mason 397, Fed. Cas. No. 14,312; Barrett v. Parsons, 10 Cush. (Mass.) 367; Pollitz v. Long, 58 Barb. 20.

deal chiefly with the mill or direct power rights claimed by the various riparian owners upon the streams. These rights of riparian owners to use the water of the streams upon which their lands adjoin have been brought to the Western part of this country in those States wherein the common law of riparian rights is in force and it may be said that in this portion of the country the use of the water for this purpose is practically the same as defined in the earlier common law decisions of New England and in the Eastern States.[5] And, in this connection it may be said that one of the most invariable rules is that, after the water has been used for the propulsion of machinery by one owner, it must be returned to the natural stream undiminished in quantity[6] and undeteriorated in quality,[7] for the use of the other riparian proprietors upon the same stream. A riparian proprietor has the right to maintain obstructions across navigable streams of a State for the development of power, if he does not materially affect its use as a highway, during the season when it may be so used in its natural condition. But if such obstructions prevent the use of the stream for navigation or for the driving of logs, they may be prevented.[8]

**§ 854. Under common law—Non-riparian transmission of power.**—Although the cases are few upon the subject, the question has arisen as to whether or not a riparian owner who developed electric energy upon the banks of the stream had the right to transmit the same to distant and non-riparian lands for use there. It must be borne in mind that the actual use of the water by such riparian proprietor is made at or near the stream to which his land is riparian. Hence, it follows that, under the general rule of

5 That the use of the water of the streams is permissible for power purposes in the Western States, see Kalama El. etc. Co. v. Kalama Driving Co., 48 Wash. 612, 94 Pac. Rep. 469, 22 L. R. A., N. S., 641, 135 Am. St. Rep. 948; Trullinger v. Howe, 53 Ore. 219, 97 Pac. Rep. 549, 99 Pac. Rep. 880, 22 L. R. A., N. S., 545; Mentone etc. Co. v. Redlands etc. Co., 155 Cal. 323, 100 Pac. Rep. 1082, 22 L. R. A., N. S., 382, 17 Am. & Eng. Ann. Cas. 1222; Cline v. Stock, 71 Neb. 70, 98 N. W. Rep. 454, 102 N. W. Rep. 265.

6 For the return of water to the stream, see Secs. 496, 522.

7 For the pollution of waters, see Secs. 1129-1147.

8 Kalama etc. Co. v. Kalama Driving Co., 48 Wash. 612, 94 Pac. Rep. 469, 22 L. R. A., N. S., 641, 125 Am. St. Rep. 948; Trullinger v. Howe, 53 Ore. 219, 97 Pac. Rep. 549, 99 Pac. Rep. 880, 22 L. R. A., N. S., 545.

For the protection of navigation, see Chap. 16, Secs. 341-357.

law, a riparian owner may make a reasonable use of the water of the stream upon his riparian land, taking into consideration the rights of the other riparian owners upon the same stream. And in this connection it must be remembered that the water itself is not conveyed away from the riparian lands but it is only the electrical energy or power which is so transmitted. The cases are very few upon this particular phase of the subject, but the Supreme Court of California had a recent occasion to decide this question. And in that case[1] it was held that the owner of riparian land has the right to use the water either in its natural course on his land for the generation of electric power, or, if it is more convenient, he has the right to turn the water out of its natural channel at the upper end of his land and carry it in an artificial channel over the land and use it for the generation of such power, although the power is carried away and used on the non-riparian lands of others, provided that he turns all the water back into the stream, without unduly interfering or injuring the rights of those below. And, upon the point under discussion, the Court said: "The electricity generated at the power house by the use of water from the pipe is carried away to Redlands and other places not on the stream, and there used for light, heat, and power. The plaintiff makes the novel proposition that the use of the water to generate electric power by means of a power house situated on riparian land is not a use within the scope of the riparian rights which attach to the land, unless the electric power is not only generated upon that land, but is also applied and used within its confines. There is no merit in this proposition. The riparian owner, by reason of the situation of his land on the stream, has the right to make any use beneficial to himself on the riparian land which his situation enables him to make, except that, if his use involves a consumption of water, he may not use more than his reasonable share as compared with other riparian owners, and that he must not pollute the water to the injury of others entitled to it, and that the water he does not consume must be returned to the stream before it passes his land.[2] There may be other qualifications of

1 Mentone Irr. Co. v. Redlands El. L. & P. Co., 155 Cal. 323, 100 Pac. Rep. 1082, 22 L. R. A., N. S., 382, 17 Am. & Eng. Ann. Cas. 1222.

2 Citing Gould on Waters, Secs. 204, 208, 213; 2 Farnham on Waters, Sec. 495, p. 1645; Sec. 471, p. 1591; Secs. 475, 476; Gould v. Eaton, 111 Cal.

his right, but they do not affect the present question. The use of water in its passage through his land to operate a power plant thereon is as clearly within his rights as is his right to operate a mill thereon with which to grind grain, or to operate any other machinery, than which there is no more ancient or well-established feature of riparian rights. The theory of the plaintiff on this point would seem to come to this: That in the process the water is in some way transformed into electricity, and in that form is carried away and used on non-riparian land. If this were correct, perhaps the use would not be included in the riparian right, and perhaps even a prior appropriator below could prevent such use if it worked injury to his right. But no such thing occurs. The water is not changed into electricity, nor carried away by the process. It is not the water that becomes electricity. It is the force of gravity, the weight of water, which turns the wheels, and, being converted into electric power, is carried away on the wires, the water itself being turned back into the stream, precisely as in the case of its use to turn an ordinary mill wheel. The power company, being the owner of the riparian land, has the full right to use the water in its natural course on its land for that purpose."

§ 855. **Use of water by appropriators for power purposes.**—As we discussed in previous sections the use of water for power purposes is among the beneficial uses for which water may be appropriated under the Arid Region Doctrine of appropriation.[1] But, as is the case with all uses of water where the appropriation is for some purpose which does not consume the water, it must be returned to the stream in order that other appropriators may also receive its benefits. The general rule is that all water which is not actually consumed by the use for which it is appropriated is subject to other

639, 44 Pac. Rep. 319, 52 Am. St. Rep. 201; *Id.*, 117 Cal. 539, 49 Pac. Rep. 577, 38 L. R. A. 181; Bathgate v. Irvine, 126 Cal. 135, 58 Pac. Rep. 442, 77 Am. St. Rep. 158.

1 See Secs. 694-696.

See, also, that the generation of electricity for light, heat, and power is a beneficial use, for which an appropriation can be made, Speer v. Stephenson, 16 Idaho 707, 102 Pac. Rep. 365; Tompson v. Pennebaker, 173 Fed. Rep. 849, 97 C. C. A. 591; Pool v. Utah etc. Co., 36 Utah 508, 105 Pac. Rep. 289; Cascade etc. Co. v. Empire etc. Co., 181 Fed. Rep. 1011; Sternberger v. Seaton Mountain etc. Co., 45 Colo. 401, 102 Pac. Rep. 168; Union M. & M. Co. v. Dangberg, 81 Fed. Rep. 73.

For the appropriation of water for power, light, and heat, see Sec. 695.

and subsequent appropriations.[2] It is also the general rule that where water has been appropriated for power purposes, where very little, if any, is actually consumed, the appropriator can not change the nature of the use in any manner where it will require a greater quantity of water or a greater draft upon the flow of the stream, and where the vested rights of others would be injuriously affected thereby. This subject, however, has been discussed in other sections of this work and no further argument need be made here.[3]

2 For rights of subsequent appropriators, see Secs. 783-789.

3 For changes which may be made, see Chap. 48, Secs. 856-873.

For changes of the use of the water, see Secs. 869-872.

# CHAPTER 48.

## CHANGES WHICH MAY BE MADE.

§ 856. Scope of chapter—Changes in general.
§ 857. Point of diversion may be changed.
§ 858. Point of diversion—Effect of change—Others must not be injured.
§ 859. Changes in dams—Flooding lands.
§ 860. Changes in location of ditch or canal.
§ 861. Changes in the character of the works for conveying the water—As against the rights of the land owner.
§ 862. Changes in the character of works for conveying the water—As against the rights of the ditch owner.
§ 863. Changes in the mode of collecting the water.
§ 864. Changing the channel of a stream—Changing back.
§ 865. Changes in time of diversion.
§ 866. Change of water from one watershed to another.
§ 867. Changes of place of use—May be made where no injury is done the rights of others.
§ 868. Changes in place of use—Can not be made where injury is done to the rights of others.
§ 869. The change in the use of the water appropriated.
§ 870. Change in the use of water—What changes may be made.
§ 871. Changes in the use and the place of use—Statutes authorizing and restricting.
§ 872. Changes on sale—Rights of the purchasers.
§ 873. The nature and extent of injuries to others which will prevent changes.

**§ 856. Scope of chapter—Changes in general.**—In the taking of the first steps of an appropriation, it sometimes happens that the appropriator can not always make his plans with sufficient definiteness so that afterward it is necessary to make changes. Again, it often happens that the channel of the stream from which he takes the water changes, and other changes are made, due to natural causes; and hence this necessitates a change in the works of the appropriator. These changes are quite numerous and will be discussed in this chapter in detail. Among them may be named the right to change the point of diversion,[1] the location of the ditch or canal,[2] the changes necessarily due to the shifting in the channel

1 See Secs. 857-859. 2 See Sec. 860.

of the natural stream,[3] the change of the water from one watershed to another,[4] of the place of use,[5] in the application of the water from one use to another,[6] of the manner of use, and the time of diversion and other changes which may be made by the appropriator.

In general, it may be said that any change in the point of diversion, location of the ditch or canal, the use of the water, and its application, may be made by an appropriator, provided that the rights of others are not materially impaired or injured. But, on the other hand, as said by the Colorado Court in a recent case:[7] "An appropriator of water for irrigation may not change the place of use, the point of diversion, the character of the use, or make an enlarged use of his original appropriation, to the prejudice of the rights of the other appropriators from the same source of supply after their rights have attached."[8]

And in general it may be said that any change for any purpose by one appropriator which injures the vested rights of others either prior or subsequent to the date of his right can not be made. And in the statutes relating to this subject it is always provided that the change may be made if others are not injured thereby. And the courts in construing these statutes have always held that the converse of the proposition was also true, to the effect that the change could not be made if the rights of others were materially injured by such change.

3 See Sec. 864.

4 See Sec. 866.

5 See Secs. 866-868.

6 See Secs. 870-872.

7 Diez v. Hartbauer, 46 Colo. 599, 105 Pac. Rep. 868.

8 See, also, Vogel v. Minnesota etc. Co., 47 Colo. 543, 107 Pac. Rep. 1108; Windsor etc. Co. v. Hoffman etc. Co., 48 Colo. 82, 109 Pac. Rep. 422; Windsor etc. Co. v. Lake Supply Ditch Co., 44 Colo. 214, 98 Pac. Rep. 729; Bates v. Hall, 44 Colo. 360, 98 Pac. Rep. 3; Smith v. Corbit, 116 Cal. 587, 48 Pac. Rep. 725; Santa Paula etc. Works v. Peralta, 113 Cal. 38, 45 Pac. Rep. 168; Ortman v. Dixon, 13 Cal. 33; McKinney v. Smith, 21 Cal. 374, 1 Morr. Min. Rep. 650; McDonald v. Bear River etc. Co., 13 Cal. 220, 15 Cal. 145, 1 Morr. Min. Rep. 626; Davis v. Gale, 32 Cal. 26, 91 Am. Dec. 554, 4 Morr. Min. Rep. 604; Nevada etc. Co. v. Powell, 34 Cal. 109, 91 Am. Dec. 685, 4 Morr. Min. Rep. 253; Higgins v. Baker, 42 Cal. 233, 7 Morr. Min. Rep. 525; Head v. Hale, 38 Mont. 302, 100 Pac. Rep. 222; Smith v. Duff, 39 Mont. 382, 102 Pac. Rep. 984, 133 Am. St. Rep. 587; Davis v. Chamberlin, 51 Ore. 304, 98 Pac. Rep. 154; Williams v. Altnow, 51 Ore. 275, 95 Pac. Rep. 200, 97 Pac. Rep. 539; Hough v. Porter, 51 Ore. 318, 95 Pac. Rep. 732, 98 Pac. Rep. 1083, 102 Pac. Rep. 728.

§ 857. **Point of diversion may be changed.**—It often happens that where an appropriation has been legally made, owing to the fall of the land or to some other physical condition of the country, or in order to more easily divert the water, or, again, by the construction of a new ditch or canal higher up, in order to bring more land under cultivation,[1] that the appropriator desires to change his point of diversion of the water from the natural stream. This change can be made only upon certain conditions. The law is settled beyond all question that where an appropriation has been once legally consummated,[2] or before the consummation of the right, for that matter, and the appropriator is entitled to the use of a certain quantity of the water flowing in a natural stream, he may originally take out the same at any point on the stream that he may see fit, if the vested rights of others are not injured thereby.[3] Again, under the same limitation he may change his point of diversion at pleasure, provided in so doing the rights of others, either prior or subsequent in time to him, are not materially injured by the change. The authorities upon the subject hold that, in all changes of this nature the effect of the change upon the rights of others which have vested at the time is the controlling consideration, and that, in the absence of any injurious consequences to the rights of others, any change an appropriator desires to make is legal and proper.[4] The use to which the water is applied makes no difference as to the right to change the point of diversion, so long as the rights of others are not injured.[5] This right is usually pro-

1 For the right to change the ditch or canal, see Secs. 860, 861.

2 For the consummation of an appropriation, see Secs. 728, 752.

3 For diversion of the water, see Secs. 722, 723.

4 Union M. & M. Co. v. Dangberg, 81 Fed. Rep. 73; Anderson v. Bassman, 140 Fed. Rep. 14, both citing Kinney on Irr., 1st Ed., Sec. 248.

*Alaska.*

Miocene D. Co. v. Campion M. Co., 3 Alaska 572.

*Arizona.*

"The circumstances under which Gould changed his mode of diversion by taking water from the Maricopa Canal instead of the Wilson ditch can not be held to have been an interruption of his original right of appropriation. We know of no provision of law by which a right of appro-

priation may be thus lost." Gould v. Maricopa C. Co., 8 Ariz. 429, 76 Pac. Rep. 598.

See, also, Miller v. Douglass, 7 Ariz. 41, 60 Pac. Rep. 722.

*California.*

A person entitled to divert a given quantity of water of a stream may take the same at any point on the stream, and may change the point of diversion at pleasure, if the rights of others be not injuriously affected by the change. Kidd v. Laird, 15 Cal. 161, 76 Am. Dec. 472, 4 Morr. Min. Rep. 571.

See, also, Civil Code of California, Secs. 1412, 1415.

For other California cases, see Butte etc. Co. v. Morgan, 19 Cal. 609, 4 Morr. Min. Rep. 583; McDonald v. Askew, 29 Cal. 200, 1 Morr. Min. Rep. 660; Davis v. Gale, 32 Cal. 26, 91 Am. Dec. 554, 4 Morr. Min. Rep. 604; Nevada etc. Co. v. Kidd, 37 Cal. 282; Junkans v. Bergen, 67 Cal. 267, 7 Pac. Rep. 684; Ware v. Walker, 70 Cal. 591, 12 Pac. Rep. 475; San Luis W. Co. v. Estrada, 117 Cal. 168, 48 Pac. Rep. 1075; Ramelli v. Irish, 96 Cal. 214, 31 Pac. Rep. 41; Gallagher v. Montecito W. Co., 101 Cal. 245, 35 Pac. Rep. 770; McGuire v. Brown, 106 Cal. 660, 670, 39 Pac. Rep. 1060, 30 L. R. A. 384; Hargrave v. Cook, 108 Cal. 72, 41 Pac. Rep. 18, 30 L. R. A. 390; Charnock v. Higuerra, 111 Cal. 473, 44 Pac. Rep. 171, 32 L. R. A. 190, 42 Am. St. Rep. 195; Santa Paula etc. Co. v. Peralta, 113 Cal. 38, 45 Pac. Rep. 168; Smith v. Corbit, 116 Cal. 587, 48 Pac. Rep. 725; Byers v. Colonial etc. Co., 134 Cal. 553, 66 Pac. Rep. 732; Craig v. Crafton etc. Co., 141 Cal. 178, 74 Pac. Rep. 762; Southern Cal. Inv. Co. v. Wilshire, 144 Cal. 68, 77 Pac. Rep. 767; Perry v. Calkins, 159 Cal. 175, 113 Pac. Rep. 136.

*Colorado.*

The right to change the point of diversion of water which has been obtained as the result of an appropriation is one of the incidents of ownership, and existed and was exercised in this State independent of statute, and the only limitation is that the rights of others must not be infringed. Lower Latham D. Co. v. Bijou Irr. Co., 41 Colo. 212, 93 Pac. Rep. 483.

For Colorado statutes providing for change of point of diversion, see Chap. 87. See, also, Sess. Laws 1899, p. 235, Chap. 105.

For other Colorado cases see New Cache La Poudre Irr. Co. v. Water Supply etc. Co., 29 Colo. 469, 68 Pac. Rep. 781; Bates v. Hall, 44 Colo. 360, 98 Pac. Rep. 3; Greer v. Heiser, 16 Colo. 306, 26 Pac. Rep. 770; Strickler v. Colorado Sprs., 16 Colo. 61, 26 Pac. Rep. 313, 25 Am. St. Rep. 245; Sieber v. Frink, 7 Colo. 148, 2 Pac. Rep. 901; Fuller v. Swan etc. Co., 12 Colo. 12, 19 Pac. Rep. 836, 16 Morr. Min. Rep. 252; Knowles v. Clear Cr. etc. Co., 18 Colo. 209, 32 Pac. Rep. 279; Nichols v. McIntosh, 19 Colo. 22, 34 Pac. Rep. 278; Baer Bros. v. Wilson, 38 Colo. 101, 88 Pac. Rep. 265; Wadsworth D. Co. v. Brown, 39 Colo. 57, 88 Pac. Rep. 1060; City of Telluride v. Davis, 33 Colo. 355, 80 Pac. Rep. 1051, 108 Am. St. Rep. 101; Robertson v. Wilmoth, 40 Colo. 74, 90 Pac. Rep. 95; Crippen v. Glasgow, 38 Colo. 104, 87 Pac. Rep. 1073; New Cache etc. Co. v. Arthur etc. Co., 37 Colo. 530, 87 Pac. Rep. 799; Hallett v. Carpenter, 37 Colo. 30, 86 Pac. Rep. 317; Fluke v. Ford, 35 Colo. 112, 84 Pac. Rep. 469; New Cache La Poudre etc. Co. v. Water Supply etc. Co., 29 Colo. 469, 68 Pac. Rep. 781; Cache La Poudre etc. Co. v. Water Supply etc. Co., 25 Colo. 161, 53 Pac. Rep. 331, 46 L. R. A. 175, 71 Am. St. Rep. 131; Fort Lyon C.

Co. v. Chew, 33 Colo. 392, 81 Pac. Rep. 37; Wyatt v. Larimer etc. Co., 1 Colo. App. 480, 29 Pac. Rep. 906; Hammond v. Rose, 11 Colo. 524, 19 Pac. Rep. 466, 7 Am. St. Rep. 258; Thomas v. Guiraud, 6 Colo. 530; Coffin v. Left Hand D. Co., 6 Colo. 443; Fulton Irr. D. Co. v. Meadow Island Irr. Co., 35 Colo. 558, 86 Pac. 748; Diez v. Hartbauer, 46 Colo. 599, 105 Pac. Rep. 868; Vogel v. Minnesota etc. Co., 47 Colo. 543, 107 Pac. Rep. 1108.

*Hawaii.*

Peck v. Bailey, 8 Hawn. 658.

*Idaho.*

The person entitled to the use may change the place of diversion if others are not injured by such change. Rev. Stat., Idaho, 1908, Sec. 3157.

See, also, Hard v. Boise City etc. Co., 9 Idaho 589, 76 Pac. Rep. 331, 65 L. R. A. 407; Hill v. Standard M. Co., 12 Idaho 223, 85 Pac. Rep. 907; Walker v. McGinnis, 8 Idaho 540, 69 Pac. Rep. 1003.

A person entitled to the use of water may change the point of its diversion, provided, always, other parties are not injured thereby. Even in the absence of statutory declaration, the rule would be the same. Head v. Hale, 38 Mont. 302, 100 Pac. Rep. 222.

See, also, Rev. Codes, Mont., 1907, Sec. 4842.

*Montana.*

For other Montana cases, see Columbia M. Co. v. Holter, 1 Mont. 296; Gassert v. Noyes, 18 Mont. 216, 44 Pac. Rep. 959; Alder Gulch etc. Co. v. Hayes, 6 Mont. 31, 9 Pac. Rep. 581; Hayes v. Buzard, 31 Mont. 74, 77 Pac. Rep. 423; Meagher v. Hardenbrook, 11 Mont. 385, 28 Pac. Rep. 451; Middle Cr. D. Co. v. Henry, 15 Mont. 558, 39 Pac. Rep. 1054; Carlson v. City of Helena, 43 Mont. 1, 114 Pac. Rep. 110.

*Nebraska.*

Farmers' etc. Co. v. Gothenberg etc. Co., 73 Neb. 223, 102 N. W. Rep. 487.

See, also, Nebraska Comp. Laws, 1905, Sec. 6403.

*New Mexico.*

Sess. Laws, 1905, p. 270.

*Nevada.*

*Oklahoma.*

See Sess. Laws 1905, p. 274, Sec. 10.

*Oregon.*

A prior appropriator of water for a beneficial use from a stream or other natural source of supply may change the point of diversion so long as it does not prejudice the rights of subsequent claimants. Williams v. Altnow, 51 Ore. 275, 95 Pac. Rep. 200. Tolman v. Casey, 15 Ore. 83, 13 Pac. Rep. 669; Bolter v. Garrett, 44 Ore. 304, 75 Pac. Rep. 142; McCall v. Porter, 42 Ore. 49, 70 Pac. Rep. 820, 71 Pac. Rep. 976; Cole v. Logan, 24 Ore. 204, 33 Pac. Rep. 568; Carson v. Hayes, 39 Ore. 97, 65 Pac. Rep. 814; Glaze v. Frost, 44 Ore. 29, 74 Pac. Rep. 336; Whited v. Cavin, 55 Ore. 98, 105 Pac. Rep. 396.

But the place of diversion can not be changed if it prejudices the rights of other appropriators. Hough v. Porter, 50 Ore. 318, 95 Pac. Rep. 732, 98 Pac. Rep. 1083, 102 Pac. Rep. 728.

*South Dakota.*

See Sess. Laws 1905, p. 201, Sec. 48.

*Utah.*

Salt Lake City v. Salt Lake City etc. Co., 24 Utah 249, 67 Pac. Rep. 672; *Id.*, 25 Utah 441, 71 Pac. Rep. 1062, 61 L. R. A. 648; Hague v. Nephi Irr. Co., 16 Utah 421, 52 Pac.

vided for by the statutes of the various States.[6] In Colorado a regular proceeding is provided for by an action brought in the District Court, and in each case if the change is allowed a decree must be entered to that effect. As this law is local in character, it will be discussed under the laws of Colorado.[7] However, the statute is held by the Court to be purely remedial, and the right to make the change exists as one of the incidents of ownership and independent of the statute.[8] In some of the recent Irrigation Codes, enacted in some of the States, before a change in the point of diversion can be made the appropriator must apply to the State engineer for a permit for that purpose, which, after due notice to the parties liable to be affected thereby, may or may not be allowed. We will discuss this phase of the subject in our chapter on the laws of State Control.[9]

In all the States it may be said that the change in the point of diversion may be made, and such change will not affect the priority of right,[10] and neither does it affect the quantity of water which the appropriator is entitled to under the extent of his appropriation.[11] But where the statute of a State prescribes a mode of procedure for making the change, it must be complied with.[12] The rule as to the right to change the point of diversion

Rep. 567, 41 L. R. A. 311, 67 Am. St. Rep. 634.

*Wyoming.*

Willey v. Decker, 11 Wyo. 496, 73 Pac. Rep. 210, 100 Am. St. Rep. 939.

The place of diversion of appropriated water may be changed if it can be done without injury to subsequent appropriators. Johnston v. Little Horse Cr. Irr. Co., 13 Wyo. 208, 79 Pac. Rep. 22, 70 L. R. A. 341, 110 Am. St. Rep. 986.

Smith v. Corbit, 116 Cal. 587, 48 Pac. Rep. 725.

12 "The interests of the State and the protection of its rights require that Sess. Laws 1899, p. 235, prescribing the procedure necessary to the exercise of the right to change the point of diversion of irrigating water, should be enforced." New Cache La Poudre etc. Co. v. Water Supply etc. Co., 29 Colo. 469, 68 Pac. Rep. 781.

See, also, Sec. 871.

is the same for subterranean waters as it is for the water of natural streams. And one having the right to take a definite quantity of water from a basin of permeable material saturated therewith, and not composing a part of any stream, may change his place of diversion, so long as the total amount of water taken is not thereby increased.[13] Again, a secondary appropriation may be made of the same water for power purposes, where it does not interfere with the rights of the prior appropriator.[14] Therefore, a decree conferring upon a power company a secondary use of the water of a river so long as the prior appropriator "shall continue to divert its water at its present point of diversion, and to use the same at its present place of use," does not prevent the prior appropriator from thereafterwards changing the point of diversion, the decree only dealing with the present place of diversion.[15] A consumer of water who takes it from a canal company has also the right to change his point of diversion, and his right in this respect is that of an appropriator.[16] An appropriator may also have more than one point of diversion, taking the water sometimes from one and sometimes from the other.[17]

**§ 858. Point of diversion—Effect of change—Others must not be injured.**—In the preceding section we stated that any change in the point of diversion might be made which did not injuriously affect the rights of others.[1]

Upon the other hand, one entitled to divert a quantity of water from a stream can not change his point of diversion if by such change the vested rights of others are materially injured.[2] This

13 Barton v. Riverside W. Co., 155 Cal. 509, 101 Pac. Rep. 790, 23 L. R. A., N. S., 331, where it is held that new artesian wells sunk in an artesian basin constituted a mere change of the place of diversion, and others who were entitled to the waters of the basin could not complain unless their rights were injured.

is true both as to the rights of the prior appropriator,[3] and also as to the rights of the subsequent appropriator. The subsequent appropriator has a vested right as against his senior to insist upon the continuance of the conditions that existed at the time he made his appropriation, and if the change of the place of diversion by the senior interferes with or changes those conditions to the prejudice of a subsequent appropriator, an action will lie to prevent the change.[4] As was said in a recent Montana case:[5] "But though

"The fact that the appellant was the owner of 128 shares of stock in the Montpelier Irrigation Company, an appropriator of water prior in time to that of the respondent, did not give the appellant the right to change the point of diversion of the Montpelier Irrigation Company to a point above the point of diversion of the respondent, if such change resulted in injury to the respondent." Montpelier etc. Co. v. Montpelier, 19 Idaho 212, 113 Pac. Rep. 475.

[3] For rights of the prior appropriator, see Secs. 776-782.

"The right to change the point of diversion existed before the statute and has always been recognized in this State. It is a property right. . . . But it is a *qualified* right, and has always been made subject to the condition or provision that it can be exercised only in case it appears that such change will not impair or injuriously affect the vested rights of others." Monte Vista Canal Co. v. Centennial Irr. D. Co., —— Colo. App. ——, 123 Pac. Rep. 831, citing Union Colony *et al.* v. Elliott, 5 Colo. 371; Ft. Morgan Land & Canal Co. v. South Platte Ditch Co., 18 Colo. 1, 30 Pac. Rep. 1032, 36 Am. St. Rep. 259; Wadsworth Ditch Co. *et al.* v. Brown, 39 Colo. 57, 88 Pac. Rep. 1060; New Cache La Poudre Irr. Co. v. Water Supply & Storage Co., 29 Colo. 469, 68 Pac. Rep. 781; Lower Latham Ditch Co. *et al.* v. Bijou Irr. Co., 41 Colo. 212, 93 Pac. Rep. 483; Vogel *et al.* v. Minnesota Canal Co. *et al.*, 47 Colo. 534, 107 Pac. Rep. 1108; Fuller *et al.* v. Swan River Placer Co., 12 Colo. 12, 19 Pac. Rep. 836, 16 Morr. Min. Rep. 252.

[4] "If the appellant was the only appropriator, it would have the right to change the point of diversion or place of use of the water as frequently as desired, because there would be none having rights which might be affected; but when a subsequent appropriator makes his diversion, he acts under the belief that the water appropriated by his senior will

he may change the point of diversion or may use it for other purposes, his right to do so is subject to the well-settled rule that the change may not affect injuriously the rights of subsequent appropriators."[6]

As to whether or not an appropriator may change his point of diversion depends upon the facts of each particular case, and that, too, whether his rights are prior or subsequent in time.[7] And as said in a recent Colorado case:[8] "One who seeks to have made a change in the point of diversion of his ditch should make it appear to the Court that the same will not injuriously affect the vested rights of others, although in a sense this may involve proof of a negative."[9]

The right to change is not absolute, and should not be allowed where the owners of another ditch would be injuriously affected thereby, in case it is impossible to make such conditions as would

continue to be used as it was at the time of the making of the appropriation of the junior. So a subsequent appropriator has a vested right as against his senior to insist upon the continuance of the conditions that existed at the time he made his appropriation." Baer Bros. etc. Co. v. Wilson, 38 Colo. 101, 88 Pac. Rep. 265.

For the rights of subsequent appropriators, see Secs. 783-789.

obviate the injury.[10] Nor can an appropriator make such a change in the point of diversion which will injuriously affect the rights of riparian proprietors which have vested since the appropriation was made.[11] But it is held that an appropriator entitled to a certain amount of water may change the place of diversion, even upon the servient tenement, when others are not injured by the change.[12] However, without the consent of the owner of the servient estate, as we view the law, the only correct method is by condemnation proceedings.[13] Again, where the change of the point of diversion is to the land of another, the right must be acquired in some legal method.[14] However, where an appropriator committed an actual trespass by entering the inclosure of another to change his point of diversion, and continued so to divert the water for six years, the owner was held to be estopped by acquiescence from denying the appropriator's right on the ground that he was a trespasser.[15]

**§ 859. Changes in dams—Flooding lands.**—An appropriator may change the dimensions of his dam or raise the height thereof

As to lands other than those subject to his easement, and as to other claimants and owners, he can make no change at all which injuriously affects them or their rights. Hargrave v. Cook, 108 Cal. 72, 41 Pac. Rep. 18, 30 L. R. A. 390.

See, also, McGuire v. Brown, 106 Cal. 660, 39 Pac. Rep. 1036, 30 L. R. A. 334; Vogel v. Minnesota etc. Co., 47 Colo. 534, 107 Pac. Rep. 1108; Snyder v. Colo. etc. Co., 181 Fed. Rep. 62, 104 C. C. A. 136; Vestal v. Young, 147 Cal. 715, 82 Pac. Rep. 381.

Where an appropriator has a right merely to divert at a certain point on defendants' land water from a stream and conduct it by a certain route over such land the fact that defendants will not be injured by his so diverting it at a different point on their land and conducting it by a different route and a different means, does not entitle him to make the change, though, through the elements, a diversion at the original point and the conducting of the water by the original route and means were rendered impossible. White Bros. & Crum Co. v. Watson, 64 Wash. 666, 117 Pac. Rep. 497.

15 Miller v. Douglass, 7 Ariz. 41, 60 Pac. Rep. 722.

See, also, Crescent etc. Co. v. Montgomery, 143 Cal. 248, 76 Pac. Rep. 1032, 65 L. R. A. 640.

as he sees fit, so long as the rights to the water of a stream acquired by others are not affected or injured thereby, or so long as the lands owned by others are not flooded or injured by the back water caused by the changed dimensions of the dam,[1] or the rights of others injured.[2]

But, upon the other hand, an appropriator who, by means of a dam of certain dimensions, has diverted a certain portion of the waters of a stream sufficient for his purpose, according to the condition and height of the stream at the time of making his appropriation, can not change his dam by raising the height thereof, if such alterations interfere with the rights of appropriators. This is held to be the rule even where the stream changes from natural causes or becomes filled with mud and silt.[3] Where the facts were that a party first appropriated a portion of the waters of a certain stream at a given point, and diverted and enjoyed the water by means of a dam of a certain height, from these facts alone no legal presumption arises that the right was also acquired at the time of the appropriation to take the water out either by moving his dam to a point higher up the stream, or to build his dam higher, so that the back water would injure the rights of other appropriators, either subsequent or prior in time to his right to the water. On the contrary, the legal presumption from these facts alone would rather be that his right to the use of the water was no more extensive than his present enjoyment, if such change interfered with the vested rights of others. The fact that subsequent changes occurring in the bed of the stream render it impossible to longer divert the water at the point chosen, without raising the dam, can make no difference if the rights of others were injured by the change. Whatever water in the stream was left unappropriated at the time the first made his appropriation was open to appropriation by subsequent parties.[4] And if they, by lawful subsequent appropriations, acquired the right to use a certain amount of the

Rep. 240; Sims v. Smith, 7 Cal. 148, 68 Am. Dec. 233, 13 Morr. Min. Rep. 161; O'Keefe v. Cunningham, 9 Cal. 581; Jones v. Jackson, 9 Cal. 237.

4 For the rights of subsequent appropriators, see Secs. 783-789.

water of the stream for any purpose, according to the condition that the stream was then in, the first appropriator, in spite of his priority, is not authorized, by erecting a higher dam, to interfere with or injure those rights. Such, also, is the case relative to the flooding of lands along the stream which were acquired subsequent to the first appropriation. And, again, the same rule applies where the stream was caused to rise through the acts of others in filling the channel with debris.[5] The prior appropriator may have legal remedies against the parties who filled up the stream and thereby destroyed the use of the water right he had acquired, but the remedy is not by building his dam higher, and thereby destroying the property and rights of other parties who have acquired rights upon the stream above, subject only to the rights of the first appropriator, whatever they were, as they then existed at the time of his appropriation, and which parties were entirely innocent of the injury to the rights of the first appropriator.[6] If this was the law, its exercise might lead to the flooding of a large part of the country above the dam, to the irreparable injury of those owning lands where they would be affected by the back water from the changed dam.

§ 860. **Changes in location of ditch or canal**—In the change of the point of diversion of the water from a natural stream it necessarily follows in most cases that there must also be a change in the location of the ditch or canal of the appropriator. There must be some new means of conveying the water from the new point of diversion.[1] There are many cases, however, where the new ditch takes its water from an old ditch, the point of diversion of which is not disturbed. In general, subject to the same limitation that applies in the change of the point of diversion, an appropriator may change the locality of his ditch or canal without his rights being affected thereby, provided, always, that the rights of others are not injured by the change.[2] And as far as his right to

5 For rights in debris cases, see Secs. 1136, 1141.

6 Nevada W. Co. v. Powell, 34 Cal. 109, 91 Am. Dec. 685, 4 Morr. Min. Rep. 253.

For injuries from flooding lands, see Chap. 83.

1 For change in point of diversion, see Sec. 857.

2 Nichols v. McIntosh, 19 Colo. 22, 34 Pac. Rep. 278, where it was held that an appropriator could secure an adjudication of his priorities through any substituted ditch, instead of his

the water is concerned, the fact that a party has changed the head of a ditch to a point higher up the stream, or that he built a new ditch to carry the water of a former appropriation, does not affect his right to such water.[3] Subject to the same limitations, changes may also be made during the course of construction of an original ditch, and the original surveyed line of the ditch be departed from where it is found necessary.[4] Cases of this kind occur where the line of ditch is upon the land of the appropriator, upon the public lands, or upon the lands of another whose consent is obtained therefor.

But when the change is attempted upon the lands of another, who refuses to give his consent thereto, we come to another question, and although the right to the change is often granted in these cases, the necessity for the same must be apparent and the right to make the change must be acquired in some manner known to law. An appropriator can not go upon the lands of another through which his old ditch may run and through which he has a right of way for that purpose where the ditch is located only, and without first obtaining the consent of the owner, arbitrarily change the line of the ditch to some other. He can not do this any more than he could have originally gone upon the lands of the other and thus secured his right of way and constructed his old ditch, without first securing a legal right to do the same.[5] A right of way for a ditch

original ditch, if he desires so to do, and that the abandonment of an old ditch was not an abandonment of the water right where he continued to use the water.

For abandonment, see Secs. 1100-1117.

See, also, Lilioukalani v. Pang Sam, 5 Hawn. 13; Peck v. Bailey, 8 Hawn. 658; Higgins v. Baker, 42 Cal. 233.

In a proceeding for change of water rights from one ditch to another, the Court should ascertain the volume of petitioners' right in cubic feet per second, but should not determine the duration of petitioners' use, unless such duration necessarily resulted in an enlarged use. Bates v. Hall, 44 Colo. 360, 98 Pac. Rep. 3.

3 Greer v. Heiser, 16 Colo. 606, 26 Pac. Rep. 770.

4 Conger v. Weaver, 6 Cal. 548, 65 Am. Dec. 528, 1 Morr. Min. Rep. 594; Parke v. Kilham, 8 Cal. 77, 68 Am. Dec. 310, 4 Morr. Min. Rep. 522.

5 For securing a right of way against the consent of the owner, see Secs. 1075-1086.

For the change in the character of the means of conveyance, see Secs. 861-863.

The privilege of changing the point of diversion does not extend to making new ditches on land lawfully held under a homestead claim. McGuire v. Brown, 106 Cal. 660, 670, 39 Pac. Rep. 1060, 30 L. R. A. 384.

or canal over the lands of others is an easement.[6] And when the ditch or canal is once constructed, it is well settled that the owner of the easement, against the consent of the owner of the fee, can not arbitrarily change the location of the ditch or materially increase the burden upon the servient estate, or injuriously affect the rights of the owner thereof.[7] The granting of a right of way over one portion of a person's land gives the grantee no right over any other portion.[8] And an indefinite easement for this purpose upon the construction and use of the ditch becomes fixed and definite as to its location.[9] And after this no change in the location can be made without the consent of the owner by prescription, which, of course, presupposes a grant or consent, or by some other legal method. As was said in a recent Washington case:[10] "The alteration by the action of the elements of the physical conditions so as to make the enjoyment of the easement impossible or more difficult was appellant's misfortune as an impairment of its property, just

6 See Secs. 991-993.

7 It is entirely immaterial in this connection that the new line was only from 1 to 20 feet distant from the old line. It was upon the property of the plaintiff, over which defendants had no right whatever; and the principle is the same as if the new line had been hundreds of feet away from the old one. Vestal v. Young, 147 Cal. 715, 721, 82 Pac. Rep. 381, 383.

as if the elements had impaired the enjoyment of its property of any other character. This furnishes no reason why another should be required to contribute to restore the enjoyment of the property, even if the thing to be contributed be something the other does not need, and the surrender of which will not injure him."

§ 861. **Changes in the character of the works for conveying the water—As against the rights of the landowner.**—As in the case of other changes which may be made by an appropriator, as far as his right to the use of the water is concerned, he may change the character of his works for conveying the water, provided that the vested rights of others are not materially injured.[1] He may, therefore, change an open ditch to a flume, pipe line, or to a cement conduit, or the reverse, provided that the rights of others are not materially injured thereby; and also provided that the line of his ditch is either upon his own lands, the public lands, or upon the lands of others whose consent he has obtained. But where it appears that by permitting the water to flow in its usual way through open ditches, some of it would seep into and percolate through the soil, and again reach the stream, to the benefit of other users of the water, and riparian owners, the mode of conducting the water can not be changed to a pipe line by means of which all seepage back into the stream is prevented, to the injury of those using the water thus returned to the stream.[2] And in cases where the change proposed is upon the lands of others, whose consent can not be obtained, as is the rule in cases proposing the change in the location of the ditch or canal,[3] no change can be made in the character of the use of an easement which is more burdensome to the servient tenement than was the old use. Therefore, the owner of a right of way through the lands of another for a ditch or canal can not permit the ditch to fill up and obstruct the flow of water so as to cause it to overflow and injure the lands of the land owner.[4] Again, he can not enlarge his ditch or canal or increase the flow of water therein, or so operate or use his ditch or canal as to increase

the burden on, or unnecessarily damage, the servient estate, without acquiring the right in some legal manner.[5] An indefinite easement for the purpose of a ditch becomes fixed and definite as to the size of the ditch upon its construction and use, and thereafter no change in its size or character can be made without the consent of the owner of the land, by prescription or by some other legal method.[6] As was said by the California Court:[7] "Where the right not definitely limited by grant has become fixed by the manner of its use, it can not be enlarged without the consent of the parties who may be affected.[8] The laying of pipe on a new line, or the substitution of pipe for a ditch or wooden conduit, or for pipe of a smaller size, was therefore not authorized by the mere fact that water had already been conducted across the highway in another manner."

In regard to the question as to the change in the character of the mode of conveyance from an open ditch to a flume, pipe line, or conduit, or the reverse, upon the lands of others where there is an easement for the means of the conveyance of the water through works of one class, we will say that the change should never be allowed without the consent of the owner of the land, where the

burden to the servient estate is increased, or actual injury to the rights of the land owner are incurred thereby. The Supreme Court of California goes to the extent of holding that an easement to carry water in an open ditch over another's premises does not give the right against the will of the land owner to carry the same quantity of water in pipes, even if the change would be beneficial to both parties.[9] The same was also held in a recent Washington case.[10] It is true that this is the common law rule upon the subject, and the case referred to was decided entirely upon common law authorities; but at the same time, under the Arid Region Doctrine of appropriation, where the common law has been abrogated or modified in so many cases, the extreme rule laid down by the California and Washington courts was wrong. Every easement is a restriction upon the right of the property of the servient tenement, and no alteration can be made in the mode of enjoyment by the owner of the dominant tenement, or the easement, the effect of which will be to increase such restriction.[11] But where no injury is done to

9 Allen v. San Jose W. Co., 92 Cal. 138, 28 Pac. Rep. 215, 15 L. R. A. 93, where it was held that, where plaintiffs in such a case sought to enjoin the laying of pipe to carry water in lieu of carrying it through an open ditch, it is immaterial that the alteration would be less burdensome to the servient estate and more convenient to the defendant. Citing Merritt v. Parker, 1 N. J. L. 460; Dickinson v. Grand Junction Canal Co., 7 Exch. 299, 21 L. J. Exch. N. S. 241, 16 Jur. 200; Johnston v. Hyde, 33 N. J. Eq. 632; Gregory v. Nelson, 41 Cal. 278, 12 Morr. Min. Rep. 124.

10 White Bros. & Crum Co. v. Watson, 64 Wash. 666, 117 Pac. Rep. 497, where it was said: "Counsel argues with much force and persuasiveness that, inasmuch as the respondents will in nowise be injured by a change from ditch and flume to pipe line, the right to make the change should be accorded to the appellant; that the taking of the additional right of way and conducting the water in a pipe line invades no substantial right of the respondents. But, even if it were shown that the change would be an actual benefit to the respondents, we would have no power to compel them to accept the benefit. The question is one of property rights, not of benefits or injuries. Many authorities so hold, and we have been cited to none to the contrary. 'No one has a right to compel another to have his property improved in a particular manner. It is as illegal to force him to receive a benefit as to submit to an injury.'" Citing Merritt v. Parker, 1 N. J. L. 460; Allen v. San Jose etc. Co., 92 Cal. 138, 28 Pac. Rep. 215, 15 L. R. A. 93; Tillotson v. Smith, 32 N. H. 90, 64 Am. Dec. 355.

11 See cases cited *supra;* Smith v. Hawkins, 110 Cal. 122, 42 Pac. Rep. 453; North Fork W. Co. v. Edwards, 121 Cal. 662, 54 Pac. Rep. 69; Oliver v. Agasse, 132 Cal. 297, 64 Pac. Rep. 401.

the servient estate, and where it is even beneficial to both parties, the change should be allowed.[12]

**§ 862. Changes in the character of works for conveying the water—As against the rights of the ditch owner.**—As was said in a previous section, the character of the works and the means of the use of the water are immaterial so long as the water appropriated is actually applied to some beneficial use or purpose and the rights of others are not injured thereby.[1] It therefore follows, as long as the appropriator makes a reasonably economical use of the water without unnecessary waste it is immaterial as to the character of the works which he uses as a means of effecting his appropriation and applying the water to the beneficial use or purpose for which it is made. The owner of a ditch over the lands of another can not be compelled against his will to change the character of his works upon behalf of the owner of the fee where no unnecessary damage by the use of such works is being done. As was said by Mr. Justice Sprague in an early California case:[2] "I know of no principle of law or power in a court of equity to justify or authorize such an invasion of the property rights of one private party to serve the wishes, convenience, or necessities of another private party. Such a principle, if once adopted by judicial tribunals, upon grounds of necessity, in view of the peculiar relations and character of private property rights of miners on the public domain, would readily be invoked as applicable to other property rights, and its practical application would result in a system of judicial condemnation of the property of one citizen to answer an assumed paramount necessity or convenience of another citizen. It is the duty of courts to protect a party in the enjoyment of his private property, not to license a trespass upon such property, or to compel the owner to exchange the same for other property to answer private purposes or necessities." And, again, as was said in a still later California case:[3] "Ditches and flumes are the usual and ordinary means of diverting water in this State, and parties who have made their appropriations by such means, can not be compelled to substitute iron pipes, though

they may be compelled to keep their flumes and ditches in good repair, so as to prevent any unnecessary waste."

In a recent Utah case [4] it was held that a prior appropriator from a lake acquired a vested right to his means of diversion and the right to continue to use his method or means of diversion which he had installed, and that if he was compelled by the withdrawal of unappropriated water from the lake by subsequent appropriators which required a change of method the additional expense for such change should be borne by the subsequent appropriator as a condition to the right to appropriate the unappropriated waters of the lake. However, the United States Circuit Court of Appeals in a recent case [5] held almost exactly contrary to the holding of the Utah Court.

It may be stated, however, as a general proposition, which we will discuss in a subsequent chapter,[6] that where any particular method of use of the water by an appropriator involves great and unnecessary waste, and there are other claimants to the water thus wasted, the appropriator may be compelled by a court of equity to change his method of diversion, carrying of the water, or its application, and thus suppress all unnecessary waste.

§ 863. **Changes in the mode of collecting the water.**—An appropriator of a certain quantity of water may take the same from the stream and conduct it directly to the place of use, or, if he does not desire to use the same immediately, he may collect the water in reservoirs in times of plenty, and afterwards, when he needs the water, conduct it to his place of use. He may also make the change from the direct application of the water by means of his ditches and canals to the indirect application of the water by means of his storage reservoirs, as he sees fit, but always provided that the rights of others to the waters from the same source of supply are not materially impaired or injured.[1] But an appropriator of water from a certain stream already partly appropriated acquires a right

[4] Salt Lake City v. Gardner, —— Utah ——, 114 Pac. Rep. 147.

[5] Schodde v. Twin Falls etc. Co., 161 Fed. Rep. 43, 88 C. C. A. 207; aff'd on writ of *certiorari* in the Supreme Court of the United States, 224 U. S. 107, 56 L. Ed. ——.

[6] For economic use of water and suppression of waste, see Chap. 49, Secs. 874-916.

[1] For rights for storage reservoirs, See Secs. 837-846.

to only the surplus or residuum of the water left flowing in the stream within the extent of his appropriation.[2] And, again, if he was the first to appropriate the water from the stream he is limited to the extent of his right as against those who come later.[3] So, where an appropriation is made for the direct application of the water to the purpose for which the appropriation was made, a priority of right to a certain quantity of water confers no right to it for storage and the indirect application of it in any greater quantity or at any other time, or to change his method of collecting the water by adding reservoirs to the system, if by this means other appropriators will suffer injury by the change.[4]

In the case of subterranean waters, changes may be made in the mode of collecting the water which is afterwards conducted by means of ditches or canals to the place of use.[5] This right is subject, however, to the same limitations as in the case of other changes, that the rights of others must not be injured by the change. Therefore, where a water company had been diverting a certain amount of water for fifteen years, by means of cuts and trenches, it was held by the Supreme Court of California that the company was entitled, when its supply from this means began to fail, to drive wells in the wash by means of which the requisite quantity previously diverted was obtained from the same source of supply, as the wells constituted only a different means of collecting the water.[6]

**§ 864. Changing the channel of a stream—Changing back.**—The location of a channel of a natural stream can not be changed by artificial means and still remain the natural stream. The flow of water of a natural channel may be changed into an artificial

channel, but then it is no longer in the natural channel, but it is in a ditch or canal. But the channel of a natural stream may be changed by Nature or by "act of God." This usually occurs from one of two causes or by a combination of both. The channel may gradually become filled with silt so that it will no longer carry the waters, especially during the period of heavy storms and freshets, and the water breaking through its old banks may cut out a new channel for itself. Or the waters of a great freshet may cause the same thing, and that, too, without there being any accumulation of silt in the bottom of the old channel. A channel of a natural stream having once been changed by Nature, the question arises as to what right, if any, have appropriators of the waters from the old channel, or the owners of land riparian to the same, to change back the flow of water from the new channel to the old? Under the common law a riparian owner has no right to go upon another's land and restore to the old channel the water which has been suddenly diverted by an act of God so as to flow elsewhere. And a water course, therefore, running between the lands of A and B, which leaves its course and suddenly and sensibly makes its channel entirely on the land of A, wholly belongs to A.[1] This rule is adhered to by the common law of States of the arid West, especially California, as far as riparian rights are concerned.[2]

1 Angell on Water Courses, Sec. 57; 3 Kent Com. 525; Gould on Waters, Sec. 160.

2 Wholey v. Caldwell, 108 Cal. 95, 41 Pac. Rep. 31, 30 L. R. A. 820, 49 Am. St. Rep. 64, where the Court held that a lower riparian proprietor has no right, independent of contract, to go on the land of an upper proprietor to return the stream to its original channel, when it has been diverted therefrom by natural causes.

But see Morton v. Oregon etc. R. Co., 48 Ore. 444, 87 Pac. Rep. 151, 1046, 7 L. R. A., N. S., 344, 120 Am. St. Rep. 827, where it is held that the person across whose land a freshet in a natural stream suddenly causes a new channel to be formed, may, within a reasonable time, restore the flow of water to its natural bed.

See, also, Mathewson v. Hoffman, 77 Mich. 420, 43 N. W. Rep. 879, 6 L. R. A. 349.

Where a public stream, abounding in fish, valuable for food, flowed through the premises of the defendant, it was held by the Utah Court that he was entitled to change the course of the stream over his own premises and construct fish ponds in the old bed, where this could be done without injury to the public or private interests or interfering with the passage of the fish up and down the stream, the Court saying: "We know of no reason why such person should not be permitted to change the course of the stream across his premises

Under the law of appropriation, as we view the same, a different rule appertains. Where a person has acquired the right to a certain amount of water in a stream by the appropriation of the same, he also acquires the right to have that water flow in the natural stream and over the lands of others down to the head of his ditch.[3] The appropriation of the water also carries with it an implied authority to do all that may become necessary to secure the benefit of the appropriation. He therefore has the right to enter the bed of the stream above the head of his ditch, even on the lands of others, and to remove sediment or obstructions which may have changed or obstructed the course of the current so as to prevent it from flowing down to and entering his ditch. Thus to this extent the appropriator acquires an easement in the lands through which the stream flows; but the right thus acquired is one which must be held to the narrowest limits compatible with the principal right, which is the use of the water.[4] No unnecessary injury must be done to the lands of another in making the change, or the party making it will be liable in damages.

§ 865. **Changes in time of diversion.**—As we have seen an appropriation of water may be made for the diversion and use of the water according to periods of time.[1] Where this is done the appropriator can not take the water at any other time, where it would interfere with the rights of others. Such a change in effect would be a new appropriation, and would be subject to all the rights which had vested prior to the date of the change.[2] The time of the actual application of the water, diverted during the period of time when

where, as in this case, neither public nor private interests are affected by such change." State v. Barker, 37 Utah 345, 108 Pac. Rep. 352, 27 L. R. A., N. S., 1134.

3 Right to flow of water to head of ditch, see Secs. 801-803.

1 For periodical appropriations, see Sec. 786.

2 Santa Paula Waterworks Co. v. Peralta, 113 Cal. 38, 45 Pac. Rep. 168; Barnes v. Sabron, 10 Nev. 217, 4 Morr. Min. Rep. 673; Colorado Mill etc. Co. v. Larimer etc. Co., 26 Colo. 47, 56 Pac. Rep. 185; Stowell v. Johnson, 7 Utah 215, 26 Pac. Rep. 290; Smith v. O'Hara, 43 Cal. 371, 1 Morr. Min. Rep. 671; Cache La Poudre Res. Co. v. Water Supply etc. Co., 25 Colo. 161, 53 Pac. Rep. 331, 46 L. R. A. 175, 71 Am. St. Rep. 131; Salina Cr. Irr. Co. v. Salina Stock Co., 7 Utah 456, 27 Pac. Rep. 578.

the appropriator is entitled to its use, may be changed. Therefore, the owner of a priority for direct irrigation is entitled to store, during the irrigation season, the quantity of water measured by volume and time which he would be entitled to divert during that period for the purpose of direct irrigation, and use the same later in the same season for crops requiring irrigation at that time, when the direct supply would be insufficient.[3] But the draft upon the natural stream must not be any greater than if the water had been directly applied to the land at the time of the diversion.

As there is no difference in principle between an appropriation measured by quantity and an appropriation measured by time,[4] there is also no difference in principle in the trespass upon the rights of another regardless of the fact as to whether the water was measured by him by quantity or by time. And where a trespass is made by the wrongful diversion of the water during the period of time when it rightly belongs to another, an injunction will issue to prevent such future trespasses.[5] A person entitled to divert water from a ditch during specified hours each day has no right to the water in the ditch below his point of diversion at the moment of the commencement of his right.[6]

§ 866. **Change of water from one watershed to another.**—There is no question now as to the right of an appropriator to divert the water from a stream flowing in one watershed and by any means conduct it for the irrigation of lands in another watershed. Yet in an early case in Colorado the validity of the appropriation and use of the water by this method was questioned, but the Court upheld the right.[1] Under a similar state of facts to those in the Colorado case, the Supreme Court of Washington in a very recent case also upheld the right.[2] Both cases also involved the

2 Miller v. Wheeler, 54 Wash. 429, 103 Pac. Rep. 641, 23 L. R. A., N. S. 1065.

question of mingling the waters of one watershed with the waters of the stream of another and the right to redivert the water from the latter stream and use the water for irrigation, and the right to do this was upheld.[3] The general rule is that under the law of appropriation, as contrary to the law of irrigation as a riparian right,[4] the water may be used in any locality, however remote from the stream from which it is taken. Therefore, it may be used on the lands of the valley of the stream from which it is taken, or it may be carried over or through the intervening ridge to land lying in another watershed, and there used, provided that the vested rights of others are not injured thereby. Where, however, water has been used in one watershed for irrigation and domestic purposes by an appropriator, and other parties were receiving the benefit of the seepage and percolations, it was held that it could not be conducted to another watershed by a pipe line, whereby all seepage is lost, and in such a case it is held that an action for an injunction will lie without proof of damages.[5]

§ 867. **Changes in place of use—May be made where no injury is done the rights of others.**—Under the law of appropriation, not only may the water appropriated be used in the first instance upon any lands, or in any locality,[1] but the appropriator may also afterward change his place of use without losing any of his rights to the water, provided that he actually applies all of the water appropriated to some beneficial use or purpose, and, provided further, that the rights of other persons are not materially injured by such change. This has been a rule of the doctrine of appropriation ever since the early California cases upon the subject, and has never been questioned, except where statutes have been enacted endeavoring to make a water right, where the water was appropriated for the irrigation of lands, an inseparable appurtenance to a certain tract of land.[2] And in these instances it has been held by the Supreme

3 For mingling waters, see Secs. 798-800.

4 That riparian owners can use the water only on riparian lands, see Secs. 460-466.

5 Southern Cal. etc. Co. v. Wilshire, 144 Cal. 68, 77 Pac. Rep. 767.

1 That riparian owners can only use the water on riparian lands, see Sec. 517.

Place of use by appropriators, see Sec. 782.

2 That a water right can not be made an inseparable appurtenance to land, see Secs. 1015, 1016.

Courts of some of the States which have made such an attempt that the appropriator could either sell his water right separate and apart from the land for which the water was appropriated, or could use the water on other lands.[3] So it may be regarded as the settled law, in at least the most of the States, that the place of the use of the water may be changed at the will of the appropriator, and the only questions to be determined in cases of this nature are, Is all of the water being applied to some beneficial use or purpose at the new place of use, and whether or not others are materially injured by the change.[4] A change in the place of use can not be

For statutes authorizing and restricting the place of use, see Sec. 871.

Pac. Rep. 168; San Luis etc. Co. v. Estrada, 117 Cal. 168, 48 Pac. Rep. 1075; Southside Imp. Co. v. Burson, 147 Cal. 401, 81 Pac. Rep. 1107; Charnock v. Higuerra, 111 Cal. 473, 44 Pac. Rep. 171, 32 L. R. A. 190, 52 Am. St. Rep. 195; Smith v. Corbit, 116 Cal. 587, 48 Pac. Rep. 725; Vineland etc. Co. v. Azusa etc. Co., 126 Cal. 486, 58 Pac. Rep. 1057, 46 L. R. A. 820; Byers v. Colonial etc. Co., 134 Cal. 553, 66 Pac. Rep. 732; Craig v. Crafton, 141 Cal. 178, 74 Pac. Rep. 762; South Side etc. Co. v. Burson, 147 Cal. 401, 81 Pac. Rep. 1107; Calkins v. Sorosis etc. Co., 150 Cal. 426, 88 Pac. Rep. 1094.

In the case of Walnut Irrigation District v. Burke, 158 Cal. 165, 110 Pac. Rep. 518, it was held that where an owner of a certain water right in use from a common dam was entitled to irrigate sixty acres of a certain tract, he was entitled to use such right to irrigate a similar quantity of other land, such new use involving a mere change of place of use and where no injury to any other person occurred.

*Colorado.*

The right to change the place of use of water appropriated is one of the incidents of ownership, independent of statute, and the only limitation upon it is that the rights of others be not infringed upon. Lower Latham D. Co. v. Bijou Irr. Co., 41 Colo. 212, 93 Pac. Rep. 483, holding that the statute upon the subject was purely remedial.

See, also, Wadsworth D. Co. v. Brown, 39 Colo. 57, 88 Pac. Rep. 1060; Strickler v. Colorado Springs Co., 16 Colo. 61, 26 Pac. Rep. 313, 25 Am. St. Rep. 245; Baer Bros. etc. Co. v. Wilson, 38 Colo. 101, 88 Pac. Rep. 265; Handy D. Co. v. Louden C. Co., 27 Colo. 515, 62 Pac. Rep. 847; Seven Lakes etc. Co. v. New Loveland etc. Co., 40 Colo. 382, 93 Pac. Rep. 485, 17 L. R. A., N. S., 329; Town of Sterling v. Pawnee D. etc. Co., 42 Colo. 421, 94 Pac. Rep. 339, 15 L. R. A., N. S., 238, where it is held that the right to water appropriated for domestic purposes does not depend on the *locus* of its use for that purpose.

See, also, City of Telluride v. Davis, 33 Colo. 355, 80 Pac. Rep. 1051, 108 Am. St. Rep. 101; King v. Ackroyd, 28 Colo. 488, 66 Pac. Rep. 906; Cache La Poudre Res. Co. v. Water Supply Co., 25 Colo. 161, 53 Pac. Rep. 331, 46 L. R. A. 175, 71 Am. St. Rep. 131.

"It is now the settled law that water rights, though primarily applied to a certain tract of land, may be severed from it, used on other land by the owner, or sold." Larimer etc. Res. Co. v. Cache La Poudre Irr. Co., 8 Colo. App. 237, 45 Pac. Rep. 525; affirming 24 Colo. 144, 53 Pac. Rep. 318.

See, also, Nichols v. McIntosh, 19 Colo. 26, 34 Pac. Rep. 278; Bloom v. West, 3 Colo. App. 212, 32 Pac. Rep. 846; Knowles v. Clear Cr. etc. Co., 18 Colo. 209, 32 Pac. Rep. 279; Fuller v. *Idaho.*

Mahoney v. Neiswanger, 6 Idaho 750, 59 Pac. Rep. 561.

For the Act of 1901, attempting to make a water right an inseparable appurtenance to a certain tract of land, see Sess. Laws 1901, p. 200.

Users of water from a ditch or canal acquire such a property right as they may transfer to other lands under such ditch or canal. Hard v. Boise City etc. Co., 9 Idaho 589, 76 Pac. Rep. 331, 65 L. R. A. 407; Boise City etc. Co. v. Stewart, 10 Idaho 38, 77 Pac. Rep. 25, 325; Hailey v. Riley, 14 Idaho 481, 95 Pac. Rep. 686, 17 L. R. A., N. S., 86.

See, also, that a water right can not be an inseparable appurtenant to land, Sec. 1015.

For statutes attempting to restrict the place of use, see Secs. 1015, 1016.

*Montana.*

A prior appropriator can not encroach upon the rights of the sub sequent appropriator by changing the place of use. Gassert v. Noyes, 18 Mont. 216, 44 Pac. Rep. 959.

But if others are not injured it may be changed. Smith v. Deniff, 24 Mont. 20, 60 Pac. Rep. 398, 50 L. R. A. 737, 81 Am. St. Rep. 408; Fabian v. Collins, 3 Mont. 215; Woolman v. Garringer, 1 Mont. 535, 1 Morr. Min. Rep. 675; Meagher v. Hardenbrook, 11 Mont. 385, 28 Pac. Rep. 451; Middle Cr. D. Co. v. Henry, 15 Mont. 558, 39 Pac. Rep. 1054; Power v. Switzer, 21 Mont. 523, 55 Pac. Rep. 32; Hayes v. Buzard, 31 Mont. 74, 77 Pac. Rep. 423; Last Chance M. Co. v. Bunker Hill M. Co., 49 Fed. Rep. 430.

*Nebraska.*

"It has been the uniform rule to allow appropriators of water, after it has been actually taken and applied to some beneficial purpose, to change the place and character of its use." Farmers' etc. Co. v. Gothenberg etc. Co., 73 Neb. 223, 102 N. W. Rep. 487, holding that the proceedings provided for by the statute must be complied with and that in the application for the change of use the new lands upon which the water is to be used must be specified.

See Farmers' Irr. Dist. v. Frank, 72 Neb. 136, 100 N. W. Rep. 286.

*Nevada.*

Union M. & M. Co. v. Dangberg, 81 Fed. Rep. 73, 116; Smith v. Logan, 18 Nev. 149, 1 Pac. Rep. 678; Proctor v. Jennings, 6 Nev. 83, 3 Am. Rep. 240, 4 Morr. Min. Rep. 265; Lobdell v. Simpson, 2 Nev. 278, 90 Am. Dec. 537.

*New Mexico.*

Trambley v. Luterman, 6 N. M. 15, 27 Pac. Rep. 312.

*Oregon.*

A prior appropriator of water for beneficial purposes may change the place of use if it does not prejudice the rights of subsequent claimants. Williams v. Altnow, 51 Ore. 275, 95 Pac. Rep. 200; *Id.*, 97 Pac. Rep. 539; Bolter v. Garrett, 44 Ore. 304, 75 Pac. Rep. 142; McCall v. Porter, 42 Ore. 49, 70 Pac. Rep. 820, 71 Pac. Rep. 976; Wimer v. Simmons, 27 Ore. 1, 39 Pac. Rep. 6, 50 Am. St. Rep. 685.

However, the same Court holds that such a change in the appropriation can not be made, either of the point of diversion or place of use, where to make such change will substantially prejudice the interests of other appropriators. Hough v. Porter, 51 Ore. 318, 95 Pac. Rep. 732, 98 Pac. Rep. 1083, 102 Pac. Rep. 728.

made which results in an alteration of the point at which the water is returned to the natural stream, if subsequent appropriators are injured thereby.[5] In placer mining it is held that the use of the water for that purpose is in effect notice to subsequent appropriators that as the ground is worked out the place of use of the water must be from time to time changed.[6] So, again, where the water is used for irrigation for a certain definite tract, the land becomes "seeped,"[7] or in a condition so that it can not be cultivated profitably, or at all, natural justice is subserved by recognizing the right of the appropriator to change the place of use to lands capable of profitable cultivation, or to sell his water right to some person

who can so use the water.[8] Then, again, for the reason of economy and the prevention of waste, the right to change the place of use should be permitted. The water can then be made to go as far as possible.[9]

§ 868. **Changes in place of use—Can not be made where injury is done to the rights of others.**—But as is the general rule in regard to all changes relative to the diversion and use of water, a change in the place of use by one appropriator can not be made where vested rights of others are materially injured thereby. When not needed for the purpose by a prior appropriator, the waters are subject to appropriation by others, and one appropriator can not so change his place of use or enlarge his use so that others are injured by such change.[1] In fact, this proposition is but the converse of the proposition stated in the title of the preceding section,[2] in which section the subject has been fully discussed, and no further discussion is necessary here.

§ 869. **The change in the use of the water appropriated.**—When water has been once lawfully appropriated and the extent of the appropriation determined, the right thus acquired and the priority therefor is not lost by changing the use or purpose for which it was first appropriated and applying the water to some other use or purpose, provided that the change made does not materially injure the rights of others which have vested prior to the change.[1] By

increased beyond the amount of his original appropriation, and the rights of others are not materially injured by the change in any manner. The true test of the right is appropriation, use, or non-use; the beneficial purpose to which the water is applied, or the place where it is applied, is not.[2] This has been held to be the law from a very early period of the Arid Region Doctrine of appropriation, as will be seen from the authorities cited, and is the present law in all jurisdictions, unless it may be in some of the States where there has been an attempt upon the part of the legislature to make a water right an inseparable appurtenance to a certain tract of land. But, as will be seen in a subsequent section, the statutes in this respect have not been generally upheld by the courts.[3] It will be seen upon examination that the authorities hold that, in all cases of the changes in the use of the water, the effect of the change upon the rights of others is the controlling consideration; and in the absence of any injurious consequences, any change which the appropriator chooses to make as to his use of the water is legal and proper, as is also the case as to the change of place of use.[4] In fact, it will be found that many of the cases treat these two subjects together. It is true that changes may be made in the use and the place of use, if others are not injured thereby. But there is a distinction between these two rights which should be observed. An appropriator may change his use of the water without changing the place of use. As, for example, he may have a water right for power for running a grist mill. He can change this right to one for the generation of electricity for municipal or other purposes. He thereby changes the use without changing the place of use. Again, he may change the place of use without changing the use, as where he transfers his water right for irrigation from one field to another.

Again, the change of the point of diversion and the change of use are sometimes treated together. While these two subjects are usually considered different, it is upon the general theory that any change which does not injure others may be made, and any change which does cause injury to the vested rights of others can not be

2 Davis v. Gale, 32 Cal. 26, 91 Am. Dec. 554, 4 Morr. Min. Rep. 604.

3 That a water right is not an inseparable appurtenance, see Secs. 1015, 1016.

4 For change in the place of use of the water, see Secs. 867-871.

made. As was said in a recent Montana case:[5] "But though he may change the point of diversion or may use it for other purposes, his right to do so is subject to the well-settled rule that the change may not affect injuriously the rights of subsequent appropriators."[6]

**§ 870. Change in the use of water—What changes may be made.**—After the rights of an appropriator have once vested and the amount of water to which he is entitled has once been determined, there is one general rule relative to the change from one use to another which must be observed, and that is he can not change to any use so as to enlarge the quantity of water to a greater amount than that to which he was entitled under the old use if others are materially injured thereby. For this purpose the uses of water acquired by an appropriation may be divided into two classes—those which practically consume none of the water and those which practically consume all of the water. Of course, these are the extreme cases, and there are all degrees between; but the extent of the appropriator's claim is limited to the needs of the purpose for which he makes the appropriation. And if the original purpose is for the generation of electrical power, which comes under the first class above named, and consumes none of the water, it is obvious that he can not change his use to that of irrigation, which comes under the second class, and which would consume all of the water, where the rights of subsequent appropriators have vested, and which rights would be injured by the change. Hence it follows that for the new use he can only consume an amount of the water equal to the amount consumed under the old use or a less amount. He can never consume more water for the new use than was consumed under the old use if the rights of others are injured thereby.[1]

In an early California case[2] it was held that, where water was appropriated for placer mining, the use might be changed to the running of a quartz mill; and from the use for a saw mill to that of

5 Featherman v. Hennessey, 43 Mont. 310, 115 Pac. Rep. 983.

1 For extent of appropriator's right fixed by purpose, see Sec. 879.

2 Davis v. Gale, 32 Cal. 26, 91 Am. Dec. 554, 4 Morr. Min. Rep. 604.

a grist mill.[3] But where the appropriation was for placer mining, and by the use of which very little of the water was consumed, a change to a use for irrigation can not be sustained.[4] However, where a certain amount of water is consumed in the mining operations, the same amount may be changed to irrigation.[5] But a prior appropriator for mill purposes only, the water to be returned to the stream when used, can not, as against appropriators below the mill, use the water for irrigation purposes.[6] But in a recent Nebraska case, where the same principle was involved, it was held that a prior appropriation for power might be changed to irrigation purposes, and the case was reversed only upon the ground that the land to which the water should be applied was not specified in the decree.[7] The ruling in this case we consider as wrong under the authorities cited by the Court, as it appears that

[3] See, also, McDonald v. Bear River etc. Co., 13 Cal. 220, 15 Cal. 145, 1 Morr. Min. Rep. 626.

But a contract for the use of water as the motive power for a mill gives the owner no right to use the water for any other purpose. Fresno M. Co. v. Fresno etc. Co., 126 Cal. 640, 59 Pac. Rep. 140.

Where the change was made from a grist mill to a distillery, it was upheld. Trambley v. Luterman, 6 N. M. 15, 27 Pac. Rep. 312.

Also, see Whitehair v. Brown, 80 Kan. 297, 102 Pac. Rep. 783, where a change was allowed from the use for a flour mill to an electric light plant.

[4] Smith v. Duff, 39 Mont. 382, 102 Pac. Rep. 981, 133 Am. St. Rep. 537; Head v. Hale, 38 Mont. 302, 100 Pac. Rep. 222.

[5] The use may be changed from mining to agricultural, and *vice versa*, provided such changes do not injuriously affect the rights of others. Seven Lakes Res. Co. v. New Loveland etc. Co., 46 Colo. 382, 93 Pac. Rep. 485, 17 L. R. A., N. S., 329.

However, an upper appropriator on a stream after his mine where he used the water is worked out, can not change the use of the water which under the use was accustomed to flow back into the stream, to mines lower down the stream, if the rights of intervening mine owners would be thereby cut out. Alder Gulch etc. Co. v. Hayes, 6 Mont. 31, 9 Pac. Rep. 581.

But where there is no injury, see Wimer v. Simmons, 27 Ore. 1, 39 Pac. Rep. 6, 50 Am. St. Rep. 685; Davis v. Gale, 32 Cal. 26, 91 Am. Dec. 554, 4 Morr. Min. Rep. 604; Maeris v. Bicknell, 7 Cal. 261, 68 Am. Dec. 257, 1 Morr. Min. Rep. 601.

[6] Cache La Poudre Res. Co. v. Water Sup. etc. Co., 25 Colo. 161, 53 Pac. Rep. 331, 46 L. R. A. 175, 71 Am. St. Rep. 131.

[7] Farmers' etc. Co. v. Gothenburg etc. Co., 73 Neb. 223, 102 N. W. Rep. 487, citing Maeris v. Bicknell 7 Cal. 261, 68 Am. Dec. 257, 1 Morr. Min. Rep. 601; Davis v. Gale, 32 Cal. 26, 91 Am. Dec. 554, 4 Morr. Min. Rep. 604; Woolman v. Garringer, 1 Mont. 535; Wimer v. Simmons, 27 Ore. 1, 39 Pac. Rep. 6, 50 Am. St. Rep. 685.

others were injured by the change, and that the water after its use for power by the defendants had been appropriated by the plaintiff. This decision violates the rule laid down by the decisions that no greater quantity can be consumed after the change than before. Where, however, all of the water is practically consumed by its use for irrigation, its use may be changed to that of furnishing water to a city for domestic purposes.[8] A change from one agricultural use to another is also permitted, as is the case where the water is stored during the period when an appropriator is entitled to its use for irrigation, and used by him to mature crops requiring a later irrigation.[9] But this can not be done to the injury of the rights of those who have subsequently appropriated the water for immediate irrigation.[10] But a change even from one agricultural use to another is not permitted where the appropriator uses more water for the second use than he was entitled to under the first use.[11] However, any change from any use to any other use may be made, provided that the change does not injure the rights of others entitled to the water.[12] But a change can not be made in the use of the water which results in an alteration of the point where the water was returned to the stream under the old use.[13] As between appropriators, it is obvious that one can not under the law change his use of the water so that he may acquire a larger quantity as against one prior in time to him if his rights are injured.[14] But, also, the rights of the subsequent appropriators must not in the same manner be injured by one who is prior to them. If the prior appropriator's right to the water was for irrigation or for some other use which practically consumes all of the water, by his

13 Gassert v. Noyes, 18 Mont. 216, 44 Pac. Rep. 959; Last Chance M. Co. v. Bunker Hill etc. Co., 49 Fed. Rep. 430.

14 For rights of the prior appropriator, see Secs. 776-782.

valid appropriation, distinct notice is given to all that not only is so much water withdrawn from the public supply, but that its appropriation is such that it can not be appropriated a second time or any rights gained therein by later comers. But, on the other hand, if the water of the first appropriator is for running a mill or for some use which does not consume the water, the same notice is given to all by this use, that the same water may be again appropriated either for other mills, or it may be appropriated lower down the stream for irrigation or for some other beneficial use or purpose. And after this notice has been given of the extent of the water consumed by the prior appropriator, he can not change his use after the rights of the subsequent appropriators have vested to irrigation or to some other use which will consume all of the water.[15]

Upon the other hand, where no greater quantity of water is taken after the change, measured either by time or quantity, it makes no difference to others that the water is more economically used and extended over a greater acreage.[16]

In general it may be said that where the new use of the water required a less quantity than the old use, the change may be made unless other elements of injury enter into the proposition. Hence, a change may be made from the use for irrigation, mining, or manufacturing where practically all of the water is consumed to the development of electrical power, where very little is consumed.[17]

15 For the rights of the subsequent appropriators, see Secs. 783-789.

See Last Chance M. Co. v. Bunker Hill etc. M. Co., 49 Fed. Rep. 430.

A change of purpose which would increase the amount of water diverted will not be allowed as against subsequent claimants whose rights are injured thereby. See Nevada W. Co. v. Powell, 34 Cal. 109, 91 Am. Dec. 685, 4 Morr. Min. Rep. 253; Ortman v. Dixon, 13 Cal. 33; Higgins v. Baker, 42 Cal. 233; Davis v. Gale, 32 Cal. 26, 91 Am. Dec. 554, 4 Morr. Min. Rep. 604; Lobdell v. Rep. 525.

17 Thompson v. Pennebaker, 173 Fed. Rep. 849, 97 C. C. A. 591.

§ 871. **Changes in the use and the place of use—Statutes authorizing and restricting.**—The statutes of the various States vary greatly upon the subject of the change of the use of the water and the place of use. Some provide simply that the right is given if others are not injured by the change, of which the statute of California is an example.[1] Others provide for the right upon the approval of certain officers or the Court, and also in order to effect the right to change the place of use certain formalities and proceedings must be gone through. Of this class the statutes of Colorado are an example.[2] Other States have endeavored by statute to make a water right an inseparable appurtenance to a certain tract of land, inherent in that tract only, and to be used only on that tract, and that, too, whether the land needs it or not, and if the owner thereof attempts to change the place of use to another tract owned by him, or to sell the water right to another person separate and apart from the land for use on his land, it works either an abandonment or forfeiture of the water right. Wyoming was the first State to lead off on this attempt to make a water right an inseparable appurtenance to a certain tract of land. It was followed by Idaho, and in a modified form by Nebraska, Nevada, North Dakota, Oklahoma, South Dakota, and Utah.[3]

When some of these statutes, attempting to restrict the change in the place of use, reached the courts they did not always meet with the consideration or construction that their engineer progenitors expected. In Colorado, where a mode of procedure was prescribed, it was held that the statute was purely remedial, as the right to make the change of the place of use was one of the inherent rights of property, and is one of the incidents of ownership, and exists independent of the statute, and that the only limitation upon it is that the rights of others must not be injured by the change.[4]

1 See Sec. 1412, Civil Code of Cal., 2 Kerr's Cyc. Codes, p. 1153. It is to be noted that this statute is silent upon the question of the change of the use, and only provides for changes in the point of diversion, and the place of use.

2 See Sess. Laws Colo. 1899, p. 235, Chap. 105; Rev. Stat. 1908, Sec. 3226; 3 Colo. Stat. Ann., Sec. 3226.

3 For the statutes of the various States upon this subject, see Part XIV.

4 See Lower Latham D. Co. v. Bijou Irr. Co., 41 Colo. 212, 93 Pac. Rep. 483; New Cache La Poudre Irr. Co. v. Water Supply etc. Co., 29 Colo. 469, 68 Pac. Rep. 781; Wadsworth v. Brown, 39 Colo. 57, 88 Pac. Rep. 1060.

In Nebraska it was held to the same effect, but that while a prior appropriator may change the place of the use of the water, he can only do so under the permission and subject to the administrative control of the board of irrigation.[5] In the State of Arizona the water appropriated need not be applied to the same tract of land, although under the statutes of the old Territory the original appropriations must have been made in connection with some definite tract of land.[6] In Oregon it is, however, held that a prior appropriator is not entitled to use the water on lands other than those for whose benefit the appropriation was made.[7]

But it was the statutes of Wyoming and Idaho, whose legislatures attempted to pass the most drastic measures, especially upon the subject of the forfeiture of the water right unless it was used upon a certain tract of land for which it was originally appropriated, which met with the greatest objection when they came to be construed by the courts. In Idaho, in the face of the statute, the Supreme Court holds that appropriators of water acquire such a property right to the use of the water that they may transfer it to other lands than the land for which it was appropriated, or that they may sell the right separate from the land to others who may transfer the water to other lands.[8] In Wyoming, the statute met with a similar fate by a similar ruling of the Supreme Court; and when it was urged by the engineer, who in effect tried the case for the defendant and whose views were urged upon the Supreme Court in behalf of the appellant as of greater weight than the views of the Court, on account of a greater practical experience in irrigation matters,[9] that to permit the sale of a water right separate

7 Ison v. Sturgill, 57 Ore. 109, 109 Pac. Rep. 579, 110 Pac. Rep. 535; Whited v. Cavin, 55 Ore. 98, 105 Pac. Rep. 396.

8 Hard v. Boise City etc. Co., 9 Idaho 589, 76 Pac. Rep. 331, 65 L. R. A. 407; Boise City v. Stewart, 10 Idaho 38, 77 Pac. Rep. 25, 325; Hailey v. Riley, 14 Idaho 481, 95 Pac. Rep. 686, 17 L. R. A., N. S., 86.

9 See opinion in Johnston v. Little Horse Cr. Irr. Co., 13 Wyo. 208, 79 Pac. Rep. 22, 70 L. R. A. 341, 110 Am. St. Rep. 986.

from the land would be a source of litigation, Mr. Justice Potter in delivering the opinion of the Court, very aptly said: "It may be accepted as true that the rule permitting the sale of a water right separate from the land has been the source of litigation. But that affords no sufficient reason for destroying property rights. We can not agree that, in order to discourage litigation or render it impossible, the courts should devest the citizen of his property."[10]

We shall have more to say upon this subject when we come to the discussion of appurtenances.[11] We are in hearty accord with the ruling both of the Idaho and Wyoming courts. A water right may be an appurtenance to a certain tract of land, but it can not be made an inseparable appurtenance, for the many reasons given in a subsequent portion of this work.[12]

**§ 872. Changes on sale—Rights of the purchasers.**—As we shall discuss in a subsequent portion of this work, in all jurisdictions water rights acquired by appropriation are such property rights that they may be sold and transferred by the appropriators to others, who in turn may again sell and transfer them.[1] Again, in most, if not in all jurisdictions, where the acquisition of water rights were for the irrigation of certain definite tracts of land, they may be sold, separate, and apart from the land for which the water was appropriated. It is true that in certain States an attempt has been made by legislation to prevent this, but even in the face of this the courts have held that a water right could not be made an inseparable appurtenance, and that in the face of the statutes they might be sold separate and apart from the land.[2] Upon the sale and transfer of a water right the purchaser is vested with the same right to change the point of diversion, the place of use, and the use or purpose of the appropriation itself as the original appropriator had, but no more; and the vested rights of others must

10 See, also, McPhail v. Forney, 4 Wyo. 566, 35 Pac. Rep. 773; Frank v. Hicks, 4 Wyo. 502, 35 Pac. Rep. 475, 1025.

11 See Secs. 1005-1018.

Water right as an inseparable appurtenance, see Secs. 1015, 1016.

12 See Secs. 1015, 1016.

1 For the sale of water rights, see Secs. 994-1032.

2 Statutes authorizing and restricting changes in use and place of use, see Secs. 871, 1015.

That a water right can not be made an inseparable appurtenance, see Secs. 1015, 1016.

not be materially injured by the change.[3] As was well said by the Wyoming Court: "The only limitation upon the right of sale of a water right separate from the land to which it was first applied, and to which it has become appurtenant, laid down by any of the authorities, is that it shall not injuriously affect the rights of other appropriators. In other words, the burden upon the use must not be enlarged beyond that which rested upon it under the original appropriation, and while in the hands of the original appropriator as he was entitled to and did use it."[4]

The use of the water can not be enlarged so that more water is diverted by the purchaser than was permitted by the original appropriator.

[3] For the right of the original appropriator to make changes, see the previous sections, 857-871.

[4] Johnston v. Little Horse Cr. Irr. Co., 13 Wyo. 208, 97 Pac. Rep. 22, 70 L. R. A. 341, 110 Am. St. Rep. 986.

See, also, Strickler v. Colorado Springs, 16 Colo. 61, 26 Pac. Rep. 313, 25 Am. St. Rep. 245.

The purchaser may transfer the water to other lands, so long as the change does not interfere with the right of others. Hard v. Boise etc. Co., 9 Idaho 589, 76 Pac. Rep. 331, 65 L. R. A. 407.

See, also, Cache La Poudre Irr. Co. v. Larimer & Weld Res. Co., 25 Colo. 144, 53 Pac. Rep. 318, 71 Am. St. Rep. 123; affirming *Id.*, 8 Colo. App. 237, 45 Pac. Rep. 525; Frank v. Hicks, 4 Wyo. 502, 35 Pac. Rep. 475, 1025; McPhail v. Forney, 4 Wyo. 556, 35 Pac. Rep. 773; Crippen v. Comstock, 17 Colo. App. 8[illegible], 66 Pac. Rep. 1074; Boise etc. Co. v. Stewart, 10 Idaho 38, 77 Pac. Rep. 25, 325; Smith v. Denniff, 23 Mont. 65, 57 Pac. Rep. 557, 50 L. R. A. 737; Bessemer etc. Co. v. Woolley, 32 Colo. 437, 76 Pac. Rep. 1054, 105 Am. St. Rep. 91; Clague v. Tri-State etc. Co., 84 Neb. 499, 121 N. W. Rep. 570, 133 Am. St. Rep. 637; Dodge v. Marden, 7 Ore. 456, 1 Morr. Min. Rep. 63; Seven Lakes etc. Co. v. New Loveland etc. Co., 40 Colo. 382, 93 Pac. Rep. 485, 17 L. R. A., N. S., 329; Cave v. Crafts, 53 Cal. 135; Coonradt v. Hill, 79 Cal. 593, 21 Pac. Rep. 1099; Crooker v. Benton, 93 Cal. 365, 29 Pac. Rep. 953; Smith v. Corbit, 116 Cal. 587, 48 Pac. Rep. 725; Mount Carmel etc. Co. v. Webster, 140 Cal. 183, 73 Pac. Rep. 826; Tucker v. Jones, 8 Mont. 225, 19 Pac. Rep. 571, Sweetland v. Olsen, 11 Mont. 27, 27 Pac. Rep. 339; Simmons v. Winters, 21 Ore. 35, 27 Pac. Rep. 7, 28 Am. St. Rep. 727; Coventon v. Seufert, 23 Ore. 548, 32 Pac. Rep. 508; Turner v. Cole, 31 Ore. 154, 49 Pac. Rep. 972; Snyder v. Murdock, 20 Utah 419, 59 Pac. Rep. 91; Fisher v. Bountiful City, 21 Utah 29, 59 Pac. Rep. 520; Toyaho etc. Co. v. Hutchins, 21 Tex. Civ. App. 274, 52 S. W. Rep. 101.

See, also, for sale and conveyance of water rights and rights of purchaser, Secs. 1030, 1031.

For water rights as appurtenances, see Secs. 1005-1018.

**§ 873. The nature and extent of injuries to others which will prevent changes.**—A water right being a property right of the highest order, its owner may do what he wishes with his own, including the making of such changes as he sees fit to make, provided that he does not materially injure the rights of others in making them.[1] It is evident that no general rule can be laid down which will govern every change attempted, but that whether the change should or should not be allowed is a question of fact and is to be determined from all the facts and circumstances surrounding each particular case. The principal question to be determined in cases of this nature is whether or not any other appropriator's rights are injured by the change. The restriction to the right to make the change, that others must not be injured by the change, is a matter of defense; and, therefore, the burden of proof showing that injuries have been done to the rights of others is upon the one seeking damages for injuries actually committed or seeking an injunction against contemplated injuries.[2] There is no presumption that a greater quantity of water was diverted, or is about to be diverted, after the change than was diverted before, even if the water is used to irrigate a greater acreage after the change than it irrigated before;[3] nor, under this state of facts, will it be presumed that the vested rights of others, have been or will be injured by the change.[4]

1 That a water right is a property right, see Secs. 768-771.

A priority to the use of water is a property right, and its character and method of use may be changed, provided such change does not injuriously affect the rights of others. Seven Lakes Res. Co. v. New Loveland etc. Co., 40 Colo. 382, 93 Pac. Rep. 485, 17 L. R. A., N. S., 329.

See, also, Lower Latham D. Co. v. Bijou Irr. Co., 41 Colo. 212, 93 Pac. Rep. 483.

2 Lorenz v. Jacobs, 98 Cal. 332, 33 Pac. Rep. 119.

See, also, for injuries and the remedies therefor, Chaps. 81-83.

3 "The mere fact that it is the intention of the appellee to apply the water, diverted from its original headgate into the new headgate and new ditch, upon a greater acreage, does not even presumptively establish that more water, measured in time or quantity, will be used than was diverted through the original headgate, nor will it presumptively establish injury to the vested rights of others." Fulton etc. Co. v. Meadow Island Irr. Co., 35 Colo. 558, 86 Pac. Rep. 748.

See, also, Platte Valley Irr. Co. v. Central Trust Co., 32 Colo. 102, 75 Pac. Rep. 391; Fort Lyon C. Co. v. Chew, 33 Colo. 392, 81 Pac. Rep. 37; Cache La Poudre Irr. Co. v. Larimer etc. Co., 25 Colo. 144, 53 Pac. Rep. 318, 71 Am. St. Rep. 123; affirming *Id.*, 8 Colo. App. 237, 45 Pac. Rep. 525.

4 See cases cited *supra*.

The injury to the rights of others must be proven as is any other fact by the party alleging the injury.

Upon the question of the extent of an injury to the vested rights of others, which must exist before any change is prevented, we will say in general here that it must be of such a nature that it is a real substantial injury and seriously affecting the rights of others. A mere fanciful or trifling injury will not prevent the change.[5]

[5] For injuries and remedies therefor, See Chaps. 81-83.

## CHAPTER 49.

### ECONOMICAL USE AND THE SUPPRESSION OF WASTE.

§ 874. Scope of chapter.
§ 875. At an early day settlers had little knowledge as to economical use of the water.
§ 876. At an early day the courts had little knowledge as to economical use.
§ 877. Quantity of water limited to amount needed and economically used.
§ 878. Quantity of water limited by claim.
§ 879. Quantity of water limited by special purpose for which appropriation is made.
§ 880. Capacity of ditch or canal.
§ 881. Early rule as to the capacity of ditch as related to the quantity of water appropriated.
§ 882. Modern rule as to the capacity of ditch as related to quantity of water appropriated.
§ 883. Quantity of water limited by size of ditch.
§ 884. Capacity of ditch or canal—Rule in adjudicating priorities.
§ 885. Quantity of water limited to that economically used.
§ 886. Quantity of water—Appropriations for future use for irrigation.
§ 887. Appropriator not always limited to first amount used.
§ 888. Measurement of water.
§ 889. Measurement of water—Early standard the miner's inch.
§ 890. Measurement of water—The miner's inch as prescribed by the statutes.
§ 891. Measurement of water—Miner's inch not a safe or accurate standard.
§ 892. Measurement of water—The second foot—Of what it consists.
§ 893. Measurement of water—The second foot—Its use as a unit of flow.
§ 894. Measurement of water—The acre foot—Of what it consists and its adoption as a unit of quantity.
§ 895. Measuring water—Devices for—The weir.
§ 896. Devices for measuring water—Different kinds of weirs used—The Cippoletti weir.
§ 897. Devices for measuring water—The flume.
§ 898. Other devices for measuring water.
§ 899. The velocity of approach—Formulas for computing.
§ 900. Evidence of the measurement of water before the courts.
§ 901. Scientific investigations tending toward economical use.
§ 902. Duty of water—Definition.
§ 903. Duty of water—Too high, should not be required at expense of success.
§ 904. Duty of water—How essential duty is determined.

§ 905. Duty of water—Power of court to fix.
§ 906. Duty of water—Minimum duty as fixed by statute.
§ 907. Duty of water—Relation to, of natural losses in transit.
§ 908. Duty of water—Point where water must be measured.
§ 909. Rotation as a matter of economy.
§ 910. Rotation as a matter of economy—The law as applied to the subject.
§ 911. Wasting water—The need of suppression of.
§ 912. Wasting water—What act constitutes—Excessive diversion.
§ 913. Wasting water—Defective appliances for conducting.
§ 914. Wasting water—By application to land of extravagant amounts.
§ 915. Wasting water—Influence of statutes upon the waste of water.
§ 916. Wasting water—Duty of the courts to suppress.

**§ 874. Scope of chapter.**—In this chapter we will treat of the quantity of water which may be diverted under an appropriation of the same for a given purpose, how the water is measured, the duty of water essential to the successful cultivation of land, and how the water must be used economically and without waste, and with general respect to the rights of others. The subject of wasting water will also be treated, and the methods of preventing waste, and the effect where the water is wasted.[1] The economical use of percolating or underground waters will be discussed in a future chapter, in order that those subjects may be discussed together.[2]

**§ 875. At an early day settlers had little knowledge as to economical use of the water.**—The time has passed in the history of irrigation and water rights when an appropriator can lawfully claim all the water in sight by virtue of his appropriation, or as was recently said in an Oregon case,[1] "To keep all you get, and get all you can." Even though prior in time to all others, unless all of the water claimed is actually applied economically and without waste to the beneficial use for which it is claimed, it is held in most jurisdictions that as to the surplus not so used there is no appropriation.

As the population of this Western country has increased and the demand for water has correspondingly increased, the principle of "beneficial use" is becoming each year in all jurisdictions more

1 For the wasting of water, see Secs. 911-916.

2 For subterranean or underground waters, see Chaps. 59-62, Secs. 1148-1211.

1 Andrews v. Donnelly, —— Ore. ——, 116 Pac. Rep. 569.

and more strictly enforced. More stringent regulations may still be made in certain jurisdictions, which will benefit not only those who at present have water rights in certain streams, but also those subsequent who need the water and desire to appropriate sufficient for their purposes. There are many appropriators who still demand the amount of water claimed by them at first, although the amount is many times more than was originally or is now needed by them for the purpose to which they apply it. At an early day, and when they first made the appropriation, the settlers had no knowledge whatever of the proper amount of water necessary to irrigate certain tracts of land; and there was at that time an entire absence of written authority from which they could learn, and water then being plentiful, it followed, as a matter of course, that the settlers claimed extravagant amounts, and also used very wasteful methods in the diversion and use of it.[2] Many of them still keep up those methods, notwithstanding that it has been demonstrated by practical experience and scientific experiments as to the "duty of water" that by so doing they are raising smaller and poorer crops than they could raise by using the water more sparingly. In many places it has been shown that from a given amount of water five or six times as much land could be irrigated than had been thought possible in early days, and with much better results. Then, again, there is another subject which must be mentioned in this connection. In the earlier days the lower lands, or those nearest the streams, were usually settled upon. The higher, or bench lands, were considered only fit for grazing. During the later years these lands are also being cultivated and irrigated, and

2 "When irrigation first began, little attention was paid to the economical use of water or to the just division of rivers among irrigators. The area watered was so small that the owners of ditches did not need to consider how much was used or how much was wasted. They had all they wanted, and because it cost nothing and they were free to take it as they pleased they failed to realize its coming scarcity and importance. Every transaction which had to do with the disposal of streams was marked by a lavish prodigality. Ditches diverted more water than was used. Their owners claimed more than they could divert, while decrees gave appropriators titles to more water than the ditches could carry and many times what the highest flood could supply. Little was known of the quantity of water needed to irrigate an acre of land, and in the absence of such information the ignorance and greed of the speculative appropriator had its opportunity." Elwood Mead in U. S. Dept. of Agriculture, Bulletin 86, p. 15.

the seepage from the upper lands affects the quantity of the water now needed by those lands lying under them. Not near the amount of water is needed now as was actually needed at first to irrigate these lower lands. Then, again, the changes in the conditions in the land itself also have had its effect upon the amount needed. As the land becomes covered with trees and vegetation from the effects of cultivation and irrigation, it does not require the same amount of water as at first.[3] As a general thing, all of these influences tend to lessen the lawful claims of the early settler, as he can only claim the amount which he actually applies to some beneficial use or purpose. But in many localities throughout this Western country there are those who still claim the amount of water originally diverted by them, even to the injury of their own lands. It seems as though, if they can get the water originally claimed by them, or an extra amount of water, that they had rather raise cat tails and tules than to raise useful crops. But by the strict enforcement of the rule that only such quantity of water can be claimed under an appropriation as is actually applied to a useful purpose, and that the surplus over and above that amount is subject to appropriation by others, the days of "the dog-in-the-manger"[4] or the water hog—to be more accurate, as he not only prevents others from being benefited, but injures himself by so doing—are numbered.

§ 876. **At an early day the courts had little knowledge as to economical use.**—Owing to the general lack of knowledge upon the subject, the courts were as ignorant as to the essential amount of water to successfully irrigate a given tract of land as were the settlers and practical irrigators. That this was the case one has but to examine some of their early decrees adjudicating water rights to various users. There being at this time no accurate method in

3 "Again, it has been so often demonstrated as to become a matter of common knowledge that lands after years of irrigation do not require the amount which, when first applied, was essential to the successful growing of crops thereon. This law of Nature, added to the improved methods, greatly reduces the quantity now required." Hough v. Porter, 51 Ore. 318, 95 Pac. Rep. 732, 98 Pac. Rep. 1083, 102 Pac. Rep. 728.

See, also, U. S. v. Conrad Invest. Co., 156 Fed. Rep. 123.

4 An expression used by Mr. Chief Justice Sanderson in the case of Nevada etc. Co. v. Kidd, 37 Cal. 282, 309, and also used by Judge Hawley in the case of Union M. & M. Co. v. Dangberg, 81 Fed. Rep. 73.

practice for the measurement of water, either of the amounts flowing in the streams or the amounts diverted and used, and where any measurements were attempted at all, the miner's inch being used,[1] which at best is a most inaccurate method of measurement, it is not to be wondered at that many of the early decrees adjudicating the rights of the various appropriators from certain streams were usually indefinite as to the amounts of water allowed, were often inconsistent with other decrees rendered by the same Court relative to the waters of the same stream, many times inconsistent with themselves and the facts as disclosed by the evidence, oftentimes ridiculous, and are now treated as legal curiosities. Of course, the courts have to decide cases upon the weight of the evidence presented before them, and there being no evidence or no reliable evidence, upon the quantity of water essential to irrigate a certain tract of land, they oftentimes decided the question upon their best judgment, which was sometimes right and sometimes wrong, and oftentimes gave excessive amounts of water for the area to be irrigated. There is no better example of this subject than that of the district irrigated by the Cache la Poudre River, in Colorado. This region, as we have seen in a previous section,[2] was settled by intelligent Eastern people. A high standard of irrigation had been established, and excellent methods, for that period, had already been employed, both in the distribution of the waters from the stream among the various irrigators and in their application of the water. Then the whole matter was thrown into the court for the adjudication of these rights. When this adjudication took place there were twenty-three early ditches, which, taken together, irrigated about 1,000 acres of land. These ditches were small, and could not do more than irrigate the bottom lands along the stream, yet their combined appropriations, as fixed by the decree of the Court, amounted to 692 cubic feet per second, or enough water to have irrigated 41,520 acres on a duty of water of sixty acres per cubic foot per second, or more than forty times the amount of water actually used under the then wasteful methods, and more than one hundred times the water actually needed under the methods now prevailing on the same stream. The mean annual flow of the Cache la Poudre River, as taken from the report of the State

1 For measurement of water by the miner's inch, see Secs. 889-891.

2 See Secs. 247, 248.

engineer of Colorado for 1889, was 735 cubic feet per second, and for 1890 was 770 cubic feet per second, and during those years this volume served to irrigate 139,000 acres of land. This was a duty of water of 189 acres for each cubic foot of water per second in 1889, and 180 acres in 1890. The Court decree, therefore, gave to 1,000 acres of land almost as much water as now serves to irrigate nearly 140,000 acres.[3]

There are many other illustrations of the extravagant quantities of water which were awarded by the courts in early days, all owing to the lack of knowledge of the actual necessities of irrigation, both upon the part of the witnesses who testified in these cases and upon the part of the courts which rendered the decrees. But two more examples will suffice, the case of Hillman v. Hardwick,[4] decided by the Supreme Court of Idaho in 1891, and one of more recent date, decided by the Supreme Court of Oregon. In Idaho the testimony before the trial court was to the effect that the entire flow of the stream was about 100 inches of water. The District Court decreed to the various parties the amount of 370 inches during the early part of the irrigating season to June 15, and smaller amounts later as the volume of the water decreased, and in making the decree entirely disregarded the priority of the plaintiff to the amount of 125 inches. The Supreme Court, in setting aside the decree and awarding the plaintiff the prior right up to 125 inches, by Mr. Justice Huston, said: "The individual who causes two blades of grass to grow where but one grew before is held in highest emulation as a benefactor of his race. How, then, shall we rank him who, by judicial fiat alone, can cause 400 inches of water to run where Nature only put 100 inches? (We veil our faces, we bow our heads before this assumption of judicial power and authority.) . . . Evidently the (district) Court assumed that Gooseberry Creek was as inexhaustible as the widow's cruse, or else that its decree possessed the potency of Moses' rod."

Also, in a recent Oregon case,[5] the trial court in a suit awarded

a continuous flow of seventeen inches per acre under the Oregon standard of a six-inch pressure. This was considered excessive by the Supreme Court, which, in the opinion, said: "A flow of seventeen inches, therefore, would cover an area equal to one acre to a depth of twenty-five and one-half feet each month, or 102 feet in depth (102 acre feet) during an irrigation season of four months. The absurdity of such a quantity, being essential to the proper irrigation of lands, is manifest." The Supreme Court modified the decree of the lower court without the taking of additional testimony.[6]

We cite these instances relative to the early decrees of the courts simply to show the ignorance which universally prevailed through the West as to the quantity of water necessary to irrigate a given tract of land, and also upon the question of the measurement of water generally. In following sections we will endeavor to trace the results of modern scientific investigation as to the duty of water,[7] and the more modern methods of measurement.[8]

**§ 877. Quantity of water limited to amount needed and economically used.**—As we have seen in the previous portions of this work, the first appropriator is entitled to the use and enjoyment of the water to the full extent of his original appropriation,[1] even if it takes all of the water naturally flowing in the stream.[2] He is also given a reasonable time within which to apply the water to the purpose for which the appropriation is made.[3] The terms used by some of the courts in some of their early decisions, that "the first appropriator has a prior right to such water to the extent of his appropriation,"[4] and later, that "the priority of right is limited to the amount of water actually appropriated and to the amount actually needed"[5] are both vague and indefinite as to the quantity

or amount of water which can be lawfully claimed by an appropriator for any purpose within "the extent of his appropriation." Therefore, it becomes necessary in the succeeding sections of this chapter to ascertain by what methods and upon what basis the extent of a prior appropriator's right to the use of a certain quantity of water for a given purpose is to be determined.

Upon this proposition there is one general rule which may now be considered as settled law in all of the States where the law of appropriation is in force, and that is that the quantity of water which can be lawfully claimed under a prior appropriation is limited to that quantity or amount which is needed and within the amount claimed, and within a reasonable time, is actually and economically applied to the beneficial use or purpose for which the appropriation was made or to some other beneficial use or purpose.[6]

[6] For the right to change use, see Secs. 869-872.

The following are but a part of the cases sustaining the proposition that actual beneficial use limits the amount of water which may be taken under a prior appropriation:

*Alaska.*

Ketchikan Co. v. Citizens' Co., 2 Alaska 120.

*Arizona.*

A person may appropriate to his use the waters of a non-navigable stream, and maintain his right thereto against everybody to the extent of his use. Others may appropriate subject to his right. Clough v. Wing, 2 Ariz. 371, 17 Pac. Rep. 453; Sullivan v. Jones, 13 Ariz. 229, 108 Pac. Rep. 476.

*California.*

Civ. Code of Cal., Sec. 1411.

A proprietor of a water right is entitled to so much water as he can put to a useful purpose on his lands within a reasonable time by the use of reasonable diligence. Senior v. Anderson, 115 Cal. 496, 47 Pac. Rep. 454; *Id.*, 130 Cal. 290, 62 Pac. Rep. 563.

See, also, Strong v. Baldwin, 137 Cal. 432, 70 Pac. Rep. 288; Smith v. Hawkins, 120 Cal. 86, 52 Pac. Rep. 139, 19 Morr. Min. Rep. 243; Bledsoe v. Decrow, 132 Cal. 312, 64 Pac. Rep. 397.

The extent of an appropriation is limited, not by the quantity of water diverted, but by the quantity of water which is, or may be, applied to a beneficial use. Barrows v. Fox, 98 Cal. 63, 32 Pac. Rep. 811.

See, also, Riverside W. Co. v. Sargent, 112 Cal. 230, 44 Pac. Rep. 560; Santa Paula etc. Works v. Peralta, 113 Cal. 38, 45 Pac. Rep. 168; Dougherty v. Haggin, 61 Cal. 305, 56 Cal. 522; White v. Todd's etc. Co., 8 Cal. 443, 68 Am. Dec. 338, 4 Morr. Min. Rep. 536; Evans Ditch Co. v. Lakeside Ditch Co., 15 Cal. 119, 108 Pac. Rep. 1027; Hufford v. Dye, —— Cal. ——, 121 Pac. Rep. 400.

Federal Court for California: Hewitt v. Story, 64 Fed. Rep. 510, 12 C. C. A. 250, 30 L. R. A. 265, 29 U. S. App. 155; *Id.*, 51 Fed. Rep. 101.

*Colorado.*

A mere diversion of water is not an appropriation of it. A diversion
